In 1775 as in 1940, American farmers knew that they must stand together, or lose every right that makes life worth living. That's why Paul Revere's pounding hoofbeats had barely ceased to echo, before a little band of Middlesex farmers began to gather on the green at Lexington. "If they want war, let it begin here," said their leader.

And ever since then, farm leaders have spoken with equal conviction. Dairymen's League members said practically the same thing 20 years ago when they organized to oppose the march of selfish dealers and other enemies of the farm who were intent upon driving milk prices far below a LIVING LEVEL.

But 20 years ago, the same as 150 years ago, men had to ride through the countryside crying out the alarm, before all farmers awakened to their danger. Then only did thoroughly-aroused farmers gather to fight, first in small groups, then in cooperatives, then in bargaining agencies. Until today, a LIVING PRICE FOR MILK is as much a reality as the LIFE, LIBERTY AND PURSUIT OF HAPPINESS for which Paul Revere and the "Sons of Liberty" fought so long ago.

Even so, the danger is not over yet. And like the "Sons of Liberty" of old, members of the Dairymen's League still patrol — in a figurative sense — the midnight streets. Still keep an eye on the old signal tower, watching for the light that will say, "the enemy is coming — awake and fight." For the price of liberty, and of the rights and privileges of liberty, is eternal vigilance. Members of the Dairymen's League know that all they have won has been won by keeping everlastingly on their toes. They intend to maintain that vigilance. They intend to have riders ready to gallop out to every village and farm whenever the first sign of danger appears. So listen for the hoofbeats. Await the alarm. Be ready to answer when the call to action comes.

Farming Two Thousand Acres

WHEN WE were out in California, three of us took a little trip to the Fuller Ranch. It sure was some dairy farm. The first thing we saw was ten loads of green oats to feed the cows. The next was 14 good sized silos. We asked the owner how large the place was, and he said 2,000 acres, and that they kept 2,000 head of stock. They had a fine lot of cows. When we were there, they were milking 650. In one way or another they market their own milk, use 25 delivery wagons, and sell three grades priced at 10c, 11c and 12c.

The cows were kept 30 in a pen and were milked by hand in a special barn which held 30 at a time. This farm purchased about 1800 tons of alfalfa from the Imperial Valley, costing them from \$12.00 to \$14.00 a ton.

We also noticed some turkeys, and were told that they raise around 100,000 a year. The owner said that they could raise especially nice ones because of the skim milk and whey. We asked if they had any chickens, and he said just a few—about 15,000.

There were about 125 men on the payroll.—Alexander Speirs, Slate Hill, N. Y.

Getting Ahead of Weeds

Trouble with Canada thistles and burdocks is eliminated by cutting just before they go to seed while the stalks are hollow. I have never known it to fail in sixty years. If they are ripe, burn them.—C. E. F., New York.

* * *

Pigs on Pasture

M. B. Adams of Oneida, N. Y., finds pig raising profitable. With the help needed to take care of the dairy and retail milk business he is able to raise several Belgian colts a year, has a small herd of Angus beef cattle and several spotted Poland China brood sows.

Some skim milk is available for the pigs, and during the summer they are out on pasture. Rape, sweet clover, alfalfa, and rye are grown for pig pas-

ture, and one plot has been sown to Cornell Pasture Mixture.

"Last fall," says Mr. Adams, "a bunch of pigs lived on rye until they were half way through the winter. They would root right down through the snow in order to get at the rye."

A Real Herd of Jerseys

Jersey breeders of Allegany County, N. Y., and surrounding areas showed much interest in the recent herd classification made at the farm of the Allegany County Home. Classification was made by Professor Fordyce Ely of the State College of Kentucky and J. C. Thompson, representing the American Jersey Cattle Club.

Special interest was shown in the classification of the daughters of the proven sire Creamy Lass Jap Baron No. 350067, whose first 10 daughters averaged 12,240 lbs. of milk and 686 lbs. of fat. In dairy herd improvement

work his first 16 daughters, on twice-a-day milking for 305 days, averaged 9,037 lbs. of milk with 5.6 fat test and 507 lbs. of fat. This sire was classified as "very good." His daughters and sons in the herd were classified as follows: 4 were "very good," 6 were "good plus," and 7 were "good."

During the past 7 years the production of the Jerseys on the County Home has averaged 7,900 lbs. of milk and 420 lbs. of fat. The best record for any year was 9,400 lbs. of milk and 514 lbs. of fat on twice-a-day milking.

In commenting on the herd, Prof. Ely stated that he would like to pay tribute to the fine herd and also to Herdsman Leo Johannes because the herd could not have made the fine record they have without excellent care.—Subscriber.

Reasonable, But—

I just read about what some farmer thinks about D.L.S. Time. I produce considerable milk which is hauled by a truck. The man gets here at 4 A. M. Now I am one of these Yankees that you can drive just so far and no farther. The truckman said he was coming one hour earlier. I told him that I was not going to get up at 3 o'clock for him or anyone else. I never have and I am too old to begin now.

As it stands now there are 4 farmers on this road, 2 of them eat at 11 o'clock old time and I and the other

eat at 12 o'clock old time. My nearest neighbor was putting his cows out last night when I was getting mine up. I will do what is right but I do not propose to get up before 5 o'clock (4 day-light saving). As far as going anywhere is concerned, I don't go (I am stone deaf). I have a time clock with strong lights to wake me any time I set it.—H. S., N. Y.

Fruit With Milk

Some years ago the well-known writer of northern folklore, the late Elizabeth Taylor, returned to Scotland very ill with Bright's disease. A well-known doctor in Edinburgh put her at once on a milk diet. She returned soon, saying she could not take milk alone.

"If I can have fruit also, I can do it all right," she said.

The doctor answered promptly, "Certainly, fruit of course." Evidently he had considered the two together so often that he had quite forgotten to mention the fruit. The combination was a success.

When milk causes unfavorable symptoms, in nine cases out of ten it means that too little fruit is being used to help the liver do its work.

We fully agree with your statement that the farmer's family should use more dairy products. Not only are they the best, but at wholesale prices much the cheapest foods they can use.—Blanche D. Hubbard, Rochester, Vt.

Provide Your Flock
WITH
WINTER QUARTERS
THAT PROMOTE
HIGH EGG PRODUCTION

FREE BLUE PRINTS & MATERIAL LISTS FOR POULTRY HOUSES

DESIGNED BY
AGRICULTURAL ENGINEERS

POULTRY HOUSE - 72731

Before you get winter quarters ready for your poultry, see the 4-Square Farm Building Service at your 4-Square Dealer. He has designs for many different types of laying houses. The designs were created by Agricultural Engineers so as to provide every requirement for poultry health and high production — and your requirement for convenience in management. These buildings are economical to erect because in the planning, Agricultural Engineers took advantage of the many standard, ready-to-use materials that lower costs. You'll find these engineered plans give stronger, more durable, longer lasting structures. Before you build or remodel, see the 4-Square Farm Building Service. It's complete with Blue Prints and Material Lists. See the 216 designs for other farm buildings — and the many pieces of poultry equipment which you can build yourself.

The 4-SQUARE FARM BUILDING SERVICE

216 designs of Farm Buildings and Equipment designed by engineers — complete with blue prints and material lists. There is a size and type of building to suit your program and preference at a big dollar saving.

The FARM NEWS

New York Breeders Boost Artificial Insemination

Most dairy barns house from 15 to 50 cows and one herd sire or maybe two. But located in an old barn just across from the Syracuse Airport west of Syracuse are 9 herd sires that are occupying bachelor apartments. You can well ask, "How come?" and here is the answer. It is the bull barn operated by the Central New York Artificial Breeding Association and every day the semen from these bulls is shipped to veterinarians in several counties who in turn visit the herds of members and inseminate the cows that are in heat.

The Central New York Association is really a federation of a number of artificial breeding associations. One of them is the Pioneer Association of Dryden, New York, which was in a sense an experiment. After operating this association for some time and starting some others, it was decided that keeping the bulls of all associations in a central location would cut down costs and permit the keeping of better bulls. In addition to the Pioneer Association the Central New York Association is made up of local associations in Onondaga, Madison and Livingston counties, two associations in Jefferson County and an association in Unadilla, Otsego County.

At present the barn near Syracuse houses 5 Holstein bulls and 4 Guernseys, all of which have records which make them so valuable that few individual dairymen could afford to own one of them. If he could afford it

there just aren't enough bulls of that quality to go around.

As time goes on it is expected that bulls of other breeds will be added to the herd if and when enough dairymen become interested so that at least 10,000 cows of one breed are owned by them and which also will not be so scattered that the cost of service to them would be prohibited.

In an early issue we plan to give the set-up and operation of this association in more detail and perhaps to recite some of the records that the daughters of some of these bulls have made.

Potatoes Hit by Heat and Blight

Many potato growers are not as optimistic about the potato outlook as they were a month ago. Early in the season we had so much moisture and the weather was cool enough that potato tops grew very rapidly. Under existing conditions the roots were near the surface and did not have to go in very deep in order to supply the growing plants.

The hot weather of the last month has dried out the top soil several inches, to such an extent that many of these near the surface roots have been killed, causing premature ripening of the vines with a consequent crop of small sized tubers. In many fields the vines did not mature, but a lot of tip burn has occurred in the leaves, which is nature's way of balancing the tops and roots. Since anything that affects the leaf of the plant will naturally affect

the tubers, this condition is bound to have an effect on the final yield.

Late blight is very prevalent in many fields both up-land and muck. It occurred much earlier than usual due to favorable weather conditions for the development of this fungus. One large grower stated recently that blight had killed so many of his Chippewas that he was certain the yield had been reduced one-third already. The spread of the disease from now on, and whether or not we get a lot of blight rot depends primarily on the weather and of course the vigilance and thoroughness with which the grower protects his crop with Bordeaux.

Long Island has been digging potatoes for several weeks and reports a very good yield for the early crop. Recent reports indicate that 75c per hundredweight is the shipping point price. Some of the muck areas in up-state New York have been digging potatoes since July 20 in a limited way and also report a good crop, better than average for this time of year. Current wholesale prices in central New York run around 75c per bushel.

—H. J. Evans.

Special Sixth Degree Sessions

In preparation for the National Grange session at Syracuse next fall State Grange officers are arranging for a number of special sessions covering the entire state at which the sixth degree will be conferred. This is to accommodate New York State Grangers who are not sixth degree members but who wish to join the National Grange at Syracuse.

Following are the dates and places of these special meetings:

SEPT. 9—WATERTOWN, Jefferson County.
SEPT. 10—BEAVER FALLS, Lewis County.
SEPT. 11—CANTON, St. Lawrence County.
SEPT. 12—LAKE PLACID, Essex County.
SEPT. 13—GLENS FALLS, Warren County.
SEPT. 14—JOHNSTOWN, Fulton County.
SEPT. 16—ROCHESTER, Monroe County.
SEPT. 17—BATAVIA, Genesee County.
SEPT. 18—ARCADE, Erie County.
SEPT. 19—JAMESTOWN, Chautauqua County.
SEPT. 20—ALFRED, Allegany County.
SEPT. 21—CANISTEO, Steuben County.
SEPT. 30—LYONS, Wayne County.
OCT. 1—GENEVA, Ontario County.
OCT. 2—ITHACA, Tompkins County.
OCT. 3—BINGHAMTON, Broome County.
OCT. 4—UTICA, Oneida County.
OCT. 5—ONEONTA, Otsego County.
OCT. 7—ONEONTA, Otsego County.
OCT. 8—MIDDLETOWN, Orange County.
OCT. 9—MILLBROOK, Dutchess County.
OCT. 10—ALBANY, Albany County.
NOV. 13—SYRACUSE, Onondaga County.

A. A. - GRANGE Cookie Contest News

BRUSHTON GRANGE, Franklin County, is very proud of its cookie contest winner, Mrs. William Rabideau of Moira, N. Y., and we aren't surprised! Mrs. Rabideau is the mother of 15 children, and this interesting account of the family comes from Grange chairman Mrs. Ruth Austin:

"Mrs. Rabideau and her husband are prosperous, progressive farmers and find time to attend various farm functions throughout the county. Both are active, enthusiastic workers, and above all very jolly, pleasant people. Their home life is carried on in a systematic way, all mem-

Ulster County, have won two cookie contests, held by different Granges. Mr. Saile got first prize in Asbury's contest; then along came Mrs. Saile and got first in her home Grange's contest, Lake Katrine. Since their marriage the Sailes have continued to belong to both Granges and to be active in them.

Here are more first prize winners whose names have been reported to us during the past fortnight:

Subordinate Grange Winners

Mrs. Hollace Hicks, of Morrisville, N. Y., winner of rolled sugar cookie contest held by Morrisville Grange, Madison County. Before their contest, Grange members "practiced up" and made cookies for their Neighborhood Night meeting, which was attended by 136 persons. "Everybody," says Grange Chairman Mrs. Wm. G. Yearly, "had lots of praise for the rolled sugar cookies, which brought back memories of days gone by."

bers sharing the burden of the work. Everything is done in a pleasant manner. The family are courteous and helpful to each other, and work in love and harmony. The children attend village grade and high school, and each year finds the names of one or more of them on the honor roll. The three oldest are married, and 3 of the younger ones are members of our Juvenile Grange."

Malone Grange, Franklin County, reports that their contest drew a record breaking crowd of Grangers. They had 16 entries in their contest.

The Saile family of Saugerties, N. Y.,

Sears PUTS YOUR FARM ON RUBBER AT NO EXTRA COST

The Milk Supply Situation

By LELAND SPENCER

A LITTLE more than a year ago the courts put their stamp of approval on the main provisions of both the federal and the New York State programs of milk control. Since then I have felt that the possibility of increased production and excessive surpluses was the greatest threat to the continued successful operation of the federal and state orders for the New York milk market. Therefore, I have been watching the production charts carefully from week to week. They show that New York dairymen are increasing their production rapidly.

Leland Spencer

A report recently issued by the State Department of Agriculture and Markets, at Albany, shows that in the first six months of 1940 the dairy plants of this state received nearly 18 per cent more milk than the average for corresponding months of the five years 1933-37. During each of the first six months this year, the plants received at least 12 per cent more than the five-year average, and there was also some increase over 1939.

Reports on the quantities of milk delivered per farm at certain groups of milk plants show a similar trend. In one group of nearly ten thousand dairies, except for one week in May, production in 1940 has been well above that for corresponding weeks of 1939 and the three-year average 1936-38 (figure 1).

Figure 1. Milk Delivered Per Farm at Dairymen's League Plants

(Average pounds per day during each week)

Except for one week in May, production in 1940 has been well above that for corresponding weeks of 1939 and the three-year average 1936-38.

Some of the increase in milk production undoubtedly is due to favorable weather, and this, of course, is temporary. However, part of the increased milk supply must be attributed to the keeping of more cows and to better feeding. New York State farmers have increased their dairy herds about 9 per cent in the past five years. Judging by the number of yearling heifers on hand, there will be some further increase in the number of cows again next year. Dr. Gillett, the Agricultural Statistician for New York State, says in his monthly report for July first that "the feeding of concentrates per cow was maintained at the highest level for July 1 in the ten years of record."

The output of milk in future months will be affected by the prices that farmers have received for milk during the past year. During the past twelve months, the prices paid farmers for milk in New York have been rather good in comparison with the price of feed and the prices of other farm products. During this twelve-month period, the farm price of milk was equivalent

to the wholesale price of 130 pounds of dairy feed. This is well above the average for the previous five years. Likewise the farm price of milk during the twelve months ending with June this year was 25 per cent above the June average for the years 1910-14, while prices of other farm products in the state were actually two points below their pre-war base.

There can be no doubt that favorable prices and good grass weather have brought on a rising tide of milk production in the New York milk shed, and the up-swing in milk supply may go further. On the other hand, there are two favorable factors in the present situation. One is the fact that storage holdings of dairy products are not large. The market for manufactured dairy products has been clearing well, and the prices are firm. Another favorable condition is the fact that we have an effective smooth-working surplus plan under the federal and state orders for the New York market. During the last few months, a huge volume of surplus milk has been taken care of with less disturbance to the fluid market than we have seen for many years. Nevertheless, the milk supply situation will bear watching. There is a limit to the weight that even the federal-state marketing plan can support.

Milk Grade Changes Sept. 1

September 1st is the date when the regulation for one grade of milk will go into effect in New York City. This new grade will be known as "Approved Milk." After September 1st there will be no Grade B or A milk.

Only one designation is allowed on the label, namely "Approved Milk." Butter fat must be at least 3.3% and solids must be not less than 11.5%. The bacteria count when delivered to the consumer must not be over 30,000. The bacteria count when the milk is delivered by the producer to the station must not be over 150,000.

Milk must not be kept after pasteurization more than 48 hours before delivered to the consumer and all approved milk must be from cows tested for T.B.

After next January 1st the pouring lip of the bottle must be completely covered by a cap. Dealers can sell milk testing 4.2% of butter fat under a trade name and will be permitted to show this butter fat content on the bottle cap.

Sour Cherry Deal Favorable

Western New York sour cherry growers are feeling optimistic over this year's deal. The usual price received is reported as 3c a pound. New York's crop is estimated at 21,450 tons, which is about 17% less than last year. However in general the fruit reached larger size than it did a year ago.

A. K. Gardner, executive officer for the Agricultural Conservation Program in Maine, charges that the New England crop reporting service during the past few years have reported Maine potato acreages too high. According to Mr. Gardner, crop reports have regularly indicated a total potato acreage in Maine which has been 8,000 to 33,000 acres more than the commercial acreages reported under the Agricultural Conservation Program. Some of the discrepancy may be explained by potatoes grown on non-commercial farms, but probably not all of it. The error, if there is an error, goes back to crop reporters who estimate acreages rather than to the crop reporting service which merely collects and compiles these estimates.

With AMERICAN AGRICULTURIST Advertisers

Harvesting timothy seed with a model 40 all-crop harvester manufactured by the ALLIS-CHALMERS COMPANY, Milwaukee, Wisconsin. In an effort to do their part in improving the quality of seed purchased by farmers, the Allis Chalmers Company are stressing the importance of certain rules where seed crops are harvested by a combine. Three rules are: (1) Don't harvest too soon. (2) Use correct equipment. (3) Store seed in a well ventilated place.

These three rules are fully explained in a pamphlet published by the Allis Chalmers Company called "Buyers Want Dry Seed." The pamphlet is being supplied to owners of the all-crop harvester, will be made available to the seed trade, and will be sent to any subscriber of American Agriculturist on request.

THE PRIME MANUFACTURING COMPANY, Milwaukee, Wisconsin, announces that the two high-line electric fence controllers which they manufacture have been approved by the Underwriters' Laboratories. Before the Underwriters' Laboratories decided to give approval to electric fence controllers, they spent three years studying the facts and making tests in order to set up a standard.

Because the use of electric fences is so popular, we are glad that the Underwriters have set up standards which we expect will be met by most or all of the companies manufacturing controllers. Doubtless in the near future most controllers will carry the seal of approval of the Underwriters' Laboratories.

Much interest is being shown in consuming at home more of the products grown on the farm. No one disputes that fresh fruits and vegetables are best but many can be stored and kept in good condition if storage conditions are right. THE PORTLAND CEMENT ASSOCIATION, Department K8A-1, 347 Madison Avenue, New York City, publishes a 72 page manual called "Permanent Farm Construction" which, among other things, tells how to build a permanent storage cellar for fruits and vegetables. It is free.

With the hot weather we have been having it seems like rushing the season to talk about furnaces but when winter winds begin to blow it is too late to fuss with a heating system, except in an emergency. THE UTICA RADIATOR COMPANY, Department A-6, of Utica, New York, will gladly have the authorized dealer nearest you give an estimate on the cost of installing a Utica heating system. Such an estimate puts you under absolutely no obligation.

Here is a new wrinkle in hay making that you may want to watch. The JOHN BEAN MANUFACTURING COMPANY of Lansing, Michigan, is distributing the Food Machinery Quick Hay Maker. Powered by a small gasoline engine, this machinery hooks back of the mower, picks up the newly cut grass and crushes it between two rollers. As a result the curing time is cut about in half.

Dr. C. D. Looker of the INTERNATIONAL SALT COMPANY of Ithaca, N. Y., comments on the item "Stop Cannibalism Promptly," which appeared in the Poultry Department of the August 3rd issue. He refers to a release from the United States Department of Agriculture which states that feather picking and cannibalism can be stopped very quickly by increasing the salt content of the diet for 4 or 5 days. Where hens are fed by

the all-mash system the salt in the mash can be increased to 1% or if that is not sufficient to 1½%. In some cases it may even be necessary to increase the salt content of an all-mash diet to 2% of salt or if both mash and grain are fed to add up to 4% in the mash.

No one intends to have an automobile accident but eternal care is the price of safe driving and it does no one harm to check up on one's driving habits occasionally. The TRAVELLER'S INSURANCE COMPANY of Hartford, Connecticut, have a booklet called "Smash Hits of the Year," the reading of which may prevent one of these "smash hits." The booklet is available direct from the Traveller's Insurance Company or from any of their agents.

THE J. I. CASE COMPANY of Racine, Wisconsin, recently introduced a new Case silage cutter known as Model MC. It is designed to handle either corn or grass for silage, also to chop dry hay, straw or fodder.

The new cutter has a normal speed of 600 revolutions per minute and will cut from 10 to 30 tons of corn silage per hour. Built into the machine is a very accurate method of applying molasses or phosphoric acid to the material that is being cut.

E. I. DU PONT DE NEMOURS AND COMPANY of Wilmington, Delaware, recently reported on some experiments in the use of ammonium sulfamate for destroying weeds. The product is described as non-poisonous and non-inflammable. Experiments will be continued and may result in a new weed killer.

SAFE DRIVERS

New Jersey milk drivers for the SHEFFIELD FARMS COMPANY recently completed a five-year record of 26,000,000 miles of New Jersey streets and highways without a fatal accident. To commemorate the achievement, L. A. Van Bomel, President of Sheffield Farms, presented Charles Suavet, Superintendent of the company's New Jersey division, with a certificate signed by Governor Moore of New Jersey, Arthur McGee, Commissioner of Motor Vehicles, and L. A. Van Bomel.

WEEDS AND DUST

Calcium chloride has two qualities of interest to farmers. It will kill weeds and prevent dust. Reasons for this double action and directions for use are contained in a little booklet "Ending Dust and Weeds" recently printed by the SOLVAY SALES CORPORATION, 40 Rector St., New York City. Copy will be sent to any reader who makes request to the above address.

WYCHMERE FARMS, ONTARIO, N. Y.

Guernsey Bull For Sale

BORN MAY 22, 1940.
His Dam has 2 year old D.H.I.A. record of 10,444 lbs. milk, 571 lbs. fat. This record won a cup presented by N.Y.S. Guernsey Breeders' Ass'n. Sire's seven nearest Dams average 13,601 milk, 679 lbs. fat. Dam of Sire is 3/4 sister to Beechford's Glow 437962, world record cow in CC and C. Have other yearling bulls for sale from same sire and a few young cows.
HAROLD C. TRIPP, DRYDEN, N. Y.

CATHEDRAL FARMS, Oneonta, N. Y.

BIGGER AND BETTER GUERNSEYS
Because CATHEDRAL FARMS BIGGER AND BETTER GUERNSEYS at Oneonta, N. Y., are leading the Guernsey world in production, it does not mean that you cannot afford to bring into your herd one of their bulls.
If you will buy your bull when a calf and raise it yourself, you can make a big saving on the price.
Others have built up great production herds from a small investment by doing just that, why don't you? Write soon or come and see.

COWS FOR SALE

Rosa, an eight year old registered Holstein cow, owned by George Swartout and Son of Clayton, Jefferson County, New York. She freshened April 16 and on three times a day milking, averaged 84.3 pounds of milk a day in May and 83.4 pounds in June. Her best day's production was 91.5 pounds. Her average test for May was 3.6 and for June 3.7. Mr. Swartout is holding the animal and the other man in the picture is George Fox, a cheese maker.

DOWN THE Alley

By J. F. (DOC.) ROBERTS

I HAVE spoken a number of times recently about the importance of sheep in the Northeast, as a long-time operation. While I do not like figures and charts, here is a chart which shows that in the last ten years we have never produced in this country all the wool that we consume:

	Production*	Consumption Total	Per Cent Domestic
1930.....	414,029	447,900	81.2
1931.....	442,401	545,200	89.6
1932.....	418,096	439,800	95.0
1933.....	438,352	572,200	94.0
1934.....	430,829	381,400	90.4
1935.....	430,667	748,400	94.8
1936.....	420,327	666,400	83.6
1937.....	427,859	579,500	72.7
1938.....	436,000	513,900	92.5
1939.....	441,000	673,900	88.0

* Thousands of pounds.

With so much talk about future export demand, trading with foreign countries, etc., here is at least one product which we can produce and which we do not need to worry about, as far as other countries are concerned. On top of that, if we go ahead with a greatly enlarged army, wool is one of the things that you must have in quantity. Sheep are not now any higher than they have been for the past few years, and it looks to me as if they have a real possibility in the next few years to help the income of the Northeast. The government has placed a large order for woolen goods already, and wool is showing continued strength, which may develop into really higher prices soon.

Judging from appearances, this Holstein cow is imitating Ferdinand the Bull. All that is missing are the flowers. F. Louis Day, Assistant Herdsman at the State School of Agriculture at Delhi, New York, sent us the picture. He says:

"This cow is 15 years old, and her name is Tilly Rowena of Delhi. She has a six-year-old record of 19,066 lbs. of milk and 621 lbs. of fat, and in ten lactations has produced 141,153 lbs. of milk and 4,510 lbs. of fat. On July 7, 1940, she gave birth to twin heifer calves, weighing 70 and 75 lbs. Before she calved, she used to sit in the position shown for five or ten minutes before getting up on all fours. No one at the school ever before witnessed such an oddity."

We humans are peculiar. This odd habit

Right in this connection, there is going to be an opportunity on Thursday, August 22nd, at Springwater, New York, which is a few miles southwest of Canandaigua, to see an old, practically deserted farm, of high altitude acres, which has been converted into a sheep farm, and to see what can be done with one of these Northeast farms, which have been so sadly forgotten. This is the Kenwood Sheep Farm, and they are holding a State Sheep Field Day there for the purpose of giving any interested sheep men an opportunity to see a commercial flock of about 600 ewes and lambs being handled on one of these old, hilled farms. Many men will drive miles to attend this Sheep Field Day. I know I will, and I hope you will.

* * *

BELIEVE IT OR NOT, there are communities where quackery, patent medicines, all sorts of folklore and cure-alls are so embedded and practiced that livestock losses run as high as 20 to 30 per cent.

The graduate, licensed veterinarian today is a skilled, scientifically educated individual. Such rapid progress has been made with new developments and new techniques in the last ten or fifteen years, that many of them are now practicing preventive medicine more than curative medicine. With your animals, as well as with yourself, an ounce of prevention is worth a pound of cure. The veterinarian today is a public servant. Are you going to him with your problems? Is he talking to you in your meetings? Do you know what you can actually do in the way of prevention yourself, and do you know your limitations, and do you realize the importance of a good veterinarian in your community?

of sitting on her haunches will attract more attention from a lot of people than her more worth-while accomplishment of producing well toward 150,000 lbs. of milk.

You can CHECK COLLAR GALL while the horse is working

Rub Absorbine in well as soon as swelling or irritation is noticed. Apply Absorbine each day before and after the horse is worked. Be sure that the collar is not torn or lumpy, as this will continue irritation.

Absorbine's fast action relieves the soreness. Speeds the blood flow through the injury — opens up small blood vessels, clogged by collar pressure, so blood flows more freely, washing out impurities, relieving soreness. The swelling often goes down within a few hours.

Absorbine is not a "cure-all," but it is most helpful in checking windgall, curb, bog spavin and other congestive troubles. Helps prevent them from becoming permanent afflictions. \$2.50 a long-lasting bottle at all druggists or postpaid. W. F. Young, Inc., Springfield, Mass.

ABSORBINE

Dr. Naylor's LINITE

A thorough treatment for stubborn conditions — Hoof Rot, Hoof Lameness, Thrush, Bruises, Calk Wounds. Just pour it on. Per bottle \$1.00. At dealers or by mail postpaid. H. W. Naylor Co., Morris, N. Y.

HORSES

WEEKLY AUCTION SALES!

2500 HEAD OF HORSES

AUGUST 12TH, AUGUST 19TH, AUGUST 26TH, SEPTEMBER 2ND, SEPTEMBER 9TH, SEPTEMBER 16TH, AND SEPTEMBER 23RD.

PRIVATE SALES DAILY

OVER 2000 HEAD GENERAL PURPOSE, FARM AND DRAFT HORSES, including a substantial number recently acquired from the French Government, we having taken over their entire purchases made in Canada. These horses run in age from 4 to 10 years and weigh anywhere from 1000 to 1800 lbs. The majority weigh from 1200 to 1500 lbs. and are of Percheron, Belgian, Clydesdale, and French Canadian breeding.

300 HEAD CAVALRY HORSES, all broken to harness and majority broken to saddle.

200 YEARLING AND TWO YEAR OLD COLTS of draft and French Canadian breeding.

We particularly invite commercial horse dealers to attend these weekly sales and buy what horses they need at their own price. If your district needs horses, communicate with us and we will work out arrangements to supply you. This is without doubt the greatest offering of horses that has ever been assembled together and offered to the public at their own valuation.

SALES WILL BE HELD UNDER COVER, RAIN OR SHINE, commencing at 9:30 A. M.

TERMS: CASH.

200 HEAD PEDIGREED STALLIONS AND MARES, COLTS AND FILLIES ARE BEING OFFERED FOR PRIVATE SALE AT ATTRACTIVE PRICES — PERCHERONS, BELGIANS, CLYDESDALES, FRENCH CANADIANS, FRENCH COACHERS, HACKNEYS, AND STANHOEDBROS.

ARNOLDOWLO FARMS, Grenville, Que., Canada.

The Egg and Poultry Industry United

By J. C. HUTTAR

J. C. Huttar

THE GROWERS of citrus fruits get together and finance an advertising plan which cost several million dollars. The walnut growers spend about one-third of a million dollars. The Hawaiian pineapple growers spend three-quarters of a million dollars. And so it goes. As a matter of fact, here are some figures which my friend August Hanke published in the July-August issue of the Poultry Tribune:

ADVERTISING BUDGETS OF COOPERATIVES

California Citrus (Sunkist)	\$2,000,000.00
Florida Citrus (Seald-Sweet)	1,100,000.00
Texas Citrus (Tex-Sun)	300,000.00
Total	\$3,400,000.00

Canned Salmon	300,000.00
Idaho Fruit and Vegetable	200,000.00
American Cranberry Exchange	170,000.00
California Walnuts	350,000.00
Hawaiian Pineapple	750,000.00
Washington Apples	218,000.00
Bartlett Pears	130,000.00
California Raisins (Sun-Maid)	150,000.00
California Prunes and Apricots	125,000.00
Pea Canners	150,000.00
The Tea Bureau	1,000,000.00

"Skeff" tells in the last issue of this paper that the New York State Horticultural Society and the State Farm Bureau Federation are talking of advertising apples, peaches and cherries. Producers and distributors finance the promotion of meats in the diet. The same for butter and the same for milk. With radio, magazines, papers and fairs all going strong, the old saying is proving out that, "It Pays to Advertise." Or to put it another way; you just can't afford not to advertise if you have any sizable production to sell.

There seem to be two ways of selling a farm product. One is to push it, promote it and advertise it and thus arouse demand to a point where it moves at a good price. The other is to let folks come and get it, and then the producer usually takes a lower price. In heavy production seasons, the price generally goes far below the cost of production.

Two other systems have been used lately to correct extremely low prices—Government purchasing of surpluses and collective curtailment of production. Producers are thankful for the first of these as an emergency measure, but they know it is no cure. Many farmers don't like the second one at all.

Left Holding the Bag

Now, when you think this all over, many keepers of chickens think, as I do, and ask, "Where does this leave the egg, the broiler, the roaster, the turkey and the duck?" The answer is an open secret. It leaves him holding the empty feed bag. The feed has gone into the chickens and he has a troubled look on his face because he wonders where he's going to get the money to pay for it or buy some more. It's a puzzle with 19c eggs and 13c broilers, isn't it?

I have a couple of sons who have all the earmarks of growing up to be farmers that will keep some chickens.

So, while I'm in a position to do so, I intend to work with others, who are interested in this problem, in seeking a solution that does not call for killing off too many birds. I'd like to accomplish three things:

1. Get every poultry keeper who has eggs and poultry meat to market, no matter how small his flock, to listen to my ideas.
2. Then I'd like to have each one give it his best thought and improve on my ideas. (Many heads are better than one.)
3. Next I'd like to have him send these ideas, either to me or to Herman Demme, president of the National Egg and Poultry Board. He's a producer and lives at Sewell, New Jersey.
4. Finally I wish each one would take his share of the responsibility to see that the final program is put across.

I honestly believe that a satisfactory solution would be easy if we all do just a little to help work it out.

My Ideas

Remember that I offer these as one man's opinion and as a basis to start thinking on.

Who takes part: Every farmer in the United States who markets any eggs or poultry. His stake in better markets is bound to be greater than the effort or money it costs him to do his share. Also every hatcheryman and breeder, every feed manufacturer and dealer, every poultry equipment manufacturer and dealer, every egg and poultry dealer and every cold storage warehouse that stores these products must do his share.

There may be some I have forgotten and you can add those to the list.

What's been done: The entire poultry industry united in putting over a great World's Poultry Congress in Cleveland last summer. A mass meeting was held at the Congress at which all branches of the industry were well represented. The meeting asked the Congress directors to choose twelve more people from the industry to form a Planning Committee which was instructed to work on this problem.

As a member of that Committee, I report that the Committee really worked on the job. As a result, on July 22, the National Poultry and Egg Board was organized by representatives of twenty poultry producers organizations, poultry feed manufacturers, egg dealers and others of the industry. During the year, the Planning Committee has also solicited and received money and pledges of money from over 550 people and firms totaling \$30,000.00 to finance the work of the Board in its first year.

An executive committee of seven, four of which are poultry producers, is now selecting a General Manager to

"Aw, the heck with it, Ma—let's just sit in the sand!"

carry the brunt of getting the work organized permanently.

How about permanent financing: To be effective in really getting folks in cities to eat more eggs and poultry meat, not less than \$100,000.00 a year will be needed.

My idea is that this money should come from all who will benefit by the success of the work in proportion to their stake in this success. It would probably mean not over 1/4 of a cent a case of market eggs and the same on a coop of chickens. Feed manufacturers and dealers might be asked to pay in 1/2c a bag on poultry feed and so on. No one would be hurt if everyone comes through.

What's to Be Done: Eggs and poultry meat are really such good food that it should be easy to work up a real educational campaign to re-sell them to the folks who eat. Retail grocery and dairy stores, restaurants, drug stores, hotels and demonstration agents for electric companies are willing to help the work along.

Women's clubs, newspapers and many others can be sold on the idea of encouraging people to eat more eggs and poultry for their health's sake.

A paid personnel, working full time, should carry on all this work and everybody in the poultry industry should boost it.

What do you think?

Hens Laying Heavily

Egg production for June for the entire country was reported as the largest in ten years and June egg prices the lowest since 1931-1934. In contrast to small hatchings early in the season, June production of hatchery chickens was above a year ago. Figures indicate that there will be about 5% fewer hens in U. S. laying flocks next January 1st than there were last January. It is reported that more than the usual number of old hens were sold during the month of June. The decrease in the number of young chickens was highest in the western states and not so marked in the northeast.

Why No Dew Before Rain

(See question on editorial page 4)

Dew is caused by a condensation of the moisture in the air on a surface colder than the air. A heavy deposit of dew occurs in a still atmosphere and with a clear sky. Rain is most likely to follow a wind, especially a south one, in most parts of the Northeast, and after the sky has been cloudy for some time. Therefore, the weather prophets who predict rain when there is no dew are likely to be right.

WENE CHICKS

High breeding standards. Hatches Every Week in the year. Write for Catalog and Price List.

WENE CHICK FARMS, Dept. B92, Vineland, N. J.

PULLETS — PULLETS

8,000 Hanson Strain White Leghorn. April and May hatched pullets. Raised on free farm range. Healthy vigorous pullets at moderate prices. Send for circular and complete price list.

Ducklings. Pekins \$14.00 hundred, Runners \$12.00. Harry Burnham, North Collins, N. Y.

NEARBY MARKETS for NEARBY POULTRYMEN

August on the Poultry Farm

FOWL POX has become an irritating problem in many areas. Vaccination, the standard method of prevention, is not particularly costly nor hard to do, but if birds are vaccinated after they start producing, a slump in production is probable. The usual recommendation is to vaccinate the pullets before they start laying.

Not every poultryman should vaccinate his pullets, but if you have had fowl pox on your farm or if it is prevalent in the neighborhood, vaccination is a good, cheap insurance. If you have never heard of a case in your neighborhood, you had better wait until you do. If you anticipate any trouble with fowl pox and have had no experience with vaccination and need information, write to *American Agriculturist*, Poultry Department, Box 367, Ithaca, New York, and we will try to answer your questions.

A Clean House

Going into the laying house is an important time in the life of a pullet. Up to that point she has been an expense to her owner, but now has the promise at least of paying what she owes plus some profit.

Any self-respecting pullet is entitled to start her productive life in a clean house. It is probable that the old hens that have been occupying the house have picked up some parasites and disease. A thorough cleaning and disinfecting of the house will reduce to a minimum the chances that the young birds will pick them up quickly.

It is good business to grade the pullets and to put into each pen those with approximately the same degree of development. There has been a tendency

to look at the slower developing pullets as culls. This isn't necessarily true, although you will find most of the culls in this group. To put it another way, a cull pullet usually develops slowly, but so do some pullets that are not culls.

The age at which a pullet lays her first egg is more a matter of heredity than it is of feeding or care. Even so, picking out the most mature pullets and putting them together will give them a better chance, also a better chance to the slower maturing birds. If the birds in each pen are graded according to development and begin laying about the same time, the feed and management that is good for one will be good for all.

Let Them Grow

There has been a gradual change in opinion about attempts to hold back pullets and keep them from laying until they are fully mature. Here again experiments have shown that heredity is the most important single factor in determining at what age a pullet will lay her first egg. Undoubtedly feeding more grain and less mash will delay the date of the first egg, but it is difficult to see what has been gained. You are just holding back the development of that pullet when a better program would help her to grow rapidly and produce at a younger age. It is my own opinion that a well-grown, healthy pullet will more quickly reach the point where she lays a full-sized egg than one that is held back.

Swat Parasites

The warm weather we have been having has been ideal for the multipli-

cation of lice and mites. If haying and harvesting has occupied most of your attention, take time to examine your houses and hens. If you are planning to give the flock a complete culling by handling each bird, that will give you a good opportunity to douse them with louse powder. An even simpler way of discouraging lice is to use a nicotine product on the roosts. This vaporizes during the night and the vapor kills the lice.

Red mites are comparatively easy to control. Where they overrun a hen house, don't excuse yourself. It is just a matter of neglect. Periodic painting of roosts, nests, and in extreme cases the walls too with heavy oil or some coal tar product will check them.

What Do You Think?

A number of interesting letters on both sides of the "Water Witching" question have been received. Due to lack of space in this issue we are holding them to appear in the August 31st issue.

Meanwhile send us your letters for "What Do You Think?" on the question, "Should pullets be held back so they will not lay until they are full grown or should poultrymen attempt to induce them to lay as soon as they will?"

To Pick "All-American" Hen

At the 92nd Boston Poultry Show, to be held in January, the All-American Hen of the Year will be picked. This competition is open to any hen that has made a good record for her breed in any official laying test in the country. The Director of the 2nd All-American Hen Contest is Professor Robert C. Ogle of the State College of Agriculture, Ithaca, N. Y. If you are interested, you can get full particulars from him.

Grange Cleanings

(Continued from Page 11)

just put on the market a very complete cook book. The book contains over 600 tried and tested recipes besides 7 pages of valuable household hints. All of the contents of the book were contributed by the members of the 23 Granges of Delaware County. The books are 50c each, and will be mailed to anyone whether a Granger or not upon receipt of 50c in stamps, coin, or check. Send orders to: Mrs. Tracy Neish, Chairman of Service and Hospitality Committee, De Lancey, New York, Route 1.

* * *

A SUCCESSFUL Grange organizer of the past year in the Northeast was E. M. Farr of Chester, Vermont, chairman of the executive committee of the Vermont State Grange. Several flourishing subordinate units are now functioning in the Green Mountain State as the result of Mr. Farr's organizing skill, and he has his eye on other fields from which definite reports are likely to be soon forthcoming. For a quarter of a century Mr. Farr has been a rural mail carrier and has built up a wide acquaintance, out of which his Grange organizing ability is a natural consequence.

* * *

AS THE RESULT of the tree-planting campaign carried out by the Granges in Massachusetts the past year, in the endeavor to replace some of the trees destroyed by the hurricane of September 1938, the latest reports show 3357 evergreen and deciduous trees already planted, besides thousands of fruit trees of all varieties. Many roadside shade trees in villages throughout the Bay State bear impressive testimony to Grange interest in community welfare.

* * *

DURING JUNE, twenty-two Patrons in the Empire State were awarded Golden Sheaf certificates for 50 years of continuous Grange membership.

Don't Let Your Accident Insurance Policy Run Out

If you have been notified that your policy is to run out soon, renew it right away with our agent or direct to the office.

North American Accident Insurance Co.
10 NORTH CHERRY ST., Poughkeepsie, N. Y.

Here is an arrangement recommended by the Vermont Department of Agriculture for grading and packing eggs efficiently. The bench is approximately 2 ft. high, 6 ft. long, and 30" wide, with a shelf 2 ft. above the bench. The scales and candler are attached to this shelf, which also contains cleaning equipment, flats, fillers, nails, and labels. A basket of cooled eggs is put in the middle of the bench with a case on either side. With all of the equipment concentrated, the entire job can be done with one handling of the eggs.

"Back-to-School" Clothes

BY MRS. GRACE WATKINS HUCKETT

GETTING READY for school is a pleasure and may be somewhat bewildering with so much from which to choose. Materials range from sternly practical to the gay and giddy; patterns are equally diversified.

Some girls look better in tailored things while the softly feminine styles bring out the best points of others. Bright colors are worn to advantage by individuals of high coloring, either blond or brunette, while others having more delicate complexions, neutral hair and eyes of less pronounced color require the subtler shades. Therefore in selecting either color or design for any individual, her personality or type is the real foundation upon which to base a choice—this applies both to little and big.

The new fall silhouettes emphasize side drapes, front fullness, surplice bodices, wrap-around, back fullness, accordion pleats, unpressed pleats and pocket detail in dresses. Jacket costumes are very important, coming in lightweight woolens, wool jersey, crepes, failles and velveteens. Suits feature mannish jackets with flared skirts, oftentimes combining black with color, jackets being longer than heretofore.

Suit and jacket costume colors offer a wide range of greens in shades including lava, pale, warm, deep and bright shades. Blues, grays and brown or cocoa shades also are noted in the fall showings.

Pin-wale corduroy made of fine
(Continued on opposite page)

To Order Patterns

Little Girl's Suit No. 3411—Sizes 8 to 14. Size 8 requires 2 yds. of 35-inch material for jacket, 1½ yds. for skirt, ¼ yd. 35-in. lining, ¼ yd. contrasting.

Princess Dress for Young Girls No. 3412—Sizes 6 to 14. Size 8 requires 2¾ yds. of 35-in. material, ½ yd. contrasting. Pattern includes a bolero (not shown.)

Hat Pattern No. 3447—Includes 4 different hats, sizes 2 to 10 years (19, 20, 20½, 21, 21¼-inch head-size.) For material requirements, see pattern envelope.

Brother and Sister Outfits No. 3420—Sizes 2 to 8. Size 4 requires 1¾ yds. 35-in. fabric, ½ yd. contrasting, 3 yds. braid for dress; ⅞ yd. 35-in. for trousers; 1½ yds. 35-in. for boy's blouse, 3 yds. braid.

Side-Button Frock No. 3423—Sizes 14 to 42. Size 36 requires 4½ yds. of 39-in. material or 3¾ yds. 54-in.

High-Waisted Frock No. 2976—Sizes 11 to 19. Size 15 requires 4½ yds. of 39-in. material, 1 yd. ribbon.

Suit Classic No. 3004—Sizes 12 to 20. Size 16 requires 1¾ yds. of 54-in. material, 1½ yds. 39-in. lining, for jacket; 1¾ yds. 54-in. fabric for skirt.

Day-Time Dress No. 3377—Sizes 12 to 40. Size 16 requires 3¾ yds. of 39-in. material or 2½ yds. 54-in., ¼ yd. contrasting.

Slip No. 3326—Sizes 11 to 19. Size 15 requires 2¾ yds. of 39-in. material, 3½ yds. lace. Pattern also includes floor length evening version.

Pajamas and Dressing Gown No. 3163—Sizes 12 to 40. Size 16 requires 4¾ yds. of 39-in. material for pajamas; 2¾ yds. 39-in. fabric, 1¼ yds. contrasting for dressing gown.

TO ORDER: Write name, address, and pattern size and number clearly and enclose 15c in stamps. Address Pattern Department, *American Agriculturist*, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our new Fall Fashion Book.

(Continued from opposite page)
combed cotton yarn appears even in dresses and no doubt will prove very popular with the school-going crowd. Deep shades of rose and blue for light moments, leather brown for street wear, winter pastels for sports and children's clothes, tangerine, olive and pale blue for corduroy dresses, gray for wool or velveteen dresses and jackets, and companion chambrays for school dresses are some of the possibilities for the fall.

Faille and bengaline continue in interest for dresses and jacket costumes while mossy crepe and canton crepe are expected to be very popular. A heavy ribbed black silk ottoman with the rib going round and round the very narrow silhouette is one of Schiaparelli's dinner suit interpretations. Incidentally, the very narrow, straight silhouette seems to be indicated in the early style showings. Black will lead off as a favorite color, with other fall colors following strongly.

Tweeds are lighter in color and smoother in feel. Big plaids are still selling well while the usual tweedy mixtures in unusual color combinations of blues, yellows, black and white are in soft finish. Shepherd checks in black, navy or brown and white are always good, while the herringbones are always classic.

Jacket costumes are wonderfully convenient for fall. Our little girl's suit, No. 3411, exemplifies this in its jacket and suspender skirt combination. The jacket pattern offers a choice of a plain tailored collar or a sailor type; mix or match materials, new or used—it has lots of possibilities.

Young girls love full skirted frocks with their free, unhampered swing. Pattern No. 3412 buttons all the way down the front and with or without the tie-sash to give a neat fit through the waist and with or without the bolero (not shown in the illustration), the school girl may be ready for any occasion.

As every mother knows, hats are a great problem. It is a great comfort, and likewise a great saving, to be able to contrive cute headgear to match costumes. Hat Pattern No. 3447 includes four different hats, one or more of which would surely be suitable for your own daughter's particular type.

Tiny tots like the brother-sister outfits and look quite distinguished in matched colors and design. Such an outfit is pattern No. 3420—the girl's featuring a roomy pleated skirt, while the boy's has button-on trousers.

Early fall's fashionable black dress could be designed along no better lines than those in Pattern No. 3423, with its side-front trim, its princess lines and air of general smartness. It lends itself equally well to the faille and bengaline silks or to the lightweight woolsens.

One style note emphasizes soft draping of fullness in tops of lightweight

dresses and is nicely carried out in pattern No. 2976. This sleek little frock with its high-pointed waistline gives youthful figures those long, lean lines which they covet. Perky bows do their bit for the general youthful effect.

For downright hard wear the classic suit is probably the most useful outfit in the high-school or college girl's wardrobe. Pattern No. 3004 has fine lines and emphasizes the best of the season's style points. Worn with sweater or blouse and with varied accessories, this outfit would take her to anything short

of a really formal occasion.

The tailored dress is ideal for fall wear and when winter comes it goes under a coat with perfect ease. Pattern No. 3377 features an unusual front with its square yoke and becoming fullness. The skirt has the wanted flare; besides, its gores fitted snugly at the waist serve also to hold the garment in shape.

All girls need plenty of slips and it is a wonderful saving to make them at home. Also, it is then possible to fit them exactly to the wearer's own figure—highly important because the fit of the dress depends upon the fit of the slip. Pattern No. 3326 may be made as pictured or with a stay-up camisole top.

A pajama and dressing gown combination is beloved by every girl and woman. Pattern No. 3163 invites the home sewer to exercise her own inventiveness with colors and materials to express her personal taste. For the traveler the matched-up outfit is essential, and no college girl would think of doing without one.

An Amazing Offer

INSTALL A UTICA HEATING SYSTEM NOW ON THESE SPECIAL SUMMER TERMS!

"Am I out of your way enough so you can go ahead with your house-cleaning in peace, Dear?"

The Strange Discomfiture of "White-Eye"

BLEAK and blue were the mountains of the upper Androscoggin Valley. How wild they looked, and how the wind blew that early November morning in 1873—the morning I set off to "keep school" for the first time.

In general it was held to be good policy for a beginner to secure a school where he was not too well known, or not known at all. Hence the inference will be easy why it was, on that windy morning, that I was heading for one of the remotest districts in the county, known as "Jericho."

My kind old grandfather was carrying me and my new trunk of books and clothes to Jericho in the express wagon with "Old Sol." We had seventeen miles to go, and started at four o'clock. It had rained so violently for the two previous days that we did not even attempt to start until Monday morning—the morning school was to begin. On Monday the weather had cleared, but it had turned very cold and rough.

Grandfather's furrowed old cheeks reddened and his nose turned blue as, wrapped in his curly, yellow buffalo-skin coat, he drove sturdily on through the gusty tumult; and sitting beside him, I was trying hard to possess my mind with fortitude and to summon courage, for at a little hamlet a few miles ahead I was going before Squire Danforth to be examined for my schoolmaster's certificate. The squire was said to be severe with young teachers the first time they came to him.

As we drove on, grandfather, who secretly feared for me, began asking certain admonitory and leading questions designed to fortify and freshen my mind in regard to compound interest, equation of payments, vulgar and decimal fractions, and square root. He also exhorted me to alertness in geography, and to great steadiness and caution in parsing, and above all he warned me to watch the squire and not let him trip me.

"If he asks you what you don't know, keep your mouth shut," the old gentleman finally advised me. "Better not to answer than to state what isn't so."

In point of fact, Squire Danforth, when we reached his office, did not prove at all terrible, but rather sympathetic and inclined to give me a confidential talk on school teaching. He asked only a few simple, easy questions, and said, "I guess you are pretty well posted."

"But I do wish there was a little more of you," he added, with a laugh, giving my small biceps a squeeze. "Think you can keep top of those big boys? There is one pretty sassy chap among them. I had to go up and turn him out of school last year; but I hear he has gone into the logging swamp this winter."

We still had five miles to drive before Jericho was reached, and then I had to call on the district school agent to ascertain where I was to board; so that, although I made all possible haste, it was half past nine before I could unpack my trunk, lay out my books and ruler, and proceed to the schoolhouse.

Both the house and the pine thicket seemed to swarm with yelling boys and girls as I approached; but when they spied the new schoolmaster coming, they all dived inside, and my entry was made in a hush so profound that I could hear my own heart thumping.

My pupils were all in their seats, and every eye was upon me; but on first entering I could scarcely see them or anything else; the place was as dark as a dungeon.

There were forty-one scholars, ten

By C. A. STEPHENS

in the back seat, several of whom were considerably larger than their schoolmaster. One girl stood nearly a head taller, and three of the large boys actually had beards!

My opening remarks had been carefully thought out; they were ambitious, and of a high and soaring character. I laugh and wonder now when I recall what I planned to do and what I expected my pupils to do that term. Besides the daily routine of school studies, I instituted a public lyceum on Friday evenings for discussing national questions; also historical readings for Monday night; a parents' meeting for Tuesday; and a spelling-bee Wednesday evening.

I did organize all the other "exercises" and kept them going, more or less successfully, but naturally was obliged to take the lead in all of them in matters of preparation, selection and presiding.

I understand a little better now why I became so tired and went home to my boarding place so exhausted that I would drop on the lounge by the sitting room air-tight stove, and have to lie there half an hour before I could eat my supper and start out again for the evening.

Good Aunt Milly and Uncle Andrew Chase—what a debt of gratitude is still due them from me for their parental kindness! When grandfather left me there that first morning, I thought that I would not like the place, for they were old people, nearly seventy. Theirs was a comfortable, two-story red farmhouse, only a quarter of a mile from the school, but it seemed quiet to the verge of loneliness. Uncle Andrew and Aunt Milly had lived there quite alone for twenty years.

I was homesick on the first evening; for although they made me welcome, they were not talkative at first, but sat regarding me with kindly old eyes,

observing the sort of youth they had taken into their house. Ere long I began to perceive that they both possessed a rare fund of quiet humor.

As the weather grew colder, however late I was in coming home, I always found a hot block wrapped in soft flannel in the foot of my bed, and a little pitcher of creamy ginger tea, or like warm drink, and a piece of pie set where it would keep hot for me on the top of the old Franklin fire-frame. Uncle Andrew and Aunt Milly never complained when I came in late, although I must often have waked them at eleven o'clock. A lamp was always left burning on the sitting room table.

Often, too, I would hear Aunt Milly's soft old voice from the adjacent room, saying, "Now take off your boots and give your feet a good toasting before you go to bed. You will sleep all the better for it."

One morning, when I had been there about a fortnight, I found a pair of fine, thick woolen socks beside my boots, in place of my own dilapidated foot gear.

"Aunt Milly, I think I must have Uncle Andrew's socks here!" I called out at the door.

"Oh, I guess not", she said. "No, they aren't his," she added, after looking them over with well-feigned attention.

"But where did they come from?" I exclaimed.

I could elicit nothing but pretended astonishment from her, however, and put them on, although at first it troubled me and I did not quite know what to do about it.

Ere long Uncle Andrew and Aunt Milly began occasionally to address me as "Freeland," although that was not my name. I fancied that they were under a misapprehension and did not like to correct them. Later in the winter I learned that they once had a son named Freeland.

Uncle Andrew soon began to inquire at the supper table how school had gone during the day. For it was easy to see, I suppose, that I was often troubled, sometimes, indeed, well-nigh in despair. At first I felt impatient at being questioned, but soon discerned that their inquiries were prompted by solicitude for my welfare; and indeed they gave me a great many valuable bits of advice as to how to manage certain unruly boys.

As Uncle Andrew was an old man, it

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Send poems to Poetry Editor, *American Agriculturist*, P.O. Box 367, Ithaca, N. Y.

Contented Heart

I measure my pleasure in simple things;
An oriole's call and a flash of wings,
Sheep on a hillside, waving corn,
The East aglow with the rosy morn.

There's a wealth of pleasure in simple things;

A far-off cow bell that faintly rings,
A waterfall tumbling over rocks,
A garden pathway and hollyhocks.

I never grow tired of simple things;
An old grey stone where a cricket sings,
Green mossy carpets in wooded nooks,
A cozy fire and friendly books.

I thank Thee, Dear Father, for simple things;
The hush that the fall of evening brings,
The rest that comes from a day well spent
And peace that dwells in a heart content.

—Ruth Atwood,
Spencer, Mass.

had occurred to me that I ought to help him bring in the night's fuel and bear a hand at pumping water for the cattle at the barn. I soon learned, however, that he did not wholly like to have me do this. Out at the barn one day he took occasion to show me that he was still very strong, as well as remarkably quick and active for a man of sixty-nine. I had still further proof of Uncle Andrew's physical prowess less than a fortnight afterward. I was having trouble at school, serious trouble, chiefly with a large boy whom the others called White-Eye. It was the same boy whom Squire Danforth had expelled the previous winter. He could hardly be called a boy, as he was twenty years old, very strong, thick-set and heavy. The nickname of White-Eye, by which I will continue to designate him here, was from a white scar on the cornea of his left eye, the result of a puncture when a child. The eye had also a cast which did not add to the fellow's good looks, and his countenance at best was not prepossessing.

It was supposed that White-Eye had gone to work with a logging crew for the winter; but sufficient snow had not fallen, and during the second week of school he returned home and made his appearance at the schoolhouse, bringing only his arithmetic and slate.

If I had met White-Eye more cordially and displayed a genuine interest in him and his welfare, I have little doubt that I might have won his good will and made the term of use to him. He was sadly in need of education. But I can see now that I was prejudiced against him from the start. Probably, too, I was a little afraid of him, for I was no match for him physically.

Partly in consequence of this lack of cordial feeling, as is likely, White-Eye began soon to play pranks. He was idle, and sat for much of the time in a back seat, leering at me and inciting the younger boys to mischief.

When this had gone on for several days, I requested him to remain after school one night, and told him that he must take up other studies and behave differently, or I would have him expelled.

Thereupon he threatened to thrash me and dared me to lay hand on him—an impertinence I judged it more pru-

The Song of the Lazy Farmer

WHEN FAIR time comes around once more, I dress me all up in my store clothes and I hie myself away, to see the livestock, so I say. I want to educate my brain by studyin' each line and strain, to see what breeding takes the prize. I'll git myself almighty wise a-watchin' at the judgin' ring to study form and fit, by jing. New farm machin'ry on display shows how to make our farmin' pay, a feller must keep up to date, the fair's the place to educate yourself about the things that's new, you learn a lot before you're thru.

Now that's the story that I tell Mirandy Jane, so all is well, she lets me go without a kick, and then I take my walking stick, and when I git inside that place I buy a ticket to the race. With cows and porkers all forgot I sit myself upon a spot where I can see them horses run, and then I have a lot of fun. If track is dry or if it's mud there ain't a thing that stirs your blood

like watchin' horses trot or pace and fightin' hard to git first place, or mebbe runnin' down the track with lively jockeys on their back. You clean forgot each fret and care a-watchin' races at the fair and when it's done, then I explain, back home, to my Mirandy Jane, how valuable it was to me, to be right on the spot and see the judge, when he had looked them o'er pin ribbons on the first prize boar.

dent to ignore. The next day, which was copy book day, we found all the ink bottles filled with sawdust. White-Eye had come to the schoolhouse before anyone else that morning; and one of the little girls told me that she had seen him filling his pockets with sawdust down at the shingle mill.

That night I wrote a statement of the case in detail, and sent it to the school committee the next morning. Squire Danforth knew White-Eye well. Without waiting to take the usual preliminary steps, he sent him notice to keep away from the schoolhouse for the winter, and added a hint that if he heard any further complaint of him, he would institute proceedings to send him to Cape Elizabeth—the state reformatory school.

It is not strange, therefore, that White-Eye, from his point of view, entertained spite against me and plotted revenge. He did not come to school again; but on the following Monday evening, when I set off for the schoolhouse to rekindle the fire for the "historical reading," Uncle Andrew, a little to my surprise, went along with me. I had told him of my troubles with White-Eye, and it seems that the old man thought I was in personal peril. He said not a word to that effect, however, but went along casually, as if to assist me.

The old gentleman went home after we had kindled the fire and the young people began to arrive.

The next evening was the parents' meeting to talk over the children's progress — always sparsely attended; but I had kept it going. I lost sight of Uncle Andrew as I was setting off. The evening was cloudy. It was as dark as a pocket inside the house; but I walked slowly forward to the desk and was striking a match, when somebody grabbed me there in the dark—grabbed at my throat and tried to trip me. We clinched, and then I realized that my assailant was White-Eye.

We fell across the teacher's chair, and went over the warm stove, he grappling at my throat, I trying to break away, but neither of us saying a word. I was fighting for life, for I had little doubt that White-Eye meant to kill me and escape to the lumber regions. He easily pushed me backward across the floor to the door leading into the wood shed, which was in the same end of the house as the outside door.

I struggled hard, but was pushed violently through it and fell clear of him—when suddenly I had a sense of something, or someone, brushing past me from behind. I was on my feet the next instant and then perceived that the fight was still raging in some inexplicable manner in the schoolroom, and that, oddly enough, *I was no longer in it!* Round and about the combatants went, over the stove again and against the cracking benches, while I, still panting, stood in the wood shed door, wondering what had happened.

With a clatter and a rush, the combat now came straight for the outside door, tumbled through it, and fell over the little handsled of wood with a crash.

White-Eye's voice then rose in a doglike howl, as if from fear or pain, and I heard such whacks as made my flesh creep.

Immediately White-Eye broke away, still yelling, but was hotly pursued out into the road and down the hill toward home; and at every step I could hear those dreadful welts, sounding like the blows of a teamster upon oxen.

I had hastily followed out to the road, and waited there for some time after the chase passed beyond hearing. No one came back, however, and at last I lighted up the house and had it warmed when the six or eight parents arrived, half an hour later. I was somewhat excited, but not much hurt, having received only two slight scratches on my neck where my assailant had

torn off my shirt collar and tie. I explained very briefly why I was in that disheveled condition, and some proper indignation was expressed by the people. Otherwise, little was said at the time.

When I went home, Uncle Andrew's boots stood there at one corner of the fire-frame. He and Aunt Milly were abed, but she spoke to me as usual. I felt pretty certain as to who my friend in need was, but surmising that Aunt Milly might not know of it, I said nothing.

The talking, in fact, did not begin until next day, and came from the adversary. White-Eye was actually a good deal hurt, and sent for a doctor. In self-defense the young rascal had to explain his plight, and he set a most amazing story current. It appeared that—there in the dark—he had not become aware of a third person. He thought that I did it all; that I had suddenly rallied and displayed terrific prowess. He declared that I was a regular "slugger", that small as I looked, I could knock down a horse with my fists, that no two men in Jericho could handle me!

The public effect was singular. The other large boys at school and every

man whom I met regarded me with most curious and respectful looks. If I spoke sharply in the schoolroom, I cowed the pupils into absolute silence.

I had grave doubts as to the propriety of accepting my laurels. I had no means of sustaining such a reputation, and felt like the ass who paraded in the skin of a lion.

For a day or two after this episode, Uncle Andrew seemed to avoid meeting me alone; but I cornered him at last out at the barn, and began in a roundabout way to thank him for coming to my aid. I thought that I caught a twinkle in his eye at first, but he immediately expressed the utmost wonder as to what I meant, and who it could possibly have been there in the dark wood shed!

I was, as will be seen, in a very queer position; if I denied the story of my exploits, I must implicate Uncle Andrew, and possibly involve him in some future difficulty. On the whole, it seemed as well to say nothing at all about the affair, at least while I was in Jericho.

Editor's Note: In an early issue we will print another story by C. A. Stephens concerning Aunt Milly and Uncle Andrew.

Personal Problems

Happier As You Are

Dear Lucile: I have been a widow for 7 years, am 54 years of age, have a few thousand dollars, own my home, and earn my living by taking roomers and working out. About 6½ years ago a widower living in our town began to pay calls at my house and to do everything possible to make life easy for me. I certainly have the deepest feeling for him, but here comes the sad part. His health failed him to such an extent that he has been unable to work and has to have assistance from his daughter.

In the meantime I have met another widower, a very nice man who has a good job, owns a nice home and wants to marry me. I work at his home every Tuesday. He is a wonderful provider, a hard worker and says, "Oh, for a happy home once more." He says he has prayed for a good helpmate and thinks he would have one if he could win me. When at his house, I seem to be contented, but I know I am going back home, and when I get home I am contented and don't care if I never see him. He calls every Sunday and wants to take me out, but if I can get out of it I do. I don't ask him down much. The other fellow did so much in my home to make it attractive that I feel as though I couldn't let any other man have the good of it.

The first man has no home of his own now; his daughter rents a room for him to live in. He has a crippled boy who stays with a sister in winter and with his Dad in summer. When I had my car I took him places and treated him like he was my own son. His dad says he can't stand to see me married to someone else and pleads with me to stick by him. Of course he knows and I know that I can't marry him under his condi-

tions; but would I ever be happy married to the other man and knowing that the first one loves me as he does? My life and sympathy have been all for him these six years.

Do you think it best for me to run my chances and get along without marrying? I don't seem to have real love for the second man, but it might come.—*Between Two Fires.*

My advice to you is to continue on as you are—living alone—rather than try to force yourself into a marriage with a man you evidently don't love, or to take on as your husband a man who would be financially and physically dependent upon you.

There seems to be no object in your marrying for a good home, since you already have one of your own. And in the case of the first man, perhaps you have "mothered" him until you have a maternal feeling for him, which you are confusing with love. It is not the same, and isn't a very safe, satisfactory substitute in a marriage.

Why not wait a while instead of forcing the issue? It might be possible that someone would yet come along that you could really love. I truly do not feel that you will be very satisfied if you choose either of the men you have described to me. However, the decision rests with you.

* * *

Age Not Biggest Problem

Dear Lucile: For two years I have worked near a very nice girl. I admired her tremendously yet seemed afraid to get acquainted, as I am very slow on that, but somehow eight months ago we met and have kept company very steadily. It seems as if we just can't be separated for any length of time, but I feel badly. Here's what worries me:

1. I'm 29 and she is 33; but older girls always fascinate me.
2. If we married we would have to live with her mother, who is a widow. We get along well now, but her mother has an awful temper.
3. I don't make much money; her mother gets something from an insurance settlement each month; the girl works and makes more than I do. If we married and had children, maybe she would have to quit working—at least for a while—and I'm not sure that she could adjust herself to having less money.
4. She likes to go to parties, etc., but they bore me; yet she can drive a car and might get along without me on this.
5. I may be below her class. She's half English and half French. I am Slavic-American, yet her mother and brother have a lot of Slavic friends and like them very much.

Here are the points in my favor and that I like about her: 1. Through her

A Woman's Wealth

By Grace Noll Crowell.

My small house faces West, and I Can look across the fields and see Beneath the blue and arching sky A hill, a neighbor's house, a tree, A silver brook, a sea of wheat, And oh, the windy day is sweet!

All this is mine: none has a claim To that blue distance stretching far: The morning light, the sunset's flame, The sickle moon, the evening star — Oh, everything belongs to me As far, as far as I can see.

And in the center of it all Is my good man upon his plow. If I should lift my voice and call, A clear high call, he'd hear me now. . . . His plow goes deep, and straight and far, And none are happier than we are.

encouragement and advice I have already stepped closer to my dream of success as an artist. 2. Our religion is the same. 3. We love the same artistic things. 4. Part of her home is hers, and if we married we could live there. 5. She has the spirit to make me tackle things I'm afraid to alone. The only real objection I'm afraid of is the difference in our age. Does this matter so much—*All-at-Sea.*

While your case does present problems, I do not think the four years difference in your age and the young lady's is one of them. The biggest problem, as I see it, is that you might have to make your home with her mother, which is always risky. You might find her changed toward you, after marriage, especially as she would see her daughter bearing the financial burden of the marriage, as you say she makes more than you do. It seems that to insure your happiness, you should work out some plan of starting out in a home of your own, or else a very definite part of the mother's home should be reserved for your use exclusively. That might be possible, inasmuch as you say the girl owns part of the house.

You seem well suited to each other, and I can see no reason why you should not be happy.

Use Formal Signature

Please tell me through the **Personal Problems** department how a secretary should sign the minutes of a club meeting. Should she say, "Respectfully submitted" and read her name, and should these closings be read when the secretary finishes reading the minutes?—*Uncertain.*

A secretary reads the minutes, then closes with "Respectfully submitted, Mary Jones, secretary." This is done at each reading.

Good Books to Read

DOC'S WIFE, Fay Cashatt Lewis.—Although the young physician's wife was also a doctor, she was a little taken back to find that to the village folk she was just "Doc's Wife." It's a straightforward story of real people, and although she loyally makes her husband the central figure, every page reveals her own good sportsmanship, her understanding, and her fine sense of humor.—*The Macmillan Company, New York. \$2.00.*

Good Movies to See

PRIDE AND PREJUDICE. Greer Garson has the prejudice and Laurence Olivier the pride—until they fall in love. Adapted from Jane Austen's classic novel.

BRIGHAM YOUNG. Pioneering Mormons in 1844 on trek to Salt Lake Valley. Tyrone Power, Linda Darnell and Dean Jagger.

ONE MILLION B.C. Victor Mature, Carole Landis, Lon Chaney, Jr. Cavemen and dinosaurs cavort about in this picture of life as it might have been in prehistoric days. Good trick photography.

"Hereafter, I won't be responsible for any more candy Miss Helen Mattigan charges to my name here!"

New York State Fair Program

What to See — When and Where to See It!

SUNDAY, AUGUST 25TH

Inspirational Service — Sacred Concert, 2:00 P. M. in the Coliseum. Processional, 2:30 P. M. in the Coliseum, followed by complete service, including the feature address by the Reverend Albert W. Beaven, D. D., on the subject: "America's Inner Defenses". Indian Village Religious Ceremonial, 5:00 P. M. at the Indian Village. Twilight Community Singing, 6:00 P. M. in Empire Court, Homer A. Rodeheaver, leader.

"The Paths of Freedom", historical pageant-spectacle, 8:30 P. M., in front of the grandstand.

AGRICULTURAL FEATURES

Horses—Breeding, draft, farm and commercial classes on exhibit in Draft Horse Building.

Cattle—All classes on exhibit in Cattle Building.

Sheep—All classes on exhibit in Sheep and Swine Building.

Swine—All classes on exhibit in Sheep and Swine Building.

Poultry Show—All classes of poultry, pigeons, rabbits and covies on exhibit, and Egg Show and Turkey Production Show in Poultry Building.

Flower Show—Judging of Garden Club classes, many other classes on exhibit.

Livestock will be on exhibition all through the week. Time of judging is given in the daily program on this page.

* * *

MONDAY, AUGUST 26TH

Grand Circuit Horse Races—2:17 Pace for ½ mile track horses, 4th division pace; The Trotting Club Stake, 1st Division Trot; The Trotting Club Stake, 2:14 Trot, for ½ mile horses. First event starts at 1:30 P. M. Circus, hippodrome and vaudeville acts between heats.

"The Paths of Freedom", 8:30 P. M. in front of the grandstand.

AGRICULTURAL FEATURES

Cattle—Judging of fat cattle in the Coliseum, 2-5 P. M.; Junior Baby Beef classes in the 4-H Pavilion, 2-5 P. M.

Flower Show—Opening of thirteenth annual exhibition of the Empire State Gladiolus Society; Judging in many special classes in the Horticultural Building.

4-H FEATURES

Dairy Cattle Judging Contest—10:30 A. M. in 4-H Pavilion. Sheep blocking and trimming contest, 7:30 P. M. General Livestock Judging contest.

* * *

TUESDAY, AUGUST 27TH

Grand Circuit Horse Races—2:22 Trot for ½ mile track horses; 2nd Division Pace; The Trotting Club Stake, 2-year olds, \$7,000 Noyes trot; 4th Division Trot, The Trotting Club Stake. First event starts at 1:30 P. M. Circus, hippodrome and vaudeville acts between heats.

Horseshoe Pitching Tournament (between Horticultural Building and Grandstand) Sponsored by Farm Bureau and American Agriculturist. Preliminaries during afternoon.

State-Wide Spelling Bee—Starting in forenoon, Assembly Hall, Boys and Girls Building.

Flower Show—Featuring Permanent rock gardens, terraces, nooks, etc., in the Horticultural Building.

Horticultural Building the Newest and Biggest Hit

The newest structure on the grounds, the Horticultural Building, is expected to be one of the biggest hits of the 100th Anniversary New York State Fair, as a result of a vast, modernization project.

Striking display booths, decorated with arresting murals of farm scenes and set off with indirect lighting, have been installed. And in these, sixty-four organizations, including granges, farm bureaus and garden clubs, will present their exhibits.

Wide-spread changes in the method of showing flowers will also feature the building. Containers will be hidden from view, and thus the beauty of the show will be enhanced greatly by the uniformity of the displays of blooms and stems only.

As in the past, a feature will be the \$50,000 gladiolus show, staged by the Empire State Gladiolus Society. A new departure will be a miniature forest, backed by high murals and presenting four different types of woodlands. A naturalistic treatment, including rushing streams and waterfalls, will be an outstanding feature of these forests.

Historical Pageant

"The Paths of Freedom," a mammoth historical pageant-spectacle, with a cast of 1900, which will depict the stirring history of New York State from the time of the arrival of the first white man to the present day, will be the outstanding attraction of the 100th Anniversary New York State Fair.

The huge production is to have its premiere in front of the grandstand on the fair's opening night, Sunday, August 25th, and will continue each night through Thursday, August 29th.

It will be presented on a stage 600 feet in length, which will span almost the entire length of the grandstand. Infinite care has been exercised to make it historically accurate. Research, extending over several months, preceded the start of casting. Made up of amateurs, the cast has been in rehearsal under professional direction for more than six weeks.

Included among the many features will be ballet numbers, a chorus of 200 voices and the use of many special properties, including yokes of oxen, covered wagons, old-time carriages, etc.

The spectacle will portray the life of early Indians; early explorers in quest of a water route to Cathay; noted discoverers and colonizers, including

Every-Day Features at the Syracuse Fair

WILDLIFE SHOW—A Striking Exhibit, presenting live animals and Game Birds, in picturesque, naturalistic wintry settings in the State Institutions Building.

GRANGE EXHIBITS—Mass Exhibits, prepared by twelve granges, presented in the modernized horticultural building.

FARM BUREAU EXHIBITS—Effective displays, representative of the products of twelve counties, offered in new indirect-lighted, mural-decorated display booths in the Horticultural Building.

COUNTY HOME BUREAU EXHIBITS—Eight county exhibits, featured in the Harriet May Mills Building.

INDIAN VILLAGE—Offering a new attraction, an Indian arboretum, the only one of its kind in the world, also ceremonial dances and many other features.

DAIRY BUILDING—With its extensive display of dairy products, dairy machinery, apparatus and supplies.

THE ARTS EXHIBIT—Home and fine arts display on the Harriet May Mills Building.

NEW YORK STATE AGRICULTURAL MUSEUM—With a centennial display of rare old-time farm implements and household utensils, presenting many novel features, including a blacksmith shop, a wood-worker, a potter, etc.

MODEL HOME—A five-room, one-story, dwelling, built to sell in the public market for \$5,500 and embracing all the latest features in home construction.

THE FARM MACHINERY, HOUSEHOLD APPLIANCES AND PURE FOOD EXHIBITS—Representing an aggregate value of \$750,000 and housed in the Farm Machinery Building, the Manufacturers and Liberal Arts Building and the Pure Food Building, respectively.

MIGHTY MIDWAY—With its many varied rides and shows, featured afternoon and evening by Zacchini, "the Human Cannon Ball", who will be shot out of a mammoth cannon.

Champlain and Henry Hudson; the Dutch colonization of the Hudson River; the inauguration of the potent Wallon system, and the coming of missionary workers into every wilderness section of the state.

Also the inception of British control of the state, featuring major battles of New York, such as Ticonderoga, Saratoga, Crown Point, Fort Stanwix, Oriskany, Herkimer and Stony Point; the beginning of democracy and the ratification of the United States Constitution; the opening of the Erie Canal and scenes depicting the growth of agriculture, industry and education.

Striking sound effects will accentuate the spirit of the spectacle. Fireworks will contribute not only to the sound effects but also to the color of the battle scenes.

A. A. Advertisers Exhibiting At State Fair

The largest display of farm machinery and implements in its history will mark the 100th Anniversary New York State Fair. All available indoor space has been filled, and many exhibitors will have to show in the open or under tents.

Included among the farm machinery and equipment to be exhibited are tractors of all sizes and power, dairy equipment, barn equipment, poultry equipment, including battery brooders, starting and growing brooders, plows, harrows, cultivators, roughage mills, milk coolers and milking machines, ensilage cutters, reapers and complete combines in several sizes, corn pickers, huskers, shredders, spreaders, mowers, a complete line of garden tractors of both single and two cylinder models in walking and riding types, electric fence, hay balers, hammer mills, mulchers, potato machinery, grain threshers, corn shellers, and equipment for maple sugar production.

The Home Made Farm Equipment Show will be held in the Farm Machinery Building Court. Trucks and snow plows, will also be displayed in the Court.

The following list of exhibitors of farm machinery at the New York State Fair are advertisers in *American Agriculturist*. When you visit the fair drop around to see the newest in farm equipment and remember that only reliable advertisements are accepted by *American Agriculturist*:

Home-Made Equipment Contest

For the third year, an exhibit of home-made farm equipment will be a part of the New York state fair at Syracuse, under the supervision of James S. Morse of Levanna, New York. Numerous prizes are available in various classes.

Any and all kinds of home-made equipment, for farm or home, may be shown; any device which contributes to labor-saving or safety is encouraged, but patented articles are not eligible.

Special prizes are offered for the best safety device, the best self-feeder for calves on pasture, for the greatest originality in invention, for the best household appliance, and others. Competition is open only to New York state residents.

Home Bureaus Exhibit at State Fair

Considering efficient homes and united families the first line of defense for national effectiveness, Home Bureau women throughout New York State will demonstrate in eight exhibits in the Harriet May Mills Building at the State Fair, how a family's wise planning can lead to happier and more successful households.

The exhibits, sponsored by the New

Dry Your Wheat Before You Store It

WHEAT GROWERS using a combine this year are having a real problem. The grain contains so much moisture that dealers are docking it heavily or refusing to take it at all, and if held on the farm it must be handled carefully or it will spoil.

This problem of high moisture in wheat can be and should be handled on the farm, and there is no reason why farmers should sell it to dealers at a discount. Here's how:

1. Don't condemn the combine. Many of these smaller practical machines have come into the Northeast in recent years, and they are great labor savers. This year the particular moisture problem is worse than usual. Most years it probably doesn't bother much. Newly combined and threshed grain usu-

Wheat cut by a combine this year must be dried before being sold or put in the bin. The best way to dry it is to pile the sacks as illustrated in this picture.

ally runs about 14% moisture. This year much of it will average 18%. Grain with that amount of moisture cannot be safely stored without extra care.

2. The first thing to do is to beware of the danger. Grain will heat not only from the combine but it probably is well to be sure that grain harvested in other ways can be safely stored.

3. Don't harvest the grain until it is dead ripe.

4. If cut with a binder, dry out thoroughly in the shock and sweat it well in mow or stack before threshing.

5. Don't dump grain immediately in the bins. Instead, stack the bags up in rows with at least 6 inches between the rows on barn floors, and leave the doors on both sides open so as to get a current of air through.

Grain so handled showed a moisture content of 18% when first stacked in bags; but in four days it had lost 3%, and at the end of a week it was down to 14% and then safe either to store or to ship.

Professor Bussell of the New York State College of Agriculture also suggests that the lower the grain is cut the more green stuff will be picked up, resulting in a higher moisture content. Running the threshed or combined grain through a cleaning mill before storing will also take out some green stuff and reduce moisture content.

Oats, being a much lighter grain, are not so apt to heat after threshing or combining.

This situation did not become evident until too late to give you these facts in the last issue. There is still time, however, for many of you to use them and save money.

A Show Window for Agriculture

(Continued from Page 1)

Conservation and the New York College of Forestry. It is expected to surpass by far the wildlife show which attracted 159,000 people last year.

The State Fairgrounds will be more appealing than ever before. The entire interior of the huge Horticultural Building has been changed. Modern, indirect-lighted, mural-decorated booths will be used to display the striking exhibits of the granges, farm bureaus, garden clubs and other organizations in a way that is expected to make this building one of the biggest attractions of the Fair.

The Fairgrounds never were more inviting than they will be for the Centennial. Five miles of curbstones have been installed, hundreds of drains and catch-basins have been set, and all the streets have either been repaved or reconditioned, giving the grounds the neatest appearance in years. The weather has dealt kindly to the grass and its lush greenness will be accentuated by a myriad of blooms from the 285,000 bulbs and plants set early this spring.

The New York State Fair — August 25th-September 2nd.

Kernels, Screenings and Chaff

By H. E. BABCOCK

DESPITE the obvious window dressing which is being used in many quarters to cover up lack of real progress with this country's defense program, the effects of what is under way can already be felt.

Farm Labor Shortage

Farm labor is becoming scarce. This labor shortage is caused, not so much by the disappearance of farm hands from the picture, as by the fact that sons and daughters and other relatives of farm families are getting jobs and are no longer around to help with the work on the farm and in the farmhouse.

I am so sure that the labor situation in the country will become acute within the next year that I am personally rearranging all my farm plans so that I won't be caught by it.

Transportation Shortage

The next pinch which I feel quite certain farm people will feel as the defense program gets under way will come in the field of transportation. We have been living for years in a fool's paradise so far as transportation is concerned. Railroads have had a light business; trucks, buses, and passenger cars have been ours on demand, usually at prices which have slowly bankrupted the operators.

I can see all of this changing very rapidly. As farmers in the Northeast, we had better look ahead, in my opinion, and plan how we can cut down on our use of transportation when it becomes necessary to do so and hedge ourselves against the increased costs which I am sure we will be paying for before very long.

Capital Shortage

Possibly not within the next year, but I feel reasonably sure within the next three, we shall see a shortage of capital and interest rates will rise. Even if this doesn't happen, present interest rates are so favorable that it appears to be just ordinary good business to fix them for as far ahead as possible.

* * *

Pre-Milking

Although we always like to sell the dairy heifers we raise just before they freshen, we occasionally get caught with one or more which do not sell before they drop their calves.

Since around twenty grade and purebred Guernsey heifers each year constitute one of our important sources of income and since a fat heifer always sells better than a thin one, most of our Guernsey heifers put up tremendous udders before they freshen. Last year, we started pre-milking out some of these heifers and although we were not consistent in the practice, I think that we have all come to the conclusion that it pays.

I am sure that there is no sense in putting a two-year-old heifer through two or three weeks of torture with a hot, swollen udder right on top of the strain of freshening.

The boys aren't going to like to do

it, but we shall pre-milk this fall's crop of a dozen or so heifers if we keep them until they drop their calves.

* * *

Down Mexico Way

By H. E. BABCOCK, JR.

August 2, 1940.

This morning we were all able to breathe a sigh of relief since the irrigators finished watering the cotton last night. Some of the cotton suffered before the water got to it, which will cause the dropping of a few bolls. The crops dry out so rapidly once the low humidity winds start blowing that it is absolutely nerve-racking. With no rain in sight, we must wait for the water which seems entirely too slow. To add insult to injury, Mother Nature provided Roswell—five miles away—with an inch of rain.

Yesterday we took the county agent for a tour of our cotton fields to check up on our bug population. All in all, the results of the sweepings showed that we had an allowable infestation. It was satisfying to find that, in contrast to those who have been dusting every ten days, our single dusting has kept our infestation low. From now on we will keep a close check to see whether another dusting will be necessary.

The cotton which was planted first

Our power unit at Larchmont Farm consists now of four sorrel mules. They have completely won our hearts. They are strong, hardy, spirited, and believe it or not, equipped with a sense of humor. On this page we have grouped them into some poker hands—Above, three jacks; RIGHT, two jacks and a queen;—Below, four jacks with a queen high.

alfalfa will be cleaned up by tomorrow night. So far, it shows every indication of beating the second cutting yield by three or four tons. If this is true for the whole third cutting, we are going to be hard put to find room for it. Our yields have been so much higher than expected this year, resulting in a pile-up which would have been offset, if ex-

is now showing between eight and ten well formed balls to the stalk. If our management is satisfactory from now on, this indicates a yield of a bale to the acre. The whole success of the crop lies almost entirely on our careful checking and studying of the crop. A failure can hardly be blamed on the weather, since we control the rainfall through irrigation. Infestations of disease, worms, or insects are about the only other factors which may affect the yield, and it is up to us to recognize these dangers in time to apply controls.

The first fifty acres of third cutting

pected, by selling the first cutting. First cutting was worth eight dollars in the field, but recent rains have dropped the price to seven. The hay market in this section is regulated by range conditions, as much as anything. During drought periods, ranchers buy large quantities of good quality hay for supplemental feeding. With the ample range which this year's rain has provided, the only market is a local alfalfa meal mill. At the present time it is cleaning up by making seven-dollar hay into thirty-dollar meal.

Due to the necessity of watering our cotton first, we have been forced to

neglect irrigating our piece of maize which was planted late. The drought-resistant qualities of this wheatland maize continue to astound us daily. Each afternoon we expect to see it begin to brown and dry up completely. Instead, it continues to grow. Fortunately, we have been able to start watering it this morning, which will give it the necessary push to go ahead and make grain. It is sowed in twenty-inch rows, and had two harrowings when three inches high as cultivation. If we do not use this field for silage we will expect a yield of around one hundred bushels of grain to the acre.

All That's Smooth Is Not Silk

"I have just had a proposition from Dr. Ludwig Harpootlian of 607 86th Street, Brooklyn, New York, which was concerned with growing mulberry trees and silk production. I would appreciate any information you may have."

At one time, we are informed, Mr. Harpootlian was connected with the firm known as Silk Worm Industry, Inc. of 1270 Sixth Avenue, New York City, which was concerned with growing mulberry trees and silk production. In this connection it was interesting to read the recommendation of the Bureau of Entomology and Plant Quarantine, U. S. Department of Agriculture, Washington, D. C. They report that silk culture has been tried out at various times since Colonial times but no one has had any lasting financial success. It appears that silk worms and mulberry trees can be grown in this country but at a cost so far above that of Japan and China that it is not profitable. Previous to 1908 the Department of Agriculture made some appropriations but were discontinued after an investigation of the subject. Since that time other factors have entered the situation, namely the development of synthetic fibres closely resembling silk. We do not like to predict too far ahead but it is our opinion that no one now living will ever see a prosperous silk industry in this country.

Sold!

"A lady called at my home the other morning with what she called 'Stocking Medicine', telling me that our Pastor's wife was in favor of the deal and that she sent her to me—this was not quite true as the Pastor's wife was not in favor of it, although she did send the agent over to me as I am President of the Ladies Aid Society. I supposed this was 'okayed' and sent the woman to the treasurer of the Ladies Aid, saying we would take it and gave the agent \$12.00. She did not sign the receipt.

"I took the 'medicine' to the meeting and it was voted to return the goods and get our money back. I wrote to the address on the envelopes and the letter was returned marked 'no such address in the directory.'

"I think this woman should be advertised so that other churches will not get beat as we have. The address on the envelope of Stocking Medicine is 'Silk Service, Williamsport, Pennsylvania.' It also says 'sold under money-back guarantee—agents wanted.'"

Line Fences

In recent months more than the usual number of letters to the Service Bureau have involved differences of opinion about line fences. The law in New York State is rather definite and covers the following points:

Adjoining farm owners are expected to build and maintain half the line fence between the two farms. If the neighbor's stock gets through that part of the fence that you are supposed to maintain, you have no claim for damages against him; but if the stock gets through his part of the fence, you do have such a claim.

Where a neighbor refuses or neglects to build or repair his fence, you can get in touch with your Board of Fence Viewers made up of your Town Assessors, ask them to look over the situation and serve notice on your neighbor in writing to put his line fence in shape. If he still refuses to do this, the law states that you can build or repair the fence and that the cost of it is legally collectable from him.

One difficulty not covered by the

law occurs in the case of the neighbor who not only refuses to build or repair the fence, but who has no assets which are not tied up—a situation which makes it a little difficult to collect the cost in case you do the work.

Promises

About a year ago I answered an advertisement in reference to a correspondence course. A short time later a representative called on me and misinformed me about the course. He promised me a lot of things that would happen if I took the course, and told me that I could complete the lessons easily. So I gave him \$50 down, and promised to pay \$10 per month until \$224.50 was paid.

When the course came, I couldn't understand it or complete hardly any lessons. I decided to stop paying and drop the course. About that time I had secured employment with an insurance company. The company offering the course found that out and decided to sue me for the balance of the money. As it was, I hired a lawyer, and he was able to settle with them for \$32.50, charging me \$7.50 for his services. It cost me \$90 in all for just a few lessons that I couldn't work out.

I hope that more young people will read about this and that it may prevent some of them from getting caught like I did.—P. N. R., Vermont.

(EDITOR'S NOTE: This particular school puts out a good course. Young people who are considering correspondence courses can learn two lessons from this experience. First, read the agreement and discount all over-optimistic statements by agents. Second, be sure that you have the previous training to make it possible for you to understand the lessons and profit from them. To this I might add that no correspondence school, so far as we have been able to learn, ever guarantees anyone a position.)

The Cow Came Back

A subscriber sold two cows to a dealer, giving the dealer the privilege of making any test by a veterinarian; but with the distinct understanding that once they left the barn, they were the property of the dealer. Some time later, the dealer objected to one of the cows, and was told that he could pick out another one and that the subscriber would state a difference in price which the dealer would have to pay. The dealer made a choice, but objected to the amount the subscriber wanted.

Later the dealer, in the absence of the subscriber, returned the cow, and through an attorney is attempting to collect the money paid for her.

We have advised the subscriber to defend this action, and trust he will be successful. Where the situation has been reversed and subscribers have bought from dealers cows which have not been satisfactory, but where there was no guarantee, we have been notably unsuccessful in getting any settlement from the dealer. The situation ought to work both ways.

"I am very anxious to locate my uncle, Joseph Matatis. He is 57 years old, partially bald, about 5 feet 7 inches tall and weighs 160 pounds. He has brown hair. He is a Lithuanian but speaks English quite well. I last saw him about ten months ago. He had a broken leg and was admitted to St. Mary's Hospital in Amsterdam and stayed for three months. When he left he gave no information as to where he was going."—Miss Veronica Krecunas, R.D. 1, Amsterdam, N. Y.

If a subscriber has any clue that will help locate Mr. Matatis, we would be glad to have it.

It was a foggy night -- Mr. Cook's auto went off the road, striking a concrete culvert. He was fatally injured.

CLIFFORD J. COOK, Deceased.
Friendship, New York.

H. E. Mapes, Attorney
at Friendship, writes:

"To the administrators of Clifford J. Cook's estate you sent draft for \$1,000.00 payable under deceased's policy.

"The administrators and I commend the prompt and efficient service you have rendered in the payment of the death benefits provided under the policy."

AMERICAN AGRICULTURIST

THE FARM PAPER OF THE NORTHEAST

An Open Letter to . .

NORTHEASTERN Apple Growers

DEAR FRIENDS:

FOR YEARS I have been worried about the apple-growing business here in the Northeast. I used to own a farm on the edge of an apple belt, with a small orchard on it. When I had a good crop I usually got a good price. But now, as you know all too well, whether the crop is good or bad the price is almost always at ruinously low levels.

For years, apple growing was a profitable business. There were off years, of course, but on the whole good growers paid for their farms, made a good living for their families, and sent their kids to college. I don't need to tell you that you are not doing any of those things now. Since 1900 the per capita consumption of apples has gone down from 90 lbs. to 27 lbs. in 1935. Add to that the almost total loss of the export business since the war started and it is not hard to see why apple growers have been up against it in recent years.

But I am not discouraged as to the future for northeastern apples, because I know that there are things that can be done that will put this splendid fruit back into its place in the sun. That's the reason for this letter.

In the first place, you growers here in this Northeast country of ours start with two advantages—you are growing the finest apples in the world, and you are nearest to our biggest and best markets. But to a great extent you have lost these markets, and some of you have lost your shirts. Speaking very frankly, the answer is that you have been asleep at the switch. You have continued to improve your production methods so that the quality of your apples is even better than it used to be, but so far as marketing is concerned, you have permitted your competitors to steal your markets right out from under your noses.

Way back in 1922 when I went to *American Agriculturist* as its editor—our offices were then in New York City—I used to go out and try to buy eastern apples. Could I find one? Not on your life! People in the trade down there with whom I talked said eastern apples were all packed in barrels. When I tried to talk to some of you growers about a more attractive package for apples, you pooh-poohed the idea. You'd always packed them in barrels, and by the Great Horn Spoon you were always going to!

Well, you finally got out of that notion, but not until the other fellow had mostly got the markets away from you.

Back in 1900, when I was a boy on a poor hill dairy farm, an orange was a rare treat. Maybe we saw one or a part of one at Christmas, but that was about all. Now they are

more common on the consumer's table than apples. Why? Because the citrus growers have for more than a generation now been alive to the necessity of advertising and marketing, and they have spent millions of dollars to tell the consumer about what a wonderful thing an orange is. Now, as a matter of fact, you cannot eat an orange or a grapefruit without getting all messed up or shooting your neighbor in the eye with the juice. Citrus fruits are tasty, of course, but they contain no more health-giving properties than a good apple. But try to tell the ordinary consumer that and see how far you get. Why? Because for years he has been told about how necessary citrus fruit is for health.

Annually Sunmaid Raisins of California growers spend \$150,000 to popularize California raisins. The California Walnut Association spends \$250,000 a year; the California Prune and Apricot Association \$125,000; Florida Citrus Growers spend 1 cent a box

(Right) John Chandler, president of the New York, New England Apple Institute.

Displays like this increase consumption of apples. This one was put up by the Institute at the New England Foods Exposition at Boston last fall.

on oranges, 3 cents on grapefruit, and 5 cents on tangerines, making a total of \$110,000 annually, to sell citrus. Cranberry growers of Massachusetts and New Jersey, through the American Cranberry Exchange, spend \$170,000 annually for advertising. To advertise Idaho potatoes, growers pay 1 cent per hundredweight to raise \$55,000 annually. In Maine, potato farmers pay 1 cent a barrel to raise an annual fund for advertising of \$200,000.

Even apple growers in other sections have been more alive to the marketing problem than you folks have been. (Continued on Page 16)

CANNED CORN FOR COWS — SEE PAGE 3.

Mr. Jason Sawyer of E. Jaffrey, N. H., has been running a little experiment this summer. He has one litter of Hampshires, one litter of Chester Whites and one litter which is a cross of the two breeds. The market in recent years seems to want more of the bacon type of hog and up to date Mr. Sawyer thinks the pure bred Hampshires are ahead.

Pigs As a Sideline in New Hampshire

JASON SAWYER of East Jaffrey, New Hampshire, is in the pig business in a small way. There are 630 acres on his farm but some of it, he says, is useful chiefly to hold the rest of the farm together. He keeps about 60 head of cattle with around 30 that are being milked and in addition he has 5 brood sows.

"Do you want to hear how I got started in the pig business?" he asked. My answer was, "Yes."

"My father used to keep pigs," he said, "and I got pretty sick of looking after them and feeding them about dark after the other chores were done. But a few years ago a man wanted to pay me for some work in shotes and I took them. They were supposed to be barrows but it was after dark when they were picked out and on that fact hangs the story. I brought them home and put them down in the basement of the barn and did not see them for some time because the hired man took care of them. One day he said to me that I had better move that sow because she was about due to have pigs. I said, 'Man, you must be crazy. I have no sows.' He stuck to his story and on investigating I found that instead of 3 barrows I had a sow, a barrow and a boar. That is how I got started in the pig business."

Mr. Sawyer finds that he can get a good supply of skimmed milk in the summer at practically no cost and also during the summer months he gets garbage for the pigs from summer hotels.

"I am going to revise my management a little," says Mr. Sawyer. "I plan to have the pigs born in February and March. During the summer I can get plenty of skimmed milk and garbage and I am going to grow some corn for the pigs to 'hog down' in October. They will be on feed in the barn in the winter and I am going to market them in January or February."

Treat Seed Wheat This Fall

Winter wheat in New York this year is badly infested with "bunt" usually spoken of as stinking smut. The most effective way to control this for another year is to treat every bushel of wheat you sow this fall with one-half ounce of Ceresan. No one has ever counted the number of spores in a head of wheat affected with this disease but one man guesses that it must be at least a billion, which is plenty to infest every wheat plant on the farm.

There are two reasons why this seed treatment should not be neglected. The disease itself will cause a decrease of anywhere from 5 to 90% of your crop and what may be even more important no miller will, if he knows it, buy wheat

that has much stinking smut in it. Some men learned that expensive lesson this summer.

There is another kind of smut commonly called loose smut which is not so susceptible to treatment. The variety of wheat known as Yorkwin which is very common in Western New York is not very susceptible to this disease, neither is another variety known as Junior 6.

Winter wheat will be going into the ground very shortly. Don't take chances. Treat your seed. It doesn't cost much and will insure you against heavy losses.

A Flower for the Farm Wife

By JAMES ALDREDGE

THE FARM wife who loves flowers cannot go wrong when she devotes a part of her hard-earned savings to peonies. No other hardy flower thrives so easily year after year. The plants continue to survive the most severe

winters and form bigger and bigger beauty spots in the yard or garden.

Do not confuse the homely peonies of grandmother's day with the more recent exquisitely-colored, sweet-smelling varieties. As a considerable time has passed since most of these were originated and they are now widely distributed, many can be bought for less than a dollar.

Growing peonies does not require any work to speak of, outside of the planting. The latter should be done in the fall, from early September until the end of October. A place in the sun is best, and good rich soil is naturally preferred. Some experienced growers do not recommend the use of manure for soil fertilization, but if it has to be used, it should only be of the well-rotted kind, and care should be taken that none of it touches the roots. A good substitute fertilizer is a mixture of bone meal and wood ashes.

Peony plants have small, fleshy roots with pink and white buds or "eyes" at the top. In holes that are 3½ feet apart and 2½ feet in diameter, the latter should be planted, in the best soil obtainable, so that the "eyes" are about 2 inches below the surface level. Before planting, it is a good thing to loosen the soil well under the root and all around, so the shoots can easily spread outward and downward.

For the first winter a light covering of dry leaves, etc., should be used, but it will not be necessary in later years. Roots sold by a nursery are necessarily small and may not have more than two or three blossoms the first year after planting. But do not be impatient. In a few years your plants will be so large and so covered with blooms that they can be divided into smaller roots.

Before telling how this should be done, it might be well to advise the farm wife who cuts a bouquet for the house, to remember to leave at least two leaf shoots on each stem and not to cut lower than that. After the blooming season is past, the leaf stalks of the peony should not be cut down 'till they turn brown in the fall.

In dividing peony roots, a long-bladed spade can be used to dig deeply all around the plant. Then, by gentle pry-

Good Annual Hay Crop

Mr. E. J. Montague and his small son standing in a field of Hungarian millet and Manchou soy beans. The crop was put in June 18 and the picture was taken August 11. Mr. Montague planned to cut the field for hay, probably the day following the one on which the picture was taken.

"It takes about three days to cure this kind of hay but it has been my experience that cows like it as well as they do alfalfa and that it is approximately as valuable for feed."

Mr. Montague's farm is just outside the village of Amherst, Massachusetts. He has 60 acres of land, keeps Guernsey cows and delivers milk in Amherst. Because Amherst is a college town, he plans to milk 15 cows in winter and a smaller number in the summer when there is less demand for fluid milk.

ing, the root can be brought out of the ground. The collected earth should be gently shaken off, and then, with a knife, the root can carefully be cut up into divisions, leaving from three to five buds and a good strong root growth to each part. These parts will all make new peonies and have to be planted in the way described at the beginning. Ordinarily, roots can best be divided after a growth of from four to seven years. After a dozen years, the growth becomes so enmeshed that separation is far more difficult.

Choosing varieties depends, of course, on individual taste in colors, and it is surprising how this varies. Some people may not care for red varieties, but others will prefer them to whites and pinks. Where there are hundreds to choose from, perhaps it would be best to list only a few of the finer, inexpensive peonies under the separate headings of white, pink and red:

WHITE: *Festiva Maxima*, white flecked with red, a sturdy grower and one of the finest of all peonies; *Duchesse de Nemours*, fragrant; *Marie Lemoine*, a late white with lemon tints; *Mme. de Verneville*, another fragrant variety; *Couronne d'Hour*, showing yellow stamens; *Mme. d'Hour*, a favorite white.

PINK: *Marguerite Gerard*, a low-growing exquisite shade; *Umbellata Rossea*, an early vigorous variety with a straw-colored center; *M. Jules Elie*, a large chrysanthemum-shaped lilac pink; *Octavie Demay*, a lovely blush; *Triomphe de Lille*, a deeper shade; *Mme. Calot*, another delicate pink.

RED: *Delachei*, *Felix Crousse*, *Augustin d'Hour*, *Mme. Bucquet*, *Pierre Dessert*.

PRACTICAL POULTRY MANAGEMENT, Rice & Botsford. In the 15 years since the first edition of this book was published, many changes have taken place in the science of poultry husbandry. This fourth edition embodies the latest methods known in the industry.—John Wiley & Sons, Inc., New York. \$2.75.

A Few Onions in the Connecticut River Valley

Grading and bagging onions on the farm of Charles Clark of Sunderland, Massachusetts. Mr. Clark grows 30 acres of onions, 30 of tobacco and 110 of potatoes. He has storage room for 100 cars of produce. Such an acreage of intensive crops is a real farm business but it represents only part of Mr. Clark's interests. He grows 300 acres of onions under irrigation in the state of Texas and also grows certified seed potatoes in the state of Maine.

Onions in the Connecticut Valley are handled somewhat differently than they are in New York State. They are pulled and after they have dried for some time the tops are cut off in the field. They are then sacked and hauled by truck to a grader like the one shown in the picture. The grader is rocked from side to side by hand, allowing loose leaves and small onions to fall to the ground. The onions are then put in net bags and hauled to storage.

Canned Corn *for* Cows

By H. L. COSLINE

WHENEVER I think of filling silo I remember an experience of years ago. The weather was bad that fall, and after a field of extra tall corn had been cut it rained for a week. Meanwhile the corn laid on the ground waiting for the silo filling gang. Just to complicate matters further, the cows got into the field and in accordance with cow nature they sampled a few stalks out of every bundle, meanwhile mixing them up so the stalks lay in all directions. It was still raining the day we filled the silo and it would be difficult to imagine a nastier job.

Even under the best conditions, silo filling is hard work but there is a deep sense of satisfaction, once the job is finished, in realizing that a good supply of "cow salad" is available while the herd is in the barn.

When to Cut Silage Corn

Most men who have studied feeding state that the proper stage to cut corn for silage is when the ears are glazed. For three weeks prior to that stage, corn increases rapidly in feeding value. Unquestionably a man can grow a bigger tonnage of a rank growing corn that will not mature to that stage in the average season, and there is still an occasional dairyman who grows that kind of corn. The question to decide is whether you want the biggest

Rather than depending on the man who owns an ensilage cutter and does custom work, there is a growing tendency to own a smaller cutter on the farm and to do the work without extra help. To be sure it takes longer, but the work can be done when it should be, and certainly the housewife appreciates the relief which comes from omitting the annual silo filling gang dinner.

When you have to wait your turn for a custom rig, there is always a question of when to cut the corn. You, of course, want it cut before the frost hits it. You also want the corn to get the advantage of every day's growth and you do not like to see it lying on the ground for a week or ten days. If frost does hit the crop, the best way to handle it is to cut it next day and get it into the silo as quickly as possible. In that way there is little damage, either from loss of leaves or leaching out of food nutrients. If you own a cutter, that is the way it can be done.

There is another advantage you can have by using a corn harvester with a bundle elevator which delivers the bundles right on the wagon. If you have your own cutter you can go to the field for a load avoiding any handling of bundles, cut it into the silo and go back for another load, thus taking a few of the backaches out of the job.

Filling the silo without extra help is a bit slower, but this method has many advantages.

from a garden hose can run into the blower while the corn is going through without getting it too wet.

The finer you cut ensilage the more power it takes per ton, yet there is some trend toward cutting corn finer. A lot of silage is cut in the 1 inch lengths, but some men feel that the extra power needed to cut it into half inch lengths is well used.

Another argument on which there are still differences of opinion is the necessity for tramping silage. Some men believe firmly that the more you tramp it the better it will be. Others feel that no tramping is necessary. I suspect that the condition of the corn when it goes in has as much to do

necessary is to keep the silage level. With no tramping or spreading, the ears roll off the pile to the edge of the silo and mold may develop around the edges. Keeping it level mixes the stalks, leaves and ears uniformly and it will settle and pack better.

Avoiding Mold

Where moldy silage comes out of the silo in the winter it is a pretty sure sign that the corn was too dry when put in or that the silo was not air tight. A small amount of mold is not too serious when silage is fed to cows, but it is mighty bad stuff for horses. Occasionally I hear a man say that

(Continued on Page 9)

Left: Where electric current is available, a motor furnishes a handy and flexible source of power.

A bundle elevator on the corn harvester saves many a backache.

Right: One man in the silo to keep the silage levelled off is better than no tramping and just as effective as a half a dozen men.

possible tonnage of green feed, or a little less silage which contains an abundant supply of ears to add to the feeding value. Once that decision is reached, it is a question of picking the variety which you want to plant.

In recent years in the northeast there has been a steadily increasing acreage of double-crossed 29-3, a variety which gives an excellent yield with a good supply of ears. Incidentally an enormous tonnage per acre can be grown from a variety that will mature to the glazed ear stage.

In fact, there have been some experiments with a corn harvester which cuts the corn into ensilage right in the field, elevating it to a wagon box which is then hauled to the silo where a blower puts it into the silo.

Handling Frosted Corn

Where corn gets badly frosted and where it cannot be put into the silo immediately, it may be necessary to add some water. If any water is needed, it takes a surprising amount. With badly dried corn a stream of water

with the way it comes as does the amount of tramping. If it is still green and put in the day it is cut or if sufficient water is added, it will settle sufficiently to exclude all the air and you will get good silage. Where the job is done by a small filler owned on the farm, it will settle better and you will get more corn in without refilling because it will take a few days to do the job and the silage will settle a little every day.

Personally I feel that one man in the silo is advisable. About all that is

He wasn't behind the door when feet were handed out. — Old Country Saying.

No Relief for Able-Bodied Men

EVERY mail brings letters from farmers asking how they can get hired help to carry on their work. Some of these letters are pathetic, coming from older men who have done their share of hard work and who must now depend upon hired help, which is not available.

Farm help is harder than ever to get now because of the demand for men by the Army and by business to carry on the defense program. But farm help was hard to get right through the depression, while at the same time farmers were paying their share of taxes to take care of millions of men on relief.

No matter what happened in the past, there is certainly no excuse now for any able-bodied man to be out of work, and if any such are left on relief rolls it is high time they were kicked off.

The Road to Prosperity

DR. KARL T. COMPTON, President of the Massachusetts Institute of Technology, recently said that what America most needed was a billion dollars to be devoted entirely to research in order to create new jobs, new industries, new goods, and new services for the world of tomorrow.

Dr. Compton made the further commonsense suggestion that this money for research be raised by private industry and not by the government. He said that if all the large companies in the United States were to spend 2 per cent of their gross income for research, it would raise probably 5 times as much money for research as is now being spent, and would open up a new day for all Americans.

How much more sensible is this suggestion than any and all of the recent government schemes for recovery!

Don't Blame the Milking Machine

A FARMER told me the other day that he quit using a milking machine years ago because every time he tried it his bacteria count went up, and I know that some other dairymen believe that a milking machine spreads mastitis.

It is too bad that farmers feel that way, because equipment is becoming increasingly necessary as good farm labor becomes harder and harder to get. The whole answer to the problem so far as a milking machine is concerned is in keeping it clean. If it is just a matter of preventing high bacteria count, all you have to do is to follow the rules on the machine for properly washing and disinfecting it.

If there is mastitis in the herd, in addition to keeping the machine disinfected, it is a good plan to use a strip cup to examine the milk from each quarter before putting on the machine. Cows showing flakes, clots, or watery milk should be milked last or by hand, and cows that are definitely known to have mastitis should be milked by hand.

Losses from Chicken Thieves

WHEN I was a boy, Mother got my brother and I up at one or two o'clock in the morning to investigate a noise in the hen-house. As we sneaked out with an old muzzle-loading shotgun we saw a couple of men run pell-mell

out of the rear door of the hen-house. We took after them, but they hid, and although we spent most of the rest of the night hunting for them, they got away. They didn't get any hens that night, but we always lost plenty during the course of a year, and so did all the neighbors, and so do thousands of farmers still.

One of the reasons for this loss from stolen poultry, which totals up to hundreds of thousands of dollars, is the fact that many enforcement officers, and particularly the judges, take chicken thieving altogether too lightly. Some of them act as though it was something of a joke. It's no joke to farmers, particularly now when organized gangs come out from the cities with trucks and sometimes clean out a whole poultry flock in one night. We need better laws, better enforced.

Tell us your experiences with chicken or other thieves and we will try to get better enforcement against thieves.

There is a Good Trespass Law

I WONDER why it is that there are thousands of people who seem to think they have the God-given right to roam over a farmer's property at will, breaking down his fences, stealing his fruit, and often killing his cattle by reckless shooting. If a few bad actors would realize that they have absolutely no right on farm property and would conduct themselves as they would expect a guest in their home to do, there would be no problem. Hunting or fishing on private property is a privilege, not a right.

Farmers, loving the outdoors themselves, have sympathy for the city man who likes to get out to picnic or to hunt or fish. But it doesn't take long for a farmer to lose that sympathy and to post his land against all trespassers after he has had two or three bad experiences with them.

It's only a few who make all the trouble. If farmers and sportsmen's organizations would get

together to make it hot for the hogs on two feet who violate their privileges when trespassing, then the other 95 per cent of people who like to walk and hunt and fish across the countryside could do so, and the farmers themselves would live a happier life. In New York State, and in other states too, there are laws with real teeth against trespassers. The New York law is outlined on page 19. Read it and use it if you need to.

Unfair to Eastern Farmers

IN NEW YORK State, according to Dr. George E. Brandow of Cornell University, for every \$100 received by farmers for regular farm operations, government payments amounted to only \$1. But in North Dakota, for every \$100 received by farmers from regular farm operations, government payments amounted to \$25; in Iowa \$11; in Alabama \$19; in Texas \$21.

Northeast farmers might well remember also that they are paying in indirect taxes for these government subsidies many times more than they get in the small amount of cash.

Such large payments by government to western and southern farmers may be fair on a temporary, emergency basis. But it is certainly unfair for a state like Iowa, for example, with some of the richest, best land in the country, to continue permanently on such large government subsidies. They are either poor farmers or good politicians.

Women Best Buyers

SOMEONE was telling me about a California man and his wife who had a contest to see who could purchase a list of supplies of equal quality with the least money. The man won. He paid \$2.06 and his wife \$2.29.

For a little pleasant competition in your own home try this contest. I think you will find that, as a rule, women are better buyers than men.

Eastman's Chestnut

HERE are some good definitions you cannot find in Webster's Dictionary:

ABSENTMINDED PROFESSOR—One who mistook himself for his pants and hung himself on the bedpost.

ACCORD—The lost chord of the concert of nations.

ABDICATION—An exercise among ancient monarchs, falling hair with the head attached.

ACCORDION—Musical instrument with one advantage—playing it ought to help you learn to fold up a road map.

ADULT—One who has stopped growing except in the middle.

ADULTS—People who wish they had nerve enough to walk down the street sucking a lollipop.

ADVICE—Counsel old men give young men when they can no longer set them a bad example.

ADVISORY CAPACITY—The capacity in which a back-seat driver drives.

AFTER DINNER SPEECHES—An occupation monopolized by men—women can't wait that long.

AIRFLOW—Condition of a car created by putting the wife in the back seat.

ALIMONY—Another war debt a lot of ex-husbands would like to see cancelled.

AMBITION—An itching sensation caused from inflammation of the wishbone.

AMERICAN—A man who does not know the words of the Star Spangled Banner.

ANCESTRAL PRIDE—Going forward by backing up.

Meet Mr. and Mrs. William Duger and family of sixteen children. Picture was taken on their 50th anniversary. Most of the family are farmers and all live within 15 miles of home. All have one another for help and none have employed outside help. All are readers of American Agriculturist and several report fine service from the American Agriculturist Service Bureau. Mr. Willard Duger says that the Service Bureau collected \$307 for him once, a service that he can never forget. Here are the names of the different members of the family: Mrs. Lela Mosher, Leon Duger, Henry Duger, Mrs. Genevieve Parks, Harry Duger, Mrs. Ira Danenport, all of Plainville, New York; Edw. Duger, Fred Duger, Mrs. Sophia Salisbury, Mrs. Minnie Welch, Fulton; Ray Duger, Ira, N. Y.; Mrs. Augusta Groot, Meredian, N. Y.; William Duger, Augusta Duger, Mrs. Cora Drice, Willard Duger, Ira, N. Y.; Floyd Duger, Cato, and Charles Duger, Baldwinville, N. Y.

The "Going-Away" Time

AFTER hay and grain harvesting, there comes a period on most farms of a little let-up before the fall work starts. The grass has started to green on the mowed meadows, contrasting with the other green of the long rows of corn; the sun somehow has a different feel, casting its mellow haze across the landscape; bees hum over the buckwheat fields; the days are noticeably shorter, and for several nights now I have heard the lonesome chirp of the crickets—all signs to countrymen that another summer is on its way out.

This period between summer and fall is one of a little regret and sadness for most of us. The older we get, the more we hate to see the passing of another fine old summer. Then, too, in many families it is a time of change, the "going away" time, when children start to school for the first time and are no longer babies, or son and daughter go away to college after a happy summer at home. You realize, somehow, that things will never be quite the same again.

But the rolling of the seasons is like the chapters in a book. Life is like that too, made up of chapters full of change. The happiest person is he who can adjust himself quickly to those changes from season to season and from chapter to chapter of Life, leaving the past with as little regret as possible, making the most of the present, and looking forward to the future with hope and confidence.

Trees in Legend and History

TEST your knowledge of trees with the following questions. Count 10 points to each answer. 70 is fair, 80 good, 90 excellent. Answers are on page 6. Contest is contributed by George W. Lyon, of Pittsburgh, Pa.

1. When Governor Andros demanded that the Connecticut colonists surrender their charter, they hid the document in a hollow—tree.
(a) Ash, (b) oak, (c) chestnut.
2. William Penn made a treaty with the Indians of Pennsylvania under a certain—tree.
(a) Maple, (b) pine, (c) elm.
3. Longfellow had his village blacksmith stand beneath a spreading—tree.
(a) Oak, (b) ash, (c) chestnut.
4. The people of Canada sing the praise of the—leaf forever.
(a) Chestnut, (b) maple, (c) oak.
5. Washington took command of the Continental army under a spreading—at Cambridge, Mass.
(a) Oak, (b) elm, (c) maple.
6. The tree that suggests choice things for politicians.
(a) apricot, (b) peach, (c) plum.
7. The famous trees of Lebanon, some of which were used in constructing Solomon's Temple.
(a) Mahogany, (b) cedar, (c) rosewood.
8. In Longfellow's poem, *Evangeline*, we have in the first line, "The murmuring—and the—", etc.
1. (a) Cedars, (b) pines, (c) spruces.
2. (a) Tamaracks, (b) willows, (c) hemlocks.
9. The tree associated with the fall of man (not that he fell out of it, but tasted of its fruit).
(a) Peach, (b) apple, (c) pear.
10. A tree that yields a milky, poisonous juice used for arrow poison.
(a) Banyan, (b) upas, (c) hemlock.

Give A. A. a Chance to Help

SO FAR as the time of our small editorial staff will permit, we go out and call upon our farmer readers to ask them personally what they like and don't like in *American Agriculturist* and how we can improve it. Once in a great while we find a farm family who subscribes to *American Agriculturist* but doesn't read it. That isn't fair to you nor to your paper.

If you read it and don't like it, tell us so and we'll be glad to get constructive suggestions from you. But I'll just make a bet with you. If you haven't been reading your *American Agriculturist* recently and will start in now and give it a chance, my bet is that you will continue.

How to Tell Poison Ivy and Prevent Poisoning

A NUMBER of my friends, including two members of our staff, have had their summer largely spoiled from poisoning by poison ivy. This bad vine seems to be on the increase. However, many vines that people call poison ivy are not, and the first thing to do is to be certain that you can recognize the poison ivy.

Here is how: First, there must always be three leaflets, but as there are other vines with three leaves that are not poisonous, you must have a further test. If the vine has three leaflets, and the leaves on the main stem are alternate (not directly opposite) then you can be certain that it is poison ivy.

Many people think that the poison is carried in the air, and that even coming close to it will poison them. That is not true. The only way you can be poisoned is from actual contact with the vine. When you think you have touched it, wash your hands thoroughly in strong laundry soap and hot water. Thorough washings, with plenty of heavy lather, repeated several times with alternate rinsings with clear water, will generally prevent the action of the poison. Follow, if possible, by rubbing with alcohol. The poison may be carried about on clothing and shoes for some time, so it is a good idea to wash exposed clothing thoroughly.

Mild cases of ivy poisoning may be treated with a 5 per cent solution of potassium permanganate, or a solution of 1 part ferrous sulfate in 5 parts of water, the latter to be applied immediately after exposure. Strong solutions of soda or epsom salts are helpful for inflammation. Immersion of the irritated parts in water as hot as can be borne often gives relief, sometimes for from 3 to 5 hours afterwards. Severe cases, of course, should be referred to a doctor.

To eradicate poison ivy, if there is not too much of it, get somebody who is not susceptible to dig it up. If this is impractical, spray it thoroughly with a solution of 3 pounds of salt to a gallon of slightly soapy water. A very fine spray should be used and care must be taken to cover the foliage of the plants thoroughly with the spray. The first application should be put on

when the foliage is about full size in early or mid-June. Second, third, and fourth applications should be made if the shoots put out more foliage when the leaves reach almost full size. It may take more than one season to kill out the plants by this method, but it is certain to if persisted in.

Old automobile lubricating oil, if thinned with kerosene or coal oil until it is thin enough to spray easily, is perhaps just as effective as salt. I suggest you save this information.

Smells Good and IS Good

I CAME into our kitchen the other day to find it filled with the appetizing smell of berries that the women folks had been making into jelly. And is that jelly good—all the better, of course, because I grew the berries myself!

Think of all the thousands of kitchens which, for the next several weeks will be rich with the odors of the products of our farms and gardens, being canned and preserved and stored away for winter use. It always reminds me with what pride my Mother used to take visitors down cellar to point to the shelves loaded with long row of cans, which she had put up with her own hands.

Hard work? Yes! But also satisfaction and contentment!

Fisherman's Prayer

MY FRIEND, Dr. E. R. Eaton, Physician, Philosopher and Fisherman sends me the following with a note saying that it is good enough for *American Agriculturist*—so it is, and here it is!

Dear Lord, when Gabriel blows his blast

And I come home to rest at last,

Don't measure me for harp and wings,

Let me have, instead, these things:

Some tackle and a rod and reel

A great big strike that I can feel

From the largest bass ever seen,

And I don't want it just a dream;

A perfect pal with whom to angle

A reel that will not tangle,

And permission, Lord, with fingers crossed,

To lie about the fish I lost.

—Fred Fletcher.

Readers Talk Back

ARMY SHOULD EAT CHEESE

"A few days ago Mr. F. C. Whitney, a former Mayor of the City of Iliion, was in this office. Mr. Whitney is the owner and operator of a large farm near Iliion, and is a live-wire.

"He stated that, at the time of the Civil War, cheese was made one of the staple foods to be used by the Army. He said that as a result of this there was a tremendous demand for cheese and that prices advanced rapidly. He asked why it was that, at this time when we are having so many war maneuvers and, without a doubt, we will soon be training a million or more soldiers, cheese is not again made one of the substantial parts of the soldier's diet. Mr. Whitney believes that, if this were done, it would not only benefit the soldiers but would make a wonderful outlet for a lot of our surplus milk."—C. H. Baldwin, Secretary, Metropolitan Milk Producers' Bargaining Agency, Syracuse, N. Y.

Well, why not? Northeastern dairymen have and can produce some of the highest quality cheese in the world. It is one of the best foods, and its virtues ought to be better sold to those authorities who determine the diet of our soldiers and sailors.

LET'S TRY VOLUNTARY WAY FIRST

Dear Mr. Wadsworth:

I am 17 years old, and was graduated from high school last June. I feel I have my life to give to the world and want to do what I think I can do best with it.

The United States of America, it seems to me, is a place where democracy is still at work. I hope it will stay that way. I hope there will be no law pass-

ed such as the proposed Compulsory Military Training Bill which takes away the freedom every man has, as to what he will do with his life. This proposed bill does not seem to me a further step towards a government "Of the people, by the people, and for the people."

I have lived on my father's farm since I was born. I like farming, and I wish to go into that field as a livelihood as soon as I can get more education in that line. I do it because I want to.

I do not enjoy the idea of killing men and thinking of such things. If the Compulsory Military Training Bill is passed, I, along with thousands of other men, will be forced to train for such killing of our fellow men. I know I would enjoy farming more and I'm sure I could do a better job at it and do more good with my life than training for the army.

The United States of America is a Christian nation in my mind, and I'm sure a Christian nation should not even think of compulsory training for war in time of peace. Sincerely, R. K., N. Y.

Dear R. K.:—Your letter to Representative Wadsworth, copy of which you sent me, is an interesting, thoughtful letter. I am particularly interested because of your desire to become a farmer, which in many respects is the finest and best of all occupations.

Now, I feel about compulsory military training as you do. The compulsory feature is contrary to our American traditions. Probably most young men could spend a year in the Army with profit. The training is fine physically and the discipline is good mentally. A strong defense of the Republic is absolutely essential, also, of course. But let's try the voluntary, Democratic way first.—E. R. E.

What Do You Think?

The question for discussion this issue, as announced on page 9 of the August 3 issue, is "Do You Believe in Water Witching?" Here are some of the interesting comments which we have received from readers:

I have located wells for years but I use an iron bar which I balance on my fingers. Have located 50 wells or more and never lost one yet. Have one on my farm which I located that has never been dry. We only went down 19 feet and struck two veins of water.

You have a splendid farm paper in the *American Agriculturist*, and we enjoy your interesting articles.—*Fritz Simonson, Hammondsport, N. Y.*

Water witching is all right but the stick will not work in all hands. When I was a boy back on the home farm in Penna., an oldish man was to our farm. He tried for water near the barn, using a peach stick. I said, let me see if it will work in my hands, and to my surprise I could not hold it. I went farther back when the stick began to pull in my hands. The well was dug and we found plenty of water. While I lived there, it never was dry. I think it is electricity your body contains that causes the stick to work.—*J. R., N. Y.*

In the August *Agriculturist* on Page 9 you ask "Do you believe in water witching?" Well, "Seeing is believing." Along the Delaware rim in this section springs are scarce, and at one time a house was built and water had to be had. My husband was a hardware merchant and interested in getting in the plumbing. He took a crotched stick and walked in the place where water was needed for the house. Presently he stopped and the stick was bending so hard it made his wrists ache. He said, "Down so many feet you will find a flow of water from the hill." The workman laughed at him but began digging, and eventually reached a natural flow of water. He was asked other places and always found water. The sticks must be from a tree having fruit with a stone, like peach, cherry, or plum.—*T. B. McG., N. Y.*

I used to be as skeptical as anyone about water witching. Then my husband and I stopped at a garage where one of the neighbors was trying to locate water with a "divining rod." He heard me laugh at him and said, "You try it." I took the stick and, feeling very foolish, started walking back and forth as he had done. Sure enough, the stick bent for me as it had for him. The pull was much stronger in one place than elsewhere.—*Mrs. Dwight L. Bigelow, East Peru, Maine.*

The writer has located 152 wells in this manner with not one failure. A certain well driver will take a contract to drive a well if I locate the water.

There is no answer as to why this method works with some people and not others. There are a great many people who can do it but they don't know it. It is very interesting, and many amusing things happen. Believe it or not, it works, for any tidy little bet any one wishes to make.—*R. W. Coffin, Augusta, Maine.*

In the glaciated (northeastern) part of the country, the earth's surface is in most places underlain by shale, granite, or deep deposits of glacial till, composed of sand, gravel, and clay, although sizeable outcrops of limestone are not uncommon. In this region it is necessary only to go to the depth of the "water table", or level of ground water to obtain water. In other words,

in most cases one is as likely to find water in one spot as in any other, and water witching is a waste of time and money.

Having spent five years in forestry training with a smattering of geology, I can truthfully say that so far as is known a "vein" of water has no attraction for a twig of willow, peach, or any other wood. If you want to be sure of a successful well, consult a geologist, not a water witcher.—*Ellis L. Lyon, B.S., M.F., Naples, N. Y.*

I happen to be a water witch and have found water for different persons. We have a driven well that we dug through our cellar just when the stick went the fastest, and in spite of dry weather have always had plenty of water. My father could locate water and some of his old neighbors said he was a wizard at it. I have talked with engineers and other college men, but lots of them think there is nothing to it, and that it is all a big joke. However, we are enjoying water that was located 25 years ago.—*Mrs. James O'Donnell, Scotia, N. Y.*

I believe that certain people have the ability or gift to find veins of water by means of the twigs of certain trees. Personally the trick won't work for me.—*H. Knight, Chesterville, Maine.*

By J. F. (DOC.) ROBERTS

I HAVE just spent over two weeks in the Northeast. Too much rain set everything back early, but July and August have been such good growing months that hays, grains, gardens, and even corn and pastures are green, thick, and prospects are good. I spent most of this time through Vermont and New Hampshire, and the progress that those states have made in the past few years brings up a great many questions as to how it has been done.

One Vermonter said to me, "We do have fertile valleys; our operations are small, but our hillsides carry us in the summer, and our valleys in the winter, and I believe we have about as much left at the end of the year as the average farmer anywhere." That word, "left", got me to thinking and observing. These small, New England farmers simply do not pay out money. By running their operations themselves, keeping every possible expense down, they really are able to have something "left".

Perhaps one of the best illustrations is the number of oxen that are being

"Do you still think it's a moose call?"

used for power through both these states. Not that I would recommend our farmers, generally, to go back to oxen for power, but the general principle can be well applied. They are still "tradin'" in horses. There is no laughter when we talk of any kind of farm-sustaining power, whether it be oxen or horses. There is practically nothing sold from any of these farms that can be fed to any type of livestock. In a good year like this, they keep a few more of their heifer calves to winter through; they get a pig or two; they keep their ewe lambs over. In fact, it was an eye-opener to me to see how much livestock they could winter with the amount of feed in their barns. The only answer is thrift without waste. They do not waste anything.

Every farm has its own home garden spot. Berries were plentiful this year and they were not wasted. Eggs were selling to summer people for at least 10c a dozen more than they were bringing in Buffalo. They still like Jersey cows and rich milk, and that is something to think about. Practically every farm has an animal or animals that they are carrying along for their home meat consumption this winter, and that is why, as one of the summer people expressed it to me, "Vermont and New Hampshire farms look as if they had had a hair-cut, a shave, a shampoo, and all the trimmings."

Incidentally, Willkie really rates in those hills, and they do not hesitate to say so.

With livestock feed crops as plentiful as they are this year, we are again faced with marketing costs. For example, this will be another year when it will cost more to bale hay and ship it, than the original cost of the hay, which brings to mind the old adage that it does not cost any more to feed this feed to your own livestock than it costs you to get it marketed. With what is happening in Europe, and with the increased demand there is going to be for food by next spring, think this over.

Fall Housecleaning

By ED W. MITCHELL.

EVERY YEAR the apple growers are stymied by a lot of apples of poor grade or variety lying between the good apples and the market. It is either human nature, or a custom of such long standing that it has become second nature, to insist on selling these first.

The result is the same as though the grocer had good eggs and bad, but insisted on customers using the poor eggs before he would release the good ones to them. The result is that people eat something else.

There are two very practical ways to overcome this difficulty.

First, cut down all apple trees of the poorer varieties, or in a condition or position where they do not warrant and get the best of care.

Second, market first of all the good apples, and release the poor ones only when the good ones are all gone and the market will pay enough for the poor ones to show a profit on handling them.

Harvest time is a good time to mark the trees you know ought to come down; and in the fall, when prices are low, is the time to do the job. That is one simple little contribution every grower can make for the good of the industry, and at the same time be sure of advancing his own individual welfare. It is cheaper to cut them down than prune, spray, thin and pick them another season.

Try it yourself on your own orchard and see how it works.

HOW to do it

WITH CONCRETE

Do your modernizing for keeps, with concrete! Here's a "how to do it" book that gives detailed information on building septic tanks, foundations, feeding floors, barn floors, tanks and troughs, milk cooling tanks.

Remember, concrete is fireproof, termite proof, easy to work with, low in first cost, needs no upkeep, endures for generations.

You can do your own concreting—or hire a local concrete contractor. Write us for your free copy of "Permanent Farm Construction."

Winter Grain

THERE ARE more patches of winter wheat scattered through the Northeastern countryside than there were a few years ago. Not only in the "wheat belt," but pretty generally throughout the Northeast, more farmers seem to be including some wheat in their rotation.

Why are they doing this?

Farmers who are planting patches of winter grain—three to ten acres—say that the rush of spring work is lessened by planting some of the grain in the fall, and that cash spending for lime and fertilizer is spread out. They say that sowing legumes on frost honey-combed land early in the spring is a surer way of getting a good stand of seeding.

They have found that they can use about a third less seed when timothy is sown in the fall. Most important,

Winter grain is cut early, removing nurse crop competition and giving the seeding moisture and light.

they point out that winter grain is cut early enough in the summer to give the seeding better growing conditions in late July and August when hot dry weather comes.

Wheat for Cash or Feed

All the winter grains—wheat, barley, and rye—generally yield more pounds per acre and more nutrients per acre than oats or oats and barley mixed. Let's examine the case of wheat in particular.

Wheat is one of the best feed crops, especially for hens. Often it is a good cash crop.

It takes 56 bushels of oats to equal 30 bushels of wheat in weight. It takes more than 65 bushels of oats to equal 30 of wheat in total digestible nutrients.

Here are some of the practices recommended by farmers who have had experience growing winter wheat successfully:

1. **Plow Early**—far enough ahead of planting to get a good firm seed bed.
2. **Use Good Seed**—clean, smut-treated seed of the variety that is recommended for your locality.

3. **Plant Soon As Possible** after danger of Hessian fly is past. (Consult county agent for best planting date.)

4. **Use High Phosphorus Fertilizer** like 5-20-5, to give the wheat and seeding plenty of push.

5. **If Lime Is Needed** for the seeding, apply before plowing.

6. **Sow Timothy in Fall** with grain; legumes as soon after March 1st as ground is reasonably free from snow.

Spreading superphosphated manure on fall-sown grain, after the ground is frozen, makes a better grain crop and is fine for the seeding.

Winter Grains Compared

Grain	Bushel Weight	Digestible Nutrients per Bushel	% Protein
Barley	48 lbs.	38.77 lbs.	9.3
Oats	32 lbs.	22.88 lbs.	9.4
Rye	56 lbs.	44.8 lbs.	10.3
Wheat	60 lbs.	50.16 lbs.	11.3

Recommended Wheat Varieties

White Wheat

Yorkwin (Hybrid #19). White chaff, beardless, stiff-strawed, winter-hardy. Somewhat resistant to loose smut. Recommended as high-yielding, pastry flour type.

Honor. Bronze chaff, beardless, stiff-strawed, winter-hardy. Very susceptible to loose smut. Seed should be treated.

Junior No. 6. Bronze chaff, beardless, not as winter-hardy as Yorkwin and Honor. Susceptible to Hessian fly injury. Excellent pastry flour variety.

Dawson's Golden Chaff. Light brown chaff, beardless. Very resistant to Hessian fly injury. Excellent yielder in western New York and New Jersey.

Red Wheat

Valprize. White chaff, beardless, stiff-strawed, winter-hardy. Resistant to loose smut. Superior to other red varieties for pastry flour but not equal to Yorkwin, Honor, or Junior No. 6.

The small combine is growing in popularity on Northeastern farms.

If part of your small grain acreage is suited to wheat, you can generally get more feed per acre than with any other grain.

Leap's Prolific. Yellowish white chaff, beardless, moderately stiff-strawed. Soft kernels. Good for New Jersey and Pennsylvania.

Nittany. White chaff, purple straw, bearded. Inclined to lodge on rich land. Recommended for Pennsylvania.

Forward. White chaff and straw, awnletted, fairly stiff straw. Inclined to shatter when dry. Recommended for Pennsylvania and New York.

Barley and Rye

Barley is a very good feed crop and yields better than wheat for some

farmers. Winter barley of the Polish variety seems to withstand our Northeastern winters successfully. Many farmers who have tried the smooth-awned Virginia barley have had poor results with it. The soil requirements for winter barley are the same as for wheat, but the seed may be planted later.

Winter rye does better than wheat or barley at high elevations and on less fertile land. It can be used for livestock feeding in amounts up to 20% of the ration. Rye stands grazing in the late fall and is an excellent crop to control winter erosion.

FERTILIZING WHEAT

The rates given here qualify for Agricultural Conservation payments. They are somewhat higher than necessary if wheat is sown alone, but on seeded wheat the hay crop will more than pay for the extra plant food.

from SKEFF'S NOTEBOOK

By L. B.
SKEFFINGTON

THE PAST MONTH has been one of summer meetings and tours. It is good to get around and see what the other fellow is doing and, incidentally, to visit with folks one does not see often enough. In general, growers are feeling better this year. That is not to say that prices are high enough, or that everything is working out satisfactorily.

Starting the marketing season, cherry growers got a much better break on prices than last year. A large amount of the gain is undoubtedly due to the organized effort put behind the marketing of the crop. Last year the big crop and low prices created a situation which brought home to many growers that something had to be done. Cooperation of retail stores in moving a large part of the processed crop cleared the decks somewhat for this year's crop.

The New York State Cherry Growers' Association, with Horace M. Putnam of Lyons as president, already was in action when June crop estimates pointed to a larger crop than growers believed would materialize. Largely as a result of a four-state conference called and presided over by Mr. Putnam, the price was stabilized at three cents per pound for the tart varieties. Many growers would like to have seen it a bit higher, but it must be remembered that it was twice the general price of a year ago.

When the State Horticultural Society held its summer meeting at the Geneva Experiment Station it was noticeable that most growers felt pleased over the cherry deal.

How Canada Moved Crop

The main speaker at Geneva was W. J. Tawse of Montreal, a member of the Canadian Horticultural Board. Canada, like the United States, had a record crop of apples last year and heroic measures were called for to move it. War cut into the export market, as the United Kingdom took only half of its normal quota of apples from Canada.

This still left a larger than usual volume of apples to be marketed at home. Tawse said the dominion was divided into three areas for marketing, but that this had been found to be unsatisfactory and this year the crop will be marketed on a nationwide basis. Certain localities, he said, have developed a taste for certain varieties regardless of whether or not they are produced within that area.

Upwards of \$100,000 was expended in an apple advertising campaign and Tawse reported that it had been successful in selling apples. This year the crop is less than a year ago, but it still is a large crop and apples will be marketed systematically in every possible channel.

Frozen Food Outlet

Dr. Donald K. Tressler of the Geneva station was kept busy explaining what was being done at the station with frozen foods and fruit juices. A number of growers were amazed to note the conditions under which some of this work is being done at Geneva. Tressler's work has reached extensive proportions in recent years because of the demands for experimentation, but no adequate housing or equipment

has been provided. Parts of it are done piecemeal in cubbyholes in three or four basements. A new freezing unit has been installed in the administration building, because there is no other place for it.

In response to inquiries, Dr. P. J. Parrott, station director, told growers that the Geneva greenhouses will be closed again next winter for want of funds to repair and operate them.

Economy Hits Hard

The station, like other state institutions, is hard hit by an economy program. For several years cuts have been made, even in such things as light, heat and power. Parrott said a deficit is not permitted, so when funds run out there is no way to continue operations.

A few years ago the state expended about \$85,000 to build the greenhouses at Geneva. The idea of greenhouses at Geneva and Cornell is to extend the growing season. Where two crops can be grown a year it means that certain types of research can be carried on the year-around.

From expressions I heard, the greenhouse plant at Geneva is a discredit to somebody. The heating plant is located below the ground level with no drainage. One unit is not in condition to be operated and the other was partially repaired last year. One greenhouse was kept in operation because a small heating plant was installed in one end. A wide ramp leads into the boiler room and down this water flows, with the complaint being made that good money must be used to buy power to pump out the water.

These conditions are far from being exaggerated. Dr. Parrott says his job is to keep within his budget, not to say how much money should be expended upon agricultural research. Growers who are interested will do well to look over the situation.

* * *

Visit Field Plots

Several hundred growers went to Geneva for the summer meeting of the State Vegetable Growers' Association. In the morning there was a tour, followed by a frozen food dinner at noon. After a short program members dispersed to visit the experimental plots. In fact, the thing that impressed me more than anything else was the fact that so many growers came to Geneva with definite ideas of what they wanted to see and discuss. After the program the entire crowd dispersed to the fields quickly.

It seems to me that at this gathering there were many items that very clearly demonstrated the value of agriculture research. I remember that at one field Dr. C. B. Sayre, head of the vegetable crops division, pointed out that application of 80 cents worth of "starting solution" had resulted in a yield of 800 pounds of tomatoes. The solution used was two parts of ammonium phosphate to one part of nitrate of potash.

The experiments have been under way for the past two years and many growers report equal success, according to Dr. Sayre. One of the drawbacks has been that nitrate of potash comes from Germany and the supply is shut off, but at the station this year

they are obtaining equal success with a substitute.

The starting solution has been found equally effective in use of cabbage, peppers and some other plants. It is applied in water at time of transplanting. With canning tomatoes it has been particularly effective in producing extra yield early in the season.

Likewise, the vegetable growers saw how a quarter to a third of the usual amount of fertilizer may be more effective if applied in bands, and that fertilizer placed deep is far more effective than if placed shallow. So many of these instances of how to get a larger yield or better crop were cited to the growers, and so many growers reported success with them, that there seemed to be no doubt that money being spent for agricultural experimentation is returning big dividends.

* * *

Potato Club Draws 10,000

Gilbert Prole, Master Farmer, was host to the Empire State Potato Club field day at his farm in Stafford. An estimated crowd of 10,000 saw a show that more than outdid most county fairs. The potato field day has definitely established itself as the largest turnout of New York farmers during the summer, at least. Lieutenant-Governor Charles Poletti was the speaker and urged growers to seek better markets through the use of the state trade mark for inspected farm produce.

On behalf of the H. S. Duncan Memorial Fund, Poletti presented the 1939 joint award to Spencer G. Duncan of the State Department of Agriculture and Markets and Dr. Arthur J. Pratt of the State College of Agriculture. The award was made for their "unusual and meritorious services in demonstrating the value of good grading and packing as aid to more satisfactory marketing." It was cited that Duncan and Pratt have been zealous far beyond the routine calls of duty over a period of years in conducting marketing educa-

tion, especially among the 4-H Clubs and other groups of young people.

* * *

Wheels to Turn Easier

At the eastern meeting of the Horticultural Society I was interested to hear Ed Babcock (Kernels, Screenings and Chaff) talk about wheels, farm freezers and a number of other things. A few weeks ago my wife and I stopped at Ed's farm and saw what a simple proposition the farm freezer is, as the result of a great amount of research and trial.

At Holmes I learned that wheels on Ed's farm equipment are being standardized, so that on seven machines wheels and rubber tires are interchangeable. Incidentally, the knobby tread tires used on one of the cars in winter have been doing summer duty on the hayloader.

Herbert P. King, president of the State Farm Bureau Federation, was a speaker at the meeting and analyzed some of the perils that now face agriculture. He foresees that cuts may be made in subsidies to agriculture, because of the need for more funds for defense. This will have the effect of reducing farm income. Some benefits will be obtained from industrial pick-up, but Mr. King thinks the solution is to raise the price level.

Instead, he says, a number of men in high places are toying with the idea of price-fixing. "I dread to think of this," he said, "because no man or group of men is competent to fix prices for all commodities and if they attempt to do so it will lead to regimentation of the worst sort."

In a reminiscent mood, Doctor Parrott recalled early days of fruit work in the Hudson Valley and praised the optimism of the society president, J. Wessel TenBroeck, in launching an orchard enterprise of several hundred acres. Members inspected the TenBroeck and other nearby orchards on a short tour.

Steuben Potato Tour Largely Attended

STEUBEN potato growers attended Senmasse on Tuesday, Aug. 20, the tour celebrating the second anniversary of "Little Maine" and paid tribute to the vast potato industry for which the county is famous. Starting point was the Cohocton farm of C. D. Wolcott to make the annual checkup of the rotation and fertilizer test plots, and a planting of seventeen varieties of potatoes.

At the nearby Frank Clark farm on Lent Hill, where 70 acres of certified seed are making crop, a new twelve row, truck-mounted sprayer was shown. Keynote speaker here was Chief of Cornell's Agronomy Department, Dr. Richard Bradfield, who discussed the potato soils of Steuben County and their adaptation to the crop.

Dine at Warehouse

The former Avoca Wheel Factory now being rebuilt for potato storage estimated to have capacity of a quarter million bushels, provided shelter for the basket picnic at noon.

It is estimated that over 800 persons attended the Bishop & Babbins farm on Olmsted Hill, where the tour went in the early afternoon to see the 135 acres of potatoes and the several hun-

dred acres of cover crops being grown for potato production in 1941.

Harvest Contest A Feature

Picking 150 pounds in five minutes, Mrs. Lucy MacDougal of Avoca placed first in the women's division of the potato harvest contest. Other top scores were Mrs. Freeman Davis of Prattsburg with a weight of 145, and Mrs. Joe Richards of Atlanta whose pick weighed in at 142.

Using the baskets and barrels common to their native Maine, Fred Langen, Cohocton, Freeman Davis, Prattsburg and Lawrence Martin, Avoca, placed first, second and third in the men's division.

Expansion of the potato industry in Steuben County was predicted by Roy Porter, Elba grower who for nine years served as president of the Empire State Potato Club and is a prominent member of the Northeastern Potato and Vegetable Council.

The meeting was sponsored by the Steuben County Farm Bureau.

Mrs. Freeman Davis and Mrs. Lucy MacDougal, formerly of Caribou, Maine, winners of the women's division of the Harvest Contest, discuss with Steuben growers, Guy Robbins and Olin Sharp, the crop on Bishop & Babbins farm, at Steuben Potato Tour.

Changes in the Milk Marketing Set-Up

By LELAND SPENCER

THE OLDER text books on marketing described the functions of several agencies that played a part in getting farm products into the hands of consumers. Most prominent among these middlemen were the country buyer, commission merchant or wholesaler, jobber and retailer. Sometimes a broker was used between country buyer and wholesaler and of course such products as wheat, live-stock, etc., had to go through the hands of a miller, packer or other processor.

Leland Spencer

In the course of time marketing methods and organization have changed so that fewer middlemen are employed. The development of mass buying by large chains of stores has eliminated many independent wholesalers, jobbers and retailers and has forced others to consolidate. Direct selling by large co-operatives to chain stores and direct marketing by large scale organizations such as the big packers has had a similar effect. This trend toward fewer middlemen and more direct marketing has generally been considered as a favorable development helping to give the farmer a larger share of the consumer's dollar.

One of the most important dairy products, butter, has shared in this change toward a more integrated system of marketing. Yet ordinarily the ownership of a lot of butter will change from three to five times between producer and consumer. The same is true of eggs, potatoes, apples and in fact the great majority of products raised on the farm.

The principle of direct marketing probably has been carried further in the case of fluid milk than with almost any other product. Most commonly the producer sells to a milk dealer who looks after all the essential functions of marketing all the way to the consumer's doorstep. I suppose the milk business has developed that way because the product is so perishable and because continuous close supervision is necessary to maintain the quality of milk so that it will be satisfactory to the consumer.

The business of distributing milk is so vast and varies so much in different markets that it is difficult to judge the importance of changes that occur from time to time. However, it seems to me that a most important change in the milk marketing set-up is now going on. In New York and probably in some other large markets there is a tendency for specialized agencies to take over certain parts of the job. I refer particularly to the development of independent country plants, to the increased distribution of milk through stores and to the growth of retail distribution by sub-dealers or peddlers.

Of course substantial quantities of milk have always been handled by independent country plants, both private and cooperative, and retail food stores have been an important channel of distribution for many years. However both of these specialized marketing agencies are now increasing their proportion of the total business. On the other hand sub-dealers have come into the picture quite recently.

If these observations are correct the present trend in milk marketing is

practically the opposite of that which has been going on in the marketing of other products. Probably one important reason for the apparent splitting up of marketing functions in the milk business is the improvement of quality control to a point where milk from any source approved by the city health department is acceptable to the majority of consumers. Certain other conditions also have played their part, but our comment on these will have to be reserved for a later article in this series.

Milk Prices

Milk Administrator Cladakis has announced that the July uniform price for milk producers of the Metropolitan area is \$1.68 per hundred. This price is for 3.5 milk in the 201-210 mile zone.

This price is 12c above the June price and 18c above the July price a year ago.

Milk delivered during July showed more than the usual seasonal decline, yet deliveries during the month were higher than they were a year ago.

Mr. Cladakis attributed the increase to the higher price level established by amendments to the Federal State Order that became effective on May 1.

Renken Decision Reversed

In the July 6 issue we commented on the fine given to the Renken Dairy Company on a charge of manipulating butter fat tests. On July 29 following a hearing at the Tioga County Pennsylvania Court House Judge Thomas A. Crichton reversed the decision and acquitted the Company. The Judge stated that it was evident that the tester for the Commonwealth did not use the best methods for making the test and that he had stated in effect that the tester should use his imagination to some extent. It was also brought out that other tests made by a disinterested tester gave results which did not check with the figures used in the trial.

The Government Crop Report

The latest Government crop report gives the following indications for crop yields this season:

POTATOES—The total 1940 United States potato crop is forecast at 374,314,000 bushels. Last year the crop was 364,016,000 bushels and the 10 year average was 366,949,000 bushels. Maine expects a crop considerably above last year, New York a crop slightly above and Pennsylvania about the same as last year. The crop in western states is below last year.

ONIONS—The U. S. onion crop is forecast at 11,887,000 sacks. This indicates a crop 15% below last year but 16% above the ten year average. The Massachusetts crop is up from last year but below the 10 year average. The New York crop is somewhat under last year and the Pennsylvania crop a little better.

DRY BEANS—The forecast is for a crop of 14,649,000 bags as compared to last year's crop of 13,962,000 bags and a ten year average of 13,086,000 bags. The crop in New York and Michigan is slightly below last year, while the crop in Idaho and California, two of the big western bean producing states, is up somewhat.

CORN—The indications are that the U. S. corn crop is below last year. This year's figures are 2,248,246,000 bushels. Last year's crop was 2,619,137,000

bushels. This is a decrease of about 7% below the July 1 estimate and is 14% below the 1939 crop and 51,000,000 bushels below the 10 year average.

WHEAT—The U.S. winter wheat crop is forecast at 555,839,000 bushels compared with last year's crop of 563,431,000 bushels. The ten year average is 571,067,000 bushels.

The total wheat crop (winter and spring) is forecast at 760,623,000. This forecast is nearly 42,000,000 bushels higher than the July 1 estimate. The latest estimate is nearly 1% above last year's crop and the ten year average.

State Commission for Soil Conservation

Governor Lehman recently appointed a State Soil Conservation Commission. Members are:

Harold I. Peet of Pike, Chairman; Millard Davis of Kerhonskon; J. Sloat Welles of Big Flats; Dean Carl E. Ladd and Director of Extension, L. R. Simmons of the College of Agriculture, Cornell.

At the first meeting of the commission Mr. Peet was elected chairman. L. D. Kelsey of the State College of Agriculture was appointed as executive secretary.

At the meeting it was announced that Schoharie County had formed the first Soil Conservation district in the state.

More Dairy Cows Than Year Ago

U. S. dairy farms on last June 1 had 1% more producing cows than they had a year ago. This increase of 1% a year has been going on now for three years. There will be another increase next year. How do we know? Because dairymen are raising 22.1% as many heifer calves as they own cows. That is slightly fewer than they raised last year but with that exception it is the highest number since 1930.

In the Northeastern states, Vermont, New York, Pennsylvania and New Jersey have 1% more dairy cows than a year ago, Rhode Island has 3% more and other New England states have neither increased nor decreased since last year.

Dealer Goes Broke—Maine Dairymen Get Checks

Fifty-seven Maine dairymen received \$2,950 last week (Friday, Aug. 16) from New England Milk Producers' Association to reimburse them for loss due to the bankruptcy of New England Creamery Company.

The company, which has been buying milk from farmers in the vicinity of Livermore Falls, Maine, for many years, went into bankruptcy on July 11, owing a total of about \$15,000 to producers, \$12,000 of which was for milk delivered in June and the remainder for that delivered during the first ten days of July.

The payment made by NEMPA was to its own members under its membership contract which guarantees full payment to members for milk delivered to approved dealers if it is of proper quality. It covers deliveries of milk during June for which the company had failed to pay.

NEMPA checks for deliveries during the first ten days of July will be given to producers as soon as payroll figures have been computed for that period by the federal milk market administrator for the Boston market.

The bankrupt creamery was operated from the time of the bankruptcy until August 1 by a representative of the Receiver in Bankruptcy. On August 1 it was taken over by Maine Shawsheen Dairy and will be operated by that company.

Canned Corn for Cows

(Continued from Page 3)

adding salt prevents mold but I have been unable to find any scientific support for the idea.

The best way to prevent spoilage on top of a silo is to start feeding it as soon as it is put in. Of course, what you will have for a time is chopped corn rather than silage because the fermentation will not be complete. Nevertheless cows will relish it and do well on it. It is not always possible to begin feeding immediately and various experiments have been tried to prevent or lessen spoilage at the top. Some men spread oats over the top. The warmth caused by fermentation results in quick sprouting and the growing oats tends to prevent spoilage. Another plan is to cut a load of two of swamp hay or straw into the top of the silo with the idea of discarding it when the silo is opened. One of the best ways, considering the time required, is to add some water to the top of the silo each day for several days and then tramp it down. Without this procedure the top layer of silage becomes loose as the silage settles and considerable spoilage results.

With good equipment, sharp knives on the cutter and good weather to do the job, silo filling after all is not so bad.

A Living Price for Milk

21 Million MORE Dollars

Steps

Leading to Bigger Milk Checks for Dairy Farmers

1. **PRODUCERS** join with neighbor **PRODUCERS** to form Cooperatives.
2. **PRODUCERS'** Cooperatives join other **PRODUCERS'** Cooperatives and work together in the **PRODUCERS' BARGAINING AGENCY**.
3. **PRODUCERS'** Cooperatives in **BARGAINING AGENCY** work with State and Federal governments to develop a sound surplus control plan.
4. **PRODUCERS** present principles of sound surplus control plan at public hearings. These principles are incorporated in Federal-State Marketing Orders and, by vote, are approved by vast majority of **PRODUCERS**.
5. **PRODUCERS** use a government agency (Market Administrator) uniformly to enforce provisions of Orders and to see that benefits are equitably distributed to all **PRODUCERS**.

OBJECTIVE

Orderly Marketing Returning a Living Price for Milk

FOR the first time in years the dairy farm families of the New York milkshed have had a steady market for their milk.

For the first summer in years, dairy farm families in this milkshed have seen their milk prices hold steady without a break . . . and have enjoyed a peaceful summer of "price security" and living comfort.

Go where you will in this milkshed and you will find farm families rejoicing that they have been able to reap and enjoy these benefits. Talk to the businessmen in towns throughout the milkshed and you will find that they, too, appreciate the prosperity which has come their way. Bankers are willing to make "character" loans to farmers today, based on the assurance of a steady milk market. Farm-machinery dealers say much needed equipment is being bought by these same farmers. And farm homes are now getting the supplies and conveniences they have long wanted.

Farmers Themselves Won These Benefits

This wellbeing in the farm homes of our milkshed—this prosperity which has come to our rural communities has been won by the farmers themselves with the assistance of the Government in the control of the surplus. This prosperity has been won because farmers working together, first earned the legal right to work as a group, and second got the necessary Government assistance through the force of their collective strength.

PRICES PAID PRODUCERS for 3.5% Milk at 201-210 Mile Zone in Metropolitan Milk Shed

means Happy Farm Families

for Dairy Families This Year . . .

Yes, there are those who say "we should be getting more." But ask any farmer in the milkshed to compare the checks he has received for his milk this year with the checks he received last year. In that story you will find the cause of satisfaction.

The 62 cooperatives and their thousands of members who make up the Metropolitan Cooperative Milk Producers' Bargaining Agency have battled long and hard for this *Surplus Control Plan*. They have realized from the start that only by controlling the surplus could the farmers begin to put a price tag on their own milk. They knew from the start that this *Surplus Control Plan* would give each producer his share of the benefits of the fluid market and compel each to bear his share of the costs. They knew from the start that the *Surplus Control Plan* would force each dealer to pay the same price for milk used in the same way. They knew from the start that the *Surplus Control Plan* would eliminate competition and strife between groups of producers and encourage true cooperation between the many producer cooperatives.

Given Federal and State assistance, the directors of this Agency have been able to prove that the farmers could bring peace and stability to the milk industry.

But the Fight Must Go On

Never for a moment can we afford to slacken our effort. The forces which have continually fought ANY plan for orderly milk marketing are still in existence. Those who would stir up strife among farmers—those who would profit by disorganization, are still as busy as ever. Only stronger cooperatives and a stronger Bargaining Agency can hold the position we have won. But by standing shoulder to shoulder in support of this collective effort, the farmers of this milkshed will be able to continue and to increase the benefits we have won. For all the forces which strive to disorganize—all the forces which would like to see the *Surplus Control Plan* eliminated or weakened—all of the forces which have profited by shattered and disorganized markets cannot withstand the firm resolution and collective strength possessed by the 62 member cooperatives of this Agency.

OUR PLEDGE

We pledge our continued efforts to all our members and to all farmers and business men in this milkshed. Because no matter what may be said or done, we cannot permit anyone to take from us the great financial and human advantages which we have enjoyed during the last few months. Advantages which we have won legally and fairly and which we have used reasonably with justice and benefit to all.

The Results

of Milk Marketing Under Surplus Control Plan for Twelve Months

1. Orderly marketing with a ready market for all milk. Surplus controlled.
2. Uniform prices on all milk based on utilization. The same price for every dealer.
3. Every producer has shared in the benefits and the cost of maintaining this sound marketing program.
4. Greater uniformity in producers' prices and better understanding of fundamental problems of milk marketing. Importance of economy of production to profits recognized.
5. An increase of approximately 40c per hundredweight over producers' price of previous twelve months.
6. An increase of approximately twenty-one million dollars (\$21,000,000) paid to producers during first six months of 1940 as compared with corresponding months of 1939.
7. Development of new and more efficient producer owned and controlled cooperatives.
8. Firm foundation laid for greater benefits to producers by power of cooperative effort among producers and by using government aid as a servant.

Success Depends Upon Extent That Cooperative Effort Increases and Remains the Guiding Power

Northeast Markets for Northeast Producers

DAIRY CATTLE

"Invincible"

Sons of Carnation Inka Invincible, our son of Sir Inka May, who now joins ranks of 1000 lb. fat sires.

Orchard Hill Stock Farm, M. R. Klock, Fort Plain, N. Y.

Holsteins—T.B. Accredited; 250 Head. Offering surplus breeding stock of all ages; a few bulls of serviceable age backed by several generations of good C.T.A. records. Inspection invited.

E. P. SMITH, SHERBURNE, N. Y.

Choice of 94 type purebred unregistered Hereford heifers ten to fifteen months old, some individuals weighing 600 or better, T.B. and Bangs tested. October 1st delivery. Singles \$65.00—discounts on larger numbers. Can be seen at farm any day.

H. E. BABCOCK, SUNNYGABLES, ITHACA, N. Y.

FANYAN FARMS

C. C. BENNETT, HOMER, N. Y. offering: One service age, two baby sons of "Cornell Royal Blend," famous son of All American 1152 lb. fat cow, "Cornell Ollie Catherine"; his second dam All American 4.3%, 1079 lb. fat sister of his dam, Cornell Ollie Pride.

Dams of these bull calves are daughters of our former 911 lb. 4% Snow bull, sired by Aristocrat, famous son of the World's Champion 4.3% "Snow Countess". Dams all have fine official records in Class C twice a day milking. They will please you as to type. Records and per cent test of dams available.

Increase Your Butter Fat Test with a Son of MONTVIC PATHFINDER

His first 12 two-year-old daughters average 607 fat, 4.1% fat, 14.850 milk. Baby sons now available at farmer prices.

F. C. WHITNEY, ILION, N. Y.

Ready for Service — Young Bulls

from our outstanding Champion Show Bulls. They are bred for type as well as production. Prices reasonable.

J. REYNOLDS WAIT, The Wait Farms, Auburn, New York.

BRADFORD JERSEY FARM,

TURNER, MAINE.

A Touring Ayrshire

TRAVELING in her deluxe barn-trailer, Penshurst Emerald, one of the most famous Ayrshire cows of all time, is now making a 5000-mile tour, which will include visits to county fairs, and one-night stands at various dairy centers throughout the New York milk shed.

This famous fourteen-year-old bovine aristocrat is the mother of a great family, that includes nine daughters and four sons. She has made more than 53 tons of 4.32% milk to date, and just prior to leaving her Vermont home, was producing over 50 pounds of milk daily.

Penshurst Emerald is owned by Fillmore Farms, Bennington, Vt., and is one of 151 cows that made a world's record Herd Test average of 10,338 lbs.

4.04% milk, 417 lbs. fat in 1938—a record that has never been duplicated by a registered herd of this size. Needless to say, "Emerald" and her descendants are counted among the most highly valued members of the Fillmore herd, which presently includes more than 300 registered Ayrshires.

BROWN SWISS

BROWN SWISS—Five production bred bulls of Nevad of Bowerhome and College Boy breeding, up to 1 year old. Build type, production, vigor into your herd with a Forest Farms bull. Approved. Accredited.

FOREST FARMS, MONROE COUNTY, WEBSTER, N. Y.

SWINE

Pedigreed Chester Whites

NEARBY MARKETS for NEARBY POULTRYMEN

Sell the Slackers

TWENTY years ago poultrymen were just becoming familiar with the principles of culling out non-producers. Many a poultryman, after a culling demonstration had been held on his farm, kept the culls for a few days just to be sure they weren't the best hens instead of the poorest! While every poultryman now understands the principles of culling non-producers, an occasional brief review is helpful.

There is an old story that has an application to culling hens. A friend said to a razor manufacturer, "Why do you advertise? Everybody uses your razors now." The manufacturer replied, "There are two reasons for advertising. First, not everyone does use my razors and anyway there is a new crop of shavers coming on every year." Not all hens are good producers and anyway there is a new crop of pullets every year.

There are three kinds of culling. First, there is the sorting out of non-producers from the laying flock. Second, there is the culling out of poor pullets when they go to the laying house and third, where a man follows a breeding program there is a question of picking out the cockerels that he

wants to save for his breeding pen.

It is poor policy to cull the laying flock when they have been neglected. In other words a hen ought to have a chance to show her ability to produce. Then if she doesn't produce she should be sold. When a hen stops laying she begins to put yellow color back into the vent, eye ring, beak and legs. Usually she also begins to shed her feathers, her abdomen contracts and she begins to lay on fat. A hen that stops laying early in the fall molts more completely and lays fewer eggs during the year than does the hen who continues to lay right into the fall. It is becoming common for poultrymen to cull more systematically throughout the entire year, and also to go through the flock thoroughly about the first of September. At this time a poultryman can cull out and sell birds that show a lot of yellow color indicating that they have been out of production for some time, birds that are very light weight or birds with a very small body capacity.

There is some temptation to discard a hen that is in a complete molt, but this is wrong because a bird that molts completely is usually a quick molter and will be back in production in time to make her profitable. Some birds that lay steadily at the rate of 2 or 3 eggs a week molt slowly but take a long time to complete the molt. If a quick molter has her legs well bleached out you can be pretty sure that she has been laying heavily.

No matter how good a flock of pullets you have you are likely to have a few culls. It is always a temptation to keep them, particularly if you are a little short of pullets, feeling that they will come along and be profitable. The thing to do is to pick out the most mature pullets and put them together in one pen, then a bit later to put the slower maturing pullets together in other pens, at the same time culling out 3 or 5 or 10% of the runts which, if put in the laying pen will merely be an expense instead of returning a profit.

The way to select cockerels for the breeding pen is by a system of elimination. Most poultrymen keep two or three times as many as they really need. At broiler age they pick out the best looking, fastest developing cockerels which at that time may look pretty uniform. However, as time goes on, differences show up and a continual culling of this bunch of cockerels will result in the number you want and the kind you want.

Consistent culling is no substitute for better breeding. Culling merely raises average production by taking out the poor producers while better

breeding raises production by raising the average of the entire flock. "Feed, Weed and Breed", is a slogan that applies to hens quite as well as it does to cows.—H. L. C.

Your Questions Answered !

Molting Pullets

Is it possible to keep early-hatched pullets from molting in the fall?

We do not say it is impossible, but it is very difficult. However, if these pullets are bred for high production, they should molt rapidly and get back into production in a relatively short time.

Building a Temporary Silo

Because of rainy weather, I have put more grass in the silo than I intended. My corn is looking better than average, and I will not have enough silo room to hold it. Is a temporary silo satisfactory? Can I put corn silage in on top of the grass?

Some dairymen are satisfied with the results from temporary silos. Others are not. At least some of this difference of opinion results from the way the silo is put up. A temporary silo is just what the term says, "temporary". The best temporary silo in our opinion is made from snow fencing and heavy building paper. It is not as simple as it seems to put up such a silo and have it stand firm. Some lean at a perilous angle which means that the silage pulls away from the walls, allowing air to enter and causing spoilage.

A company that manufactures paper has put out a little leaflet giving very definite directions for building a satisfactory temporary silo. We are sending this leaflet to you, and will be glad to send it to any reader who intends to put up a temporary silo this fall.

There is no reason why you should not put your corn silage right in on top of the grass silage.

Apple Crop Below Average

What are the latest figures on the expected U. S. apple crop and what is the condition of the crop in various areas?

The U. S. Government report indicates an apple crop a little under average. The total crop is forecast as 116,721,000 bus. as compared to 143,085,000 bus. a year ago and a five year average of 121,755,000 bus.

By regions the east is expected to have a crop 27% smaller than a year ago, while in the far western states the commercial crop is expected to be 2% larger than a year ago but about 10% below the five year average.

Bruised Potatoes Bring Less

I have heard quite a bit said about the necessity of handling potatoes to prevent bruising. Can you give me any suggestions that will help?

The first thing to do is to dig deeply enough so that the dirt acts as a cushion while the potatoes are going over the digger. In the second place a lot of growers have padded their digger. Sponge rubber is used on some metal parts, and sections of hose are cut to go on shaker rods. The third point is to instruct the people who pick up the potatoes that the potatoes are not stones and they should be placed and not thrown into crates. Unquestionably a good proportion of the defects which show up when consumers buy potatoes is due to rough handling.

Hall's Chicks

HORSES

WEEKLY AUCTION SALES! 2500 HEAD OF HORSES

AUGUST 12TH, AUGUST 19TH, AUGUST 26TH, SEPTEMBER 2ND, SEPTEMBER 9TH, SEPTEMBER 16TH, AND SEPTEMBER 23RD.

PRIVATE SALES DAILY

OVER 2000 HEAD GENERAL PURPOSE, FARM AND DRAFT HORSES, including a substantial number recently acquired from the French Government, we having taken over their entire purchases made in Canada. These horses run in age from 4 to 10 years and weigh anywhere from 1000 to 1800 lbs. The majority weigh from 1200 to 1500 lbs. and are of Percheron, Belgian, Clydesdale, and French Canadian breeding.

300 HEAD CAVALRY HORSES, all broken to harness and majority broken to saddle.

200 YEARLING AND TWO YEAR OLD COLTS of draft and French Canadian breeding.

We particularly invite commercial horse dealers to attend these weekly sales and buy what horses they need at their own price. If your district needs horses, communicate with us and we will work out arrangements to supply you. This is without doubt the greatest offering of horses that has ever been assembled together and offered to the public at their own valuation.

SALES WILL BE HELD UNDER COVER, RAIN OR SHINE, commencing at 9:30 A. M.

TERMS: CASH.

Favorite Vegetable Recipes

OF FARM FAMILIES

WINNERS IN A. A.'s CASH CONTEST

IN JUNE we sent out a call for "something different" in vegetable recipes and offered \$1.00 each for the five best recipes, and 35 cents each for every other one that we could use. From every corner of the Northeast they came, such excellent ones that our Home Editor had a difficult time picking the winners. Nearly every woman who sent in a recipe stated that it is a great favorite with her family, and we know that other farm families who try these recipes are going to enjoy them equally.

Name of sender is given with each recipe. Where cooked vegetables are specified in a recipe, please note that 1 teaspoon of salt per quart of vegetables is the standard allowance in boiling:

Spanish String Beans (First Prize, \$1.00)

1 tablespoon flour 2 large onions 2 lbs. green beans
1 teaspoon salt 1 sweet pepper cut in small pieces
pepper 2 large tomatoes 4 tablespoons butter

Cook onions, tomatoes, sweet pepper, butter and flour until a golden brown. Cover beans with boiling water, season and add first mixture. Cook slowly for one hour.—Mrs. L. Lagree, Cherubusco, N. Y.

Stuffed Cucumber Cups (Second Prize, \$1.00)

Wipe and pare cucumbers; cut in 2-inch pieces, crosswise, scooping out seed centers to form little cups.

Mix 3 tablespoons bread crumbs, 2 tablespoons finely chopped ham (or other cooked meat) and 2 tablespoons grated cheese. Moisten with 4 tablespoons tomato sauce and season with salt, pepper and a dash of cayenne.

Put cucumber cups in a shallow pan, fill with the mixture, and lay square of bacon on each cup. Bake 30 min., remove from oven and cover with buttered bread crumbs and bake until crumbs are brown.—Mrs. William Carpenter, Mount Morris, N. Y.

(EDITOR'S NOTE: Stewed, strained tomatoes, thick tomato juice or chili sauce may be substituted for the tomato sauce.)

Stuffed Eggplant (Third Prize, \$1.00)

Cut an eggplant in halves, remove seeds. Cut a few lengthwise cuts with a sharp knife, sprinkle with salt and let stand about ½ hour. Turn out water, squeeze, then rinse and dry. Brush inside with olive oil, sprinkle with chopped parsley, salt and pepper. Make a bread crumb stuffing. Fry 1 tablespoon chopped onion in 2 tablespoons butter until delicately brown. Add 1 cup soft bread crumbs, ¼ cup chopped olives, ¼ teaspoon salt, a very little pepper. Fill the eggplant, dot the tops with butter. Bake in a moderate oven (350° F.) until eggplant is tender. Serve with the following tomato sauce:

½ teaspoon pepper (black) 2 cups canned tomatoes
¼ cup olive oil 1 bay leaf
1 small onion 2 cloves
3 tbsps. tomato catsup 1 teaspoon salt
½ cup water 1 tablespoon sugar

Add black pepper to oil and cook 2 min., cut onion in thin slices and cook in oil until tender but not brown. Mix catsup with the water, add to oil in 3 different installments, letting it boil up between times. Add tomatoes, bay leaf, cloves and salt and cook slowly for 45 min. Add sugar and cook 10 min. more.—Hattie Mathewson, Sinclairville, N. Y.

Vegetable Chowder (serves six) (Fourth Prize, \$1.00)

2 medium sized onions, chopped 1 cup cooked lima beans
1 small green pepper, chopped 1 cup cooked diced carrots
2 tablespoons butter 1 teaspoon salt
1 cup cooked corn ½ teaspoon pepper
1 cup cooked peas 2 cups water
1 cup cooked diced potatoes 1½ cups milk
¼ lb. cheese, diced

Fry onion and green pepper in butter until light brown. Put into a kettle and add corn, peas, potatoes, lima

beans and carrots, with salt, pepper and water. Bring to boiling point and add milk and cheese. Heat thoroughly and serve immediately.—Mrs. Ernest Harris, R.D. 1, Nineveh, N. Y.

Vegetable Loaf (Fifth Prize, \$1.00)

1 cup cooked peas 2 cups milk or vegetable
1 cup cooked carrots liquor
1 cup cooked stringbeans 2 teaspoons salt
2 cups mashed potatoes ½ teaspoon pepper
5 tablespoons butter ½ teaspoon celery salt
1 medium-sized onion, 1 tablespoon chopped
chopped parsley
3 tablespoons flour 1 cup grated cheese
1 cup buttered breadcrumbs

Arrange vegetables in layers or mix together in greased baking dish. Melt fat in saucepan, blend in onion and flour, gradually add milk, seasonings, and parsley; stir until thick and smooth. Add cheese, stir until melted and remove from heat. Cool slightly. Add eggs and mix well. Pour sauce over vegetables and sprinkle with crumbs. Bake in moderate oven (350° F.) 45 min. Serves 6 to 8.—Mrs. Add Van, Sprugeton, Greene Co., N. Y.

Brussels Sprouts with Brown Sauce

2 tablespoons butter 1 quart brussels sprouts
3 tablespoons flour 1 tablespoon cooked ham
¼ teaspoon salt 1 tablespoon celery
1½ cups brown stock few grains of pepper

Melt butter and cook flour in it until brown, add salt, pepper and stock; cook until thickened; add ham, and celery. Simmer ½ hour, strain and add Brussels sprouts. They may be served in toasted bread cases.—Bertha Jones, R.D. 1, Eaton, N. Y.

Green Corn Cakes

1 cup corn milk ½ cup sweet milk
2 eggs ½ teaspoon salt
1 tablespoon shortening 2 teaspoons baking powder
2 cups flour

Slash corn kernels, and press out contents which should be in milk stage. Mix well, cook in small cakes on hot griddle or skillet. They are very tender. Batter should be thin like pancake batter. Flour may have to vary slightly according to thickness of corn milk.—Mae Capron, West Valley, N. Y.

Tomatoes Stuffed with Corn

6 medium tomatoes ½ teaspoon salt
1 cup corn pepper
½ cup breadcrumbs 2 tablespoons butter
½ cup chopped celery (melted)
¼ cup minced onion buttered crumbs

Remove stem end from tomatoes and remove the pulp with spoon, being careful not to break the skin. Drain. Mix the tomato pulp with other ingredients. Stuff the tomato cases and sprinkle with buttered crumbs. Bake 45 min. at 350° F.—Mrs. DeWitt Bowler, Trumansburg, R.D., N. Y.

Onion Stew with Dumplings

6 sliced potatoes 6 slices salt pork or bacon
1 sliced onion (large) salt to taste
2 or 3 carrots water to cover

Boil together until partly tender. Add dumplings made as follows:

2 cups flour ½ teaspoon salt
2 teaspoons baking powder 2 or 3 tablespoons fat
¾ cup milk

Sift dry ingredients together, cut in fat, add milk to form soft dough. Drop by tablespoonsful on boiling vege-

tables leaving the cover off pot for 10 min. Replace cover for 10 min. Serve immediately. Break dumplings as served and dot liberally with butter.—Mrs. Carl Van DeBogert, Central Square, R.D. 2, N. Y.

Creamed Tomatoes

Wipe, peel and slice three tomatoes. Sprinkle with salt and pepper, dredge with flour and brown in butter. Place on a hot platter and pour over them, one cup of thin white sauce, made of two tablespoons butter, two tablespoons flour and one cup milk, ¼ tsp. salt, sprinkle of pepper. This serves three, but is easy to double.—Ruby E. Pease, Laconia, N. H.

Spinach Souffle with Egg Sauce

2 cups cooked spinach 2 eggs
2 cups fine cracker crumbs 1 pint milk
¾ teaspoon salt 2 tablespoons butter
½ teaspoon pepper grated cheese

Beat eggs, add milk, crumbs, seasonings and spinach, chopped with butter. Pour into well greased baking dish and bake slowly for about 40 min. or until mixture is set. Sprinkle with cheese before baking. To make sauce, take 2 cups milk Pepper
¼ cup butter ½ teaspoon salt
¼ cup flour 2 hard cooked eggs

Melt butter, add flour, salt and pepper. Gradually add milk, stirring after each addition. Cook until smooth and thickened. Add chopped eggs.—Mrs. Harold Lounsberry, Ontario, N. Y.

Baked Vegetables Supreme

1 lb. fresh asparagus, 2 eggs, beaten light
trimmed 1 cup milk
1 quart boiling water 2 tablespoons butter,
(cooking time—10 min. melted)
or more) 1 teaspoon cornstarch
1 can (2 cups) kernel corn 1 teaspoon salt
2 cups cooked or canned 1/16 teaspoon pepper
peas

Cut the tender asparagus stalks into inch pieces; cook in the boiling water in a saucepan until tender; drain. Mix with the peas and corn. Beat the eggs in a bowl; add the milk, butter, cornstarch, mixed with 2 tablespoons milk, and seasonings. Combine with the vegetables; pour into a buttered baking dish. Bake in a moderately slow

oven (325° F.) until firm (about 1 hr.) Serve in baking dish. Serves 8.—Miss Rae Keller, Flemington, N. J.

Escaloped Egg Plant

1 large egg plant 2 teaspoons salt
4 tablespoons butter or pepper
other fat 1 green pepper (chopped)
1 qt. canned or chopped 1 small onion (chopped)
raw tomatoes 1 cup bread crumbs

Pare egg plant and cut in cubes. Melt 2 tablespoons fat in skillet. Add pepper and onion and cook few minutes. Add tomatoes, egg plant, salt and pepper. Cook 10 min. and place in shallow baking dish, greased. Melt remaining fat in skillet, stir in bread crumbs and sprinkle same over egg plant. Bake in moderate oven one-half hour or until done. Very good.—Mrs. Robert S. Marshman, Oxford, N. Y.

Parisian Vegetable Hash

½ cup cream 1 cup turnips
¼ lb. butter 1 cup carrots
1 cup potatoes 2 cups young tender beets

Boil vegetables separately, then dice fine. Divide butter, but in skillet and brown a medium size onion (diced) in it. Season vegetables with salt and pepper if desired, add to onions. (I like to keep the vegetables in separate mounds in skillet but they can be mixed thoroughly, being careful not to break them too much). Add the rest of the butter, and ladle over all the cream. Cook until lower side is brown and serve immediately.—Mrs. Sidney O. Lane, Marietta, N. Y.

(EDITOR'S NOTE: A good way to utilize small quantities of left-over vegetables.)

Supper Souffle

3 cups sieved tomatoes 1 cup whole kernel corn
2 tablespoons butter 6 eggs, separated
4 tablespoons flour 1 tablespoon sugar
1 teaspoon salt 1 cup grated cheese
½ teaspoon pepper

Make sauce by combining tomatoes, sugar, butter, salt and pepper; heat to boiling point, stir smooth, thicken with flour stirred to a paste with a tablespoon cold water. Pour sauce slowly over beaten egg yolks, add cheese and corn, and fold in stiffly beaten egg whites. Pour in 2 quart greased baking dish. Bake 45 min. at 375° F. Serve at once on hot plates.—Miss Martha Richards, Wayland, N. Y.

Deviled Onions

Chop 6 large onions very fine, add mashed yolks of 3 hard cooked eggs, ½ teaspoon salt, 1½ tablespoons chopped parsley and 1 cup medium white sauce. Turn into 6 greased ramekins and sprinkle with fine buttered crumbs. Brown under medium broiler flame or on top rack of hot oven. Especially favored when served with steak.—Mrs. Norman Davis, Center Harbor, N. H.

Healthful Greens

Combine Swiss Chard, endive and spinach greens, using about ½ of each kind. Clean thoroughly. Place in covered kettle, adding no water except that which clings to the greens. Cook 10 min. Turn them over, shaking them apart well. When they are wilted—

Yokes Lend Style

Yokes are in the picture for all kinds of dresses and blouses. They offer an easy way to give distinction to an outfit, besides adding to the fit of the garment.

DRESS PATTERN NO. 3409 is excellent for a house dress, being both becoming and practical. There is a choice of several necklines and sleeve lengths. With the market abounding in beautiful cotton materials suitable for house or street, this pattern may be interpreted becomingly for any type. Sizes are 14 to 48. Size 36 requires 3½ yards of 39-inch material.

DAY-TIME FROCK PATTERN NO. 3399 is smartly tailored for all day-time occasions. Its matched or contrasting jacket makes the costume doubly useful, since the jacket may be

"Who's the old hag, dearie? She looks familiar."

worn with other outfits. Sizes are 12 to 20. Size 16 requires 3¾ yards of 39-inch material for dress; 2½ yards for long sleeved jacket.

TO ORDER: Write name, address, pattern size and number clearly and enclose 15c in stamps. Address Pattern Dept., *American Agriculturist*, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our new Fall fashion book.

Favorite Vegetable Recipes

(Continued from opposite page)

ed, add salt, (1 teaspoon per quart of wilted vegetable.) Cook another ten or 15 min. Remove from fire. Add butter, serve immediately. Vinegar may be added at table if desired.—Mrs. W. A. Hatch, North Penobscot, Maine.

Vegetable Souffle

(For carrots, spinach or Hubbard Squash)
¼ cup butter 1 cup sieved vegetable
¼ cup sifted flour 3 eggs
½ cup cream ½ teaspoon salt
½ cup vegetable water pepper

Melt butter over hot water. Add flour gradually, then cream and vegetable. Add well-beaten egg yolks, and fold in stiffly beaten egg whites. Pour into buttered baking dish, place in pan with hot water and bake in slow oven.—Mrs. Leo Bibeau, Star Route, Essex Junction, Vermont.

Cucumber Jelly

2 cups chicken stock 1 sprig parsley
2 cucumbers 1½ tablespoons granulated gelatine
1 slice onion green coloring

To well-seasoned stock add onion, parsley, cucumbers, pared and grated; cover. Let stand two hours. Heat gradually to boiling point. Add gelatine and color green. Let stand till nearly cold. Strain into individual paper cases in the bottom of which is a slice of cucumber. Garnish tops with mayonnaise dressing and halves of nut-meats.—Mrs. Anna Watson, Ely, Vermont.

Onions with Cream

Boil in salted water the usual amount of onions that you serve. Drain, add sweet or sour cream almost to cover. Sprinkle generously with paprika and simmer until the cream is partly absorbed. A different way to serve the hard-to-very onion.—Ruby E. Pease, Laconia, N. H.

Tomato Treats

Original Recipes by "H. R."

Savory Tomatoes

Arrange alternate layers of cooked macaroni and dried beef in buttered casserole. Pour over enough well seasoned, stewed tomatoes to cover, top with buttered crumbs and bake 25 minutes in moderate (350°) oven.

Tomato Main Dish

5 tablespoons butter 1 quart chopped tomatoes, fresh or canned
2 medium onions, chopped 2 teaspoons salt
2 tablespoons green pepper, chopped ¾ teaspoon pepper
1 pound hamburger ½ pound noodles

Cook together until golden brown, butter, onions and green pepper. Add hamburger and cook gently 10 minutes. Add tomatoes seasoned with salt and pepper. Cook noodles in boiling, salted water until tender and drain. Mix hamburger-tomato mixture lightly with noodles; bake in slow oven 275° F. for 45 min. in greased baking pan.

Tomato Medley Chowder

½ pound diced salt pork ½ cup shredded codfish
1 cup diced potatoes 1 quart stewed tomatoes, well seasoned
1 cup diced carrot Toasted crackers
3 chopped onions

Cook salt pork in bottom of kettle until golden brown and crisp. Add potatoes, carrot, onions and codfish and simmer until ingredients are tender in water barely to cover. Add tomatoes, heat and serve with crackers.

Tomato and Lima Bean Casserole

Butter a casserole and fill with alternate layers sliced tomatoes and raw young lima beans. Add bits of butter

to each layer using about 2 tablespoons butter (or savory drippings) to each pint of mixture. Season each layer well with salt and pepper. Bake 1 hour in moderate oven (350° F.) or until lima beans are perfectly tender. Sprinkle with grated cheese to serve.

Cranberry-Orange Relish

Since it has become known that cranberries, raw ones particularly, add considerable vitamin C to the diet, various ways to serve them are more in demand than ever. Here is a tasty relish which also has the advantage of keeping well for two or three weeks:

1 lb. (1 qt.) raw cranberries 1 cup sugar or strained honey (about)
1 orange ¼ teaspoon salt

Wash and quarter the orange, remove the seeds but use both pulp and skin. Grind orange and washed cranberries in food chopper, using coarse knife. Add salt and sugar or honey to the ground fruit, adding more if desired. Put in covered jar in the refrigerator where it will keep for 2 or 3 weeks and be ready to serve with any kind of meat or poultry.

Personal Problems

Weigh Your Words

Dear Lucile: I am 21, have a nice job as secretary, come from a good family, have a nice home, and all the clothes a girl needs. And am not really so bad looking. However, it just seems that I don't click with anyone.

I get, along unusually well with my family—really swell with three brothers, ranging between the ages of 12 and 18; and very well with my co-workers. But when it comes to having friends I am just a miserable flop. It seems that I am sarcastic and stuck-up to people, when I do not mean to be so at all. I honestly try to treat other people as I would like to be treated—but it does seem as though everything I say is the wrong thing. Now how can I overcome this? I want so very much to make friends with people and have them like me, that I am writing to you in the hope that you can give me some "pointers."—Bewildered.

I think, perhaps, that your very intense desire to have other people like you defeats its own end. Without a natural aptitude at making friends easily you impose such a strain upon

Such Homely Things

By JESSIE WILMORE MURTON.

Such homely things (fresh nut-brown bread

By which four hungry mouths are fed;
A doll-child that needs sewing up,
A nondescript ungainly pup,
A barrow and a tiny trowel,
Small, grimy hand-prints on the towel,
A wee darned sock, and small patched blouses)—
Keep homes from being merely houses!

yourself that you cannot talk or act naturally.

Try being slow and deliberate; take time to think how things will sound and if there's a tinge of sarcasm to them, change your speech or keep silent.

Try to be sincerely interested in others; perhaps you're a bit too self-centered in your interests. You can't fake on things like this, you know; you must first be a sincere friend before you can expect the same quality of friendship in return.

Better Stick

Dear Lucile: I am 24 years of age, and have been married five years, which have been very, very disagreeable ones. My husband is 32. My problem is, should I stick by my husband or should I find a way myself, or is it too late to do so?

We have been struggling these past five years and I have tried my best to make a go of our marriage, but I haven't gained at all. My husband isn't lazy, but he doesn't seem to get ahead or else he doesn't care to.

We have 80 acres of good producing land and I really can't see why we have to live on a low standard, which we do. The barn is in fair condition but from neglect it won't be for long, but the house wasn't fit to bring anything into when I came here. At first I thought my husband wouldn't stay here but I soon found out he intended to, so I knew I'd have to make the most of it.

I love my three children. I have even offered to go working but he won't listen to that for he says the littlest ones need their mother's care. I think I have tried to carry my share of our load but I'm finding it pretty hard to do so of late. I really hate to break up our home if I can find any way to make my husband realize he has a wife and a family to care for. The children think a lot of both their father and me. Is there any possible way you could advise me to try? I maybe haven't made everything clear but I hope you will be able to help me some.—Discouraged.

It is always hard to advise on a case where only one side is given and you have not been very definite in naming your husband's faults. I take it, however, that the lack of ambition to provide adequately for his family is the main one.

While life with a person such as you have described your husband to be can be very unpleasant and frustrated, I do not believe you would help your condition very much by leaving him. You have three children to think about and their support would not be easy. If you did decide to break up the home and leave your husband, the court would probably order him to contribute to their support, but as he lacks ambition to work the chances are he would not help you very much.

As it is now, you have a home and as you say, 80 acres of good producing land, so why not dig in and put your best efforts in on the farm and its management and see what you can do toward making things go? You would most certainly have to work hard if you left your husband and your present home so why not keep on with things as they are and put hard work in right there? Many women, surprisingly enough, turn out to be very good managers and perhaps you could in some way get your husband to consent to your taking a more active hand in things, to the mutual benefit of all.

Fall in Line

New fashion trends make their bow with Fall—don't let them catch you napping! Send for your copy of the new Fall Fashion Book today, and see the latest silhouettes and Autumn fabrics illustrated in full color. Back-to-school and college clothes, fool-the-eye frocks for larger sizes, accessories to brighten up last year's wardrobe, are all included—not to mention an entertaining and informative fashion quiz and ideas for original Christmas gifts that you can make yourself. The price is 12 cents.

LOCKING UP the PULLETS

By ROMEYN BERRY.

OUR PULLETS came a little late last spring. They are still out on range. This means that in the dusk of every evening someone must go out and lock up the range shelter. The purpose, of course, not to lock the pullets in, but to lock the foxes out—foxes, skunks, raccoons and other varmints with whom nice, self-respecting pullets should never be allowed to spend the evening.

Unlike all other chores around our farm locking up the pullets has never become the designated task of any one person. I don't know why. Perhaps it doesn't last long enough. Maybe it's because we merely keep chickens as a part of farming and have not yet become poultry people. Sometimes my wife locks up the pullets, sometimes Elmer does, and sometimes I do. On still other occasions—as you've doubtless guessed—nobody locks them up at all, which means I've got to get out of bed again and go do it. And I want to tell you that locking up the pullets in the dusk can be a pretty spooky business, and that no one really likes it much.

It's dark enough at pullet time to make a flashlight necessary, and it isn't dark enough to make a flashlight any good. It's the better part of a quarter of a mile from our house out to the range shelter and the journey is a complicated one. The path leads first along the little brook, then through the barnyard—which involves opening and shutting two gates—around back of the main chicken houses, and finally across the open field to the range shelter. Most anything can happen on a trip like that in the dark and it usually does.

There's a bullfrog in the brook who sounds off "Ker-Chug" at the instant I'm about to step on him. I wish he wouldn't. I do not regard myself as a timid person, and I'm not the least bit afraid of any bullfrog, but it always makes me jump when our bullfrog does that and I'm past the jumping age—high or broad. Not infrequently, too, some cow has decided to spend the night in the barnyard instead of going down in the pasture with the other girls; and I find it extremely disconcerting when I'm trying to close a barnyard gate to have an unsuspected cow breathe heavily on the back of my neck in the dark.

Having passed the brook and the barnyard, going around back of the chickenhouse becomes the worst part. That's where you are pretty apt to run into skunk trouble. We have a large, white skunk on our farm who belongs to the night shift and apparently goes to work just about pullet time. I've run into him only once but my wife meets up with him practically every time she locks up the pullets. Nothing has ever happened, but she doesn't like it either. I don't like it much myself.

But once you're past the skunk phase it's all clear sailing and from there on I rather enjoy locking up the pullets. In its present location at the summer's end, the range shelter is up on a little ridge with the land falling off abruptly on either side. Up there I like to stand and look around—once I know the pullets are in and the doors are locked. There is still color in the upper sky, the grass isn't long enough for anything to hide in, the crickets and the katydids give lots of company, the nights are getting longer and cooler, and you can see the lights of automobiles coming out of the hills 10 miles away. In such surroundings locking up the pullets becomes a pleas-

ant task and I like to dawdle over it and enjoy it.

Everything is in now except the corn and potatoes. The pressure is off. The fields where the wheat and oats were growing a little while ago look as smooth as if they'd just come from the barbershop. There's a patch of blooming buckwheat over on the next farm but one. The woodlot silhouetted against the night is blacker than the night. The lights in the northern sky might be the afterglow departing or the first display of the aurora borealis just about to start. It's nearly time for that. Little bugs make noises in the grass and there's something strangely appealing in that hour—when the work of the day is over, the hard work of the summer nearly over—that keeps people on the land no matter what the prices are or how disappointing the crops. There's a comforting sense of peace and security in the realization that the fields as far as you can see (in the dusk when you can't see very far) belong to you; that through other periods of war and social change and economic chaos they have sustained the people who have tilled them; that the farming business is a sound one that must endure as long as boys and girls continue to take a deep interest in soft boiled eggs for breakfast, in chicken and dumplings for dinner.

If you think you can tell what is going to happen within the next ten years to the world in general, and to the United States in particular, you're a more confident prophet than I am. Who would have guessed that after a year of destruction, wheat and pork would be selling at a lower figure than when the madness started? Nobody knows what's going to happen. Perhaps the things we now fear most acutely will turn out to be as harmless as that bullfrog, the cow that breathes on the back of my neck in the dark, and the amiable skunk attending to his own business out back of the chickenhouse. And we can be reason-

ably sure, I think, that people will continue to hanker for soft boiled eggs for breakfast, for chicken and dumplings for dinner. Moreover if you can't sell what you produce in the farming business, you can at least eat it yourself, which is more than can be said of people who turn out, and hope to sell to somebody else, electric refrigerators, 4 per cent bonds and silk stockings.

Such comforting thoughts can be pumped up by an expert pumper, I suppose, in most any surroundings, but I find they come easier out under the new stars on the pullet range than they do within hearing distance of a radio, or in reading distance of our evening paper. So when I go out to lock up the pullets, and take a half hour for a ten minutes job, my wife doesn't get anxious about my absence. She knows I'm standing out by the range shelter in the descending night looking at automobile lights 10 miles away—at stars 10 million miles away—and getting my mind straightened out before I go to bed. She knows because she does it, too, when she locks up the pullets and with much the same results. Going out is spooky in the dusk, but it's nice coming back in the dark with your serenity re-established and that half-remembered verse ringing in your head—"When I consider thy heavens, the work of thy fingers, the moon and the stars, which thou hast ordained; what is man that thou art mindful of him? And the son of man that thou visitest him?"

An Open Letter to Northeastern Apple Growers

(Continued from Page 1)

Last year the Washington State apple growers spent \$250,000 to advertise and merchandise their crop.

Is it any wonder, then, that the consumer is turning away from your northeastern apples to almost every other kind of fruit? For the same reason, is it any wonder that hundreds of you efficient apple producers both in New York and New England are now in financial distress? The real wonder is that you have not realized this situation years ago and done something about it.

At last something is being done to meet this marketing problem of eastern apple growers, through the New

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Send poems to Poetry Editor, *American Agriculturist*, P.O. Box 367, Ithaca, N. Y.

What Shall I Build Today?

What shall I build today
While far away the warplanes roar?
I'll build a little house secure and warm
For thirteen downy yellow chicks
To shelter them from harm.
While little children starve
And fly in terror and despair,
I'll build a cake with candles on:
Who knows how soon my son
May march to war?

—Elizabeth Wells Webster,
Whiting, Vermont.

York-New England Apple Institute, which was organized in 1935. In spite of poor support on the part of apple growers, this organization already has done a remarkable job in increasing the sales of northeastern apples. If the organization were supported by every grower, or even by a majority of apple producers, it would restore the prosperity of efficient apple growers of the Northeast.

The purpose, of course, of the New York-New England Apple Institute is to increase the consumption of apples, thereby raising the price, particularly of the varieties produced in New York and New England. Here's how the organization works, and some of the results it has obtained:

Institute Gets Results

One of the Institute's first jobs was to get in touch with the heads of all the big chain and independent stores, interest them in apples, and get them to put on intensive local and national apple drives to make the consumer apple conscious. Some of these drives were in cooperation with the National Apple Institute, so the great campaigns were conducted throughout the nation. Many stores more than doubled their apple sales.

During these drives, and also at other times, field representatives of the Apple Institute personally visited the trade, including all outlets such as chain stores, independents, commercial truckers, super markets, wholesalers, to talk to these people about increasing the sales of apples, and to put into their hands poster material for displays in stores and windows, cuts for newspaper publicity, advertisements, recipe booklets for consumers' use. Representatives also addressed many retail grocers' association meetings and consumers' meetings to tell the audiences about the profits for them in properly featuring and selling and eating New York and New England apples, which are of the best quality in the world.

One chief reason in the past for the lower consumption of our apples has been their poor handling and display in retail stores. Under the guidance of representatives of the Apple Institute, grocers have been helped to handle Northeast apples so as to maintain their quality and to display them in a manner to attract consumers. The best salesmen for apples are good apples themselves, well displayed. For this reason culls should never get to the retail trade.

"An Apple a Day"

The Institute has placed much emphasis upon making the consumer realize the health properties of apples. Large publicity campaigns costing little

The Song of the Lazy Farmer

WE USED to feed the cows and shoats on corn and barley and on oats, they'd grow and thrive and put on fat, on plain old-fashioned feed like that. But now the scientists have come and put old ideas on the bum, the way we fed in days of yore won't satisfy the stock no more. We used to shovel out the feed to satisfy each critter's need, we'd pitch down hay to fill 'em up; them animals would dine and sup on feed that Nature had prepared, to look at 'em, you'd think they fared almighty well, their coats were slick and very seldom one got sick. They helped us pay the mortgage and to buy another piece of land, our ignorance was deep and rank, but we put money in the bank.

In these here days the scientists come out and speak and wave their fists and tell us we must feed the swine a dozen kinds of vitamin. Stock must have minerals and yeast, we have to coddle up each beast

and put calories in their swill, we feed 'em this and that until we've got 'em growin' strong and fast with vitamin B 1 at last. To feed the cattle right, by gee, you need to have a Ph. D., it takes a scientific cuss to balance lime and phosphorus so that in ev'ry bite they eat they've got the stuff for bones and meat. We immunize them critters too against diseases that might do 'em harm. I lie awake at night for fear my feed ain't balanced right, and worry lest each pig and cow ain't disinfected right, somehow; I'd like to quit and take my chance with my old-fashioned ignorance.

have been carried on by the Institute, working with departments of markets in several states and home bureau agents; and using demonstrations, newspapers, public utilities, the radio, and consumers' service publications. Public authorities have been influenced to use more home-grown apples in the State, county, and city institutions. The Institute also has worked with the Federal Surplus Corporation to get this government agency to buy large quantities of apples at favorable prices for relief purposes.

The effect of all of this accumulative work has been to move thousands of bushels more of northeastern apples, and to raise the price to producers above what it would have been without this work. The special apple weeks and other sales campaigns alone have moved thousands of extra bushels of northeastern apples, and every apple of good quality so moved has helped to increase consumer interest in buying more.

In a word, I am enthusiastic over the surprisingly good job that the Institute has done with comparatively little financial help. Fortunately, growers who are on their toes are beginning to recognize two fundamentals:

First: That if they are to continue in the apple growing business they have got to do something about the marketing end.

Second: They are beginning to appreciate the good work of the New York and New England Apple Institute, with the result that more and more growers are joining.

Since I started to write this letter, my associate editor, Mr. H. L. Cosline, has returned from a trip to visit farmers in New England and tells me:

"One of the best growers in Massachusetts said to me that the Apple Institute is the only way out for growers. 'We may as well make up our minds to get back of an organization of this kind or fold up.'"

Responsible Leaders

One of the chief reasons why the Institute has been able to do such good work, and why more and more growers are joining up, is the fine leadership of the Institute. Each apple section has its own Institute director, of which there are 22 in all. I know many of these directors personally, and have the highest respect for them. They are efficient growers and high-class citizens. The President is John Chandler of Sterling Junction, Massachusetts; vice-president, Frank W. Beneway of Ontario, New York; secretary and assistant treasurer, Theodor Oxholm of Esopus, New York; treasurer, E. Stuart Hubbard of Poughkeepsie, New York. Highest commendation goes to Manager Thomas H. O'Neill, whose enthusiastic and efficient hard work has had much to do with the success of the Institute. The other directors are: John Lyman of Middlefield, Connecticut; Charles B. Young of Wallingford, Connecticut; Howard P. Gilmore of Westboro, Massachusetts; Roger E. Peck of Sherburne Falls, Massachusetts; Myron O. Lord of Kezar Falls, Maine; Stanley L. Painter of Augusta, Maine;

James W. Elton of Hampton Falls, New Hampshire; Jay Gelder of Chazy, New York; William B. Giddings of Baldwinsville, New York; Percy R. Morgan of Lewiston, New York; J. Wessel Ten Broeck of Hudson, New York; Rolland Reitz of Rochester, New York; W. R. Tousey of Waterport, New York; Howard W. Hathaway of Portsmouth, Rhode Island; John M. D. Suesman of Cranston, Rhode Island; Sherman V. Allen of Fair Haven, Vermont; and William H. Darrow, of Putney, Vermont.

What Do You Say?

If you are an apple producer, all you have to do to join this organization and get back of it is to sign a pledge to pass on 1 cent per bushel of your commercial crop of apples—culls and drops excepted. Can any of you kick on the absurdly low cost of a cent a bushel to help put your business on its feet? All you have to do is just drop a postal or write a letter to New York-New England Apple Institute, 154 Nassau Street, New York City, telling Mr. Thomas H. O'Neill, Manager, that you want to join the Institute, and that you will gladly pledge 1 cent a bushel from the sale of your commercial apples to help its good work along.

Now, at the beginning of this apple marketing season, is the time to do it. What do you say?

Yours for a more prosperous Northeastern apple industry,

E. R. Eastman

Good Books to Read

THE UNQUIET FIELD, Beatrice Kean Seymour. "The battle of freedom is never done and the field is never quiet." With these lines of Nevinson's as her theme, the author traces three generations of an English family, from the days when Liverpool, in the days of privateers and slavers, was undeniably a bad old town if a picturesque one. Through the hundred years of this family's history, the "modern" spirit, always in advance of its day, emerges again and again in different members to challenge contemporary minds.—*The Macmillan Company, New York.* \$2.50.

ACCOUNT RENDERED, Patricia Wentworth. A good story to take on vacation with you. Lucas Dale, new owner of a big estate, thought that he could have anything he wanted. When, under threat, he forced Susan Lenox to consent to marry him, he started a train of events that led to murder. The solving of that murder keeps the reader interested to the end.—*J. B. Lippincott Co., Philadelphia, Pa.* \$2.00.

Good Movies to See

LUCKY PARTNERS. Ginger Rogers (a bookshop girl) and Ronald Colman, (an artist) in light romantic comedy. Greenwich Village setting.

THE MORTAL STORM. Family break-up under Nazi regime. Powerful and dramatic. Margaret Sullivan, James Stewart, Robert Young, Frank Morgan.

PURE BRED DAIRY CATTLE ASSOCIATION ORGANIZED.

Top row, left to right: John S. Clark, Executive Committee of The American Guernsey Cattle Club, Huntington, Long Island, N. Y.; Fred Idtse, Assistant Secretary of the Brown Swiss Association, Beloit, Wis.; Joseph W. Alsop, President of Ayrshire Breeders' Association, Avon, Conn.; C. T. Conklin, Secretary of the Ayrshire Breeders' Association, Brandon, Vt.

Middle Row: Glenn H. Campbell, Cleveland, Ohio; Lewis W. Morley, Secretary of The American Jersey Cattle Club, New York City; Charles M. Rodriguez, Ayrshire Breeder, Troy, N. Y.; Ira G. Payne, East Schodack, N. Y., Jersey breeder; Glen M. Householder, Holstein-Friesian Association, Brattleboro, Vt.; D. N. Boice, Brown Swiss breeder, Churehville, N. Y.

Front Row: Ira Inman, Secretary of the Brown Swiss Association, Beloit, Wis.; C. F. York, Brown Swiss breeder, Greenville, Ohio; Karl B. Musser, Secretary of The American Guernsey Cattle Club, Peterborough, N. H.; H. W. Norton, Jr., Secretary of Holstein-Friesian Association, Brattleboro, Vt.; Albert B. Craig, Holstein breeder, Pittsburgh, Pa.

AN ASSOCIATION of dairy breeds was formed at a meeting at Peterborough, N. H., recently, when representatives met to discuss a program for the breeders of purebred dairy cattle. The breeds represented were Guernsey, Jersey, Ayrshire, Brown Swiss and Holstein-Friesian, with about 1,400,000 registered animals.

The President of the new organization is Ira G. Payne, East Schodack, New York, Jersey breeder; Vice-President, H. W. Norton, Jr., Brattleboro, Vermont, representing the Holstein-Friesian Association; Secretary and Treasurer, Karl B. Musser, Peterborough, N. H., representing the Guernsey breeders. Ira Inman of Beloit, Wisconsin, representing the Brown Swiss breed, and C. T. Conklin, Brandon, Vermont, representing the Ayrshires, were elected to serve on the Executive Committee with the officers.

The program of the new organization, to be known as the Pure Bred Dairy Cattle Association, is basically one of help to the dairy farmers of America. The officers point out that modern production would be impossible had not careful breeding practice developed high production livestock through centuries of effort. Pure bred dairy cattle used as seed stock is playing a definite part in economical dairying today. It is the function of this new organization to find ways in which pure bred dairy cattle further fit into the modern dairy program and be of benefit to dairy farmers.

WINNERS IN GOODYEAR ESSAY CONTEST

Ten farm boys attending high school were winners in Goodyear's 1940 farm essay contest. At Dearborn, Michigan, they visited testing grounds of Ferguson-Sherman Manufacturing Corp., national distributor of Ford tractors with Ferguson System, for a few hours enroute to Timagami, Ontario, where they enjoyed a north woods outing as guests of P. W. Litchfield, chairman of the board of Goodyear Tire & Rubber Company, as reward for their outstanding manuscripts.

Winners were: Rulon Stephenson, Holden, Utah; Warren Howard, Flora, Illinois; Ralph Whitlow, Mayfield, Kentucky; Richard T. Howard, Brookville, Indiana; Ralph Egli, Mt. Vernon, Indiana; Wiley Connor, Belle Center, Ohio; Stuart Currie, Odebolt, Iowa; Neal Wright, Roosevelt, Oklahoma; Raymond Greene, Winfield, Kansas; Eulon Pritchett, Dixons Mills, Alabama.

Other highlights of the prize trip included a trip through Goodyear's farm

tire manufacturing departments at Akron; Niagara Falls; a steamer trip from Detroit to Buffalo; visit to the Dionne quintuplets, and fishing expeditions into remote areas of the Timagami reserve.

The boys returned to their homes in August. Subject of their manuscripts was: "How Rubber Tires Have Changed Farm Equipment and Methods".

Fall is a good time to build and concrete is the accepted material for foundations. You will find the booklet "Plans For Concrete Farm Buildings" very helpful. To get it, drop a postcard to the PORTLAND CEMENT ASSOCIATION, Department KHC-1, 347 Madison Avenue, New York City.

"Says Who?" is a 16 page book published by the CHEVROLET MOTORS DIVISION, General Motors Sales Corporation, Detroit, Michigan, in which you will find interesting and valuable facts about the cost of operating motor trucks. You can get it either direct from the company, whose address is above, or from your Chevrolet dealer.

"RURAL ROYALTY"—Crowned with a diadem of corn and bearing a pitchfork trident and cornstalk sceptre, pretty 16-year old Edith Johnson of Brooklyn reigns from her haystack throne in the Goodrich Arena as Queen of World's Fair Farm Week and prime choice of visiting farm editors.

Kernels, Screenings and Chaff

By H. E. BABCOCK

IT IS MY opinion that the rush of world affairs is changing the conditions under which we shall farm in the Northeast so smoothly and yet so rapidly that before we know it we shall be faced with an entirely new set of problems—problems to which at the present time we are paying scarcely any attention.

Farm Labor

Two weeks ago I mentioned the fact that farm labor was already becoming scarce. I feel that it will be much scarcer by next spring. Farmers generally, I presume, will try to meet the situations created by a scarcity of farm labor by working harder themselves (if this is possible) and by mechanism. If any real labor shortage develops, however, neither of these devices will suffice. There is a limit to what a farmer can do himself and there is a definite limit to the labor which can be saved through machines.

One constructive way to fight a farm labor shortage will be through making farm work more attractive. As farmers, I don't think we have yet given sufficient attention to this problem. There is a lot we can do to make the jobs, particularly of married men working on farms, more desirable without increasing money wages.

One of the best ways to accomplish this result I think lies in a smarter handling of farmhands' so-called privileges. This is why I am so attracted to the farm freezing and cold storage box. Just handling the farm meat alone—meat which can be used for wages—offers an entirely new approach to solving the problem of farm help.

Pre-Dating Work

Another practical way I see of forestalling some of the worst effects of the almost certain farm labor shortage which lies ahead is by getting as many jobs as possible done while labor is available. By this I mean jobs which once taken care of don't have to be done again for several years. A good example is fencing.

I have an idea that fencing materials are almost certain to advance in price. Now, a combination of high costing fencing materials and a shortage of farm labor makes an awkward situation for a livestock country.

Personally, I am going to rebuild or repair every possible rod of fence I can this fall. I am going to build any new fencing carefully so I won't have to touch it for years.

* * *

Frozen Farm Foods

From time to time I intend to report about our experience with our farm quick-freezing and cold storage box.

The box runs so smoothly, however,

and we get so used to living out of it that I find myself forgetting all about it for weeks.

We have come to running the box when we are not freezing in it at practically zero. Once the dial is set at zero the box goes along weeks and even months without the recording thermometer showing a variation above or below zero of more than a degree or two.

When we have meat, fruit, or vegetables to quick freeze, we set the dial

too fat. Since all our frozen sausage is gone and there are only a few frozen pieces of pork left, we plan to kill a two hundred and twenty-five pound shoat—we have been so busy she has gotten a little too heavy—within the next few days.

For some reason or other we seem to have lost our taste for turkey. We have had around a dozen frozen turkeys on hand all summer, but no one has seemed to want to have one cooked. My theory is that the trouble with turkey as a more or less regular item of diet is that one turkey just lasts a small family too long. It goes swell freshly roasted on Sunday and isn't too bad cold Monday, but turkey hash by Thursday is just stretching it too far.

* * *

Silos Full

I am sure that I have reported before that we have four big silos full of grass silage. It is pleasant to recall

I know of no more practical way to deal with a weed-infested new seeding than to make it into grass silage before the weeds have set any seed.

* * *

Horse-Drawn Trailers

For several years we have been interested in trailers to use with our automobiles, our truck, and our tractors. We have tried out several. As yet, according to our experience, the ideal trailer has not been built.

A trailer to be satisfactory for use with a tractor on a farm should be low, yet should dump by gravity at an angle sufficient to shed its load, whether it be gravel or hay. It must, of course, be sturdy and it probably should be mounted on dual wheels which can be equipped with second-hand 600 x 16 tires.

Given such a trailer, however, I doubt if it would be sufficient, to get the most out of it, to draw it only with a tractor. What I am interested in see-

When our Hereford heifers are received from the Southwest they are usually so tired after their long train trip that they are not very wild. If they are handled carefully while they are resting up from the trip we never have any trouble with them. No matter how tame they become, however, it is never possible to handle them satisfactorily on foot. On the other hand, a single man on a good live horse can drive a bunch of range-born Herefords almost anywhere. Since our pastures are scattered along a twelve-mile stretch of road, the problem of having a horse available at each of the pastures rather

stumped us until we decided to take our horse along with us when we visited the pastures, and for this purpose to use a light trailer behind a passenger car.

The picture shows the trailer we are using. Note that it is mounted on the same standardized wheel we hope to use eventually on all of our farm equipment.

In addition to using the trailer for hauling our saddle horse, we expect to find it useful for hauling supplies to the pastures, and occasionally for transporting a few head of livestock. It dumps by gravity, which is a useful feature in loading livestock on level ground.

at about twenty below and at this temperature, with the aid of a fan in the box, seem to get a very satisfactory quick freeze, in the course of a few hours, of almost anything we attempt.

Our box has three wells. We quick freeze and store some frozen food in the middle well; while we use the two outside wells — one for storing fruits and vegetables, and the other for storing meats.

Of course in the summertime we eat very little frozen fruits or vegetables, but we do use some frozen meat out of the box practically every day. During most of the summer we have been able to have home-raised-and-slaughtered beef, mutton, lamb, veal, turkey, and chicken in our box.

The box got rather low on lamb and mutton the other day, so we killed a spring lamb and a yearling wether. The lamb was in prime condition, but we all felt that the wether was much

this fact now, however, just when a lot of folks are getting ready to put up corn silage.

I certainly don't want to lead anyone astray, but in the case that any one of you have lots of land I'd just like to start you thinking about the comparative cost of a silo full of corn silage and one filled next June with a mixture of legume hay and some winter grain in the milk or dough stage.

Of course, to make grass silage cheaply, a hay loader rugged enough to pick up green hay or grain out of the swath is needed, and some sort of rig—either horse-or tractor-drawn—is desirable which will dump its load so that the green material can be pitched into a chopper by a man standing on solid ground instead of on a swaying hayrack.

A final consideration which you should think about in connection with grass silage is the opportunity making grass silage gives you to control weeds.

ing built is a small, two-wheeled truck, carrying a pair of shafts or a pole which can be hooked to the trailer in place of a tractor, and powered with from one to four horses or mules. Some day I hope to have just such a rig.

* * *

Now that we have our five darkened basements all in operation, each with running water in it, and a big trough of loose salt, we continue to be amazed at the amount of salt that pastured young stock will eat. On the basis of the loose salt ours are eating, the average heifer which goes for days without any salt at all, or has literally to rasp and melt a meager ration off a salt block must not be getting salt enough to do well. I suggest to readers of this page that you try putting loose salt in a dark, cool, well protected place to which cattle have free access, just to see how much they really appear to want.

New York's Trespass Law

The New York State Law states plainly that it is a violation of the law to hunt or fish on private property, which is posted in accordance with the Conservation Law. Property is legally posted when a sign at least 11 inches square is put along the farm boundary, one on each corner and at distances not greater than 40 rods apart. Signs which have become illegible or have been torn down must be replaced once a year during the months of March, July, August or September. The one word POSTED is legal, but other forms may be used. It has been ruled recently that the printing on these signs must occupy at least 80 sq. in.

It is the duty of local law enforcement authorities, game protectors and State Police to enforce this law. Any violation of the Conservation Law is a misdemeanor punishable by a fine which becomes more severe on subsequent offenses. It is a violation of the Conservation Law to step on private property with a gun or fishing rod. It is also a violation of the law to deface or tear down "No Trespass" signs.

Occasionally we hear reports that the law against trespassing is not vigorously enforced and in such cases a discussion of the situation in granges, at Farm Bureau meetings and other meetings, and a vigorous presentation of the farmer's attitude on the subject to the proper authorities often has a good effect. No single thing develops more respect for this law among so-called sportsmen than an arrest and conviction under the law.

Arrested

In recent weeks a number of poultrymen have complained that egg checks signed by T. Krug of New York City were protested and returned by the bank. When such a thing happens there is one of two explanations. Either the firm is in financial difficulties, or there is a definite plan to defraud poultrymen out of returns. As yet it is uncertain which applies to this case. Anyway a warrant for the arrest of Thelma Krug was issued in Tompkins County, New York, and through the cooperation of Clarence Beach and the New York City authorities, she was arrested and released on \$200. bail to appear before Justice of the Peace Floyd Beach of Newfield, New York.

This case again emphasizes the necessity of checking the reliability of egg receivers before you ship. Too many poultrymen are persuaded to ship eggs on a bare promise of better returns. In slang terms, it is called, "Sucker Bait."

Home Work

"Do you know of any honest reliable companies that give home work such as addressing letters or post cards. I would like to do this work as I would like to earn a little extra money at home as I remain at home most of my time."

We have never yet found a company that offers work on addressing postcards and circulars that is reliable. Usually it turns out like this:—you are supposed to mail out advertising material to your friends and IF any sales result from your efforts you get a commission, otherwise, you get nothing. Incidentally, it is our experience that sales are few and far between. We might add that in general our experience with firms offering to give work to do at home is very unsatisfactory.

Some Things We Cannot Do

The Protective Service Bureau is able to settle a surprisingly large number of complaints for subscribers, but there are some types of complaints that we cannot handle. First among

these are differences of opinion among neighbors or claims against neighbors—please do not ask us to do this. Second, we do not claim or pretend to collect ordinary store bills against customers. Third we are not supposed to collect notes or handle any case which has already been in the hands of a lawyer.

The purpose of the Service Bureau is to warn our subscribers against fraudulent schemes of various sorts, to give such advice as we can, and to attempt to settle differences between them and buyers of farm produce and other commercial concerns. We do not furnish advice on investments, or on legal matters except as it may involve agriculture and market laws in the states in which we circulate.

Stale News

"I received a card from the Press Associates of Boston, Mass., saying they had a news item mentioning my name which they would send me if I would send them twenty-five cents. I was curious and sent the quarter but when I received the news item it was from our local paper and was an item I had written myself. I am sure there are others who would like to know about this so they would not be taken in the same way I was."

This is an old scheme that bobs up periodically. It is a very simple matter to start a press service. All that is necessary is to subscribe to a bunch of local papers, clip out the items and send cards to everyone whose name is mentioned. The simple way to put such concerns out of business is to refuse to bite.

Treasure Hunt

The Federal Trade Commission has ordered Henry Bergman of Springfield, Missouri, to stop misrepresentations in the sale of instruments advertised as useful for locating gold and silver. The one thing I have never been able to figure out is how a man with such an instrument would be able to sell it. If I had one I would want to use it myself.

Thanks for the Thanks

"I am letting you know how much you helped me. They settled my claim very nicely and I thank you so much. A letter from you helps a lot and I surely appreciate what you have done for me."

We realize that our subscribers are very busy and sometimes they neglect to send a note of appreciation when we have been able to be of assistance to them. However, letters like this do help us to put forth our best effort to be of service to subscribers.

I would be glad to have some elderly person, lady preferred, to room and board with me. I have a quiet home. If any of your readers are interested I would be glad to have them write me and then I will discuss the price with them.—Mrs. M. A. P.

If any subscriber is interested, write to Mrs. M. A. P., American Agriculturist, Ithaca, New York and we will forward the letter to her.

Man of 34 wishes practical experience in farming. Will work for board. Has had two years college botany. Conscientious hard worker. Write H. M., c/o American Agriculturist, Savings Bank Building, Ithaca, N. Y.

Farm woman, widow, Protestant, would like to care for some older woman or man. Pleasant disposition. Good references. Mrs. W. S., care American Agriculturist, Savings Bank Building, Ithaca, New York.

Mary E. Johnson and her brother were riding in this automobile when it was struck by a train in Johnson City, New York. Both were instantly killed.

Mrs. Johnson's husband, Clayton, was in the hospital at the time recovering from an operation. The accident happened Sunday morning. Mrs. Johnson and her brother were on their way to the hospital to visit Mr. Johnson.

Mr. Johnson was waiting for his wife to arrive when he was told she had been killed. He had expected to go home within a few days but the shock of this terrible accident made it necessary for him to remain in the hospital for six weeks.

The death benefit of \$1,000.00 provided by Mrs. Johnson's policy was paid to her husband.

Accidents happen when we least expect. Experience shows all members of the family should carry a policy.

Keep Your Policy Renewed

We suggest you take out the NEW travel policy which pays \$1,000.00 for the loss of life or \$10.00 a week for as many as 13 weeks while totally disabled if accident happens by the wrecking of an automobile, truck, or public conveyance in which you are riding, or if you are injured or killed in a pedestrian accident as provided in the policy.

With all the extra protection the new policy only costs \$2.00 a year.

OUR
INDEPENDENCE"**

—FROM A SPEECH BY NATHAN HALE
IMMEDIATELY AFTER THE BATTLE OF
LEXINGTON

EVERY American schoolboy knows the story of Nathan Hale — the gallant Connecticut school teacher who became a spy. How Hale spent two weeks in the camp of the enemy and was captured on the shore as he waited for a boat to take him away. And every schoolboy can repeat Hale's dying words — words that breathe the splendid defiance of a man who loves liberty above all else, "I regret that I have but one life to give to my country."

American history is filled with countless stories of men like Nathan Hale, who put love of liberty above personal comfort and safety. We owe them a debt of gratitude, just as all of the farmers in this milkshed owe a debt of gratitude to the founders and members of the Dairymen's League. For from the very start of the struggle for A LIVING PRICE FOR MILK, Dairymen's League members have been in the forefront of the battle.

And like Nathan Hale, members of the Dairymen's League also made sacrifices to win the rights and privileges of free men for others of their kind. Their leaders suffered arrest, they were denied markets, boycotted. But they stuck to their guns and stuck together. They proved to all farmers that organization was the way out . . . that co-operative action was the only thing that their oppressors feared.

Today, as a result of that co-operative action, farmers of this milkshed are receiving millions of dollars more for their milk than they would otherwise receive. The perplexing problem of the "surplus" has practically vanished as an influence in depressing the market. And all because far-seeing farmers stood shoulder to shoulder and cried, "let us fight together for our rights to life, liberty and the pursuit of happiness — *let us never lay down our guns until we have obtained our independence.*"

THE THOUSANDS OF FARMERS WHO OWN, OPERATE AND CONTROL THE DAIRYMEN'S LEAGUE

FIELD BOYS of Morrisville Are 2d Generation League Members

Charles Field and his brother, Bill, Jr., are 2d generation League members. Each works a farm overlooking the State School of Agriculture at Morrisville where both used to be students and basketball stars.

"Playing basketball is a lot like running a co-operative association," declares Charles, who was once captain of the Aggie team. "It's team work that counts. The best men must be given the opportunity to shoot the baskets, but every man has his part to do and every individual counts."

The Field family came to America from England at the time of the Civil War. "Grandfather thought he could do better here," explains Bill, Jr. "Wages were higher. And there was a greater opportunity for employment. Father, who was the first League member in the family, was born on a farm over at Pine Woods. He is retired now and lives in Morrisville."

Farmers Fight World's Worst MONOPOLY

by Robert Eastman

4 YOU ARE a farmer, or (whatever may be your profession) your interests are vitally affected by the welfare or illfare of agriculture. Anything which affects agriculture affects you immediately or eventually.

As a loyal American, you are also deeply concerned with any pressure group working against the interests of the whole country. You, therefore, are now interested in the actions of organized labor—at its best, a great idea benefitting the working man and the nation as a whole; at its worst, a racket or a Fifth Column in which sinister foreign forces work for the downfall of this country and the destruction of the democratic ideal.

You're worried about organized labor because it has created a great pressure group and because you're afraid it's a bit Reddish. You would like to see it investigated because it is trying to organize agriculture. But you are no labor baiter! You believe in labor's right to organize. You believe in every man's right to a decent standard of living, to good food and clothing and a few luxuries for his wife and children. You are sympathetic with the laboring man. Haven't you, too, worked with your hands and known pride in even simple physical skills? You object only to any force working against the best interests of agriculture, industry and the nation, and of labor as well.

Your investigation uncovers these points:

There exists today in the United States a colossal Labor Monopoly, an oligarchy of professional labor unionists whose every action is bent toward maintaining themselves in power regardless of the effects of their action on worker or nation. Not all, but a too large number of labor leaders are among this group. This monopoly has been created by un-American methods of violence, coercion, threats, ballot-box stuffing, and includes among its number criminals, racketeers, and Communists. Despite this, the government has supported and encouraged this Labor Monopoly, so much so that it is in the saddle of power today.

Minority Rule

Although only 8,000,000 workers out of the national total of 54,500,000 are under the direct control of the Labor Monopoly, still the Monopolists speak as the Voice of Labor. Since the government accepts the word of these professionals as the will of all workers,

This picture was made in April, 1937, just as some 2,000 Pennsylvania dairymen, patrons of the Hershey Chocolate Company, Hershey, Pennsylvania, invaded the plant to drive out the sit-down strikers, who had been occupying the plant for several days, causing tremendous loss to dairymen.

As at Lexington and Concord in 1775, the farmers were successful, and the plant opened for business the next morning.

Sit-down strikes started in France. France was unable to defend herself against invaders and is where she is today because of division among her own people, for which organized labor was as much to blame as other classes. It can happen here.

behold they have created a monopoly as deadly to national welfare as any Oil Trust or Beef Combine ever was.

Not only agriculture may be concerned with this Monopoly. It works a great deal more to the disadvantage of the laboring man than anyone else. It has stolen from him his fundamental right of freedom of action. In many cases, he is just as downtrodden today by his

—Photo Courtesy of Acme Newspictures, Inc.

leaders as he was in times past by industrial monopolists. Often he no longer can get a job or a promotion through skill or merit alone; he must belong to a Monopoly-controlled union. He strikes not when he has an honest grievance but when the Monopoly tells him to. If he refuses to do the bidding of the Monopoly, he may be fined, he may be dropped from the union and so lose his job, or in extreme cases he may even suffer personal injury. The Monopoly has thrived because the rank and file worker has delegated his power to make decisions, and has not made his leaders render him an accounting.

Largest Unregulated Business

The Labor Monopoly has one of the largest unregulated businesses in the country today. Counting only dues of one dollar a month from 8,000,000 workers, it rakes in a total of \$96,000,000 a year, for dis- (Turn to Page 5)

**MILK SCALES
AT A VERY
LOW PRICE**

It's here at last—the time when a dairyman who's getting good production can make some real honest-to-goodness money. It's a situation to take advantage of by getting *all the milk you can*.

Perhaps you've been using a low-priced ration because you felt that a better one was too expensive. We believe that time is past. We believe that there's more money in feeding for lots of milk.

Here's how you can find out. Get free milk record sheets from your Purina dealer.

Get a milk scale at the special low price of \$4.00. Weigh your milk and weigh your feed.

Then try Purina Cow Chow. Weigh the milk at least once a month. Weigh the feed used. Check up and see if production doesn't begin to climb—until you're getting a good increase in milk at only a slight increase in cost. See if you aren't making more money.

Many dairymen *have* made this test and *did* find that the Purina plan makes more milk and more profit.

I DARE YOU!

**"WORK HARD
PLAY HARD
PRAY HARD
We Have a Victory to Win"**

SUCH was the message that I gave my associates nearly twenty-three years ago when I left for France to serve in the World War. I know of no better message than this for us today as we face the appalling hunger of Europe. First let's consider a program to WORK HARD.

Here is a sentence from a recent letter which sobers me:

"There's a surplus of public screaming, and it's thrilling, but it's expensive luxury, for it hampers *hard work* and cool thinking."

Was there ever greater need for *hard work* and cool thinking? There is a war and we have a victory to win—a victory right up our own alley—by Producing.

I want you to ponder over some figures which I had prepared early this summer which show Chicago Cash Prices for June 3, 1940—some TOP prices reached during the past five years—and TOP prices reached during the last war. Who knows but what these Tops may again be reached in the days ahead? Anyway, while we are doing our duty by Producing, I have a feeling way down in my bones that in the long run we will profit by Producing.

Whether we have a long or a short war, the world will need FOOD. It's our Fight to Produce Food.

	June 3, 1940 Chicago	Highest Price Since 1-1-35	Highest Price During Last War

Mr. Babson assured us in a bulletin that: "Should the worst happen abroad we see no basis for the bottom dropping out of general business or commodity prices in this country."

"When thinking the whole thing thru, it seems to us that America is on the verge of its greatest opportunity in history."

At our disposal are the immense resources of our country. We touch life at every source. When every man, woman, and child in our beloved country dreams and thinks and works for Production then we become real Fighters for the cause of humanity.

Let's each of us—with whatever capacity we have—marshall our strength, our whole resources, and make everyone around us conscious that we are back of a Production program.

When we do this as the main business of our lives, we will set an example which will make the whole world respect us. Instead of hanging morbidly over our radios and listening to nothing but "war news," let's take a hitch in our belts and WORK HARD—harder than ever before—at our particular job in our particular field of production.

More Daughters

from PROVEN SIRE

Through Artificial Insemination

By H. L. COSLINE

HERD SIREs with a record like that of Cornell Ollie Lady Boy are scarce. Born January 10, 1929, this Holstein bull is a proven sire with 18 daughters averaging to produce 454 pounds of milk and 51 pounds of butterfat more than their dams. The figures are even more startling when we learn that their dams averaged to produce 11,860 lbs. of milk and 401 lbs. of butterfat. When such a bull is discovered it is just plain horse sense to raise as many of his daughters as possible.

Here are some more interesting figures. Lady Boy, as this bull is known for short, is one of the bulls owned by the Central New York Artificial Breeding Association. During the last year this bull was in the herd of Floyd Shimel of LaFargeville, New York, his former owner, eight heifer calves were born of which he was the sire. Compare this with last year's figures when among herds of members of Artificial Breeding Associations 150 heifer calves were born of which he is sire.

But that is not all. Also in the bull barn owned by the Central New York Association near Syracuse there are eight other outstanding Holstein sires and four outstanding Guernseys. Three thousand, nine hundred and fifteen cows in the herds of members of this association are being bred to these outstanding bulls and there is every evidence that this number will increase steadily.

How did it all start? Artificial insemination is not a new thing. An Italian scientist experimented with it as far back as 1760, but the religious leaders of his day created an uproar of opposition to the idea and it was not until the last years of the past century that any practical use was made of the idea. Before the World War a Russian scientist experimented with artificial insemination and when vast numbers of Russia's livestock were killed in the last war and when the idea of collective farming was tried out, the Russian government encouraged the practice until it was rather widely used.

Denmark was the first country to start Artificial Breeding Associations of dairymen with a veterinarian for every association. That was in 1936. When travelling in Denmark, E. J. Perry of New Jersey State College was greatly impressed with results obtained there and when he returned he persuaded the Board of Supervisors of Hunterdon County, New Jersey, to hire a Danish veterinarian by the name of Larsen to come to this country. In April 1938 the first Artificial Breeding Association in the country was started in New Jersey, and before long several similar associations were started in the Northeast. For example there is the Central Maine Association which claims to be the largest association in the country, with 13 bulls owned or leased. On November 15, 1938, such an association was started in New York State. It was appropriately named the Pioneer Artificial Breeding Association and was made up of about 100 dairymen around Dryden, New York. The State College of Agriculture called these dairymen together and proposed that such an association be started on an experimental basis in order to gain additional knowledge about artificial insemination.

As might be expected some problems arose and it was decided that these problems could be better

BULLS OWNED by the CENTRAL NEW YORK ARTIFICIAL BREEDING ASSOCIATION

HOLSTEINS

1. Gromor Marathon Gilt Edge Nudine, No. 786552. Three years old. This bull is not proven but his sire is proven and he is from a proven cow family. His dam has three records averaging 15,513 lbs. of milk and his sire has 33 daughters who produced 887 lbs. of milk and 26 lbs. of butterfat more than their dams.
2. Spencercrest King Spofford Ormsby, No. 612688. Born in 1929. A proven sire. He has 13 daughters with records averaging to produce 1235 lbs. of milk and 55 lbs. of butterfat more than their dams.
3. R. M. F. Inka, No. 658861. Born in 1931. He has 15 daughters with records that average 506 lbs. of milk and 22 lbs. of butterfat more than their dams.
4. Winterthur Posch Boast Ormsby Okat, No. 675045. Born in 1933 and is a proven sire. He has 16 daughters with records for producing 2317 lbs. of milk and 76.4 lbs. of butterfat more than their dams.
5. Cornell Ollie Lady Boy, No. 64483. Born in 1931. He has 18 daughters averaging to produce 454 lbs. of milk and 51 lbs. of butterfat more than their dams.

GUERNSEYS

6. Cuddles of Elmwood Farm, No. 238115. Born in 1935, this bull soon is expected to be a proven sire. He has two daughters with records as two years old that average 398 lbs. of butterfat. His sire has been proven and the first 8 daughters averaged 10065 lbs. of milk which was 1327 lbs. more than their dams.
 7. Hinsdale Renown, No. 216597. Born in 1934. A proven sire with 8 daughters averaging to produce 1155 lbs. of milk and 10.5 lbs. of butterfat more than their dams.
 8. Cornell Royal Perfection, No. 223982. Born in 1934. His sire has 10 daughters with an average production of 514.5 lbs. of fat.
- Line Gerben Twice Colantha, No. 661955. (Picture not shown). Born July 17, 1931. He is owned by the Bureau of Dairy Industry at Washington and has been loaned to this association for an indefinite period. He has 42 daughters with records averaging 13,059 lbs. of milk and 445.7 lbs. of butterfat. The dams of these daughters average to produce 11,277 lbs. of milk and 378.5 lbs. of butterfat. These excellent cows have tested daughters producing 1782 lbs. of milk and 67.2 lbs. of butterfat more than their dams.

Daughter and dam comparisons are important but they do not tell the whole story. The dams on which comparisons were made are uniformly high producers. It is not so difficult to find bulls that will raise the average production of a mediocre herd but it takes a real herd sire to raise a production average of a Holstein herd averaging to produce 10,000 to 11,000 lbs. of milk or a Guernsey herd already producing 8,000 or 9,000 lbs.

met by combining the local associations into the Central New York Artificial Breeders' Association. This was done and all the bulls moved to an old barn near Syracuse which was remodelled without a heavy outlay of money.

The president of this association is Harold Creal of Homer, New York. Each breed is represented by a vice-president. Homer Shephard of Cazenovia, Madison County, is vice-president representing Holsteins, (Turn to Page 15)

Grow More Wheat

MOST eastern farmers stopped growing wheat because of the competition of the West, and also because wheat was thought of more in terms of bread for human consumption than as food for cattle.

It is still true that it probably wouldn't pay in most parts of the Northeast to grow wheat for bread. But wheat for feed is still a practical proposition on most of our farms. Compared with oats, wheat will produce more digestible nutrients by far, and it is a much better nurse crop than oats.

Here is another way to make your farm more self-sufficient. It would be great to see this golden grain growing again in the hills and valleys of our old Northeast as it once was, and there is no reason why it shouldn't.

Subsidies Are Bad in Principle

OF THE 3 cents you pay to send a first-class letter in the United States, the government pays the railroads an average of about one-fifth of a cent for hauling it. But if you put a 6 cent airmail stamp on a letter, the government pays the air lines about 7½ cents for hauling it. This is what you call a "government subsidy."

Government subsidies of either a business or an individual are dangerous, and except in a great emergency ought never to be used.

To Get Correct Weights and Tests

ADAIRYMAN, who spent six years as a tester in Dairy Improvement Associations, writes as follows:

"From my long experience in dairy milk testing work I am satisfied that members of Dairy Herd Improvement Associations do get their full test from the milk stations. I am not so sure that they get full weight, and I believe there is a greater loss by short weight than by low tests. I also believe that the milk plant tester tends to make up on farmers who have no check up on him for the more generous reading of tests of farmers whom he knows are watching his tests and have a check on them."

Years ago I had charge of several cow testing associations, and I have always believed that dairymen lose thousands of dollars through short weights and short tests. Most of the dairy States, through their departments of agriculture, are doing what they can to check tests and weights at the milk plants, but the job is too big for them. Any adequate supervision would require a small army of state employees. About the only answer to the problem that I can see is for the dairyman himself, either through a Dairy Herd Improvement Association or as an individual, to make careful and frequent checks of both his butterfat and his weights, to make sure that the local milk station manager knows that the farmer knows what his butterfat and weights should be. There are strong laws in every state. If in doubt write your department of agriculture and a careful check will be made.

Marketing Suggestions to Farm Women

AFARM woman writes to ask for suggestions for selling her own high-quality homemade wild strawberry jam. Here are the suggestions our household department gave her, and they may help you:

1. Get in touch with the farmer-owner of a successful roadside stand—one of those modern, large ones which draw city trade. Make a deal with him to sell your jam on commission. A man, who owns and operates a large roadside stand

near here says that he has many demands for homemade jams, jellies, baked goods, etc. This is going to be one of the big outlets in the future, as these large modern stands are growing in number and more and more city people are flocking to them.

2. Try advertising your product at home. Hang out an attractive sign which will make tourists stop and buy.

3. If you live near a good-sized city, see if you can get a local grocer (a fancy one) or the local hotel to take your jams and sell them.

4. Advertise in a nearby city paper. Have a distinctive name for your wares, which will identify them to the consumer.

5. Offer your jams to a gift shop. Many gift shops have a good sale for such goods.

More Trees in Legend and History

LAST time we started a little contest to see how well you remember your trees. Apparently it made so much fun that we are giving you another try at it. Count 10 points for your answer to each of the following questions. 70 is fair, 80 good, 90 excellent. Answers are on page 13. The contest is contributed by George W. Lyon, of Pittsburgh, Pa.

1. A tree that melancholy poets like to plant in English cemeteries.
(a) Weeping willow, (b) Holly, (c) Yew.
2. A beautiful tree that the people of South Carolina regard highly.
(a) Live oak, (b) palmetto, (c) peach.
3. A tree that the Tar Heels of North Carolina value for producing naval stores.
(a) Spruce, (b) pine, (c) hemlock.
4. Probably the largest and highest of all trees.
(a) Sequoia, (b) California redwood, (c) pine.
5. A tree with many trunks, or one that appears to have many.
(a) Upas, (b) banyan, (c) palmetto.
6. A tree that the American Indians found most valuable in making canoes.
(a) Maple, (b) oak, (c) birch.
7. A tree that provides the inhabitants of tropical countries with more valuable products than any other.
(a) Breadfruit tree, (b) coco palm, (c) mahogany.
8. The tree that sweetens all Vermont and much of the Nation.
(a) Hard maple, (b) Soft maple, (c) Rock maple.
9. A tree that makes the best wood to burn in an

One of the most interesting spots at the World's Fair is the electrified farm, owned and operated by the electric power companies.

To me the most interesting exhibit at this farm is the quick freezing cabinet. Farms of the future must become more self-sufficient, and this quick freezing process is going to make this possibility a reality, because you can keep vegetables, fruits, and meats as fresh the year round as when they were picked.

Reading from left to right, the folks in the picture are: N. W. Nixon of the Empire State Gas and Electric Association, your editor, D. E. Blandy of the New York Power and Light Corporation, and Miss Rachel Hilt of the staff of the Electrified Farm.

open fireplace because it does not throw sparks.
(a) Oak, (b) ash, (c) apple tree.

10. The rowan tree of Scotland.

(a) Oak, (b) mountain ash, (c) pine.

Eastman's Chestnut

THE definitions in my last Chestnut (some of which I stole from "The Treasury of Modern Humor") apparently got so many laughs that I am tempted to give you some more:

Americanism—Spending two hours buying a life insurance policy and 2/10ths of a second going through a grade crossing.

or

Voting to set the speed limit at 45, and demanding a car which will do 90.

Apology—The only means of having the last word with a woman.

Asphyxiation—Smoking a cheap cigar in a telephone booth.

Auto—After the horse came the auto—after the auto came the collector.

Average Husband—One who isn't as good as she thought he was before she married him, nor as bad as she thinks he is afterwards.

Baby—An alimentary canal with a loud voice at one end and no responsibility at the other.

Backseat Driver—No worse than a man who cooks from the dining room table.

Baldhead—Like Heaven, in that there is no more dye-ing or parting there.

Bargain-hunter—One who is often led astray by false profits.

Bathing-suit—A garment with no hooks but plenty of eyes on it.

Blackberries—Things that should be black but are red when green.

Block—The distance between some people's ears.

Blotter—Something you look for while the ink dries.

Boy—A pain in the neck when he is around; a pain in the heart when he isn't.

or

One who loves a dog because it is the only thing around the house that doesn't find fault with him.

Carrier pigeons—Birds that ought to be crossed with parrots so that if they lose their way they can stop and inquire.

Cauliflower—A cabbage with a college education.

Chivalry—The attitude of a man towards a strange woman.

City—Millions of people being lonesome together.

Cleverness—The ability to refuse a kiss without being deprived of it.

Communist—A person who has given up hope of becoming a capitalist.

or

One who wants to share his nothing with everybody else.

Conscience—A device that doesn't keep you from doing anything; just keeps you from enjoying it.

READERS TALK BACK

WE HERE on the farm have been doing considerable thinkin' since attending the Syracuse State Fair last week. It was one of the best fairs ever held there in our estimation, and we have been attending for nigh on forty years. But we have one criticism which we believe is justified. Our young son was at the Fair this year with us and wanted a milk shake. We bought one and paid the exorbitant price of twenty cents for it. One-half pint of milk was used, and no ice cream. At this price one quart of milk would bring eighty cents. At home on the farm we deliver from three to four hundred quarts of milk daily to the local creamery and receive less than EIGHTY CENTS FOR FIFTY QUARTS OF MILK. If the State desires to advertise the value of using more milk they might begin "at home", so to speak, by encouraging the drinking of more milk at their Fair, at a price fair to all, not at the rate of eighty cents per quart.

Yours for fair milk prices, a Farm Woman.

Editor's Note: RIGHT!

Farmers Fight World's Worst MONOPOLY

(Continued from Page 1)

position of which it gives little or no accounting. This estimate does not take any measure of extra income like fines, special assessments or strike benefits, which would swell the total considerably.

Farmers are unitedly angry at the extent to which Communists taking orders from Moscow have entrenched themselves in the very labor unions which would like in turn to entrench themselves in agriculture. "A recent survey by investigators has shown in California that in the so-called agricultural workers' unions, the Communist membership is approximately fifteen per cent among the workers and about eighty-five per cent among the heads of the unions," writes a California agricultural authority.

Says the Dies Congressional Committee Investigating Un-Americanism in their summary report:

"On the basis of the evidence submitted, we find Communist leadership entrenched in the following organizations: National Maritime Union; United Cannery, Agricultural and Packing Workers of America. . . International Longshoreman's and Warehouseman's Union; Transport Workers Union; Fur Workers Union and others. . ."

Each one of these unions has either directed or aided attempts of the organized Labor Monopoly to penetrate agriculture.

Farmers object, too, to the methods employed by striking labor unions since they are so similar to revolutionary tactics that Reds advocate. Threats, violence, beatings, intimidation and boycotts are not the American Way, yet they seem to have been the way of many labor leaders. A Mr. Schiro, dried fruit and nut packer of San Jose in California, was asked by a union for permission to talk to his workers. He granted that permission and union organizers failed to interest his workers. Mr. Schiro was asked to sign a union contract anyway, but he refused, not wishing to coerce his employees into joining a union when they didn't want to. The union then threw a picket line around the Schiro plant, forcing Schiro to ship by rail and not by truck as he had. For eight months that picket line stayed there until the union cracked down in another direction and marked Schiro's rail cargoes as "hot" so that no union members could handle them. Finally, a month later, Schiro obtained an injunction restraining the union from its un-American abuse of power.

Horning Into Farming

The Labor Monopoly is making a definite effort to enter the farm field. Back in 1938 a Salesmen's Union Local of the American Federation of Labor gave farmers who were shipping milk to the Orange Dairy Company of Sussex, New Jersey, seventy-two hours to sign union contracts, with the alternative of having their milk dumped or worse. Four farmers signed. The other seventeen, refusing to believe that the union could help them in any way, decided not to be intimidated and soon the attempt collapsed.

"As far as union penetration goes", writes a Californian, "we probably have more in California than in any other part of the nation." He continues, "Our difficulties with so-called union labor began in 1933 during a series of strikes accompanied by much violence and some bloodshed, and this has continued on through the strike in the Salinas lettuce packing industry, the Stockton cannery strikes, the strike

in the Marysville peach area, and the annual strikes and violence in the harvest of the California cotton crop. . .

"Hot" Milk

"One group which has caused considerable trouble has been the Milkmen's Union, who have been very unreasonable in their demands and have caused many cases of secondary boycotts against milk producers who refused to sign closed shop agreements which would require that all their employees become union members." A secondary boycott, one of the effective weapons of the Monopoly, is the technique of declaring a protesting farmer's produce "hot", and no labor union member may then handle it.

Deviating from their direct attempts to enter farm enterprises, the Labor Monopolists have tried to enter and control all businesses connected with processing and distributing farm products. Given a stranglehold on farm products, they can more easily attack the farm.

In 1938 Land O'Lakes Creameries of Minneapolis, a farmer's cooperative

counts a day. Suppose each of his customers takes a quart a day; this driver gets three and a third cents a quart for delivery. Oftentimes this is the sum total of the farmer's returns for the complete seven-days-a-week job of producing his milk. The farmer has a large investment; the driver none. The farmer must meet all the problems of management; the driver needs only to remember his route. Farmers have all normal expenses of farming; drivers have no delivery expense.

Farmers sympathize with the laboring man's problems although their own are entirely different. They are glad to see workers get good wages. But they cannot and will not countenance any penetration into agriculture when the farmer is as economically beaten as he has been since the first World War.

The farm depression foreran the industrial depression by ten years; ever since 1929, the farmers of America have lost thirty-nine billions of dollars, the difference between their actual in-

going. Economic conditions being what they are, farmers are opposed to any extension of even genuine labor unionism into agriculture, although they still believe in the principles of labor unions for the working man. Naturally, they oppose even more strongly any extension of the illegitimate Labor Monopoly in the farm field.

Farmers Won't Tolerate the "Isms"

The farmer resents the Monopoly's attempts to influence and dominate his own legitimate farm organizations.

The *Newburgh News* for August 17, 1939, carried a story about one Leo Levine, described as a business agent for the C.I.O. in Middletown.

"He said that the C.I.O. was back of every attempt being made to organize the farmer."

And it was obvious that Levine meant that the C. I. O. was back of every attempt of the Labor Monopoly to organize farmers and penetrate their farm organizations.

A dispatch in the New York Times dated December 12, 1937, tells of a pact concluded between Labor's Non-Partisan League, the C.I.O.'s leftwing political organization, and the National Farmers Union of Minneapolis for "... joint action, politically and otherwise. . ."

Further along the same item reads:

"Representatives of the United Cannery, Agricultural, Packing and Allied Workers of America also took part in the meetings."

"Those attending the meeting agreed that labor and farmers composed 'the great exploited mass' of producers and consumers. . ."

Labor Rackets Take Farm Toll

Farmers protest rackets perpetrated in the name of labor unions. Farmers resent the Labor Monopoly's condoning such crimes. Twenty-three members of Local 807 of the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers of America were found guilty and sentenced in June this year for violation of the Sherman Anti-Trust Act and the Federal Anti-Racketeering Act. It seems that all out-of-town trucks bringing general merchandise and perishable foodstuffs — farmers' produce — into New York City, were received at the city limits by members of Local 807.

By the use of threats, intimidation and violence, truck owners or drivers were forced to pay a levy of \$9.42 for each trip into New York for every large truck and \$8.41 for each smaller truck. The fee was levied irrespective of whether a member of Local 807 did any work. In this way, the union and certain of its members levied an estimated annual tribute of almost \$1,000,000 on trucking, a levy assumed ultimately by the consumer and one which discriminated against those farmers whose produce was so taxed.

Trucking Troubles

Another local of the same union in New York City, 202, was indicted and charged with a variation of the same racket, yielding \$200,000 a year. Non-union truckmen bringing shipments of butter and eggs into the city were forced to drive to a certain place, and there have their trucks unloaded and reloaded on another truck for local delivery at a cost of 7c per package. It didn't matter whether the whole consignment went to one dealer or several; the transfer still had to be made. In one case, the dealer's place of business was only three blocks from the terminal; yet the transfer was still made and the levy collected. Consumers and producers paid that bill, too.

Some publicity is now being given to Federal prosecutions against certain criminal members of the Labor Monopoly. It will be interesting to see if

(Continued on Page 13)

Labor Monopoly Must Be Controlled

WHEN MY FATHER was a boy, before the Civil War, and before he started farming, he did heavy labor in a tannery twelve hours a day, for a daily wage of a few cents. Many other men worked a twelve-hour day for a starvation wage. The labor union changed that, brought better wages and shorter hours, and forced capitalistic, hoggish employers to be fair.

All of which is to the good. But now organized labor itself has become a great monopoly, supported and abetted by government bureaucrats, and in many cases it has become a racket, invading the rights of farmers, injuring the laboring man himself, and destroying individual initiative, action, and liberty.

If you doubt these strong statements, read the article beginning on Page 1 and continued on this page. It was written by an impartial investigator, who has spent weeks on the subject, travelling hundreds of miles and interviewing dozens of people.

The facts in this article affect you both as a farmer and as an American citizen.—E. R. E.

sympathetic with organized labor's rights and reasonable demands, was struck against by a Dairy Workers Union demanding numerous concessions as to wages, hours, and a closed shop. Land O'Lakes made all concessions but stood out on the closed shop. With a closed shop, Land O'Lakes knew they would lose the right to hire whom they pleased; they could not for instance hire sons and daughters of farmer owners unless they were union members. Thousands of farmers wrote and telegraphed their disapproval of the strike and finally it collapsed.

On July 30, 1938, *American Agriculturist* carried a story about the C.I.O.'s attempt to organize bean pickers near Batavia, New York, when bean growers were not only paying pickers good wages but were losing money themselves. **Farmers were angry then at the support given the C.I.O. by government agencies** and at the general attitude of those agencies that the employer was always unfair and any representative of the Monopoly was always right.

Are Milk Drivers Better Than Farmers?

One reason for the high consumer cost of milk is the excessive wages Milk Wagon Drivers' Unions have taken from consumers' pockets. The Monopoly step by step has forced wages up until an average driver would get \$45 plus commissions on extra sales for six days of work delivering 225 ac-

comes and what they would normally receive. Ivan G. McDaniel, testifying before the LaFollette Committee, said:

"You are well aware of the economic disparity between the earnings of farmers with those of capital and labor. . . ."

"As of October, 1939, prices paid by farmers for commodities used by them in living and production were 122 per cent of the 1910-14 level. At the same time industrial wages were 217 per cent of the 1910-14 level. . . . All producing farmers were receiving but 98 per cent of the pre-war parity level.

"In contrast to this, farm wages were 126 per cent of the 1910-14 level, so while farmers received prices for their commodities considerably below the parity level, the prices farmers paid for their labor were much above it. . . ."

In this depressed state, farmers cannot meet the demands of the Labor Monopoly for higher pay. Indeed, a farm labor shortage has been caused already by high wages on W.P.A. projects and too large payments to relief clients. Under these conditions, farm folks feel that **the only result of Labor Monopoly activity on farms, unless millions of farmers go bankrupt — which itself is a logical possibility — would be a price fixing economy.**

Farmers know that a price fixing economy is one of the cornerstones of a National Socialist, Nazi or Fascist State. They know that a suffocating bureaucracy would be needed to keep it

START USING ESSO FUELS AND LUBRICANTS...NOW!

WHEN you're counting on your machinery to bring in a profit crop...excuses just don't go!

No apologies are needed when you use Esso products. Power for the toughest jobs and full protection for your motors. Esso Fuels and Lubricants are getting the best out of your machinery all the time.

That goes for tractors, trucks or the family car. Long hours in the hot sun—with motors at full load...that's the test that proves Esso products unbeatable.

Ask your Esso Dealer about the right lubricants for your needs. And try one of the two great new Esso Gasolines. Make a point to buy at the Esso Sign from now on!

ESSO MARKETERS

COLONIAL BEACON OIL COMPANY

New ESSO

Sets a new high level for a regular-price fuel. A powerful favorite for trucks, tractors and the family car.

New ESSO EXTRA

The finest gasoline ever sold by the world's leading petroleum organization. A new, all-time high in EXTRA quality. Extra pick-up, extra power, extra value!

Potato Prospects Decline

Frost, Blight and Heat Take Their Toll

MANY a farmer in the Northeastern states had a disappointed look Sunday morning of August 25th. This was especially true when all across New York State and into New England corn, potatoes and other frost susceptible crops in so called frost pockets where air drainage was poor, were black. In some areas temperatures as low as 22 degrees were reported with ice on still water. In those sections everything was killed.

The damage from the freeze was hard to estimate. Reports indicate that some late planted potatoes will never be dug. The tops being succulent, were easily killed, and the plants being so late in getting started did not have a set of any size.

Frost damage was reported as far west as Michigan and as far south as the northern Pennsylvania Counties and east into New England. In the aggregate the greatest damage was to other crops than potatoes.

Blight Widespread

Due probably to a very cool and wet spring, blight got started earlier than usual and many instances of infection were reported early in July. The infection was pretty widespread throughout all the northeastern states and during the last of July considerable damage to growing plants was indicated. However, during August hot, dry weather checked the development on a good many fields and there has been not much spread since. In some sections vines died prematurely, leav-

ing a small crop of small tubers.

After a late and wet spring many late potato fields were shallow rooted and suffered severely during the hot, dry weather of August. Much tip-burn is reported especially in New York due to this condition.

Early in the season a severe blight infection on Long Island was noted but the crop there is near maturity at the present time and not much severe damage is expected. However, the yield which will be dug on the blighted fields will be in direct proportion to the amount of green leaves left on the plants. Fields properly sprayed and cared for will return an excellent crop but fields which were not sprayed or dusted in some cases will not dig more than half a crop.

All these factors tend to indicate that the crop in New York State and surrounding territory will not be nearly as high as previously estimated. In July crop reporters were impressed with vines looking fine and their estimates were apparently high. The situation is not so bright at the present time, however, for a big crop and everything indicates that good potatoes will bring good money this fall. Present markets are low because of potatoes shipped in from sections where growers are planning on a second crop or where very inadequate storage facilities prevail. With the coming of cooler weather and when these emergency shipments are passed the potato industry as a whole expects material improvement.

—H. J. Evans.

Let 'em Fall

By ED. W. MITCHELL

IHAVE just finished a trip through some of the better McIntosh orchards around here and note that, while the ground is fairly well covered with wormy apples, there are still a lot of them on the trees. These will come down before long and before the good ones get color. It seems to be the opinion of the smarter growers (if any of them are smart) that it will pay to hold off picking till most of the wormy apples have fallen and the good ones get really good color.

Years ago there was a joke about the cotton growers that a little bug, the cotton boll weevil, was all that saved them from going bankrupt, and they should erect a monument to it. Now it looks as though we ought to put up one for the codling moth because it is in a fair way to cut any overproduction of apples.

Experience has shown that windfalls seldom bring back the cost of handling, so most growers will put these drops into cider or ensilage to clean up the orchard. Certainly, they ought not to try and dump them on what promises to be a weak market. In ensilage they are worth about 15c a bushel, and that is the best way I know of to market them.

A fellow, who was trying to impress on me how hot it was where he was working in Georgia, said it was so hot he saw a dog chasing a rabbit, and both of them were walking. Well, sometimes I think that is the way the apple growers feel about this time of year; they chase bugs and scab, poor prices and glutted markets, labor troubles, and this and that 'till, by this time of year, they get slowed down to a walk.

As a matter of fact, I do think the growers get so worn down by the end of a season they lack the "gimp" to give marketing the final punch that is

needed to lick that problem. If they could do the marketing end of the business in the spring when they are fresh and full of pep, they would probably do a better job of it. But that is like the Irishman who built his cellar on the roof. "He done it for a blind".

Eventually, the growers will sell through auction markets to get competitive bidding for their products and publicity for market values. This year the crop is light and quality poor, so they will continue the old-fashioned practice of underbidding each other to get the buyer's dollar, and squeeze in as much poor stuff as they can. It is only human nature, but the main trouble with human nature is that it is so hard to cure or correct.

If I knew the cure for human nature, I would have more confidence that we could find one for codling moth. But then anybody could grow apples, and there would be no profit in it for anyone.

"Propaganda, that's all it is."

THIS YEAR...

Farmers are receiving **MORE** money
per hundred for **MORE** milk...

than they received per hundred for **LESS** milk last year!

"I put a
NEW ROOF
on my Barn this Year"

"Because farmers have learned to work together through the Metropolitan Bargaining Agency, I have been able to put a new roof on my barn this year and pay up some old debts. I am certain that every farmer in the Metropolitan Milkshed has had similar experiences. When I think how little it costs me to support the Bargaining Agency, and the increased amount of money I got for my milk this year because of the **SURPLUS CONTROL PLAN**, then I say it's the best investment I ever made. I not only get more money for my milk, but the **PAYMENT** for that milk is **GUARANTEED**."

ROBERT MASON
LaFayette, N. Y.

THE statement above is one of the most remarkable stories of what can be accomplished by cooperative effort that has ever been told. In the entire history of the milkshed when farmers have produced **MORE** milk, they always received **LESS** money for it. This they were told was the law of "SUPPLY AND DEMAND."

When we got the Roger-Allen law passed, allowing cooperatives to work together—when collectively we were able to get the assistance of Federal and State governments, then the dairy farmers were in a position to show that if the surplus is properly controlled the old law of "SUPPLY AND DEMAND" need not break down their prices.

The machine which has stabilized the milk market was built by farmers and is run with Federal and State power back of it. The Bargaining Agency consisting of the 62 cooperatives listed below deserved credit for the building of that machine. And every farmer in the milkshed who has benefited by the **SURPLUS CONTROL PLAN** should thank the farmers who brought it into being.

Proof that the plan is working is told by Mr. Mason on this page. Every farmer in the Metropolitan Milkshed can tell a similar story. Every farmer's wife can tell of the increased happiness that these better milk prices have brought to their homes. And today throughout the milkshed farmers are better able to appreciate the value of their cooperatives and the value of their collective effort in the Bargaining Agency. They now know the value of this cooperative effort. And the thousands of farmers who belong to these cooperatives are beginning to realize they still have a big job to do.

The Job to be Done—and Our Promise

The present **SURPLUS CONTROL PLAN** is not safe from selfish interests who would weaken or destroy it. We pledge our collective effort to strengthen this **SURPLUS CONTROL PLAN** wherever we can. To guard it jealously against those who would profit by its being weakened. And we ask all farmers to help us in this fight for better milk prices which benefits all.

The Metropolitan Co-operative Milk Producers Bargaining Agency

Vegetable Growers Convene and Tour

By PAUL WORK.

VEGETABLE GROWERS are fortunate in having a national association—The Vegetable Growers Association of America—and a real trade convention such as this organization held in Philadelphia on August 25th through 29th. It brought together a lot of people from as far away as Florida and Minnesota and Oklahoma. It still needs larger membership and influence in the South and West.

The meeting was exceptionally fine. The program covered the range from soil and fertilization to marketing and from mushrooms to applied physiology. Some 40 or 50 business houses set up exhibits that were as useful as any feature of the meeting. There were two days of exceptionally well planned but somewhat rainy tours. Well or-

ganized committees gathered the views of members on the problems of the industry and, as usual, turned out a good set of resolutions.

There was a fair turn-out of New Yorkers but attendance from that state was limited by the fact that the marketing season is at its peak. Among those present were Henry Marquart of Orchard Park, Will Nichols of Albany, the Vollmer Brothers of Syracuse, Ed Saisselin and Alfred from Oswego and a number of others. C. F. Jeness of Waban, Wm. O'Donnell of Revere and John Christenson of Hartford were among the New Englanders attending.

Among the speakers were: Dr. V. A. Tiedjens of New Jersey; Dr. H. C. Thompson of the Vegetable Crops Department at Cornell; Dr. M. P. Rasmus-

sen of the Agricultural Economics Department at Cornell; and Dr. Pauline Mack of Penn. State College.

Jersey Tour

The sun did not shine throughout the convention and on Wednesday seven big busloads of people loaded up in spite of a drizzling rain to make a tour of New Jersey. They visited the Campbell Soup plant at Camden and saw how the government inspectors determine whether or not a man gets the \$20.00 per ton that is paid for No. 1 tomatoes or the \$12 per ton that is paid for No. 2's.

The Glassboro Auction was visited and this institution is going strong. As many as 40,000 packages are handled in a day. Even on a rainy day, a hundred or so trucks were lined up and the auctioneer was pounding out the sales about as fast as he could.

The next visit was to the Deerfield Packing Corporation which, in 1938, produced 40% of the quick-frozen vegetables in the United States. Since the day was not good for bean picking, the plant was not in operation. The vegetables are blanched and put in packages

and then are placed between metal plates in the freezing chambers. Through these plates circulates the ammonia of the refrigerating system and rapid freezing is thus accomplished. The plant has ample storage facilities at zero and employs as many as 3,000 people from the neighborhood during busy season. This plant is on the Seabrook Farm which grows some 6,000 acres of vegetables;—the other 20,000 to 25,000 acres of vegetables for freezing being grown on contract in the vicinity.

Pennsylvania Visiting

On Thursday, the visitors turned northward through a number of market gardens—some of them within the city limits of Philadelphia. At the N. M. Comly Sons farm which is now in the 4th generation of gardening, a number of demonstrations were shown including contour farming to curb erosion; the use of domestic rye grass for cover crop planted at the last cultivation; varieties of tomatoes; and some insect and disease control demonstrations. The 4th generation Comlys are winners in 4-H vegetable growing and demonstration contests.

The map of Pennsylvania shows two spear points directed eastward. In the bend of the southernmost of these two, we find three great vegetable growing enterprises—Starkey Farms, Becker Farm, and King Farms. The Starkeys have about 2,000 acres under cultivation; the Becker Farms about 625 acres; and King Farms 2,400 acres for vegetable growing. Each of these places has a packing house with mechanical lines and they put out graded and branded products in fine shape. At King Farms, there was a fine demonstration of many items of equipment affording unusual opportunity for comparison of different makes, sizes and styles of equipment. Of particular interest was a packing line at which the sprouting broccoli from a 500 acre planting was being put up; eight bunches in a wirebound crate with parchmentized kraft liners and an attractive recipe-bearing label around each bunch.

Juniors Are Active

Forty-two teams of three young people each from seven states took part in the judging, grading and identification contests of the National Junior Vegetable Growers Association. The team from Birmingham, Ohio, took first honors; Berlin Heights, Ohio, second; a Massachusetts team, third; and an All-State team from New York won fourth. All previous records were broken with high scores.

If the Resolutions Committee got the right idea, the vegetable growers of the country still insist that subsidized regulation of agriculture is an emergency measure to be tapered off as speedily as possible. In the meantime, the growers want recognition of the high cost of production and dollar value of vegetable crops in making adjustments. They are strongly against inter-state trade barriers but not so strongly against foreign barriers although their statement on this calls for "duties on imports commensurate with existing differences in labor costs and living standards" rather than stoppage of importation. Growers want new emphasis on marketing research—a sadly neglected job on the part of our experiment stations. They favor the work of regional councils such as the Northeastern Potato and Vegetable Council, and urge increased activity to promote the use and sale of vegetables including educational effort with young people leading toward recognition of the value of vegetables in the diet.

Officers were reelected as follows: A. C. Thompson of King Farms, Morrisville, Pennsylvania, President; Frank J. Klein of Chicago, Vice-President; H. D. Brown of Worthington, Ohio, Secretary; and A. J. Driesbach, Jr., Treasurer.

Win - the GENUINE

FARMALL Way!

Farmall farming is a peaceful mechanization by which American farmers are controlling all their power operations, all their crops, in all the four seasons. The Farmall-M is shown, with 3-furrow Little Genius Plow.

• Hundreds of thousands of farmers and their sons have found farming much more interesting and profitable since International Harvester announced the Farmall System of Farming over 17 years ago. Farsighted owners everywhere have built their success year after year on the practical performance of genuine Farmall power and equipment. Many have disposed of their last horse or mule, and their reliance on Farmall has been well rewarded through the years.

Today, more than ever, the Farmall System—sound, modern, up-to-the-minute!—is your safe, common-sense choice. There is no need to experiment with untried principles.

When you choose one of the four new Farmalls you get low-

cost power from an overhead-valve engine that is the envy of the industry. You get the comfort of "Culti-Vision." You can have easy, quick control of equipment with "Lift-All." You get today's most modern tractor—built by the world's leading tractor builder.

**You'll Be Proud to Say,
"I OWN A FARMALL!"**

All summer long, farmers have wanted more Farmalls than our great tractor factories could build. Be sure—be safe—choose your Farmall now. The International Harvester dealer will deliver it in time for fall and winter work, well ahead of your big spring rush. He will demonstrate whenever you say the word.

Harold Jones of Chariton, Iowa, is doing a fine job of deep plowing here in tough sod. His tractor is the plucky new Farmall-A which is filling all power needs on thousands of small farms today. Harold operates 120 acres, and he has no horses on his farm. He planted 65 acres of corn this year with direct-connected planter, cultivating it with this "Culti-Vision" tractor.

THE G.L.F. PATRON

The basis of a sound business cooperative is voluntary use by fully informed patrons

High Priced Corn Causes Dairy Feed Formula Changes

HOMINY FEED is very scarce. Corn stays high compared with other feeds. Supplies of coconut oil meal, corn distillers' dried grains, and linseed meal are short, although linseed meal should be more plentiful when the new flax crop becomes available.

Barley is a cheap source of nutrients now, at prices from \$7.00 to \$8.00 per ton less than hominy feed and corn meal.

Changes such as these in price and supply of ingredients are constantly going on. The principle of the flexible formula is to use less of the ingredients that are scarce and high, more of those that are plentiful and cheap.

On this principle, the G.L.F. flexible formula dairy feeds were changed on September 3 to take advantage of lower cost ingredients. Soybean oil meal and ground soybeans are used as well as ground barley and larger amounts of bran. The cost per pound of total digestible nutrients is slightly less.

The Super feeds remain unchanged.

Are Your Roofs Ready for Winter?

FALL IS ALWAYS a good time to repair farm buildings. This fall is especially opportune. Steel and other necessities, although they may be pushed up by war conditions, are still available at reasonable prices.

Steel roofs should last a lifetime if they are kept nailed down and free from rust. Sometimes the action of heat, cold and wind loosens the nails. Loose nails should be replaced with longer, anchor-type, lead-headed nails driven through the same holes.

Steel roofs that are beginning to rust, like the one in the picture, should be re-

zincd with G.L.F. Zinc Metal Paint. Use a stiff brush to clean the roof—a wire brush is best to remove rust spots. Previously unpainted roofs should have two coats of Zinc Metal Paint. One coat is usually enough for painted roofs.

Asphalt roll roofing can be made to last many years if properly applied and cared for. Keep it flexible by painting with G.L.F. Liquid Asbestos Roof Cement every few years. Before painting, pound down all loose nails. Patch small holes, flashings and loose joints with Plastic Roof Cement.

A Poultry Handbook

THE G.L.F. PATRON is not only the name of this page but the title of a little publication put out from time to time by G.L.F. In introducing the Poultry Edition, just off the press, General Manager J. A. McConnell says, "It is our job, as employees, to put before you complete information on the poultry service that your institution has for its membership. This issue of the G.L.F. PATRON is devoted entirely to that purpose. We have tried to make it a little G.L.F. handbook for poultrymen. I hope you'll read it and hang it up where you can refer to it."

In this issue, Dr. "Johnny" Huttar gives his slants on managing laying hens. Complete information on feeding layers and breeders is included. Every poultryman should have a copy. If you do not receive yours soon, write to G.L.F. at Ithaca or ask your Service Agency for a copy.

Making Premium Eggs

THIS PHOTOGRAPH shows the G.L.F. Premium Maker in operation at Cedar Glen Poultry Farm at Rifton, New York. The fan in the Premium Maker forces air through wet burlaps, then between and around the eggs, cooling them quickly without loss of moisture.

Miss Wagner, who owns and operates Cedar Glen Farm, ships to retail distributors in New York City and Newark, N. J.

With a premium market, Miss Wagner can afford to ship only highest quality eggs that arrive at their destination in top condition. She uses the G.L.F. Premium Maker to cool and humidify the eggs which are gathered three times a day, and regards it as a real necessity.

Ensilage Frosted Crops

FROST HIT EARLY this year—as early as August 24 in many parts of G.L.F. territory. Best advice seems to be to put frosted crops such as corn, soybeans, sudan grass, millet, and buckwheat in the silo. Exception: sudan grass less than 18 inches high should not be fed in any form except as dry hay.

Use plenty of water, running a stream through a hose into the ensilage cutter when filling with frosted crops. Silage should be at least 70% water; many frosted crops often contain less than 40% water. The County Agent can give more complete advice.

Horseshoe Pitching Title Goes to Fulton County

Thomas Brownell Wins Coveted Honor; Second Place Goes to Roy Moore of St. Lawrence; 15 Year-Old Jimmie Ruggles of Queens Takes Third; First Woman Contestant Makes Good Showing.

THE American Agriculturist-Farm Bureau State Fair Horseshoe Pitching Tournament held at the State Fair Grounds Tuesday and Wednesday, August 27 and 28, 1940, started with 37 contestants entered. A more determined lot of players could not be found in any tournament ever held. The fifty qualifying shoes produced the highest scores ever pitched. The 16th qualifier made 93 points while 124 was the highest. Ten contestants were over 100 points.

The 16 highest started the round robin, and nine games were finished on Tuesday. Wednesday a continuous rain all day prevented a finish on schedule. Ordinarily the highest six would compete in the second round robin Wednesday afternoon. But the rain and mud were too much to compete with, and the pitchers lacked their usual control. At four o'clock, there being no sign of a let up of the storm, Mr. Cosline of the *American Agriculturist* and

She pitched an unusually high point game.

Jimmie Ruggles, the 15-year-old Queens County representative, lived up to his reputation as an excellent pitcher.

Thomas Brownell of Fulton County was easily the star pitcher, winning

RESULT OF 6 MEN FINALS —

50 Point Game

(Games Cancelled on Account of Rain)

Prizes awarded in order of winners of 16 round robin contest:

Thos. Brownell	Fulton
Roy Moore	St. Lawrence
James Ruggles	Queens
Willard Nellis	Onondaga
Frank Holmes	Chautauqua
Al Holzhauer	Schenectady
E. Brooks	Montgomery

every game, while Roy Moore of St. Lawrence County was a close second with 12 wins and 3 defeats.

This year Bradley Ross of Syracuse acted as referee and kept games going with great efficiency.

The staff of *American Agriculturist* wishes to express its thanks to Dr. Turner and to Mrs. Turner, who helps keep the records, for the efficient and fair way in which the contest was conducted. We also commend the players for their sportsmanship.

State Fair Gossip

The farm dinner, given by Jerome Barnum, publisher of the Post-Standard, on Wednesday night of State Fair week, is the outstanding event of the week. Romeyn Berry, staff writer for *American Agriculturist*, was toastmaster. Speakers were: Chester DuMont, a Master Farmer and Director of the State Farm Bureau Federation; Walter Kerr, a foreign correspondent of the New York Herald-Tribune; Leverett Saltonstall, Governor of Massachusetts; and Governor Herbert H. Lehman.

The winner of the Future Farmers of America Speaking Contest was Frank Pannofino of Fulton, who talked on the subject, "The Constitution and Agriculture Through the Changing Times." As a result of his victory, he will go to the Eastern States Exposition where he will compete in a regional contest, the winner of which will represent the Northeast at a national contest this fall.

Second prize went to Bernard Spencer of Geneva, who talked on "The Qualifications of a Successful Farmer." Other contestants and subjects were: Douglas Bartlett of Sauquoit, "Soil Conservation, An Individual Problem"; and Robert Fisk of Unadilla, "Standard Bearers of Agriculture."

Kenneth Tillapaugh of Schoharie County brought "Blue Boy," an Aberdeen Angus steer, to the State Fair and won the championship of the 4-H Baby Beef Show. This bull was sold at the Baby Beef Sale to William Knight and Son of Ithaca for 60c a pound. The animal weighed 950

Thomas Brownell of Fulton County, first prize winner in the AMERICAN AGRICULTURIST-Farm Bureau State Horseshoe Pitching Tournament.

pounds, and brought \$570.

Gerald Guernsey, also of Schoharie County, with his Aberdeen Angus steer "Gage", took second place. This animal brought 25c a pound, a total of \$257.50, and was bought by G. K. Kensler of Syracuse.

* * *

The Future Farmers of Marion High School took first place among Future Farmer exhibits. Their exhibit consisted of a group of photographs showing various approved methods in farming. Other exhibits were: Albert Central School, Use of Electricity on the Farm; and Cazenovia Central School, an exhibit of eggs.

* * *

Winning the Horse-Pulling Contest for lightweights was the team of Belgians owned by W. C. Hotchkiss of Hemlock. The team weighs 2,980 lbs., and exerted a pull of 2,700 lbs. on the dynamometer for 27½ feet. The second place team pulled the same weight 22 feet 8 inches. This team was owned by Frank Anderson of Ellington.

* * *

Thirteen-year-old Norma E. Thorne of Middleport, Niagara County, won the Spelling Bee and was presented with a cup by Dr. Ernest Cole of the State Department of Education. Seymour Gluck of Saratoga Springs and Roberta Edwards of Fleischmanns tied for second place. Fourth prize went to Robert Tholfsen of Bellmore.

Frost in August

A couple of months ago we had something to say about frost in June. This actually occurred in 1940 but the damage at that time was not very great. The same thing cannot be said for the frost which occurred over a wide area of New York state August 23rd to 25th. Muskmelons in the important area around Greenwich, N. Y., were hard hit. Even around Albany, the more tender things such as beans, the vine crops, peppers, eggplants and squash were damaged. In the Madison-Chenango section, injury was decidedly spotted;—some fields showing severe losses—others very little.

Some harm was done to potatoes on muck land in the counties from Wayne to Niagara. Potatoes that were not too far advanced toward maturity were especially hard hit. A good deal of damage was done to field corn in various places but, apparently, the major sweet corn areas escaped. Damage also covered irregularly most of New England. The Northern counties of Pennsylvania were rather hard hit although they, like the southern counties of New York, are not particularly heavy in vegetables. Pennsylvania potatoes were, in some cases, severely damaged.

A frost like this affords an excep-

tional opportunity to note differences even among fields on the same farm, which is very important. A single occasion is not enough to tell the whole story as wind direction and clouds will make considerable difference in frost incidence even on the same farm. This is an opportunity that ought not to be neglected, however, for a person to learn just about how his different fields and also the different areas in the neighborhood fare on a frosty night.

—Paul Work.

Egg-Feed Ratio Improves

U. S. cold storage holdings of eggs on August 1 (frozen and shell eggs) were equivalent to 12,020,000 cases, 9 per cent above holdings a year ago and 7 per cent above the five-year average.

Indications are that there were 1 per cent more laying hens on farms August 1 than there were a year ago, but that the number of pullets on farms was 10 per cent below a year ago.

The New York Department of Agriculture figures the last week in August show that it took 7.2 doz. eggs to buy 100 lbs. of feed. The week previous it took 7.3 doz., and the month previous 9.5 doz. A year ago, the figure was 6.5; two years ago, 4.5.

Duplication of Country Plants Increasing

By LELAND SPENCER.

IN THE PREVIOUS article we pointed out that important changes seem to be taking place in the marketing set-up for fluid milk. More country plants are being operated by local co-operatives. More of the city distribution is being handled by stores and sub-dealers. Less of the milk is being handled from the farm to the consumer's doorstep by a single agency, the city milk distributor.

Leland Spencer

During a long period of years ending a short while ago, an increasing proportion of the country plants in the milk shed came under control of a few large organizations. In 1935, no less than 340 of the

528 plants under New York City inspection were operated by the Dairy-men's League and by the subsidiaries and affiliated units of the Borden Company and National Dairy Products Corporation (including the Sheffield Farms Company). Twenty-nine more plants were operated by four other firms that had five or more plants each. Between 1921 and 1935, a large number of locally owned plants were turned over to these large organizations or were closed. There seemed to be definite advantages with respect to sales and surplus disposal in operating milk plants in large groups.

From 1930 through 1935, a great many plants were consolidated to save expense. This movement was encouraged by the results of a study made by the New York State College of Agriculture, which showed that the cost of handling a hundredweight of milk was much less in the plants with large volume than in the smaller plants. Probably the total number of plants was reduced at least one-fourth during these years.

In the past two or three years, these trends have been reversed. A considerable number of plants have been opened by local cooperative groups, and more are now being built or planned. Some of these plants were operated formerly by dealers, but others are newly built, thereby adding to the total number of plants in the milk shed.

Now the increase in cooperative ownership and control of country milk plants is generally approved and is in line with public policy as announced by public officials and legislative bodies on numerous occasions. However, the

increase in number of plants and the duplication of plant facilities in many communities certainly is a move in the wrong direction. It will surely increase the costs of marketing milk, and in the long run will reduce the net returns to farmers. It may be doubted, too, whether country milk plants can be operated as efficiently by local cooperatives as by larger organizations, either cooperative or private, but we lack sufficient evidence for definite conclusions on this.

In seeking a solution for this problem of increasing plant duplication, we may well begin by inquiring as to the reasons why so many new plants are being opened. Some will say it is due to the perversity of human nature—that members of various groups are building plants to show their independence of the three large concerns: League, Borden, and Sheffield. No doubt this is a factor in the situation. But not many new plants would be opened unless they could be operated successfully. Some conditions that make this possible at the present time

will be discussed in the following article of this series.

Fewer Beans in East

It is estimated that this year's dry bean crop will be 1 per cent above 1939. Western states are expected to have more beans than last year; while eastern states, especially New York and Michigan, will have fewer beans.

The August 1 U. S. estimate is 14,649,000 100-lb. bags, which would give the third largest crop in twenty years, as compared to last year's figures of 13,962,000. The New York crop is estimated at 1,087,000 bags, which is 4 per cent below last year's figures. Michigan, which produces 27 per cent of the dry bean crop, is expected to have a crop 16 per cent below last year and 10 per cent below the five-year average. In some western states a shortage of irrigation water is reported as likely to reduce yields.

Onion Prices Better Than Last Year

For the third week in August wholesale prices of onions in New York City were 22.3 per cent above a year ago. Yields and sizes are running better than expected. During the first two weeks in August onions in New York State suffered from weather conditions. A plentiful supply of moisture had caus-

ed succulent growth, and during the hot weather there was some sun-scald and mildew in fields of seed onions.

In Massachusetts, where crops have been harvested, the yield was good. Thrips, sun-scald and mildew have reduced prospects in Michigan, and it is expected that onions will be small. Indiana expects a crop as good as or better than a year ago, and the crop in Minnesota looks good.

Domestic Cabbage Above Last Year's Small Crop

An increase in the cabbage crop is expected both in late domestic and intermediate states. The intermediate crop was grown on an acreage 3 per cent bigger than last year's, and yields are expected to be about 2 per cent larger. The late domestic crop is expected to show a 7 per cent increase in acreage and a 24 per cent increase in yield.

The domestic cabbage crop in New York, based on present conditions, will yield much higher than a year ago when dry weather cut production. The New York late domestic cabbage crop is estimated as 113,400 tons. Last year's crop was 91,200 tons, and the five-year average 101,100 tons. Reports indicate that worms have done a great deal of damage to cabbage this year, and that cabbage yellows are serious in many western New York fields.

BUILDINGS

FOR THE Dairy FARM

"Dairy Cows pay extra returns for warmth." This fact is well recognized by dairymen. So if your cattle barn isn't all you want it to be, now is the time to remodel or build a new one. The 4-Square Farm Building Service places at your disposal 216 plans for farm buildings and structures. They are the work of agricultural engineers. They represent research as to the best structures for the intended purpose—and the most economical way to build. Great advances have been made in the design of farm structures and in building materials. See your 4-Square Lumber Dealer — ask to see his

4-Square Farm Building Service. See how you can get a better building for less money. See your 4-Square Lumber Dealer today. And write right away for your copy of "Greater Farm Profits from Better Farm Buildings."

GET THIS FREE BOOK

"Greater Farm Profits from Better Farm Buildings" describes the 4-Square Farm Building Service in detail. See how agricultural engineers design better, more economical farm buildings. Write for a copy. It's free.

**MILLIONS
FOR DEFENSE...
BUT NOT ONE CENT
FOR TRIBUTE!**

**SECRETARY of Oxford Local
Is PROGRESSIVE FARMER**

"Five years ago, I started with a medium sized herd; my farm is paid for and I have money in the bank. My wife earned just as much of it as I did," declares Frank Hoffman, secretary of the Oxford Dairymen's League.

"I attended an agricultural college before I came to this country from southern Germany," he says. "My ambition was to own land and to work for myself."

"Now I have modern electric fences on my farm. In spite of the high altitude, I have tried 29-3 corn and found it a great success. I plant only certified seed potatoes and am signed up for soil conservation work, such as fertilizing pasture land and using contour farming."

Mr. Hoffman's farm is on one of the highest hills in Chenango county. The house has electrical refrigeration, a gas range and modern plumbing.

AFTER the Revolutionary War, the United States suffered many indignities at the hands of stronger nations. Our shipping was seized. Our sailors were enslaved. Governments refused to receive our ambassadors. And despite pleas by Washington and Jefferson, Congress refused to lay taxes to build a Navy. In Paris, certain men told our envoy, Charles C. Pinckney, that interference with American rights would stop, if America would pay them a million dollars. But Pinckney rose in his wrath to shout: "*Millions for defense, but not one cent for tribute.*" His boldness fired the patriotism of America. Congress voted five million dollars and the American Navy was born.

Just as Americans in the early days of this nation suffered in silence until the anger of one man roused them to action, so farmers in the early days of metropolitan milk shipments suffered in silence. They knew their rights were being invaded. They knew their families were being enslaved. But until the founders of the Dairymen's League rose up to shout in effect, "*Millions for defense, but not one cent for tribute,*" no effective action was taken.

Then only did farmers provide themselves with weapons of defense — the powerful weapons of an organized group. Then only did they pledge themselves to stand together against any and all comers . . . to defy their enemies, but never to pay a cent of tribute.

The Dairymen's League accomplished for farmers what Charles C. Pinckney accomplished for the United States. It aroused farmers to their danger, united them for a common defense, encouraged them to believe in themselves and to fight for their rights.

This summer farmers in this milkshed have received millions of dollars more in milk checks than they would have received had the League never been formed, and had farmers never been encouraged to fight for **A LIVING PRICE FOR MILK**. So the League still cries, "*millions for defense*" — because defense pays back in life, liberty and the pursuit of happiness. "*But not one cent for tribute*" — because tribute buys nothing **but** slavery and despair.

Published by

CHARLES M. GARDNER

Editor of the National Grange
Monthly and High Priest of De-
meter of the National Grange.

HOW COMPLETELY Grange neighborliness has been revolutionized by modern transportation has had recent illustration in some Neighbors' Night occasions. At Boxboro, Massachusetts, such an evening's program was recently staged, when its features were furnished in six parts — one each by a Grange from each of the six states in the New England group. Some of these members traveled more than 250 miles round trip, and made a complete night of it; while the evening's attendance filled the Boxboro hall to overflowing. To a recent meeting in Vermont came a Massachusetts delegation of more than 50 Patrons from Guiding Star Grange, No. 1, at Greenfield; the round trip covering more than 100 miles.

Great as these distances seem to New Englanders, they are not so impressive when compared with a recent Colorado Grange meeting, when a degree team from another part of the state journeyed 200 miles each way to Red Wing, put on their degrees, contributed to the evening's program, ate two Grange meals, and were back home again in time for a new day's work.

RHODE ISLAND PATRONS are looking forward to Monday evening, October 7, when the beautiful new home of Chepachet Grange will be formally dedicated, with State Master Fred J. Kennedy in charge. The Chepachet hall property is one of the most complete in New England, thoroughly modern in every way and beautifully located on a full acre lot just outside Chepachet Village.

COBBLE HILL Grange at Barre, Vermont, held an unusual meeting recently. It was staged around the 48th birthday of Governor George D. Aiken of the Green Mountain State. Governor Aiken was on hand, made a good speech, in which he paid hearty tribute to the Grange, and was the recipient of a magnificently decorated two-tier birthday cake. Everybody present had a generous slice. Governor Aiken has been a member of the Grange since he was 14 years of age, and is a frequent attendant at meetings in many sections of Vermont.

THE 29TH ANNUAL conference of New England Lecturers, recently closed at Burlington, Vermont, recorded almost 1200 Grange workers from the New England group of states, enjoyed a magnificent four-days program, and closed with a mammoth banquet, at which 760 covers were laid. National Master Taber and others prominent in the Order were on the speaking program.

ON SUNDAY, OCTOBER 13, at the New England Grange Building on the Eastern States Exposition grounds at West Springfield, Massachusetts, occurs the annual New England Grange Sunday observance. National Master Louis J. Taber is slated to give the morning address, and in the afternoon a fine program of high-class musical and speaking numbers will be provided.

AMENIA, N. Y., GRANGE had a glorious time when their 50th anniversary was happily celebrated. The auditorium of the village high school at Amenia furnished an admirable meeting place, and the occasion was graced not only with National and State Grange officers, but with the presence

of Mrs. Morton, one of the charter members of the Grange and who recently received her Golden Sheaf 50-year certificate from the hand of State Overseer Henry D. Sherwood.

WILLIS N. CADY Former State Master of Vermont recently reached his 80th life milestone. A group of Middlebury civic organizations united in tendering him a testimonial dinner, which brought together a large group of representative Vermonters. Mr. Cady has been very prominent in the life of his community and state, and for several years served the National Grange as secretary of its executive committee.

CHAUTAUQUA, N. Y., Grange Day (August 17) was graced by the presence of Mrs. Lowell, widow of former

National Master Sherman J. Lowell. She greeted a host of Grange friends at the Grange Building on the Chautauqua assembly grounds. Although far advanced in years, Mrs. Lowell is in much better health than formerly, and found great joy in coming to Chautauqua. A splendid life-sized picture of former National Master Lowell has recently been placed in the Grange Building at Chautauqua.

EVERY NEW ENGLAND STATE shows a net gain for the fiscal year ending July 30th. Much satisfaction over this fact is felt throughout the entire Northeastern territory. New subordinate or Juvenile Granges have been organized during the year in every one of these six states, and the group as a whole was never enjoying so great Grange prosperity as now.

Farmers Fight World's Worst MONOPOLY

(Continued from Page 5)

the accused can beat the charge and continue preying on the working man, the farmer and all other consumers.

As the largest single class of consumers in the country, farmers protest the increased cost of products due to labor rackets and excessive labor costs.

Every laboring man is entitled to a fair wage, but seven million farm families, thirty million farm folks, cannot see either capital or labor receive an excessive share of the nation's income. Capital has been held within bounds—some think, too tightly—in recent years; but labor has been in the saddle and the Labor Monopoly has not hesitated to dip greedy hands in the people's cash register and punch up the NO SALE sign, indicating they gave no value in return.

The Labor Monopoly, in order to keep itself in power, has not hesitated to force every concession from the rest of the people that it possibly can. It fears that if it once slackens in its crescendo of demands, it will lose its grip on the worker.

A farmer-owned cooperative runs a mill in which a union was set up in 1933. At that time these workers were already getting a good wage, but since then the Labor Monopoly has jacked wages up until they are much above the cost-of-living index. Meantime, the co-op's farmer-owners are suffering under produce prices as far below the cost-of-living index as the workers' wages are above. Despite the high wages they are paying, the employers have little to say about hiring and firing their own help, and under the Wagner Act and the National Labor Relations Board, they cannot even explain to their own employees their side in any dispute without being accused of trying to break a labor union—a

criminal offense.

Farmers protest the unfair labor laws now on the nation's statute books. They charge that the laws are unfair to farmers, to industry, to the laboring man himself, and that to continue them in force will peril not only national recovery but any effective national defense preparation.

Farmers protest the attitude of the government's administration of labor laws. They wonder how government can expect the whole nation to work together harmoniously when it so openly favors the ideas and practices for which this Labor Monopoly stands. Do the government administrators, like the Labor Monopoly, excuse the Communistic ideas and criminal practices imposed on the laboring man and the public? If so, it is time for farmers and workers alike to make known their complete disapproval of the Labor Monopoly and everything for which it stands.

Farmers remember that the French Government, just before this World War, was a partnership among Socialists, Communists and a Labor Monopoly. That combination paralyzed France, and her Democracy was destroyed. She was unable to defend herself, and she was destroyed. We have such a combination here, and it is paralyzing America, destroying the constructive gains made by organized labor, individual initiative, and freedom; and unless this unholy alliance of Socialists, Communists and Labor Monopoly is curbed, it will destroy America itself as it did France.

It was once thought that the Industrial Trusts were too powerful even to try to curb their abuses, but our people in their wrath did curb them. The abuses of the Labor Trust must likewise be curbed before the Western Light of Liberty is snuffed out through the selfishness of one small group preying on its supporters among the workers, on the farmers, on industry, and on the nation.

(EDITOR'S NOTE: This is the first in a series of articles dealing with the relations of organized labor to agriculture and the nation. In the next one, to appear in an early issue, the author will try to determine a series of fair principles for labor organization.)

The more SALT you use right

The more PROFIT you make

ALL THE SALT farm animals will eat is paid for many times over when you use the right salt the right way. It earns its profit in better health and productivity—more milk from cows, faster and healthier growth in young animals, and all at a marked saving in the cost of feed.

You know you are using the correct type and grade of salt when you use International brands. You will know better how to use these brands when you read International's book, "White Gold for the Farmer's Profit." It tells about the profitable uses of salt on the farm, and provides a simple table of these many uses. Write for a copy today.

Many improvements in farm salt, as well as improvements in its use, are the result of the work of the Research Department of International Salt Company, Incorporated. It is constantly looking for new and better ways to use salt on the farm. If you have any questions about any use of salt, write for any information you wish. For the best profits from salt, ask for International brands at your dealer's.

Help prevent PUFFS, STRAINS AND SWELLINGS

from causing costly lay-ups

LAY-UPS ARE COSTLY when there's work to be done—That's why many farmers use Absorbine to help prevent strains, puffs and other everyday accidents from becoming permanent injuries.

Absorbine's fast action relieves soreness—speeds the blood flow. Opens up small blood vessels, bruised and clogged. Washes out "muscle acid" that causes soreness. Often relieves lameness and swelling within a few hours. Applied to cuts and open sores, Absorbine tends to prevent infection. Used effectively to treat collar gall, windgall, fresh bog spavin and other everyday casualties that may mean costly lay-ups. \$2.50 the long-lasting bottle at all druggists or postpaid.

W. F. Young, Inc., Springfield, Mass.

130 Registered HOLSTEIN CATTLE

SELL IN 121st AUCTION
EARLVILLE, MADISON COUNTY, N. Y.

Thursday, Sept. 19th, 1940 at 10 a.m.

Offered by about 50 well known New York State breeders, from T.B. Accredited herds. Every animal negative to blood test, many from Bang Approved Herds. Up-to-date mastitis charts with all milking animals. 100 FRESH AND HEAVY SPRINGERS. All big producers, many milking from 50 to 75 lbs. a day. A FEW BULLS ready for service from high record dams.

A NICE OFFERING OF HEIFER CALVES. Buy these heavy producing, profitable animals, and make some real profits from the present good milk prices.

Send for catalog and details to

R. AUSTIN BACKUS,
Sales Manager, MEXICO, N. Y.

LORIMER FOLLETT AUCTION
Friday, Sept. 20, 1940, at 12:30 P. M.

35 Registered Holstein Cattle
at farm, ROUTE 12, NORTH NORWICH, N. Y.
T.B. Accredited, and Bang Approved.

All fresh or heavy springers, good ages, raised on the farm. A richly bred, unusually heavy producing offering, certain to please. Send for catalog and details, to
R. AUSTIN BACKUS, Sales Manager, Mexico, N. Y.

SWINE

Walter Lux, Tel. 0086, Woburn, Mass.
10-12 weeks old, \$3.50 each; 8-9 weeks old, \$3.00 each; 5-6 weeks old, \$2.50 each. CHESTER WHITE, YORKSHIRE and CHESTER CROSS, or BERKSHIRE and CHESTER CROSS. All large type. Stock sold as Feeders or Breeders. Will ship any number C.O.D. with pigs that will please you. If not, return them.

DOGS

SHEPHERDS—Collies. Trained Cattle dogs and pups. Heel-drivers. Beauties. WILMOT, East Thetford, Vt.

By J. F. (DOC.) ROBERTS

IN THE past week, top cattle have sold up to \$12.90, almost \$13; calves \$12.50; lambs \$10.25; hogs \$8, and old cows \$6.50 to \$7. I haven't heard of any scarcity or any great export demand, so this up-turn must be the demand as expressed in our own country. At last, the consumer is pulling out of his doldrums, realizing this is not a short war, but a long one, and that we have and will continue to have an ever-increasing part in it. Not a pretty picture, not one of war profits, but one that will entail sacrifice and economic chaos unless we are ready.

We here in the Northeast have the feed. First-cutting hay is not so good, but it is abundant. Second-cutting hay is abundant and good. We can waste it, or we can use it to produce weight, quality and numbers of livestock. The need will be great; the demand is already here.

Cows on after-feed, of which there is also an abundance, will gain in weight and improve; and, unless these fields are grazed too short, it will improve them also. Electric fencing comes into the picture for this method of improving any class of livestock. Yes, sheep, lambs and hogs can also be held behind one-strand electric fencing, if given an experience with it be-

fore turned behind it in large numbers.

Lambs should be grained up to a pound a day on late pastures or meadows; less amounts will help. The price of grain as compared to the price of top lambs this season shows a very satisfactory feeding margin, so get your lambs fat and weighing not less than 85 lbs. before you allow them to leave your farm.

Hogs are showing a nice advance in price, but fresh pork products have skyrocketed. If live hogs were selling on the basis of their fresh meat price, they would be bringing better than \$10. The drag is in the lard—it is still bringing less than the live cost of the hog, so again we have emphatically impressed upon us that future hog feeding and production must be on a basis of an all-meat hog, not weighing over 200 lbs.

Heifers simply are not available this fall in the Northeast, which only means that they are being kept by their original owners. This is as it should be under present conditions, unless they are all thrown into milk production in a year or two. The milk situation is not settled; it can be upset so easily. Heifers for meat this winter and spring will be a profitable operation by using this cheap feed to put on weight and flesh, and then selling before it is too late and the milk market and the beef market are both glutted. What an opportunity to cull out dairy herds and heifers!

Horses have met a better demand and a better price in the past few weeks than at any time this year. This is most unusual at this season, but it also is as it should be.

More Daughters from Proven Sires Through Artificial Insemination

(Continued from Page 3)

and Harold Meaker of Memphis for Guernseys. J. L. Sears of Baldwinsville, New York, is secretary-treasurer. Each local association has at least one member on the Board of Directors.

The local Artificial Breeding Associations making up the Central New York Association are the Pioneer Association at Dryden, New York, and Associations in Onondaga County, two located in Jefferson County and one each in Livingston, Otsego and Madison.

As you probably guess, Syracuse was chosen for the bull barn because of its central location. Semen from the sires kept there is collected every third day, is diluted and shipped under refrigeration to the veterinarians who serve the various associations. Each association has its own veterinarian. Where there are at least 1000 cows in an association it is a full time job. Where there are fewer cows a local veterinarian usually takes on the work on a part time basis.

New local associations are taken in on this basis. A local association must have members owning at least 1000 cows and there must be at least 1000 cows of one breed in a block made up of not more than three local associations. There is a very definite reason for this requirement. For each 1000

cows it is possible to buy a set of three outstanding herd sires. More than one bull is needed to produce fresh semen every day. The semen from these bulls is shipped to the veterinarians serving these dairymen, until members have grown to breeding age. Then a switch is made and semen from another set of bulls is shipped in order to get away from close inbreeding. Bulls of other breeds will be added when members in not more than three local associations own at least 1000 cows of that breed.

As might be expected, various stories have been circulated as to results, and to get at some of the real facts, Stanley Brownell of the Department of Animal Husbandry at Cornell got some figures together on the results secured in the Pioneer Association. Based on the number of calves born, he found that almost exactly as many heifers as bulls were born and almost exactly the same proportion of abortions appeared from the animals bred with normal service as those bred artificially in the same herd. Furthermore the percentage of deformed or abnormal calves in Breeding Association herds was practically identical with those in herds of non-members. Most dairymen reported that they could see no difference in the rate of growth and development of calves born as a result of artificial insemination, but an appreciable number said that these artificially inseminated calves grew better.

A few of the 25 Herefords on the Sheldon farm, Oneonta, New York. Says Burton Sheldon: "We have used a polled bull that was a winner at the New York State Fair, and we have a number of nice polled Hereford calves. We are keeping all of our stock registered, and hope to build up a very good purebred herd. We have always kept sheep. My sister, won first for three years on pens of lambs at the Chicago International."

The man driving the tractor is Master Farmer Gilbert Prole, Batavia, New York. The occasion was the annual meeting of the Empire State Potato Club on his farm recently. Seated on the combine is Lieutenant-Governor Charles Poletti, who spoke at the meeting. The Lieutenant-Governor expressed the desire to get a closer view of this piece of MASSEY-HARRIS equipment, and rode the combine for a complete circuit of the field.

The BEACON MILLING COMPANY of Cayuga, New York, has just put out a new folder "Cows On Pasture." There has been a phenomenal increase in the interest in pastures and an equal development of information about providing better pasture. The folder, which is free for the asking, tells how to supplement pastures for maximum results.

If you are planning to build or remodel a poultry house this fall write to the WEYERHAUSER SALES COMPANY, Box 514, Ithaca, New York, and ask for the book "Greater Farm Profits From Greater Farm Buildings." The Weyerhaeuser Company has a building service with plans for various types of farm buildings complete with blue prints and a list of materials.

THE DODGE MOTOR COMPANY have just announced a new two-ton cab-over-engine truck. This is a companion to the 1½-ton truck. The engine has a piston displacement of 241.5 cubic inches, a compression ratio of 6.5 to 1, and develops 99

Hollis Houck, Tully, New York, who stands at the left, was the winner of a \$100 prize at the Ford Exposition during Farm Week at the World's Fair. Presenting him with the award is Rex Ryan, executive of the Ford Company's exhibit and one of the hosts of the week's activities.

The prize was the right to buy clothes up to the value of \$100 from Lord & Taylor, Fifth Avenue, New York City. Before he spent his \$100, he thought of his brother at home and included a suit for him. Hollis is 15 years old and a 4-H Club member. His father, Paul Houck, operates three dairy farms in upstate New York.

horsepower at 3,000 revolutions per minute. The truck is offered in three wheel base lengths—105", 129" and 159".

Under some conditions, particularly where electric current is not available, wind power may offer the solution to the problem of running water. THE WINDMILL COUNCIL OF AMERICA have just printed a booklet called "Free Running Water from the Wind." This booklet describes and illustrates various types of windmill water system installations, and includes information to help readers select the right size windmill and the proper type of system. There is no charge for the booklet. Just drop a post card to The Windmill Council of America, 228 W. Ontario St., Chicago, Ill.

THE CONSOLIDATED PRODUCTS COMPANY of Danville, Ill., makers of Semi-Solid Buttermilk-Vitamin feed products are celebrating their 25th anniversary. The president of this company is Dan Lewis and the advertising manager Robert Q. Hammer. AMERICAN AGRICULTURIST offers congratulations on this anniversary.

The eastern headquarters of STARLINE INCORPORATED, makers of barn equipment and located at Albany, have been moved to larger quarters. To I. W. Webster at Albany goes a large part of the credit for the growth of this firm's business in this area. The former eastern address of Starline was 1031 Broadway, Albany. The new address is 51 Maplewood Avenue, Albany. There is at the new location a railroad siding over 200 ft. long which permits the loading and unloading of several cars at one time. As a result, the arrival of shipments from Harvard, Illinois, will not interfere with outgoing shipments.

Going on the market soon is a mechanical dry plucker for poultry capable of picking 300 to 500 birds a day. This is an English invention, and it is claimed that it has been tried out there with good success. It is run by a small electric motor, and an operator can learn how to use it in two days' time. The machine is being introduced by the MECHANICAL PLUCKER CORPORATION, 222 West 28th St., New York City.

THE GOODRICH TIRE AND RUBBER COMPANY are increasing their facilities for making synthetic rubber which they call Chemigum. For three years the company have been producing artificial rubber in a small plant, and the new plant, which at the start will make 10,000 lbs. a day, will be at Akron in one of the buildings already owned by the company. Chemigum is really derived from petroleum. Tires made from it are reported as giving a better performance than tires made from German Buna and equal to those made from natural rubber.

NEARBY MARKETS for NEARBY POULTRYMEN

Grain and Grass

By J. C. HUTTAR

THE FOLKS who are going to stay in the poultry business the next few years have three definite problems to lick. If they can do it, they'll still have chickens five years from now. If they can't, they won't. That's a strong statement, but I believe it.

So here are the problems, you chicken men and women. Mark them down where you can look them over every once in a while. They are: costs, mortality and marketing.

J. C. Huttar

I've done a lot of talking in the past and will do a lot more in the future on marketing, so I'm going to dismiss it this time with a single sentence. While there is still room for improvement in quality, grading and handling of market eggs, the big job is to get folks to eat more table eggs. Making layers live is important enough, too, to get a lot of attention. But, I'll reserve my ideas on that for a future time so as to be sure to make the third point stick.

COSTS

The chicken business, like all businesses, has changed immensely in a generation. When I think of Jacey and Flippy, my 10 and 8 year old sons, who have raised broilers for market the last two years, I realize this.

Twenty years ago when I first got interested in chickens (the feathered kind), lights, balanced rations, trap-nesting and commercial egg farms were just getting started. At that time, the relation of egg prices to feed costs and other costs was very favorable. Anybody whose birds were at all bred for production could make money, year after year. Since then, feed costs haven't dropped as fast as egg prices, and other farm costs have dropped hardly at all. That's why costs will have to get major consideration by the man who expects to get money out of his chickens.

Of course, there are a lot of the costs of egg production that a poultryman just can't cut. I refer to such things as taxes, necessary repairs on buildings, and general overhead. So we'll skip them and just look briefly at some others such as fuel, light, equipment and feed.

Fuel: With early hatched chicks, one of the main items of cost is coal, oil or electricity to heat the brooder.

With late hatched chicks, this item is very small. There are two things that can be done to make savings here — choose the most economical fuel and hatch chicks later.

I saw the cost records of two chicken men in central New York and this is what they showed on fuel:

One had 1,200 early February hatched chicks raised in four colony houses with oil brooders. He spent ninety dollars for fuel.

The other had 550 chicks raised in an insulated room in the southwest corner of his barn. The chicks were hatched May 23, and he used two electric brooders. His total fuel cost was four and a half dollars.

Something to think about!

Lights: The use of artificial lights shifts the time of heavy production but does not increase the total eggs laid. Now that egg prices are about as low in the winter as at any time of year, we'd better think whether it pays us

to spend money to get more eggs in January and February.

Look at the New York State Egg Laying Test records made without the use of any lights. I know this is on birds of the very best production breeding. But, again, it's something for you to think about. I'm running into more and more poultrymen who do.

Equipment: A lot of poultry equipment is made of steel. Steel is a war commodity and is rising in price. Maybe wood isn't quite as good. But, as between wood that is laying around the farm to burn or rot and increasingly high priced steel, I'll build my mash hoppers of wood. I'll change when times change.

FEED

Feed costs on most northeastern farms afford a chance for substantial cuts. Let's ask this question—To do a real good job of feeding young stock and hens, what feeds do we need? The answer—grain, green food, minerals, protein concentrates (such as milk, meat scrap, etc.), and cod liver oil.

Most of us can't produce much of the last three, but how about the first two? Grains make up seventy-five to eighty per cent of the feed chickens need. War or peace, grains are much more likely to increase in costs in the next five years than to decrease.

I know a good poultryman who used to buy all his scratch grains and a good laying mash. Now he buys a third of a ton of laying mash supplement and has his local feed mill grind and mix two-thirds of a ton of his home grown grains with it. For every ton of this mash, he feeds a ton of his home grown grains. In other words, where he used to buy two tons of feed he now buys a third of a ton and grows one and two-thirds.

He asked me the other day why he couldn't grow his own alfalfa meal. I didn't know why not, so he's going to try it.

Green Feeds: Good green grass to build a pullet on range is almost a lost art. If it's good, it will replace some high priced protein concentrates.

Now, the main thing I want you to do is to think about all of this. Maybe I'll say more about it some other time.

"Now do you understand why I got the boys to give the Warden this pet?"

NO Toxic After Shock WHEN YOU Worm WITH ROTA-CAPS

They DON'T Set Back Growing Birds . . . DON'T Knock Egg Production!

Those who worm with Rota-Caps say: "We prefer Rota-Caps because they don't interfere with normal growth and laying schedules." In other words, ROTA-CAPS don't cause Toxic After-Shock.

ROTAMINE DOES IT

This exclusive, new drug eliminates Toxic-after-shock — protects birds from unnecessary systemic absorption. Rotamine sets up mild but quickly effective peristaltic action which not only expels large round worms and capillaria worms, but also gets these tapes (heads and all): R. tetragona, R. echinobothrida (in chickens), and M. lucida (in turkeys).

Get Dr. Salsbury's Rota-Caps from your local dealer. If he can't supply you, order direct. State size and quantity and enclose check or money order to . . .

GET LAYERS READY TO PRODUCE More Eggs

NOPCO XX

REG. U.S. PAT. OFF.

Fortified COD LIVER OIL

supplies ample Vitamins A & D—two of the important feed factors which layers require to keep up in weight, ward off many diseases, and fill the egg baskets during the winter laying season.

"NOPCO XX"

is a thrifty way to supply your flocks with Vitamins A & D because it is so highly concentrated—so safe and reliable.

"NOPCO XX"

is the result of constant research, precise manufacturing methods and exacting tests. You can feed it with complete assurance that it delivers to you its guaranteed quota of 3000 U.S.P. units of Vitamin A and 400 A.O.A.C. units of Vitamin D per gram. Feed it in all your mash to help you get high producing layers, top quality eggs and bigger hatches.

ONE-TWO-THREE RATION

For Broilers - Pullets - Layers

Economical - Simple Common Sense

"Mix it Yourself"

For Particulars, FREE, Write "Buttermilk", Danville, Ill.

The man at the right is H. R. Donelson of Colrain, Mass., and the two young men are his sons, "R. E." and "R. H."

From Cows to Chickens in Massachusetts

THE POULTRY farm of H. R. Donelson and Sons at Colrain, Mass., is an interesting development of a family sized farm. Some years ago, thirty dairy cows were the principal source of income on the farm but gradually the Donelson's became interested in poultry and now they have 6000 Rhode Island Red layers.

On this farm the baby chicks are kept in a battery brooder for a week or ten days, then moved to a brooder house with a capacity of 10,000 chicks and then later they are put out on range.

It is interesting to note the difference of opinion among poultrymen as to privileges of visitors. At the Donelson farm visitors are very welcome but signs are prominently displayed asking them not to enter on the range or in the houses.

The plan from now on is to have a permanent range for the young stock. Bare spots are avoided by moving the houses frequently. There are 60 houses on the range and Mr. Donelson says he can move them in two hours.

The layers are kept in the houses all the time. It is the plan here to feed all the scratch grain at the night feeding. Some of the houses are equipped with dropping boards and some with pits under the roosts. Mr. Donelson likes the pits better.

"What is your program for raising pullets?" I asked. "Do you hold them back so they will not lay until they are mature or do you let them lay when they get ready?"

"I don't believe anyone is successful in holding pullets back very much. We let them lay when they get ready, although we do try to control to some extent the proportion of scratch grain and mash which they eat."

To save labor a small truck has been fitted up with two bins or hoppers. These are filled with feed and driven out to the range where feed can be distributed with a minimum of labor.

The eggs on this farm are picked up and taken to a basement egg room where they are graded and shipped once a week to the Springfield egg auction. The walls of this egg room are concrete and on top of the wall along one side a concrete trough has been constructed to hold water. The concrete is porous so that the water soaks down through it and keeps the air in the egg room moist. Eggs are graded into five grades: jumbos, large, mediums, pullets and peewees.

"The relative price of feeding and eggs has been a little discouraging lately," I remarked to H. L. Donelson, the father.

"That is true," he replied, "but that is

nothing new. We have always had our ups and downs in the poultry business and we have learned to take them as they come."

All One Man Can Handle

Paul Shores of N. Bernardston, Massachusetts, was once in the rayon business but he was advised to take up some occupation that would keep him out in the open and 11 years ago he started in the poultry business. Before he did this, he took a short course in poultry husbandry at the College of Agriculture at Amherst and then worked in the college poultry plant for some time. Now with the help of two men the year round and a little extra help, he keeps from 1800 to 2000 laying hens. The hens are Rhode Island Reds while the male birds are Barred Rocks and a very large proportion of the eggs are sold to a hatchery which caters to the great interest that has been developed in cross-bred chickens both for broilers and layers.

A roadside stand furnishes a market for quite a number of eggs and

Paul Shores grading eggs to be shipped to a hatchery.

also for some dressed poultry. Each Saturday Mr. Shores runs a small retail route, delivering poultry and eggs.

The main poultry house is 125 feet long, 25 feet of which is used as a service house for incubators, for grading eggs and killing poultry. A year ago a second story was added to this business to give greater capacity.

"Are you going to expand further?" I asked.

The response was definite but it was, "No, I think I have about all one man can handle."

HOME GROWN

Desserts

BY MRS. GRACE WATKINS HUCKETT

To make the **MOLASSES PRALINE ICE CREAM** shown directly above, mix eight yolks of eggs with $\frac{1}{2}$ pint of molasses. Add slowly one pint of scalding hot milk. Put in a double boiler and cook, stirring with a wooden spoon slowly. Do not let it boil. When the mixture begins to thicken, remove from the fire and let it cool. Keep stirring. When cool, add one pint of heavy cream and two ounces of fresh roasted and chopped nutmeats. Freeze either in mechanical refrigerator or in mold buried in mixture of one part ice to one part salt for 3 hours. Serve with fancy cakes.

blackberries, black raspberries, youngberries, boysenberries or dewberries.

HINTS FOR USING FRESH PEARS

- 1—Make a pear pie—using your favorite apple pie recipe. A few drops of lemon juice and bits of butter improve the flavor, also candied ginger, cinnamon or nutmeg.
- 2—Add a few cloves to a batch of stewed pears.

WASHDAY DESSERT

Into a large basin which has a tight fitting cover, empty a quart of home canned fruit, any sort of cherries, berries or sliced fruits. Add 1 cup boiling water and heat fruit to boil. Drop dumplings by spoonfuls on top of fruit, cover, cook gently 20 minutes.

Dumpling Batter: Sift 1 cup flour with 1 teaspoon baking powder, $\frac{1}{8}$ teaspoon salt and $\frac{1}{4}$ cup sugar. Beat smooth with $\frac{1}{4}$ cup milk and 3 tablespoons melted butter. ("H. R.")

MAPLE CUSTARD PIE

Beat 5 eggs together until blended, add 1 cup maple syrup and 4 cups milk heated almost to scalding point. Pour into a deep pie pan lined with unbaked pie crust. Have oven at 450° F. for 10 min. to bake pie crust, reduce heat to 325° F. and continue baking until custard is firm and a silver knife comes out clean when inserted in center (about 30 min.). For variety sprinkle top of custard with chopped home grown nutmeats before baking. ("H. R.")

PEACH ANGELS

Beat whites of 6 eggs until stiff, add 10 tablespoons powdered sugar gradually with $\frac{1}{2}$ teaspoon vanilla. Spoon in mounds on cooky sheet covered with plain white ungreased paper. Shape into cups with spoon. Bake in slow oven, 275° F. for 45 min., remove from paper at once and cool. Fill with peaches sliced paper-thin and sweetened well. Garnish with a bit of whipped cream and a nutmeat. Nice for Sunday or special occasion dinners. ("H. R.")

EASIEST DESSERT

On your most attractive tray arrange a colorful dish filled with well seasoned home made cottage cheese, a pretty dish filled with jam or jelly and circled with assorted crispy crackers. Pass a bowl of ice cold home grown fruit and serve plenty of hot coffee. Here are some of my favorite combinations.

Cottage cheese—home made strawberry jam—grapes.

Cream cheese—apple butter—bowl of pears.

Cottage cheese—green grape jelly—red apples.

Cream cheese—strawberry jelly—assorted plums.

Cottage cheese—raspberry jam—fresh peaches.

Cottage cheese—cherry conserve—pears and prunes.

Home made ginger snaps add zest to any of above combinations. ("H. R.")

THE FARM orchard and garden can be made to provide wholesome, home-grown desserts practically the year around. Combine their products with eggs and milk, also to be expected in every farm home, and it is surprising how little else is actually needed, especially if there is a home supply of honey and maple products. The woods contribute their share of nuts and berries, and gathering them can be made the object of many an outing:

FRUITED GRAPE GELATIN

1 tablespoon granulated gelatin	$\frac{3}{4}$ cup sweetened grape juice
$\frac{1}{4}$ cup cold water	2 tablespoons lemon juice
$\frac{3}{4}$ cup boiling water	$\frac{1}{4}$ teaspoon salt
$\frac{1}{4}$ cup granulated sugar	1 cup diced fruit

Soak gelatin in the cold water for 5 minutes. Add boiling water and sugar and stir until gelatin dissolves; add grape juice, lemon juice and salt. Place mixture in refrigerator and allow it to chill until it begins to set, then fold in diced fruit and turn mixture into wet molds. Canned berries; diced, canned peaches or pears, and some of the shipped fruit if desired make delicious combinations. Bananas and oranges, sliced grapes or diced pineapple add variety.

INEXPENSIVE ICE CREAM

3 quarts milk	$\frac{1}{2}$ cup cornstarch
1 quart thin cream	$\frac{3}{4}$ cup cold milk
2 cups sugar	6 eggs
$\frac{1}{2}$ teaspoon salt	3 tablespoons vanilla

Scald milk and thin cream over hot water, add sugar and salt. Mix cornstarch with $\frac{3}{4}$ cup cold milk and add to scalded milk and cream, stirring constantly. Cook 5 min. Remove from heat, add beaten eggs and vanilla. Freeze in hand freezer.

One pint washed, well sweetened fruit may be added to the mixture when partially frozen. Then serve with homemade fruit sauces or preserves.—(yields 6 quarts) (by "H. R.")

APPLE WHIP

4 egg whites	3 cups cold sweetened apple sauce
4 tablespoons sugar	$\frac{1}{4}$ teaspoon salt
1 tablespoon grated orange rind	

Beat egg whites to a stiff froth, add sugar, salt and orange rind and continue beating until stiff. Fold in cold sweetened apple sauce. Chill in sherbet glasses topped with a cherry.—("H. R.")

EDITOR'S NOTE: Instead of apple sauce one may use apricot pulp made from cooking $\frac{1}{2}$ lb. dried apricots until tender, straining and adding $\frac{1}{2}$ cup sugar. Further variety may be given by folding in one cup whipped cream and by flavoring with a bit of almond extract or lemon juice. A berry supreme is made by whipping cream stiff, adding powdered sugar to taste and a little salt; fold into this mixture berries which are washed, capped and drained. Fold until every berry is coated

and serve at once before it gets watery. Boysenberries, blueberries, raspberries or youngberries may be used this way.

BERRY BAVARIAN CREAM

2 tablespoons granulated gelatin	2 egg whites
1 cup cold water	1 cup raspberries, fresh—or drained, canned berries
$\frac{2}{3}$ cup sugar	
1 tablespoon lemon juice	

Soak gelatin in cold water, and dissolve it by setting bowl in a pan of boiling water. Add sugar, fruit and lemon juice. Chill mixture and when it begins to thicken, fold in stiffly beaten egg whites. Turn it into a mold and chill. Serve with soft custard. Dried apricots, stewed and put through a sieve, canned apricots, bananas, strawberries, pineapple and other fruits may also be used for Bavarian cream.

* * *

At times hearty desserts are needed; of course the rest of the meal is then made lighter:

PEACH BATTER PUDDING

Half fill a shallow pan, enamel or glassware, with quartered peaches, dot with butter and pour over them a cup of white or brown sugar. Make a batter of the following ingredients and pour over the peaches.

2 tablespoons sugar	$\frac{1}{2}$ cups flour
1 teaspoon salt	1 cup sweet milk
3 teaspoons baking powder	2 tablespoons melted butter

Sift dry ingredients together, add milk and butter and stir lightly together. Set in a moderate oven 350° and bake one hour. If crust browns before that time, test to see if done through and remove from oven. Serve hot with plain or whipped cream. Canned peaches or other fruits may be substituted for the fresh peaches, adjusting amount of sugar to their sweetness.

APPLE CRISP

4 cups sliced apples	$\frac{1}{2}$ cup butter	$\frac{1}{2}$ cup water
1 teaspoon cinnamon	$\frac{3}{4}$ cup flour	1 cup sugar

Cut apples in $\frac{1}{4}$ inch slices. Butter a baking dish, add apples, and pour water and cinnamon over them. Work together sugar, flour and butter until crumbly, spread it over apple mixture, and bake, uncovered, in an oven at from 375 to 400° F. Serve this dessert warm with whipped cream or top milk.

QUICK BLUEBERRY PUDDING

$\frac{1}{2}$ quart blueberries	$\frac{1}{2}$ cup water	2 cups soft bread crumbs
1 cup sugar	$\frac{1}{2}$ teaspoon salt	2 tablespoons melted butter
	1 tablespoon lemon juice if desired	

Pick over berries, wash, drain, mix with sugar, water and salt and boil for 5 min. Combine bread crumbs and butter, add to hot fruit, stir until well mixed, and let stand on back of stove for about 30 min. but do not let pudding cook. Add lemon juice and serve pudding while still warm with plain or whipped cream. Substitute for the blueberries, —

3438

3200

JUST RIGHT for Fall Wear

THE SILHOUETTE is slimmer than ever. The skirt may have fullness in front or back or may have pleats to afford ease in walking but they must not spoil the pencil slimness of the figure. The waistline is slim with the wide midriff effect. Necklines are high, featuring round collarless types, softly draped necks, high square necks, very high draped surplice closings or small collars on tailored dresses. Shoulders are wide and square looking.

DRESS PATTERN No. 3438 features the fashionable slim silhouette, yet has the necessary skirt fullness in front to afford easy grace. Sizes are 12 to 40. Size 16 requires 3½ yards of 39-inch material.

BLOUSE AND SKIRT PATTERN

"Here's your pipe, dear, and put on your smoking jacket and slippers—the Jones' are coming over."

Stay-at-home

By AMY ATWATER.

If someone must walk
In the quiet, common way
I should like to be
That one.
For those who follow rainbows
Through each shining day
Always have their backs
To the sun.

No. 3200 may be made up as separates or all-in-one. As separates, both parts may be teamed up with other blouses, skirts and sweaters. The cute triangular pocket and belt tabs will appeal to any style-loving individual. Sizes are 12 to 42. Size 36 requires 2½ yards of 39-inch material for blouse; 1½ yards of 54-inch for skirt.

TO ORDER: Write name, address, pattern size and number clearly and enclose 15c in stamps. Address Pattern Dept., American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our attractive Fall Fashion Book.

Today in Aunt Janet's Garden

September Good for Gardening

SEPTEMBER is one of my busiest garden months—that is when I am not pickling or canning! One reason why I like to do things in the fall is that the Spring days are never long enough to compass garden work, housecleaning and other various jobs we women seem to find to do at that season of the year. Another reason is that many plants are now dormant and may be moved with safety. Oriental poppies belong in this group. Just lift with a spading fork and separate the clump into its natural divisions. If you are good at rooting cuttings, the roots may be cut into 2 inch lengths and small plants grown from each.

The method of moving bleeding hearts and peonies is the same. Lift them and divide them into their natural divisions. Each peony division should have from three to five eyes on it and the crown should be 2 inches under the surface of the soil which should be well mixed with well-rotted manure and a handful of bonemeal. Plenty of water, too, is important. All the irises—bearded, Siberian, Japanese and bulbous—may be planted or divided now. The bulbous iris which is not too hardy in this climate should be planted early enough to establish a good root system before cold weather. It probably should have some mulch for protection during the winter.

My main transplanting chore in early fall is the hardy phlox. This year was no exception in the number of off-color seedlings which surprised me by coming up in the middle of my named varieties. I thought last year that I had done a thorough job of getting rid of them; yet this year it seemed as if I had more seedlings than anything else, so once more I tried to lift them while in bloom in order to be sure of getting them. Now I shall separate the remaining large clumps which I want to keep and replant the young, vigorous shoots around the edge, discarding the woody centers.

CORRECTION

On page 14 of the August 31 issue we published the names of the winners of the vegetable recipe contest. It has been called to our attention that in the vegetable loaf recipe of Mrs. Ada Van, Spruceton, Greene County, N. Y., which took fifth prize, there was an omission. The list of ingredients should include 2 slightly beaten eggs.

It takes more than kisses to keep a man happy!

CINNAMON COFFEE CAKE

2 cups sifted cake flour ¼ teaspoon grated nutmeg
2 level teaspoons Davis Baking Powder ¼ cup milk
¼ teaspoon salt 1 cup sugar
½ teaspoon cinnamon 1 egg

Cream shortening well; gradually beat in half of the sugar. Beat egg to lightness and add rest of sugar, beating well. Combine with first mixture and beat well. Sift dry ingredients together twice. Add alternately with milk; beat well after each addition. Pour batter in 8-inch square pan, greased and lined with Cut-Rite Waxed Paper. Cover with topping and bake in moderate oven (350° F.) for 45 minutes.

TOPPING: Rub together 2 tablespoons butter, ½ cup brown sugar, ¼ cup dry bread crumbs, ¼ teaspoon cinnamon, and 1 tablespoon flour. Crumble over top of batter.

THE ORIGINAL WEDDING SERENADE

(EDITOR'S NOTE: Here is another story about Aunt Milly and Uncle Andrew.)

QUITE different from Jesse Parsons or Freeland Strong was Johnny Virgin. Jesse was grave, staid and conscientious; Johnny was gay, roguish and careless. He was not impulsive and fiery, like Freeland, but calculating and cunning in laying plans, particularly plans for pranks.

But he was jolly company of an evening and very popular; and he had this, at least, in common with Freeland and Jesse, that he had been undisguisedly fond of Milly Lapham. All these boys, indeed, had been schoolmates with her, and in the habit from childhood of calling at the Lapham farmhouse and going about with Milly.

Johnny was away from home the Sunday of Milly's marriage to Andrew Chase. But he returned on Monday, and when he heard what had occurred during his absence, he was astounded; for Johnny, like Jesse and Freeland, had all along believed himself the favorite in Milly's good graces.

Thus far Johnny had not thought much of marriage—he was scarcely nineteen as yet; but while away on this hunting trip, vague misgivings as to the intentions of the other boys troubled him, and he resolved to pay court to Milly in earnest on his return.

When told that she was already Mrs. Chase, he was thunderstruck, and experienced a sharper heartache than had ever before affected his buoyant nature. He fancied himself badly used, and was much concerned about "squaring up" his own side of the account. Johnny completely lost his self-control, and went about saying every hard thing he could think of about Andrew, and was even so unmanly as to slur his former good friend, Milly.

There was then an ungracious custom just coming into vogue in Maine of "serenading" the newly married, either on the night of the wedding or soon afterward. The practice was to linger about, making a great uproar, until invited indoors by the bride and groom and entertained with refreshments. This particular kind of "serenade" is said to have come to us from the French-Canadians.

A serenade with good music, courteously rendered by a party of young friends, might be not unpleasant; and with such intent the custom perhaps originated. But if so, it soon degenerated into mere riot and discourtesy.

Not infrequently the serenaders remained until daylight; or, if not invited in on the first night, they would come on the next and redouble their previous efforts. Instances are remembered where they came every night for a week, going so far as to batter down doors and break windows.

Where the bridegroom was a spirited young fellow, and resented such imposition on his rights as a citizen, affairs occasionally occurred. In twenty instances on record firearms were used, and in eight of these there were fatal casualties.

The practice ran its course, and at last succumbed to public reprobation. But in 1824 it was a novelty, and Johnny Virgin planned and managed the first serenade of the sort in Jericho. Bursting with spite and mortification, he applied to certain "fellows of the baser sort," of whom there is always, unfortunately, a considerable number in every community, and succeeded in raising a crew of thirty or forty, all fired with the idea of making it unpleasant for Andrew.

They collected horns, bells, tin pans, guns, two snare drums, a bass drum,

By C. A. STEPHENS

fifes and a conchshell. One rogue even procured a pig, which, when its ears were cuffed, would squeal in a frightful manner.

Such was the nature of the serenade which Johnny was devising for celebrating the wedding of his former friends. But meanwhile one of Milly's acquaintances learned of it and gave her a hint. Forewarned is forearmed. Andrew promptly took measures for weathering the approaching cyclone of noise, and displayed good generalship.

On the night of the wedding Andrew and Milly had driven to the Lapham homestead; but on the following day they proceeded to Andrew's house, where they were to live with his father and mother. Andrew was an only son, and besides himself and his parents, there was but one other inmate of the house, a very deaf old man named Zimri Glinds, who was given a home there for whatever work he was pleased to do.

This Zimri Glinds was something of a character. He had been a man-of-war's man in his day, and had served for seven years on the famous old frigate Constitution. He maintained that he had lost his hearing on account of the roar of cannon during the many battles of the Constitution with British ships. Be this as it may, he was as deaf as a post; the heaviest peal of thunder was quite inaudible to him.

Otherwise than by signs, the only way of communicating with him was by writing on a slate. He was accustomed to keep the slate and a pencil on a string by his chair at table.

He sang man-of-war songs in a high-pitched, flat voice, and he had also a boarding pike in his possession with which he said he had "run through a British bo's'n."

Sometimes when the memories of his warlike days were revived, Uncle Zim would seize the pike and, with a wild hurrah, show the land-lubbers of

Jericho how he had leaped to the rail of the Guerriere and jumped down among the disheartened British tars. The sailor's performance with the pike was admittedly impressive, even if touched with burlesque.

It occurred to Andrew, however, that Uncle Zim would be an appropriate person to entertain Johnny and his serenaders, and at the supper table that Tuesday night—the night he had heard they were coming—he wrote on Uncle Zim's slate as follows:

"I am going away tonight, and I want you to take your pike and sleep in the front room of my new part of the house. The British may attack us; but don't let them board, and don't give up the ship."

The old man did not understand it very well. He had heard nothing of the serenade, and supposed this was merely some of Andy's nonsense. But he thought a great deal of Andy, and to oblige him, went upstairs to the front room about eight o'clock in the evening and went to bed.

An hour or so later, Andrew and Milly stole out at the back door and proceeded across the pastures and woodland to the Lapham farm, two miles distant, where they passed the night in peace and quiet, far from the scene of the disturbance.

Before leaving, Andy had told his parents what was on foot, and advised them to close up their part of the house, retire to bed, and pay no attention to the serenade.

Johnny and his myrmidons, all frightfully masked, did not appear on the scene until nearly eleven o'clock. They came silently, and posted themselves in the yard about the door and under the front windows of Andy's new portion of the farmhouse.

When all was ready, Johnny blew his horn as a signal for the fanfare. Then the uproar began. Three guns were fired, the snare drums rolled, the bass drum boomed, horns blared, tin pans clattered, the conchshell roared and the pig squealed. The horrible discord could be heard for two miles.

But apparently it was to an utterly unresponsive house. Old Mr. Chase and his wife stopped their ears and ignored it; and as for Uncle Zimri upstairs, he heard nothing whatever; he was peacefully asleep. The rural wags used to say irreverently that even at judgment day Gabriel would be obliged to come and write on Uncle Zim's slate.

A second attack with all the instru-

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Fall Evening

Along the fence hedge the sumac red
Broadly hints of frost ahead,
Of mornings clear and cool and crisp,
Of chimney smoke in curling wisp.
The cricket's fuss serenades the dusk,
Corn hangs rich in brownest husk,
An owl hoots loudly from a nearby hill,
Proud, noisy hens grow wary and still.
A team jogs by; milk foaming high
Is brought in 'neath a tinted sky,
The sheep bell tinkles, a lamp light glows,
The farmer sighs and to supper goes.

—T. O. Davis, Route 1,
Waynesboro, Mississippi.

ments, including the pig, woke no response. The serenaders then whooped, sang songs, beat on the door and flailed the walls of the house with long sticks.

They kept it up, with short intervals of rest, for about two hours.

Still no response.

Determined not to be beaten, Johnny now bethought himself of smoky fumes. They kindled a fire in the yard and began burning old boots, scraps of harness, old woolen garments, and a quantity of hair left over from recent plastering operations. They even went so far as to open a window on the leeward side of their smudge, so that the smoke would be drawn into the house.

It was the flicker and glare of the fire at the chamber window that finally waked Uncle Zim—waked him suddenly with the impression that the house was afire. During all this time he had not heard anything.

He jumped up and looked out. What he saw first was a man with diabolic features pounding a bass drum, then other drummers and strange looking men with guns and horns, apparently a hostile party.

"Avast there, ye land pirates!" he shouted, shoving up the window.

"Andy! Andy! We want Andy! Tell Andy and Milly we want to see 'em!" bawled the serenaders.

Of course Uncle Zimri did not hear a word of this, but he smelled smoke, and grabbing his old pike, started on the run downstairs to repel boarders.

The old man had an idea—which was not very strange—that they were trying to burn him out. The lower part of the house, in fact, was filled with most noisome fumes.

Uncle Zimri threw open the outer door, and seeing the fellow with the bass drum standing near, charged him in true man-of-war style. He speared the big drum, threw it over his head, and then gave chase after the startled drummer, cheering hoarsely.

The fellow dodged and doubled about the yard, then scudded behind a cart; but Uncle Zimri kept close after him, till Johnny, stealing up from one side, attempted to trip up the old man and disarm him.

He seized hold of the boarding pike to wrest it away, but Uncle Zimri practiced a long-forgotten man-of-war's-man's rush and landed Johnny flat on his back among the dooryard chips.

Although young and agile, Johnny barely squirmed aside and got to his feet in time to escape the point of the pike. Uncle Zimri, in fact, was so close at his heels that Johnny was obliged to retreat at his best speed,

The Song of the Lazy Farmer

upon the pillow, soft and deep all ready to enjoy my sleep. I like to sleep, no pleasure is as fine as dozin' off, gee whiz, the rest of you can speed around in airplanes or upon the ground and think you're havin' fun, but gee, just sleepin's good enough for me.

MANKIND is blessed with lots of things, we fly around he air on wings, we listen to he radio that helps to keep as in the know, while motion pictures night and day will help to chase our cares away. We roll around at sixty per, we don't know what we're goin' fer, but want to git there quick as scat, we never like it where we're at. Electric razors come apace to clean the forage off our face, new gadgets spring up ev'rywhere for washin' clothes or curlin' hair, inventions seem to multiply and all we need's the cash to buy.

There ain't no blessing we have got from science that is worth a jot compared with them that Nature gave, we all could do without a shave and hoof it where we have to go, it's sure enough if it is slow. But when we're tired enough to weep, the greatest thing of all is sleep. There's no invention in the world could tempt me when I once have curled

and in this way was driven down the garden plot adjoining the yard, and along two rows of currant bushes to a corner of the fence. The garden fence bordered the brook, being close on the bank of it, at a bend where the water was three or four feet deep.

Johnny had to jump the fence in haste, and consequently landed in water deep enough to wet him to his skin.

He got out without difficulty; but to have one's clothing saturated with water on a November night, when the temperature is down to freezing-point, is disagreeable. Johnny found it so depressing that the pleasures of serenading Andrew and Milly rapidly lessened. He hurried home, and his fellow serenaders saw nothing more of him that night.

But they soon saw more of Uncle Zimri, who returned on the run in quest of new foes. The deaf old sailor's blood was up. Wherever he saw a serenader, he charged him, pike point foremost.

He seemed galvanized, as it were, into an abnormal activity with that pike. Like a jumping-jack he darted every way, all the time whooping wildly. He could not be reasoned with, for he could not hear a word that was shouted to him; and on account of the masks he recognized no one.

There were athletic young fellows in the party, but none of them cared to close with Uncle Zim in his present excited condition. He drove them all off the premises and captured a large part of their paraphernalia.

When Andrew and Milly returned at sunrise the next morning, they found Uncle Zimri sitting on the doorsteps, with an expression of blissful contentment on his ruddy visage, the contentment of a man who has done his full duty and made an unusually good job of it.

His trophies lay in a heap at one side of the steps. They consisted of a bass drum, with both heads broken, a drumstick, one cymbal, an old musket, two dinner horns, a broken fife, three battered tin pans, three masks more or less hideous, two old hats, one known to belong to Johnny Virgin, several odd mittens and an old sword cane.

Uncle Zimri had shut up the pig, under the barn. Evidently the discomfiture and rout had been complete.

Andrew and Milly were convulsed with laughter, which Uncle Zimri regarded in grave doubt; for the old sailor was no nearer understanding the situation than when he had first looked out of the window at two o'clock in the morning. He regarded it as a real attack by a masked enemy, with colors flying and a military band thrown in.

Andrew set to work and constructed a sort of trellis over the door, and during the day Milly and he decorated it with all the trophies which Uncle Zim had captured. They put the bass drum, drumstick and cymbal directly overhead, and filled the sides with the

minor trophies.

No one ever called to lay claim to any of the articles, and the memorial remained there over their door all the following winter. It was a picturesque object, and furnished a subject for much laughter to passers-by.

Andrew also posted written notices, describing a certain pig which had mysteriously come to him, and inviting the owner to call, prove property, pay charges for board, and take his pig away.

It was pretty well known to whom the pig belonged, but the owner was so chagrined over the result of the serenade that he never summoned courage to come and get the animal. Andrew kept the pig for a year, until it had grown to be a four-hundred-pound hog.

When he finally slaughtered it, the following Thanksgiving week, he took one of the spareribs round to the owner's door, late in the evening, and hung it up there conspicuously. Attached to the sparerib was a bit of note-paper on which Milly had written the following:

"Good morning, master! I am a piece of your long-lost piggy. I cannot now squeal as loud as when you lost me, but I have had a pretty good time, for a pig, and have come back bringing the compliments and good wishes of those with whom I have been sojourning for a year."

Thus ended the first serenade in Jericho. It was also the last, for although serenades were common in other places for forty years afterward, no one ever attempted another in Jericho.

(EDITOR'S NOTE: In an early issue we will run the third and last of three stories about Aunt Milly and Uncle Andrew under the title "The Return of the Absent.")

Personal Problems

Probably Your Imagination

Dear Lucile: I am 13 years old and am very unhappy because my schoolmates dislike me. Even my teacher frowns when I come near her. I don't know why—I always try to help them. Please give me your opinion as to why they treat me as they do.—*Unhappy 13.*

I feel certain that you are imagining that, girls in your school and your teacher dislike you. There surely cannot be any reason for them disliking a nice little 13-year-old, seventh grader and I feel certain that if you will stop believing that they do dislike you and act as though you felt certain of their friendship and loyalty that conditions will change a great deal for you. Sometimes, you know, we can think ourselves into certain conditions that do not really exist at all.

If you are thoughtful and considerate of others, friendly, truthful, neat in your appearance and ready to cooperate with others there is certainly no reason why you should be disliked. If you will cultivate a happier state of mind for yourself I believe you will find life will go more smoothly for you.

* * *

Resolve to Forget

Dear Lucile: Not long ago you sent me some advice which proved to be very good, and I am not worried any more about my husband and the "other woman." We're getting along much better than we ever have in our married life and I would be happy if . . . I could only forget the past. Past memories almost eat my soul out. Is there any way to forget the unhappy occurrences of past years?—*Wants to Forget.*

I am afraid the only thing I can tell you about how to forget the past is just to forget it. It is the mark of character growth for a person to be able to lay aside unhappy experiences of the past and to build for the future on present happinesses. I feel that this is what you must do and what you can do if you make your mind up to it. And nobody can help you, much.

"Wonder why they're stretching
a wire to the schoolhouse"

"For a telephone, silly . . . makes
folks feel safer about their children"

It's so convenient to get in touch with some one at the right time at the right place when there's a telephone. Children away at school, father in town, married daughter on the farm nearby—and all of them within easy reach of your voice.

Kernels, Screenings and Chaff

By H. E. BABCOCK

OFTEN I find it interesting to run over in my mind the enthusiasms and the projects which make life at SunnYGables more interesting and worth while.

ENTHUSIASMS

I mention enthusiasms because I am aware of that type of cautious individual who never looks at *anything in life* except with an eye to whether or not it pays.

I can remember periods in my life when this type of acquaintance has had me secretly half scared to death for fear I'd go broke and outwardly ashamed of my crazy ideas. I have lived, however, to cash in on enough of my enthusiasms to have more confidence in them, and to enjoy an occasional crazy idea for the relief it affords.

WINTER BARLEY

After four or five years experience with winter barley, I'm not going to try to grow any more of it for a while. This is the conclusion that the academic folks would have had me arrive at before I ever started trying out the crop.

I am quitting winter barley, not because it has failed with me (I have had only one poor crop out of four), but because the plant breeders have not yet produced a winter barley for the area north of the southern part of Pennsylvania and New Jersey which has a stiff straw, is hardy, and is either awnless or has smooth awns.

What I propose to do now, having pretty thoroughly tested out the advantages of a winter feed grain other than rye and wheat, is to wait until the plant breeders catch up with the demand for a winter barley which will make a satisfactory crop here in the Northeast and be satisfactory to handle.

WINTER WHEAT

This fall I shall sow winter wheat, both for grain and for mixing with clover and alfalfa to make grass silage. It seems to me that winter wheat, so far as the Northeast is concerned, is a misunderstood and undervalued crop.

Generally speaking, the breeding and selection of winter wheat strains has been dominated by the point of view of a relatively small milling demand; while the most important use of winter wheat in the Northeast is for feed.

As a wheat grower, my mind is definitely made up to raise the largest yields possible of wheat for feed and forget all about it as a milling crop. When the wheat is in the milk stage, I shall trim around my fields and mix the green wheat with clover and alfalfa to make grass silage.

GRASS SILAGE

I continue to be enthusiastic about grass silage for the very simple reason that when I can get around the purchase of molasses or phosphoric acid, I can put it up more cheaply than I can corn silage. I like it just as well to feed. It is useful for weed

control, and the cutting of hay on time which it makes possible insures second and third crops.

As I have pointed out before, because we do not produce any market milk I can afford to take chances on grass silage quality, at least as far as odor is concerned, which a dairyman can't.

Right now we have four silos full of grass silage, practically all of which was made out of a straight run of grass or of clover and alfalfa mixed with rye, winter barley, or winter wheat in the milk or dough stage.

We learned one thing in making this silage. Theoretically, because it would be around the high point of its sugar and starch content, a winter grain in the dough stage seems best to mix with legumes. But, it is actually a little too ripe to pack well in the silo. Therefore, the use of winter grain in the milk stage for mixing with clover and alfalfa seems to be indicated.

QUICK-FREEZING

I think we can fairly claim at SunnYGables the pioneer enthusiasm for quick-freezing and cold storage units located right at home instead of in some freezer-locker plant miles away.

Therefore, it is a source of some satisfaction to receive reports of manufacturers of these units that sales are being made every day and to hear that one of the largest companies in the country is soon to offer home quick-freezing and cold storage boxes on a nation-wide basis.

Make no mistake about it, folks, quick-freezing and holding at zero home-grown meats, fruits, and vegetables will some day be common practice on the better farms in this country.

USED TIRES

All our farm equipment at SunnYGables, except a sulky plow and a drill, is now mounted on inflated rubber tires. *More important still, these tires are all the same size — 6.00 x 16's (the size of half the tires produced in the country)—and not one of them is worth over two dollars, it having previously rolled thousands of miles on some automobile.*

Standardized wheel sizes, second-

hand, inflated rubber tires, improved bearings and adequate lubrication systems for farm equipment have long been enthusiasms of mine. They represent dreams which are rapidly coming true.

GRASSLAND FARMING

Fundamentally, I am interested in grassland farming because it is the safest kind of farming here in the Northeast. It is the kind of farming to which to retreat when labor is scarce and high, or when a depression is on.

Because at SunnYGables we are afraid of a labor supply, we will be all in grass next year except for an acreage of small grain which can be cut for silage or threshed with a combine.

With this set-up I am getting interested in seeing how many head of stock we can carry on an acre of improved pasture. I would like to aim for a yearling, or equivalent, to the acre and by utilizing the pasture clippings—either as dry hay or silage—get eight months pasture each year.

We have one pasture of fifty acres on class four land which prior to this fall has had no liming or fertilization. We have carried thirty-nine yearling heifers on this fifty acres since the first of May and have cut fifteen tons of clippings off it. By feeding the clippings in November and December, we will actually get eight months support from the fifty acres for the thirty-nine head.

The question which now interests me is what we can do with this fifty acres if we lime it and fertilize it. This is just what we are now doing

and the next year or two should tell the story.

With four hundred and twenty acres of fenced open pasture on class four and five land, divided into five areas, each serviced with a basement barn, we are about to get some interesting experience as to what we can do growing young cattle on grass here in the Northeast.

WEED CONTROL

Weeds are becoming a problem in the Northeast to all farmers in the territory which this paper reaches. An ever increasing acreage of abandoned farm land, floods, inadequately cleaned seed—any number of factors—work together to promote weed growth. If labor gets short, our weed population will increase proportionately. We've got to do something about it.

Right now I am interested in grass silage as one of the most practical methods of weed control, in spraying in dusting, and in weed-killing rotations.

Some time ago, I published a statement from the New York State College of Agriculture to the effect that mustard seed which went through a silo would be killed.

Concerning this statement I have the following comment from Frank E. Rupert of Geneva. Speaking of mustard seeds in stacked pea vines, Mr. Rupert says, "I had a viner on my farm for some years and have since had charge of a large stack distribution. . . . It is doubtless true that seeds located far enough in the stack to be heated are sterile, but those in the outer portion are still virile and lively."

Down Mexico Way

By H. E. BABCOCK, Jr.

August 31, 1940.

At the present time, all of our crops except cotton, which we won't count until it is in the bale, forecast an extremely good yield. We have over six hundred tons of hay in the barn and a prospect of nearly one hundred tons more from our fourth cutting. All of our wheatland maize is headed out, one field being nearly ripe, and we feel safe in estimating an average yield for this crop of seventy-five bushels to the acre.

The whole prospect of being able to cut maximum crops this year is extremely gratifying to me, as it would be to any farmer who has been used to depending upon the weather alone for production of crops. To the farmers in this section who have been irrigating their crops for years it is no novelty to expect such crops year after year. They are accustomed to planning to the bushel or ton their yields for each year.

To keep from painting too pleasing a picture, however, there are, of course, factors other than the weather which control farming success here. One of the primary factors which affect production of crops in the Pecos Valley is transportation. In spite of railroads and trucks, we are too far from any of the major markets to be able to market crops in an economical way, except in the form of meat. The hay market depends largely on the demand of drouth stricken ranchers within trucking distance. Unusually high rainfall on the ranges this summer has kept this demand at a minimum. Alfalfa hay is going begging at seven dollars

a ton, which is nearly the cost of production.

Irrigation cost is another item which is acting as a control. Maximum crops must be raised to justify the cost of irrigating each field. The rains again have affected us this year in enabling the dry-land farmers to the North to produce a money-making crop of maize. At the present time it is believed that this crop will sell in the irrigated territory for \$15 a ton. Due to the rains which made this crop, the dry-land men can make money at this price, and due to our irrigation costs we can't.

Then, the cotton crop is always the great question to the farmers here. In local warehouses there is now stored a million and a half dollars' worth of government loan cotton. If this is not moved, this year's crop will have to be stored out of doors or in new warehouses built for that purpose. To add to this local problem, there is now on hand more cotton in the United States than will be used next year by United States mills, and considerably more than will be produced this year. The government plans to loan on cotton again this year, which will take care of the problem of selling our cotton at this time. However, it serves to make the problem worse rather than better over a period of years.

With the lull between third and fourth cutting, we are catching up on a lot of rainy day jobs which must be done on clear days if they are ever done at all. We are building an eight-thousand-bushel granary to take care of our wheatland maize and adding six new self-feeders for lambs.

The potatoes were grown by the sons of Howard Emmons in Burlington County, New Jersey. The dog is the latest and most minute addition to our livestock inventory at SunnYGables.

Conducted by H. L. COSLINE

No Work!

On August 12 postal authorities issued a fraud order against the Wentworth Pictorial Co. of Hamilton, Ontario, Canada. This company advertised for people who wished to make money at home by coloring photographs and promised a supply of work to those who took a course of instruction costing \$37.00. The memorandum of the Post Office Department Solicitor, following a hearing given Lawrence Ruddell, President and General Manager, stated: "The undisputed evidence in this case shows clearly that Mr. Ruddell has no market for the work produced by students and that the company does not have profitable employment to furnish."

Also connected with the Wentworth Pictorial Co. were C. A. West and A. R. Sproule. Several years ago they promoted the Irving Vance Co. which was the subject of a fraud order in 1933. West also promoted a show card service which was discontinued upon citation of the U. S. Post Office Department. Both of these men were also connected with the Menhennit Co. which likewise ceased business after some investigation by Post Office authorities.

Faith

The Postal Authorities have denied the use of the mails to the Approved Products Company of Oak Park, Illinois. This company was selling a so-called sinus treatment through the mails. An analysis of the product showed that it was made up of boric acid 28.2%, starch 23.2% and sugar 48.55%. Doctors testified that this product would not overcome or relieve sinus trouble.

Frankly we have never been able to figure out why so many people take the advice of their physician with so much skepticism at the same time believing without question the unfounded claims of some quack. Perhaps "distance lends enchantment."

Hope

"What can you tell me about the National Old Age Pension Association of Washington, D. C. I have just received a blank asking me to send ten cents in coin for five blanks which I am to give out to other people."

As our subscriber indicates, this is

Farm Service Bulletins For You

IN ORDER to make available to readers more information which will help increase profits, the editors of *American Agriculturist* have prepared several mimeographed bulletins on timely subjects. These are available to any reader without cost other than 3c each to cover mailing and shipping costs. Bulletins now available are:

- ☐ No. 101—HOW TO RAISE BABY CHICKS.
- ☐ No. 102—PULLORUM DISEASE OF CHICKS.
- ☐ No. 103—HOW TO CONTROL MASTITIS.
- ☐ No. 104—HOW TO BUY A HERD SIRE.
- ☐ No. 105—HOW TO CONTROL WEEDS.
- ☐ No. 106—HOW TO COOL AND PACK EGGS.

Check the ones you want, include mailing cost, and return the coupon to *American Agriculturist*, Box 367-S, Ithaca, New York.

From time to time we plan to make additions to the list available.

a chain scheme. It is our opinion that neither this association or any money you may send to it will have any effect on the passing of Old Age Pension legislation. In other words, since you ask our opinion we would certainly send no money or forward any coupons to friends.

* * *

Charity

Charity is a very estimable virtue, but it is only common sense to use some caution while practicing it. The National Better Business Bureau reports that at least 300 different agencies have collected at least \$9,000,000 in funds for relief of war stricken areas in Europe. While the average cost of collecting this money was 8%, not an unreasonable figure, the cost of collecting by some of the organizations ran as high as 88%! Furthermore, some of these schemes were operated by outright swindlers! The National Better Business Bureau, whose address is Chrysler Building, New York City, is anxious to get reports from our readers of any unknown solicitors of funds for so-called charitable purposes. If you have been solicited, give us the details and we will forward them along to the National Better Business Bureau.

* * *

Post Card "Duns"

"Does anyone have a right to send requests for payment of an account due on a Government post card?"

The Post Office Department has ruled that post cards containing a mere statement of an account due are mailable. However, such a post card is not mailable if it carries threats or what will happen if the bill is not paid or if it contains any statement that might hurt the character or reputation of the person to whom it is sent. If such a thing is done, there are two possibilities. First, the postmaster may refuse to let you mail it or return it to you, or if it is delivered, the person to whom it is sent may have a good case for a law suit for damages.

* * *

Calfhood Vaccination

"Is there any reason why I cannot secure Bang abortion vaccine and vaccinate my animals myself? I am a New York State dairyman."

There are two reasons why you should not do this: First, the New York State Law provides that Bang abortion vaccine should be administered only by a veterinarian.

Second, without a full understanding of the advantages and disadvantages of vaccination you might easily do more harm to your herd than you would do good. Talk it over with your veterinarian or write us your questions.

Reunion

"I received a letter from my father—I had tried for the past seven years to locate him without success. I am very appreciative of your help."—Mrs. Mary Boynton, Maine.

On this page in the July 20th issue we asked for information about the present address of Mrs. Boynton's father. Naturally we are very happy that the small part we had was instrumental in bringing these two people together.

"I would like to get a middle-aged woman or girl to help with the housework and help milk. Can give someone a good home and fair wages."

If you are interested in the above, write Mrs. H. L., *American Agriculturist*, Box 367, Ithaca, New York, and we will forward the letter.

YOU CAN'T PLOW UNDER THESE FACTS ABOUT TRACTOR POWER

"JIM, how come your tractor can plow nine acres a day? Seven is the best mine can do."

"Getting more work done in a day is only one of the advantages of high compression, Fred. You also get economy, flexibility and convenience."

YOU can talk about tractors till the cows come home, but there's only one argument a plow understands. That's "horsepower." So let's look at some facts about the kind of power you get from high compression tractors:

High compression tractors deliver MORE power. That often means you can work more acres per day, finish field jobs faster, catch up on work that has been delayed by weather.

High compression tractors offer more ECONOMICAL power. That's because they are designed along automotive principles to get the most out of good gasoline. Remember, an engine designed with high compression for modern gasolines gets more power out of every gallon than is possible with low compression.

High compression tractors provide more FLEXIBLE power. Modern gasoline power can be better and more quickly adjusted to the speed and load requirements of the many different types of farm work.

High compression tractors give more CONVENIENT power. They warm up easily, aren't likely to stall, pick up heavy loads faster.

To sum it up—high compression gives you more power, more economical power, more flexible power and more convenient power. Isn't that just about everything you want in your next tractor? Then arrange for a demonstration with a dealer who sells modern high compression tractors. That's the way to see how much this better kind of farm power is

worth on your farm, and when placing your order be sure to specify the high compression gasoline model.

Ethyl Gasoline Corporation, Chrysler Bldg., New York, N. Y., manufacturer of anti-knock fluids used by oil companies to improve gasoline.

THE FARM PAPER OF THE NORTHEAST

← It is Saturday morning, and this family of Alabama black boys are going to town.

be the oldest public building in America and probably the claim is well founded.

* * *

The fourth night from home we lay in Franklin, North Carolina. It is a town beautifully situated on a little hill with tumbled mountains on every side. There is a Main Street, a very old and very dirty Court House, and a little Inn or tourist home which is able to offer the wayfarer accommodations so modern and shining as to constitute almost the last word in travel comfort. Franklin is hardly a dozen miles from the Georgia line, so according to our custom of a little driving before the morning meal we drifted down into Rabun County for breakfast. Rabun by the way is the northeastern county of Georgia. This high country of extreme northern Georgia is more like parts of Pennsylvania than the South. There were grass and some alfalfa and apple trees and small patches of very good winter wheat. I was assured that there was not a single acre of cotton in the county. It is evidently a good deal of a summer boarder country with hotels, camps and cottages where the residents of the coastal cities and Middle Georgia came to escape the summer heat.

The highway parallels a railroad which has some wonderful wooden trestles. Yellow pine timber is cheap in the South and this railroad has used it instead of iron to build viaducts. It is amazing to see these high wooden structures with trains of cars crawling across them. This was in extreme north Georgia, which is practically a mountainous country.

A little lower down we saw miles of peach orchards and then we came to the long reaches of Middle Georgia, a depressing and not very interesting region of cotton and share-croppers. In our original plans for the trip we had rather expected to touch Birmingham. As it turned out, we drifted off (Turn to Page 8)

THE OLD Cotton South

By Jared Van Wagenen, Jr.

IT HAS BEEN my experience in touring that it is the first two or three days that are the most tiring. I am accustomed to doing considerable driving and, if necessary, can casually put in a fairly long mileage as part of the day's work. On this trip it was particularly easy because one of my daughters and I divided the time at the wheel between us. Nevertheless for farmers or their women folks to settle down to eight or ten hours driving day after day involves some adjustments. I find that after about the third day I lose the sense of hard work and feel that I could go on almost indefinitely. To do this, however, there should be an absence of great hurry or the feeling that one must be at any given place at any particular time. If you get sleepy, pull up under some convenient tree, or better still beside some wayside church, and maybe take a ten minute cat-nap. Stop for anything that looks interesting, and by all means stop when you see a friendly looking farmer resting his team or building fence.

For me, one of the sights of the road are the various Court Houses and I rarely pass one without taking two or three minutes for a very sketchy inspection of the interior. It would seem that Courts and Court-Day occupy a much greater position in the South than with us. Very frequently the county seat is the only community of any importance in the county. Court Day comes at regular stated intervals and the whole countryside comes to town and makes a holiday of the occasion, crowding the streets and having a talk-fest and a good time. It is much like Cobleskill, N. Y., of a Saturday

night, only more so. Court Day seems to be a daytime festival. It is in full swing by mid-afternoon and thins out after darkness falls.

Here in New York State all of our Court Houses are relatively modern structures. Indeed the only exception I can remember is that a part of the old Court House at Johnstown in Fulton County goes back before the Revolution, although the original building is today quite overshadowed by the modern additions. The facts are that in the North we have been prosperous enough so that almost without exception the earlier Court Houses have been replaced, oftentimes by structures more ornate and expensive than can economically be justified. But the South was left poverty stricken by the War and is still relatively poor, so they have been compelled to do with what they had. Thus it happens that Virginia has several Court Houses that antedate the Revolution, and I think a few that go back to the 1600's. The Court House for King Williams County claims to

A wonderful wooden railroad trestle in northern Georgia. It is long and high, and built on a curve.

Good News for Apple Growers. — Apple Crop Below Average. — See Page 2.

Outlook Uncertain for POTATO PRICES

By H. E. BRYANT,
Aroostook County, Maine.

THE POTATO market is unpredictable. It reminds us of the old story concerning the representative of a large company interested in purchasing potatoes who was sent to Aroostook County to obtain a true analysis of conditions and advise them concerning the desirability of purchasing. The representative stayed in the state for a couple of weeks but apparently his attention got diverted to other channels. He failed to report. Finally the home office wired him in a curt manner demanding by return wire his analysis and recommendations. He replied: "Some think they will go up—some think they will go down—I do too—whatever you do will be wrong—act quick." Nevertheless it behooves all of us interested in the potato crop to analyze to the best of our ability conditions and endeavor to form some opinion concerning general trends and general market outlooks.

September Estimate Up

Potato growers no doubt were somewhat disappointed to find that the September crop report increased the estimate for total production in the United States approximately nine million bushels over the already comparatively high August report of 374 million. This September report of 383,172,000 compares with the final figures for last year of 364,016,000 and with the ten year average from 1929-1938 of 366,949,000. The major increase in the September report was in the five central states, showing an approximate six million gain over August and a seven million gain over last year. The estimate for the Maine crop this year has remained at the same figure during the three months of July, August and September, namely, 45,135,000 which figure of course is approximately seven million bushel increase over last season. In addition to the increase in the five central states there was approximately a two million bushel increase in the states of Connecticut, Pennsylvania and New Jersey. New Jersey has always been classified as an intermediate state with reference to potato production; however, we believe that growers in New England will soon have to start considering New Jersey in a late state classification inasmuch as New Jersey offers serious competition in the fall for growers in New England.

Growers in Aroostook County, Maine, have just started digging, with wide variations in yields being reported. Some areas, particularly western Aroostook, report comparatively light yields, but taking the county as a whole we believe that when digging is completed we will find Aroostook with a comparatively large crop. Our fear now is that later reports may raise the estimate in Maine.

Growers Not Anxious to Sell

The street price in Aroostook County points is being reported between 50 and 75c per barrel bulk to the grower with very little trading. Buyers do not seem to be particularly anxious to purchase and growers will hesitate before selling any volume at these prices.

Reports from New Jersey, Long Island and the New England states seem to indicate a large crop in practically all sections. Reports from both producing sections and terminal markets indicate high quality potatoes. New Jersey potatoes are reported as excellent and Aroostook County is looking for the best quality crop in several years.

At present the market in the north-

east is at a low level. Boston and New York report prices of 90c to \$1.00 a hundred. This means a very low price to the farmer, particularly in areas having a comparatively high freight rate, such as northern Maine. Prices are low at present and we frankly cannot see a great deal of encouragement for the next two or three months. With an abundant supply of excellent quality stock in the northeast, various producing areas will be competing for eastern markets for some time to come. New Jersey and Long Island probably will dominate the situation.

At present price levels Maine growers may adopt a waiting policy such as has been followed during the past two seasons in hopes that conditions will be more favorable during the latter part of the fall and early winter. Regardless of the attitude taken by growers and shippers we cannot see much of any outlook for Maine for the next month or two. Their market will probably be limited to Boston and New England and even in those markets they will have to face competition of nearby supplies. Many Maine shippers are turning their eyes toward the mid-western markets, particularly the Ohio points. In years past when New Jersey and Long Island were dominating the eastern markets Maine has been able to move considerable stock in Ohio, particularly shipping consumer size packages not ordinarily offered the

(Continued on Page 20)

Many apple growers are supplying local markets by delivering to retailers the amount and kind of fruit needed each week. This is a grader and polisher which puts apples in first-class shape to suit consumers. It removes some spray residue but usually not enough to bring heavily-sprayed apples under the old tolerance limits. A small electric motor operates the machine.

GOOD NEWS for APPLE GROWERS Spray Residue Tolerance Substantially Increased

FRUIT growers are jubilant over the news that, effective Aug. 10, the federal spray residue tolerances on arsenic trioxide and lead on apples and pears have been raised. The tolerance on arsenic trioxide has been raised from .01 to .025 grains per pound of

fruit, and the tolerance on lead has been raised from .025 to .05. The following table shows the history of tolerances which have been set up by the Food and Drug Administration and which are now administered by the Federal Security Agency:

U. S. D. A. Tolerances on Fruit—

	Grains Per Pound of Fruit As 2 ³ (Arsenic Trioxide)	Pb° (lead)
1928	.03	None
1929	.025	None
1930	.02	None
1931	.012	None
1932	.010	None
1933	.010	.014
1934	.010	.019
1935	.010	.018
1936	.010	.019
1937	.010	.019
1938	.010	.019
1939	.010	.025
1940	.025	.050

For some years growers have been much disturbed over this situation. As apple pests, particularly codling moth, increased, it became necessary to put on more and more sprays in order to get control. Washing apples to remove spray residue required expensive equipment, which added to the cost of every bushel of fruit put on the market. If tests on apples in storage showed residues above tolerance limits it became necessary to wash or brush the fruit before it could be sold. Furthermore, growers have claimed that no conclusive evidence has ever been advanced proving that any person was ever injured by eating apples which had been sprayed.

As a preliminary move in raising these tolerances, the Federal Security Agency asked the Public Health Service what it considered to be a safe tolerance on lead and arsenic for apples and pears, and also whether the tolerances recommended for apples and pears were applicable to other foods. The opinion of the Public Health Service was that the tolerance on lead arsenic on apples and pears might be placed at .05 grains per pound for lead and .025 for arsenic trioxide. At present, the tolerances as given apply only to apples and pears, and are not applicable to other food products.

Incidentally, the fluorine tolerance which was set by the Secretary of Agriculture on November 14, 1938, of .02 grains per pound of fruit has not been changed.

Apple Crop Below Average

By G. W. HEDLUND,

New York State College of Agriculture.

NO, I am not going to tell you what prices you will receive for apples this season. I'll let the other fellow do that. What I want to do is present a brief picture of the situation so that you may be in a better position to draw your own conclusions about prices.

The Agricultural Marketing Service is now estimating the commercial apple crop on a different basis than in former years. Until this year commercial production referred to that part of the total crop that was expected to be sold for fresh consumption. Now commercial production means the TOTAL crop in the 424 counties in which apples are produced commercially. I believe this new estimate will be more satisfactory than the old one.

The Crop

The September first estimate of the Agricultural Marketing Service places the U. S. commercial apple crop at 114,830,000 bushels. If the crop turns

out to be this size it will be 20 per cent less than the large crop last year. Compared with the 1934-38 five year average, which includes 3 small crops and 2 large crops, it is 6 per cent smaller. If one takes the last five year average, 1935-39, which includes 2 small crops and 3 large crops, the 1940 estimate is 11 per cent less. This year we can expect that about 4 bushels will be for sale for every 5 bushels for sale last year, and that there will be somewhat fewer apples for sale than the average of recent years.

Location of the Crop

You will recall that the large crop last year was concentrated here in the East and in the Middle West. This year that is changed. The estimated crop for the U. S. is 11 per cent less than 1935-39 average production but the crop in New York is expected to be 26 per cent less. In New England the crop is estimated to be only 7 per cent less

(Continued on Page 9)

"We got nuthin' to worry about. He's the one on the wrong track!"

He Took a Chance on POTATOES

WHEN YOU first meet him, Joe Baroudi doesn't look like a gambler, but he certainly took a chance this summer. Fortunately, it looks now as though he is going to be the winner. Joe, and his father who runs

looks to me as though the potatoes on the area where buckwheat wasn't grown did better.

"We planted potatoes on June 1, 17" apart in the row and with rows 42" apart. We planted certified seed, and are considering the possibility of growing certified seed ourselves. As soon as the potatoes were up, we cultivated them and continued to cultivate them as often as necessary. (EDITOR'S NOTE: I might add that the field was unusually free of weeds.) We have our eyes on some storage space right now, and if we can arrange it, we are planning to hold at least part of the potatoes until December or later."

Mr. Baroudi is in a fortunate situation in one respect. More potatoes are eaten in Warren County than are grown, so if he can manage storage, he can work them out for local consumption at a price that should be a little better than he would get by

shipping to any of the larger markets.

We intimated at the start that Mr. Baroudi had luck on his side. Perhaps that needs a little explaining. In the first place, the frost which did widespread damage in August practically missed his potatoes; it just touched them in a few spots. The second and most important piece of luck is that potato prices are going to be pretty good. It is a disheartening experience for a man to work hard all summer to grow an outstanding field of potatoes, only to find that everyone has potatoes and that nobody wants to buy them except at a ruinous price. The man who has been growing potatoes year after year expects low prices in years of high production, and he is in a little better shape to stand it than the man who goes into business the first year. Of course, in Long Island or in New Jersey ten acres of potatoes aren't much, but in Warren County folks consider it a sizable piece of spuds.—H. L. C.

Ten marketable potatoes in one hill promise a good crop for Joe Baroudi on land that has been idle for some years.

a store at North Creek, Warren County, New York, own a farm a few miles from the village which, to all intents and purposes, has been lying idle for some years. This last spring they bought the necessary equipment and put in twelve acres of potatoes.

"There didn't seem to be much work for me," said Joe, "so we decided to see what we could do."

The Baroudis had little experience in growing potatoes, but realizing this, they kept in pretty close touch with the Farm Bureau, and the results justify their confidence.

We dug into several hills, and the consensus of our guesses was that they would go at least 250 bushels to the acre. I asked Mr. Baroudi just how they grew the crop.

"A year ago we grew buckwheat on three acres and plowed it under. On this three acres we put 1500 lbs. of 5-10-5 fertilizer, and on the balance of the area we put on a ton. So far, it

With 225 fine wool Merinos, Burton Pine of Hoosick Falls has the largest flock of sheep in Rensselaer County, N. Y. Part of the ewes lamb in the fall to give Mr. Pine some hothouse lambs to market. The balance lamb in the spring. For the past twenty years individuals from this flock have been shown at the Syracuse State Fair, and they always bring back some blue ribbons. The dairy on Mr. Pine's 300-acre farm consists of 12 cows, and a flock of 400 White Leghorns make their contribution to the income.

"Daisy won't tell" her age, but she probably is the oldest horse in the United States. Her owner, Abraham Casey of East Amherst, N. Y., shown holding her, figuratively speaking, was burned up the other day when he read in a newspaper about the "oldest horse in the U. S." dying in the Mid-West at the age of 37. "Why I bought Daisy as a three-year-old in 1903," he said. That makes Daisy 40 years old. Her teeth are still good, and she can eat whole grain. She does an occasional bit of light cultivating for her master, but mostly she's retired.

Fall Liming for Alfalfa

If you grow alfalfa or plan to grow alfalfa, you will be interested in the experience of William Burrington of Pownal, Vermont. In 1937 Mr. Burrington limed some land for alfalfa, putting on two tons of ground limestone to the acre. The following spring he made the same application to another plot and put in alfalfa on both fields with oats as a nurse crop. After the oats were cut, there was a distinct difference in the growth of the alfalfa. It showed up much better on land which had been limed in the fall.

You might conclude that that was a temporary difference, but such was not the case. Mr. Burrington says he can still see the difference, the fall-limed plot showing up much better.

The usual recommendation for the addition of lime for alfalfa in that area is to put on a ton of lime to the acre when you plant corn and another ton to the acre when you seed to alfalfa.

Miss Stella Gutowski, 16-year-old Queen of the 2nd Annual Orange County Onion Festival held this summer. Both festivals were unusually successful in focusing the attention of the public on the onion crop. The idea is one which could well be adopted by onion growers in other areas as well as by growers of other crops. Apple growers in several areas have, of course, made an outstanding record with apple blossom festivals.

Ladino Clover Worth Trying

Ball Lyons, who lives just outside of Bennington, Vermont, is quite enthusiastic about some Ladino clover which he has been using for pasture. In fact, the cows this summer have had so much feed from the Ladino that Mr. Lyons was able to cut for hay three or four acres of land which has always been pastured in the past.

Based on experience of dairymen in "Yankeeland", it is a crop worth looking into. Ladino clover has root stalks somewhat similar to White Clover, but is a larger plant.

Ken Bullock, County Agent of Chautauqua County, New York, looks on while Charlie Messer, County Agent of Cayuga County, inspects some quick-frozen vegetables. This is one of the small farm-size quick-freezing cabinets which is being used by the New York State Experiment Station at Geneva in their efforts to get more facts about quick-freezing. A good many people believe that the number of small quick-freezing cabinets on farms is going to increase rapidly.

THE *Editorial* PAGE

BY E. R. EASTMAN

For Better Milk Prices

ATTENTION is called to the news statement on Page 10 telling of the appeal of the Metropolitan Milk Bargaining Agency for a public hearing to increase milk prices, and giving the reasons for the same. The Department of Agriculture has granted this appeal for hearings, and they will be held in New York City, Syracuse, and Albany, on October 7, 9, and 11.

The Bargaining Agency is to be highly commended not only for starting the ball rolling to get better milk prices, but starting it early enough so that we may have those prices when they are most needed. If the Federal Department grants the raises in the marketing orders, we understand that the prices will take effect shortly following the hearings.

One only has to compare milk prices under the present State and Federal orders now with the prices that prevailed while the orders were not operating to realize how much these milk marketing agreements have meant to dairymen. They increased prices millions and millions of dollars. But now costs of production are rapidly increasing. Corn in many sections is a failure. Where it did attain some growth in other sections it was frozen. Operations of the government itself through the AAA tend to increase the prices of feed to dairymen, cost of labor is rapidly going up, and while milk prices recently have been fair compared with other farm prices, they will soon be too low. Therefore, every effort should and will be made by the dairy organizations in this state to show at the coming hearings why milk prices must be increased.

One Thing Led to Another

IN OUR New England edition this time, Harold Bailey, writing from Vermont, tells of a meeting of Vermont and New Hampshire potato growers at the farm of Fred W. Peaslee at Guildhall.

What impressed me was what Mr. Peaslee said to the potato growers. He told them that he started in to be a potato grower, and then found that he had to raise grain to rotate potatoes, then he had to have something to eat the grain, so he keeps 1,000 hens and much other livestock.

That illustrates from actual practice what *American Agriculturist* has been trying to say for years. That is, that diversification takes much of the gamble out of farming. Any man who stakes his all on one crop in these perilous times is very likely sooner or later to lose it. Besides this, the experience of thousands of farmers for years shows that there is more profit and especially more happiness in the right kind of diversification than there is in any one-crop farming.

How Farmers Are Robbed

ON A RECENT automobile trip, I saw some people get rapidly out of an automobile, run over to an apple tree and begin hastily to pick up the apples on the ground and fill their basket. They were stealing just as much as if they were removing merchandise from a store. But somehow or other, many people have the idea that anything that grows outdoors is theirs for the taking.

If farmers would be a little more hard-boiled about hauling such folks before the local Justice of the Peace, it might stop some of this kind of thieving.

Another brand of thieving that runs rampant at this time of year is chicken stealing. One trouble with this problem is that too many officers,

particularly those of the lower courts, take chicken thieving more or less as a joke and fail to punish the culprits when they are brought before them. It is no joke with farmers; in fact in some sections chicken thieving is an organized business by thugs who live in the cities, and who make regular expeditions to the country with trucks to pick up, sometimes, a farmer's whole poultry flock and other livestock.

This time of year, also, farmers need to be aware of unscrupulous truck drivers who are out to buy produce and if possible get it for nothing. Most of the truckmen are honest; some are not; and therefore you must watch out for all of them.

One safeguard is never to take a check, never to give a stranger credit, always to demand cash. Sometimes a truck driver will gain confidence by paying cash two or three times, and then he gets a big load on credit and you never see him again. Watch out!

The Labor Problem in New Jersey

"Migratory labor is as essential to New Jersey agriculture as a summer shower and a day of sunshine. New Jersey crops offer migratory workers five to ten weeks of honest toil and help to keep thousands off the relief rolls. Until a better system is found than working for one's bread and butter, we had better let migratory labor harvest our crops.

"If a crude log cabin is good enough for a millionaire's summer cottage, a comfortable bed, and a tight roof over a migratory labor shelter furnish the essentials for a sound solution to one of our major farm problems."—Harry Taylor, Secretary, New Jersey Farm Bureau.

OF COURSE Mr. Taylor is right. New Jersey, a great garden state, has thousands of acres of vegetable crops which have to be harvested in a short time, and which require a large amount of temporary labor. As Mr. Taylor states, this labor has been well paid and comfortably fed and housed, and until social workers, government bureaucrats, and labor agitators began snooping around, the men and women who did this work were satisfied and glad to get it.

The worst enemies that men and women who earn their living by their hands have in this country are the radical labor organizers, aided and abetted by social workers and by the radicals within government itself. Much of the labor

Here is the grandson of Master Farmer Minor Brokaw of Interlaken, New York, typifying this new age of machinery. We have come from the cradle to the combine in one lifetime, taking out the drudgery of hand work and increasing the interest in farm and home work.

Thomas Edison once said: "What man's mind can conceive, man's character can control." I hope the great inventor was right, but looking at the machinery of destruction at work in the world today I sometimes wonder!

problem, with its 10 million unemployed, has been caused by monkey wrenches thrown by theorists and the radicals. When laboring men once get this true picture of the situation, they themselves will take care of their un-American leaders, including those in the government.

For a constructive program for organized labor, see Robert Eastman's article on page 7.

Auctions for Apples

MY FRIEND, Ed Mitchell, regular contributor on fruit-growing subjects to *American Agriculturist*, in answer to a letter from me asking what apple growers and *American Agriculturist* can do to help the producers with their serious marketing problem, writes:

"If enough growers could get together, and stick together long enough to give apple auctions a thorough trial, it would help solve our problem. These auctions have worked well with cauliflower, eggs, and some other products, and have demonstrated the benefits of that method of selling in many markets and with many commodities."

Many years ago, when I was teaching agriculture in a high school in a fruit-growing section, I spent my vacation organizing an apple auction. As a result we got the cooperation, and the fruit, of most of the good growers of the community. The day came for the auction, a few dealers arrived and then refused to buy because the auctioneer, instead of selling the apples, spent most of his time in lambasting the dealers. They didn't buy, and I didn't blame them!

Nevertheless, I have always felt that the auction method of selling farm produce was good. We have lived to see it successful with eggs and some other commodities; why don't we try it with apples?

Boys and Girls at the Fairs

MR. HERBERT DOTTEN, representing the New Jersey State Fair, which runs from Sunday, September 22, to Saturday, September 28 inclusive, writes to tell me enthusiastically about the 4-H Club program at the Fair, which he says will be the best in the history of the Exposition.

Included in the outstanding 4-H exhibits to be put on by the boys and girls are a great poultry show, hog show, an unusually fine flower exhibition, and an extensive Home Economics display featuring the girls' own work in canning.

Meeting an assembly of young people in the Boys and Girls Building at the New York State Fair, I was impressed again with the fact that the biggest job these Fairs are doing is for the young men and women of the farms. How the whole family rejoices when they bring home the prizes!

Eastman's Chestnut

I LIKE to get a good story on myself, and I certainly had that pleasure the other night. I was acting as toastmaster at a banquet and introducing Dr. John L. Davis, nationally known lecturer and humorist. I said at the beginning that if I had any brains I would simply present Mr. Davis and sit down without saying anything further, but that I didn't have and so I was going to tell a story or two on him. Which I did.

Then, when Dr. Davis rose he said that he agreed with the toastmaster about his lack of brains, which, he added, reminded him of the label on a can of Sanka Coffee:

"All of the active ingredients have been removed from the bean!"

Hysteria Causes Haste and Waste

CONGRESS has passed, and the President has signed, the only peace-time draft in the history of the nation. Congress has also passed and the President has signed appropriation bills for billions upon billions for national defense. These billions are on top of other billions of government expenditures, reaching an all-time high, and plunging the government into a national debt which will be felt by our citizens for generations to come.

Now, as the father of three sons of draft age, and as a citizen of this Republic, I have the right to express an opinion on these far-reaching government acts:

First: A year in the army is probably a good thing for young men. It will build them physically and teach them discipline, which many need. The draft should be administered so far as possible so as not to interrupt their college education or their careers.

Second: Reasonable preparedness both with men and arms, carried on without hysteria, is necessary.

Third: There is too much hurry about all this important business which affects the lives of all of us, too little consideration by Congress. This is a Republic, but the people themselves have had no opportunity to say yes or no either on the draft or on the billions for defense. All of this hullabaloo and hurry just before a national election looks suspicious and unnecessary. Without this hurry there would have been time enough to train men long before their equipment and arms can be ready. There has been no real test of our voluntary system before the draft was enacted. A few weeks would have been sufficient to have given the voluntary system a try, and after all, this is a Republic. The volunteer plan is the Democratic way; a peace-time draft, especially if it is hurried, is not.

Fourth: We must spend for defense. That means we must cut other Federal, State and local government expenses. Our economic system will crash if both of these expenditures are continued.

Fifth: More than the people realize, they are being *told*, not asked, what to do. More and more absolute power is being centralized, in Washington. If we must sacrifice all of our Democratic freedom of action to save our Democracy, what is the use anyway?

Sixth: If Hitler cannot get across the English Channel with his army for his blitzkrieg, how can he cross the Atlantic Ocean? Don't misunderstand. I am for defense; I am for preparedness; but I insist that we should use more sense about it. Real defense starts at home by putting our own house in order, and that means first of all correcting our economic situation. If we continue to pile taxes upon taxes and government restriction upon restriction until both business and agriculture topple under the burden, where will we be then?

"You Never Miss the Water—"

FOLLOWING the World War, Germany, Italy, Spain and Russia were either actual Republics or at least the people of those countries had more representation in the affairs of government than they had ever had before in history. Each of those countries today is governed by a dictator, and in none of them do the people have any voice whatever in how they are to be ruled.

That loss of democracy was not due to Hitler, or Mussolini, or Stalin. *It was, instead, made possible by the indifference of the people themselves.*

Remember that old saying: "You never miss the water till the well runs dry"? That is the way with these privileges which we call liberty. We are so used to them that we take them for granted and don't appreciate them. But let us once lose them and then, too late, we will realize what they meant.

Chief among the privileges of this great Democracy is the right to vote, the right and the responsibility to select the men who run the government. You may say: "I won't bother to vote

because it doesn't count." Suppose every citizen took that attitude? Those who fail to vote every year could swing the elections one way or the other.

You say further that public opinion doesn't count. Indeed it does not in Germany or anywhere on continental Europe today. But here in America it is still the guiding force which determines this country's policies. Every politician or statesman watches every straw to see which way the wind of public opinion is blowing, and he governs himself accordingly.

Several years ago the women of America made a great hullabaloo to get the right to vote. *American Agriculturist* supported them in their fight, because in this Democracy women should have equal rights with men. But how many women today avail themselves of this great privilege? Voters are the most influential people in this nation, influencing public opinion in the most important way they have, that is, by voting.

Because the issues are as important today as they have been at any time in the history of the Republic, *American Agriculturist* is doing what it can, with the help of you readers, to get out the voters. Read the pledge on this page, sign it, get your friends and neighbors to sign it, and send it to us. What is more important?

The Lines of Your Farm

ON MY little farm there is a grand old sycamore (button-ball) tree which is named in the title deed as marking a line. Even sycamore trees die sometimes, and what about the line fence then?

A study of farm title deeds shows how careless the oldtimers were about running the lines. I suppose land was cheap so they thought it didn't matter much. A friend tells a story of a deed which he saw which read:

"to the stone in the middle of the creek on which a bullfrog is now sitting."

Hundreds of these old deeds mention the middle of the road, or the middle of the creek, apparently forgetting that both roads and creeks change their courses rapidly over the years. No

wonder that line fences soon came to be a common source of bitter dispute between neighbors!

A point to remember now when buying a farm is that your title is no better than the boundaries of your land, and grief can often be saved later by making sure when the deal is made that the boundaries are right and permanently located.

Finding Money

AFTER you read this, go carefully over all of your papers in the old desk or bureau drawer, and see if you haven't stowed away and forgotten a Land Bank bond, a Dairymen's League Certificate of Indebtedness, a G. L. F. stock certificate, or some other stocks or bonds which you have forgotten or neglected for years.

Almost every large institution or cooperative which has done business with farmers for years owes money on stocks or bonds which for one reason or another has not been collected. Some old stocks and bonds are worthless, of course, but you might have something among your old papers that is good today. Wouldn't that be grand? Worth looking for anyway!

In recent years farmers have been forced more and more into business, increasing the necessity of better filing and care of important papers.

Readers Talk Back

CONGRATULATIONS, MR. AIKEN

"Most anyone would have said two weeks ago that Governor Aiken could not have been elected to the U. S. Senate. Without doubt 15 or 20 years ago this would have been true, but today with many of the modern conveniences which we have, like radios and automobiles, by which farmers have an opportunity to gather together at meetings and discuss their common problems, and then because of the fact that today farmers have organizations through which they take up their problems, farmers are doing quite a lot of their own thinking. So Mr. Aiken won the victory, and today people all through the rural sections of Vermont are very proud of it."—*A Vermont Farmer*.

(EDITOR'S NOTE: Farmers everywhere who know Governor Aiken's splendid record in the service of agriculture are also proud and glad of his election to the United States Senate. Farmers and all the rest of the citizens need more men like Governor Aiken in high places, and we offer our sincere congratulations to him and to the farmers of Vermont for his successful election.)

* * *

"DROWN THEM?"

"Never a time do I skip the editorial page in *American Agriculturist*, so I read with some interest your editorial entitled 'No Relief for Able-Bodied Men.' How many times have you seen an ad for farm help for a married man with family? What is a man with a family to do who is a good farm worker or willing to be one—drown them?"—*AMB, New York*.

(EDITOR'S NOTE: This writer makes a good point. One difficulty, of course, is that few farmers have tenant houses. When they do, they are not always too careful to make those houses and the conditions that surround them attractive. More attention to the privileges other than wages, of hired help would help in keeping some hired men on the farm.)

* * *

SUPPORT THE APPLE INSTITUTE

I have read your recent article in the *Agriculturist* on the New York and New England Apple Institute with a great deal of interest. It was well thought out and properly timed, and I want to congratulate you on it. We apple growers feel that this organization, of which I am a charter member, is one of the most important instruments we have available to help us out of a serious situation. This is the more true since I note that the growers of the State of Washington will spend \$195,000 this year on sales promotion for their large crop.

Let us hope that we can receive adequate support to make our own campaign efficient.—*C.C.D., New York*.

(EDITOR'S NOTE: This is one of many letters praising the Apple Institute. Why not get behind it? Write Tom O'Neill, 154 Nassau St., New York City, for particulars, or talk to your local Institute Director.)

* * *

"I enclose a check for \$2 to renew my subscription for three years. There is a quality of real understanding and interest for farm people back of every article in A.A."—*E. S., New York*.

To Get Out the Vote

WE ARE approaching an election this fall which in many ways is more important than ever before in the history of this Republic. Never were issues more fundamental or graver than they are now.

AMERICAN AGRICULTURIST is, of course, not telling you HOW to vote, but we are emphasizing the fact that it is every citizen's DUTY to vote. We are going to do our part to get every voter to the polls. To help insure this, we are asking our readers to sign the pledge given below.

For the longest list of names of people whose signatures to the pledge you have personally obtained, we will pay \$10, and \$1 each for the next 15 longest lists of signatures. Simply cut out the pledge below, paste it on a sheet of blank paper, then take it to the voters in your family, to your neighbors, to farm meetings, to stores, to milk stations, to any place where people gather, and get them to sign it. Signature, with address must be in each voter's own handwriting, and the list must be in our offices, Savings Bank Building, Ithaca, New York, not later than Saturday, November 9, which is immediately following the election. No names of those signing the pledge will be published except those of the prize winners. Here is the pledge:

VOTERS' PLEDGE

I solemnly pledge to cast my vote in the coming election this fall, and to do my best to get my relatives and friends to do the same.

Name

Address

Attach blank paper for further signatures.

The SURPLUS CONTROL Plan

is bringing **Steady Markets . . .**

Certain Payments . . .

More Money . . .

Happier Farm Homes

- The Surplus Control Plan was built by the Cooperatives listed below

Slate Hill, New York

Since the year 1914 I have kept every statement giving milk production and the price which has come with my milk check. My dairy is practically the same as it was last year. Yesterday I compared the cash statements of March, April, May and June, 1939, with the statements of the corresponding months of 1940.

I am sure the following summary will be interesting to other dairymen, as it definitely shows the benefits that an average farmer is getting since the SURPLUS CONTROL PLAN has been in effect.

Milk checks for 4 months, 1940 totalled -	\$1,642.65
Milk checks for 4 months, 1939 totalled -	1,182.63
	\$ 460.02

Gain

These gains that milk producers are enjoying are the result of working together in cooperative associations and taking advantage of the opportunities that our State and Federal laws intend we shall have. I am an enthusiastic supporter of cooperative effort. There is a new spirit of enthusiasm among our dairy farmers which is very pleasing to see. Everyone wants to see the good work go on. We are back of the marketing plan and the Bargaining Agency 100%.

Alexander Spiers

The letter from Mr. Spiers tells of the results. A similar story could be heard in every farm home in the New York Milkshed. We are reprinting Mr. Spiers' letter here because it typifies what has been accomplished by cooperative effort, and the SURPLUS CONTROL PLAN.

The benefits Mr. Spiers refers to, which have come to every farm home, urge upon us that we still have a job to do. Today your cooperatives, through the Bargaining Agency, are urging that amendments to the order give us immediate price increase. The voice of your cooperatives, the voice of the membership—sixty thousand strong—must be heard because it is a legal voice secured by legal and lawful methods. The cooperatives listed below urge that every farmer and every businessman lends his support in this constant effort we are making to secure A LIVING PRICE FOR MILK.

"Get Your House in Order," Say Farmers to Labor Organizers

By **ROBERT EASTMAN**

DID YOU HEAR about the young man whose large family had only potatoes to eat all last winter? It seems that that spring he had invested his savings in a farm and livestock. He had little luck with crops, what with the drought, so the cattle dealer foreclosed the chattel mortgage and took his cows. He almost lost the farm too, but persuaded the bank to give him one more year. All he had to his name last fall was a chance for another growing year on his farm and his crop of three hundred bushels of potatoes. He and his family lived through last year's hard winter on potatoes alone. This spring a neighbor staked him to seed and fertilizer and next winter his family will not have to live just on spuds.

In the face of many instances of this sort, making up a twenty-year agricultural depression, the Labor Monopoly is trying to bring agriculture under its control; meaning that you and your hired man pay dues to the Monopoly for the privilege of having them direct your operations. Perhaps it hasn't come yet in your neighborhood, but you need only look over your state fence at New Jersey, Pennsylvania, or out at Minnesota or California to find the Labor Monopoly hitting hard at the farmer and his business. And it can happen in your neighborhood if you and your neighbors will stand for totalitarian tactics.

Because labor's actions affect him as a buyer, as a seller, and as an American citizen, the farmer gets a little hot under the collar when Labor Monopoly moves in on him or the worker. Withal he is thoroughly sympathetic with the laboring man's problems. He hates just as strongly as any sweated worker the methods of some greedy employers, the deplorable conditions under which men have had to work, and the miserable wages sometimes paid. The farmer was pleased when laboring men joined together to fight these evils and to better their condition. The farmer has done the same thing through his own cooperatives and farm organizations. But now he is angered because a few Labor Bureaucrats, including even some criminals and a goodly number of Communists who would overthrow our government, have stolen control of many of these legitimate movements from the workers and are shaping them to their own ends. He dislikes the methods of violence, coercion, and property destruction used by the Monopoly. He is fighting mad because government agencies operating with public funds have actively aided the Labor Monopolists.

Farmers are not "baiting" labor or the labor movement. In their fight against the Monopoly they have the support of those workers who realize that they have been deprived of freedom of action, and the support of all labor leaders who are working, first, for the best interests of the country; second, for the welfare of the worker; and last—not first—for themselves.

The plain fact is that thinking farmers are serving notice on the government and on the labor movement that either the Fascistic centralization of control by the Labor Monopoly with its criminal and communist elements be curbed, or reaction will ensue which may destroy some of the genuine gains of labor. In other words, while labor is in the saddle, it must act wisely and justly; else when it loses its position, it may not fare so well.

In the interest of the nation, the business man and the worker, farmers

make these suggestions to aid union labor to get its house in order:

1. Get rid of the criminals and racketeers. A step has been taken in

this direction by the recent conviction of trucking racketeers in New York City and a former president of a building service union. Farmers feel this to be just a beginning.

2. Drop from union rolls all Communists; the nation distrusts the aims of a labor movement which countenances Communists among its members.

3. Provide for the periodic replacement of bureaucrats among labor leaders. Some union constitutions do now, but in practice it's a dead letter. Make

it effective. Get new blood at the top—rank and file men.

4. In every labor union election, whatever the purpose, the ballot should be secret. The Labor Monopoly has used the Hitler-type plebiscite to keep itself in power. If a worker does not vote as they wish, often he is fined or dropped from the union.

5. Union leaders should be forced to render an accounting to their members both for their actions and for their

(Continued on Page 12)

An Amazing Offer

INSTALL A UTICA HEATING SYSTEM NOW ON THESE SPECIAL SUMMER TERMS!

NO MONEY DOWN 36 MONTHS TO PAY FIRST PAYMENT NEXT YEAR

Utica Boilers are economical and efficient.

Utica Radiators give even, comfortable heat.

Utica Products are backed by our Guarantee Bond.

Take advantage of this amazing offer and install a modern Utica Heating System now! Our special summer terms make it easy for you to buy a complete heating system and you can extend your payments over a period of 3 years, paying as little as \$10 a month. Your heating system is installed now while prices are lowest, and you don't pay a penny until January 1941!

STEAM or HOT WATER HEAT...

You have always wanted the convenience and economy of modern radiator heating and this is a remarkable opportunity to save money and to have real heating comfort.

Our Authorized Utica Dealer will gladly give you complete information and he will make a free estimate of your heating requirements. Mail the coupon today... take advantage of our money-saving Summer terms!

West Point of the Air Is Now Ready for 12,500 More Flying Cadets

Best Aviation Training in the
World • \$75 per Month Pay
while Training • A Commis-
sion upon Graduation.

ONE of the greatest opportunities ever offered to young Americans is now open. The expansion of the Army Air Corps makes it possible for qualified young men to receive thorough flying instruction at Government expense: \$75 per month pay while training—a Second Lieutenant's Commission in the U. S. Army Air Reserve with active duty pay and allowances ranging from \$205.50 to \$245.50 per month upon graduation.

With aviation expanding all over the world—this training equips you for a glorious career—well paid and rich in opportunity for advancement. Basic requirements are: excellent physical condition; unmarried; ages 20 to 27; two years of college, or a written examination covering equivalent work.

The opportunity is limited and time is short. Apply at once for training as a U. S. Army Flying Cadet. This is the chance of a lifetime!

U. S. ARMY RECRUITING SERVICE

Apply to the local Recruiting Office nearest you; or to the Commanding General, First Corps Area, Boston, Mass.; or to the Commanding General, Second Corps Area, Governors Island, N. Y.; or to your local Junior Chamber of Commerce.

The Old Cotton South

(Continued from Page 1)

southeasterly and so brought up in Atlanta instead. It is a big town with about a third of a million inhabitants and next to New Orleans the leading city of the South. Men who know it well tell me that in spirit it is essentially a northern town and more to be compared with, say, Buffalo than with Charleston or Savannah. One difference is that these two cities are very old, while Atlanta may be called a new town having grown up mainly since the Civil War. We paused here very briefly—just long enough to take a little look at the residential section, including Peach Tree street which was once but perhaps no longer regarded as the show street of the city. Like every thriving modern metropolis, Atlanta has some beautiful homes and well kept avenues.

Leaving, we set a course south by west toward Alabama and most of the day rode through the little gray or red Georgia hills and past the cotton patches and the terraced and often eroded fields which seem to be characteristic of Middle Georgia.

* * *

It is the fashion to accuse the South in general of being very backward in its public school system and I suppose the indictment is on the whole correct. But judging from a drive across the state two years ago and again recently I must say that it would appear there was a great stirring of the educational conscience in Georgia. Certain it is that a large number of centralized schools have been built, somewhat I assume after the New York pattern. Of course the southern dollar must be made to go a great deal further than the same sum in the North, and so these new school-houses are severely plain, box-like structures of red brick with hardly a pretense of ornamentation. Very fortunately, education does not fundamentally depend upon school-houses with inlaid floors and marble lined corridors and white-tiled swimming pools. These are just the inconsequential and expensive trimmings of education. The point of the matter is that the child of the southern share-cropper is going to school. There will be no general white illiteracy in the rising generation. Moreover these children going to the village to school will learn that there are other ways and standards of living than those their fathers and mothers have known.

Halfway down the western border of Georgia we crossed a long bridge and were in Alabama. My impression is that Alabama has some fearfully poor land and backward agriculture and also some land that is very good indeed. We ran into this good land before reaching Montgomery, the Capital of the state. The famous "Black Belt" of Alabama is a limestone outcrop running across the state from East to West and, it is said, averaging only about twenty-five miles wide. It is outstanding good country and in the old days was noteworthy for its great plantation homes. There are two reasons why it may have become known as the Black Belt and I do not know which is the correct one. It may well be that both factors contributed to the designation. For one thing the soil is much darker in color than most of the South, although I do not see that it approaches the real black of the best soils of the northern corn-belt. Another fact is the color of the people. Because this was naturally a very fertile country, growing cotton was exceedingly profitable and the big plantation owners were always adding to the number of their slaves. So it came to pass that in the old days the countryside was overwhelmingly negro, and so it still remains.

We came at length to Montgomery

where we lay the night and the next morning spent a couple of hours driving around the town. Like any state Capital, it has its historical traditions and some fine old homes. The Capitol crowning a little hill was built in pre-Civil War days and it is still a finely proportioned imposing structure. My daughters and I have the exploring instinct, so we took the winding wooden stairway and climbed up into the dome where we could overlook the city. They told us that this staircase had in it not a nail or screw but was held together by dowels and wooden pins.

The old building has its secure place in history because in its Lower Legislative Chamber was organized the Government of the Confederate States of America. Here Jefferson Davis was made President and here was the seat of the new Government for about six weeks until it was moved to Richmond. A home of the city was secured as a residence for the President and this is still preserved as the First White House of the Confederacy.

Of course the old Capitol has been repaired and refurbished with the years. On the walls of the rotunda beneath the dome is a series of mural paintings depicting different epochs in the history of the state. The one which caught my imagination was entitled, "THE GOLDEN AGE OF ALABAMA 1840-1860". The background is one of the great white-columned plantation houses with its spreading live oaks and its shaven lawns and boxwood hedges and the peacocks parading and the setter dog gamboling—the sort of a home that for all of us symbolizes the life of that halycon age. Up the curved drive comes swinging a carriage and pair with a negro coachman while down the path come a man and a maid (they are lovers I assume) mounted on beautiful horses and riding side by side. He sits his mount with the dashing grace of a knight of the olden times riding to the wars and she wears a bonnet with ostrich plume. Her dress is the long riding-habit and she uses a side-saddle, as all good women did who rode in her time. The whole canvass is the artist's conception of what life was like on one of those great baronial plantations in what the southerners still refer to with a sort of wistful tenderness as "the Good Old Days"—days that are gone and it would seem may by no possibility return. I think my youngest daughter stated the case with terse truth when she observed, "It was a Golden Age if only you were fortunate enough to be born on the right side of the track."

Alabama has one big, booming city—Birmingham. It has been called the "City of Eternal Promise." At the time of the Civil War what is now the heart of town was a cornfield and a swamp. In Alabama, Birmingham has the population and the tall buildings and the bank-clearings, but Mobile has the history so we avoided the new iron metropolis and went down to Mobile instead. The old city at the head of the Bay thirty miles from the Gulf of Mexico has a long and colorful past.

In the very earliest years of America—more than a full century before the

Pilgrims set foot on Plymouth Rock—exploring Spaniards passed this way and perhaps lighted a camp-fire and rested for a night. Later came Frenchmen who founded the city and gave to it the French names and atmosphere that still remain. In 1763 the French flag gave place to the banner of England. A few years later the town fell again to Spain, and in 1813 became a part of the United States. For something more than three years during the War between States it flew the Stars and Bars. So it comes to pass that it is sometimes referred to as "The City of the Five Flags." Mobile has had a checkered story. Before the Civil War it was one of the important ports of this country when down the Alabama and Tombigbee rivers came the white-and-gilt side wheeler steamboats piled high with cotton bales from the hinterland en route for Europe. Also in autumn by those same steamboats came the wives and daughters of the planters, intent on shopping and spending their money and having a little whirl of social life in the gay French town.

After the War it fell into a long decline when its proud families lived mainly on memories. Just now a new prosperity is coming to Old Mobile. They told me it was growing more rapidly than any city of its class in this country. I can testify that it is building a big new hotel and very few cities have done anything like that for the past ten years.

We drove to the Chamber of Commerce and picked up a young lady guide who took us for a three hour tour of the town, including both the old and the new. Let me in passing offer the advice that in visiting a good-sized and interesting city, the wisest thing to do is to go straight to the Chamber of Commerce and get an approved guide. The universal charge seems to be one dollar per hour and the money is well spent. These guide people are intelligent and enthusiastic and they have their stories pretty well learned. This lady (she was a particularly skilled even if a bit reckless driver) drove through gateways into private grounds where we would never have dreamed of entering even if we had known what lay within.

Old Mobile remembers its French beginnings in the names of its streets and squares. French architecture shows in the old houses with their "galleries" (balconies) and in the profusion of that iron grill-work which has been called "iron lace." Some of these houses are famous landmarks and the guide points them out, though today they rub elbows with filling stations and warehouses. The Old Order is passing. The Mobile of today—the newcomers—is spreading west and building modern suburbs and avenues adjacent to the trail that leads to New Orleans. Some of the recent developments are very lovely. I think there is no question but that in the soft climate of the Gulf Stream, life becomes easier and more leisurely and gracious than on the Central New York plateau which is the heart of the Milk Shed. I long ago concluded that if I could be born all over again and could select the location for my second coming, it would be somewhere a great deal nearer to the Gulf of Mexico than to the River St. Lawrence.

"Sometime I'm going to lose my temper and push one of those things off the highway!"

Apple Crop Below Average

(Continued from Page 2)

than average. The combined production in Pennsylvania, Maryland, Virginia, West Virginia, New Jersey, and Delaware is expected to be 7 per cent less than the average for the years 1935-39. The important apple producing states in the Middle West, Michigan, Ohio, Illinois, Indiana and Wisconsin, are expected to produce 20 per cent fewer apples than average production for the years 1935-39. Farther south in the states of Missouri, Arkansas, Kentucky, and Tennessee the condition of the crop points to an apple production 11 per cent below the five year average. In the Rocky Mountain and Pacific Coast States, the estimated crop is 8 per cent below the five year average even though it is 2 per cent more than the 1939 crop.

Production in the important Shenandoah-Cumberland, and West Coast areas is estimated to be only about 7 or 8 per cent less than average. The reduction of production in the Northeast is more than for the rest of the U. S. and the position of Northeastern apples, particularly New York, may turn out to be better than would be indicated by production in the U. S.

Other Fruits

Competition among fruits for the eye and the money of consumers is not well understood. It is obvious that competition does exist, but exactly how much a large crop of oranges affects the price of apples is not known. We do know it affects the price of oranges more than the price of apples.

Production of oranges and grapefruit has increased greatly during the recent years. Unfortunately at this time there is no estimate of the citrus production that will be on the market during the coming marketing season. However, the condition of the crop gives some idea as to how much to expect. The September first condition of the orange crop was 71 per cent of normal as compared with 73 last year, with the condition in California above last year and in Florida below last year. The condition of the grapefruit crop was 61 as compared with 57 last year. In Florida the condition was above last year and in Texas it was below a year ago. With normal growing conditions production of oranges and grapefruit may be materially higher than last year when winter freezes reduced production.

In September the pear crop was estimated at 3 per cent more than last year. With exports even more restricted than a year ago, this fruit will compete with apples on the domestic market. Most fresh peaches are gone before apples reach the market in substantial volume. The peach crop was estimated at 13 per cent below last year. Grape production is now estimated at 1 per cent below 1939 production. If one adds together the production of the major fruits other than citrus, which includes commercial apples, peaches, pears, grapes, cherries, plums, prunes and apricots, the estimated production is 13 per cent smaller than in 1939 but very close to the five year average.

Exports Probably Small

The war has interfered with apple marketing. Even though the Northeast has not exported apples in as large volume as other areas, changes in the export situation affect prices here.

During the five years before the present war exports of apples as fresh fruit averaged about 10,000,000 bushels per year or 8 per cent of the commercial apple production. From July 1939 to the end of June 1940 exports amounted to 3,216,000 bushels, (table 1.) This was 2.2 per cent of 1939 commercial production. Exports from the 1940 crop are likely to be less than last year. Exports of other fruits have declined so a larger portion of competing fruit

production will remain in the domestic market. Exports of canned and dried fruits have not declined as much as exports of fresh fruit, but they have declined. So long as war continues and probably for some time after it ends, we cannot expect the present export situation for fruits to improve.

TABLE 1. Commercial Production and Exports of Apples, 1934-1939

Year	Commercial production (,000 bu.)	Exported as fresh fruit (,000 bu.)	Percentage of commercial production exported
1934	103,691	8,062	7.8
1935	140,503	12,240	8.7
1936	98,608	6,755	6.9
1937	156,376	10,958	7.0
1938	109,595	12,071	11.0
1939	143,085	3,216	2.2
1940	114,830	?	?

Canada Has Smaller Crop

Apple production in Canada is estimated to be about 80 per cent of the large 1939 crop. Most of the reduction is in Nova Scotia. British Columbia is expected to produce a crop about the same as last year. Exporting probably

will be more difficult than last year. Canadian exports to the U. S. during the past season are reported in Canadian statistics at 115,000 bushels.

Demand in the U. S. A.

Market conditions here at home present a more optimistic picture for apple growers than do markets abroad. Business conditions during late summer were about 10 per cent higher than just before war began a year earlier. Some industries show much more improvement. A year ago business conditions improved rapidly from September first until December. The defense program will support active business during the coming marketing season even though we cannot estimate the exact effect. All in all, it would seem that we can expect fairly good business this fall and winter. The course of the war and the extent of defense preparations here will be important factors affecting the trend of business and employment.

What Do You Think?

Let's add these ideas to see what we can expect this season. Apple produc-

tion is far below last year and somewhat below average. Loss of exports may result in as many or more apples remaining on the domestic market as the average for recent years. Citrus production is likely to be high, but production of most other fruits is somewhat less than last year. Exports are likely to be less than the small volume exported last year. Business conditions should be good. Prices of early apples have been better than a year ago when bids of any kind were difficult to find.

What will apple prices do from now until April? As I said in the beginning I'll leave that to you, but I wouldn't take many chances on storing anything but good fruit.

The New York State Cold Storage Apple Promotion Committee, of which Master Farmer James G. Case of Sodus is chairman, has prepared facts, posters, and recipes on the use of apples. These are primarily for the use of classes in home economics and health. It is an encouraging sign when growers take the lead in acquainting the public with the value of apples and other farm products.

MASSIVE, CLEAN-CUT DESIGNING—from stem to stern, this superb 1941 Plymouth is one all-satisfying picture of charm, good taste, and distinction.

GLAMOROUS NEW Fashion-Tone Interior. It's an exquisite harmony of color, fabric, fittings, appointments!

"That's My '41 Car"

Inside, Outside, the New Plymouth Radiates Luxury! New Fashion-Tone Interior —4-Way Step-Up in Performance — Powermatic Shifting ...19 Big Advancements!

THE MINUTE you see it—you know this 1941 Plymouth is class... it's so long and sleek and beautiful, so utterly luxurious!

Performance has been stepped up 4 ways...increased horsepower and torque, new transmission, new axle ratio. It's a "powerhouse"!

And you'll find new Powermatic Shifting...a new Oil Bath Air Cleaner... new Engine Bearings, 2 to 3 times longer-lived! Plymouth's the "One" for '41! See your nearby Plymouth dealer. PLYMOUTH DIVISION OF CHRYSLER CORPORATION.

Tune in Major Bowes, Thursdays, C. B. S. See the new Plymouth Commercial Cars!

Drive the Powermatic Way—delightful new car operation with vast reductions in driving effort.

VALUE IS AWAY UP!

New Safety Rims on wheels to prevent "throwing" of the tire in case of a blowout.

New Counterbalanced Trunk Lid—goes up or down easily at a touch.

Big 6-Inch Tires—Metal Spring Covers standard on all models.

New Sealing throughout body to keep out dust, water, heat, noise.

A. A. - GRANGE

Cookie Contest News

RICHFIELD Grange, Otsego County, had the novel idea of dividing its rolled sugar cookie contest into three classes: Married women's class; young unmarried women's class; and a men's class. Top winner was Miss Mary McRorie, who received a 32-piece set of dishes donated by the Buchanan Hardware Company of Richfield Springs.

Several other handsome prizes, donated by local merchants, were awarded to holders of high scores in each of the classes. In the unmarried women's class, Miss Elizabeth Bibik, 2nd prize winner, received a camera from Ainslie Buck; Miss Esther Pierce, 3rd prize winner, won a box of cake flour, A. & P. Co.; and Miss Betsy Robinson, 4th prize winner, got a box of cheese given by Dairymen's League.

First in the married women's class was Mrs. George Key, whose prize was a kitchen set, donated by the Ben Franklin store. Second in this class was Mrs. Mary Ames, who won a sack of flour and a box of shreds, gift of G.L.F. A & P donated a third prize, which went to Mrs. Clyde Mason.

In the men's contest, Claude Robinson and his son, Clyde, won first and second prizes. Mr. Robinson received an alarm clock, the gift of M. Tuller & Son, and Clyde got a sack of flour from C. M. Ames and a box of "shreds" from G.L.F.

Two more Pomona Granges have held their contests. Following is a list of Pomona and Subordinate Grange winners received during the past month:

Pomona Winners		
COUNTY	GRANGE	WINNER
Clinton	Mooers	Mrs. Philip Gokey
Steuben	Stephen Mills	Mrs. Jessie Elsenheimer
Subordinate Grange Winners		
Albany	Heldberg	Bertha Adriance
Allegany	Belfast	Mrs. Fred Lilly
	Belmont	Mrs. Lena Francisco
	Canaseraga	Eleanor Coombs
	Enterprise	Mrs. Bessie Hurd
	Little Genesee	Amy S. Crandall
Cattaraugus	Mansfield	Mrs. Nettie Burroughs
	Olean	Mrs. Florence Scott
Cayuga	Cayuga Lake	Mrs. Genevieve Dillon
	Mentz	Mrs. Lillian Van Deneen
	Sherwood	Margaret Ryan
Chautauqua	Arkwright Ctr.	Mrs. Arthur Fairbanks
	Cassadaga	Mrs. Mary House
	Gerry	Mrs. Walter Barmore
	Kennedy	Margaret Connor
Chenango	Algonquin	Mrs. Warner Taylor
	Plymouth	Mrs. Edith White
	Sherburne	Mrs. Floyd Bryan
Clinton	Champlain	Mrs. Clara Dubois
	Mooers	Mrs. Philip Gokey
Columbia	Mellenville	Esther Cookingham
Cortland	Cuyler	Mrs. William Eaton
Delaware	Bloomville	Mrs. Floyd Mackey
	Sidney	Mrs. Guy Tilley
	Wawaka	Mrs. Edna M. Reed
Dutchess	Jackson Cor.	Mrs. Bertha Rolins
	Wicopee	Martha A. Bush
Erie	Collins Ctr.	Mrs. C. J. Simmons
	Hamburg	Mrs. William E. Lee
	Holland	Dorothy M. Spencer
	Orchard Park	Mrs. Cora Farnsworth
Essex	Whiteface	Lucille Boynton
Franklin	Chatcaugay	Mrs. Mae Carey
Fulton	Kolaneka	Mrs. Lyman J. Fox
Herkimer	Millers Mills	June E. Young
	Warren	Eula Osterlander
Jefferson	LaFargeville	Mrs. Iona M. Schultz
	Smithville	Mrs. Macy D. Brooks
	Theresa	Mrs. Walter June
Lewis	Barnes Cts.	Edith Curtis
	Copenhagen	Mrs. Fred Wadsworth
Livingston	West Sparta	Mrs. Claude Walker
Monroe	Henrietta	Mrs. Martha Smith
	Mendon	Mrs. Cora Van Voorhis
Montgomery	Stone Arabia	Mrs. John C. Kilts
	Mohawk Val.	Mrs. Richard Persse
Niagara	Warren's Cts.	Beatrice Brown
Oneida	Lee	Mrs. Edna Baker
	Remsen	Leona Maurice
	Wright Settlement	Mrs. Harry Dodson
Onondaga	Fabius	Mrs. Hettie Partridge
Ontario	Academy	Mrs. Alfred Ferguson
Orleans	Gaines	Mrs. Carl Smith
Oswego	Altmar	Pauline E. Nelson
Otsego	Fly Creek	Mrs. Mary Kniffen
	Valley	
	Laurens	Eva Martin
	Richfield	Mary McRorie
	Springfield	Florence E. Webster
	Unadilla	Mrs. Lester Carvin
Rensselaer	Johnsonville	Marion Russell
	Melrose	Mrs. C. H. Wetsel
	Pittstown	Mrs. Wm. B. Sherman
Saratoga	Mohawk Val.	Mrs. Charles Chase
Schenectady	Glenridge	Mrs. Mary Atkins
Schoharie	Ramona	Mrs. Nina Ruland

Short Courses

Short courses in agriculture given by northeastern state colleges offer a wonderful opportunity for young men who are unable to attend an agricultural college for four years. Tuition is free to residents of the state, and there are no requirements other than that the applicant must have completed the eighth grade. In New York State winter short courses start October 30 and continue for twelve weeks. Complete information about the courses offered is available from the New York State College of Agriculture, Ithaca, N. Y.

Frost Damage

In the last issue we gave a brief report on frost damage. Now the State Department of Agriculture and Markets has compiled a more complete summary. They state that approximately 142,000 acres of the 713,000 acres of corn in the state were injured by frost, and that possibly 18,000 acres will not be harvested.

About 34,000 of the 141,000 acres planted to buckwheat were damaged, and probably about 21,000 acres will not be harvested. On beans, 7,000 acres of the 151,000 acres grown in the state were injured and about 3,000 acres practically ruined. About 19,000 acres of the 215,000 acres of potatoes in the state were damaged to some extent, and possibly 5,000 acres may have been injured so badly that the potatoes will not mature to a size to make harvesting profitable.

Deer Hunting

Nearly 170,000 special deer licenses and buttons have been sent by the New York State Conservation Department to County Clerks and district offices of the Department for use during the fall season. Approximately 148,000 persons

were licensed to hunt deer in New York last year. The increase in number of licenses being made available this year is due to the addition of three new counties, Tioga, Tompkins and Chenango, to those in which deer may be hunted.

In the Adirondack section of the state, which takes in 14 counties, the season opens on November 1 and continues through November 30. In 10 counties in the Catskill region the season is November 15 through November 30, and the same dates apply to the 12 counties in the southern tier.

The Farm Price Level

For the month of August prices received for farm products by New York farmers were just at the pre-war level. Apples were the only crop bringing prices above pre-war. Of the livestock group, eggs, hogs and horses were below pre-war. Prices for milk, dairy cows, lambs and wool were well above 100 (the index for the period 1910-1914), and chickens, beef cattle, veal calves and sheep were slightly above.

New York farmers were in somewhat better position than many other sections. The U. S. index was 96 on August 15, 4 points below the New York index, 1 point higher than on July 15, and 8 points higher than August, 1939.

Milk Market News

Bargaining Agency Secures Hearing on Increase in Milk Price

It has been announced officially that hearings will be held to discuss an increase in the Class I price of milk under the Federal-State Order. The dates set are: October 7, New York City; October 9, Syracuse; and October 11, Albany.

The petition for hearings made by the Metropolitan Bargaining Agency asked that a minimum Class I price of \$2.35 be set for April, May, June and July, and a minimum of \$2.82 for the other eight months of the year, effective at the earliest possible moment.

The three reasons behind the request for the increase are: increased cost of production due to new New York City Board of Health regulations; increased cost of production due to heavy frost damage and higher labor costs; and the certainty of higher taxes to pay for a national defense program.

Rochester Area Dairymen to Have Hearing

On September 24 at 10:00 A. M., a public hearing on proposed minor changes in the Rochester area Milk Marketing Order is scheduled at the Sagamore Hotel in Rochester. This hearing was called by Commissioner of Agriculture Holton V. Noyes as a result of a petition submitted by the Rochester Cooperative Milk Producers' Bargaining Agency, Inc.

One of the amendments proposed is revision of the Class 1 (fluid) and Class 2-A (cream) prices. Increased prices are deemed necessary, according to the petition, because of increased labor costs, increased taxes, and increased production costs as a result of poor condition of feed crops.

Government Drops Case Against Chicago Milk Men

On September 16 the government's anti-trust case against 45 individuals and cooperative associations in the Chicago milk industry was dismissed. Those in the Northeast who were concerned in the case were Leland Spencer of Ithaca and W. A. Wentworth of New York City, who were called in as arbitrators to help settle disputes.

The case was brought by the government who charged that the individuals and cooperatives named were combining to fix prices, control supplies, and suppress competition in the Chicago milk market. The case aroused a lot of interest. Milk producers in various sections felt that two government departments were pursuing opposite courses—one helping farmers to organize cooperatively to better their situation and the other attempting to "crack down" on them for using these privileges.

Assistant Attorney General Leo Tierney, who had charge of the case for the government, arranged for a consent decree by which those involved in the case were enjoined from fixing prices, controlling supplies, and suppressing competition. Mr. Tierney said that this action served the best interests of all concerned as it avoided the expense of a trial.

HEADS—You Win; TAILS—I Lose

How the Canadian Trade Agreement on Potatoes Affects Growers

SECRETARY OF STATE Cordell Hull negotiated a trade agreement with the Dominion of Canada, effective Jan. 1st, 1939, by which 1,500,000 bushels of certified seed potatoes and 1,000,000 bushels of table stock are admitted into the United States each year at half the regular tariff rate of 75 cents per 160 lbs. (45 cents per bushel).

Few northern potato growers know of a far more dangerous provision in this trade agreement. Whenever the estimated potato production of the United States falls under 350,000,000 bushels, the Canadian quota of potatoes admitted at half the tariff rate is increased by the number of bushels by which the estimate is under 350,000,000.

For example, in 1936, the only really profitable potato season of the last ten years, our crop was 331,918,000 bushels. If Secretary Hull's trade agreement had been in effect then, Canada's import quota at half the regular tariff rate would have been increased by 18,072,000 bushels, sufficient to smash any chance to get profitable prices for potatoes in the United States that season.

Every American farmer competes fiercely with every other one. Few get rich. Whenever any one farm product pays better wages for the labor of producing it than others, farmers start producing more, whether it is potatoes, milk, eggs, hogs, or anything else. When any farm product loses money for very long, farmers go out of it, as many went out of chickens this spring. Farmers are like any other business men. When potatoes pay, they expand production, just as the automobile business grew by demand at profitable prices. And we know how buggy makers had to go out of business.

The Farm Management Department at Cornell has collected records of potato prices back to 1866 from files of old newspapers. Crop estimates of acreage planted, yield per acre, and of total yield go back to 1870. Putting these two sets of figures together, they found that farmers have always cut down potato plantings after seasons of unprofitable prices, by the second year after, if not the first. And they have always increased plantings after profitable seasons.

These Farm Management studies show that the effect of weather on the total size of the potato crop is three times that of the size of the acreage planted. A good growing season, not too hot, with rainfall just right, and with late killing frosts in fall will give a bumper crop, sometimes over 120 bushels per acre for the whole country. A big drought like that of 1916, a bad late blight and rot epidemic like that which cut Maine's yield by 10,000,000 bushels last year, or an early killing frost over large areas can cut the average yield to less than 100 bushels.

Bumper crops like those of 1934, 1928 and 1924 bring such low prices that growers have to pay a large part of the cost of production out of their savings of previous years. Small yields like those of 1936, 1929 and 1925 bring high prices and enable potato growers to save up money to meet the losses of big crops in later years.

By his Canadian trade agreement Secretary Hull destroys practically all chance for most potato growers to make profits in the short crop years which have kept them in the business in the past. At the same time, he leaves them with the certainty of heavy losses whenever the weather gives big potato yields over large producing sections.

It is a fact well-known to observant growers that crops over 360,000,000

By DAN DEAN,
Nichols, New York.

bushels seldom if ever pay cost of production to any but a few lucky growers. For example, the 1934 bumper crop of 406,105,000 bushels forced prices to Maine potato growers so low that millions of bushels brought only 10 cents per barrel (3½ cents per bushel) in the latter part of the shipping season. Because Aroostook starch factories paid 15 cents per barrel, many farmers stood in line there with their loads all night to get the extra cent and three-quarters per bushel. Shipped to eastern cities, these cheap Maine potatoes demoralized the market for southern new crop potatoes in June and July, 1935.

Two years later the crop was down

to 331,918,000 bushels. Potato prices to Aroostook growers started in fall at \$1.75 per barrel (63½ cents per bushel) and later in the season went to double that price. When I was there in December, many told me how the growers were just beginning to get their 1934 debts paid.

The heaviest imports into the United States in any one year came in the spring of 1912 when 13,735,000 bushels were brought in after the short drought-year crop of 1911.

Let us see what will happen the first year that Secretary Hull's agreement goes into effect. Beginning with July, a crop estimate is made every month about the 10th, until the final estimate in December, which comes out about the 17th. The acreage planted in recent years has been as high as 3,946,000 acres in 1922, as low as

2,810,000 in 1925, after the low prices seasons of 1922 and 1924. The probable crop estimate goes up or down as conditions change. The 1911 drought showed up in the July estimate, that of 1901 in August, that of 1916 in September. Very late killing frosts increase yields over early expectations, as in 1914.

By some time in October in most years the growers and dealers all over the nation have agreed on a price level which changes little till new potatoes sell in quantity the next April.

The variable import quota in Secretary Hull's trade agreement not only affects prices in years with less than 350,000,000 bushels, but also introduces uncertainty whenever early estimates are close to that figure. This uncertainty scares growers into selling while cutting down dealer demand, thus creating a "buyers' market" at lower prices.

The import quota concerns only the actual number of bushels of graded potatoes passing the border. But as it takes about 1,000 bushels of field

For DAIRY SUCCESS Depend on Successful Dairy Equipment

A modern McCormick-Deering Milker at work in the 104-year-old barn on the Lee Thomas farm, Eagle, Wisconsin.

SAFEGUARD the success of *your* dairy herd, back up its milk production, and earn more profits with *good equipment*. Choose McCormick-Deering Milkers and Cream Separators and International Coolers.

McCormick-Deering Milkers are natural-action milkers. Easy to handle. Easy to clean. Single or double units.

McCormick-Deering Cream Separators are easy-turning, attractively streamlined. All parts contacting milk are made of stainless steel. Clean-skimming self-centering bowl. Choice of four sizes. Direct motor drive available for electrified farms.

International Coolers solve the farm refrigeration problem. Wet-type milk coolers from 2 to 12-can capacity. Walk-in coolers available in 10 sizes with ample capacity for all farm needs. Reach-in coolers have up to 10 times the capacity of the average household refrigerator.

Let the International Harvester dealer help you along the way to more profitable dairying.

INTERNATIONAL HARVESTER COMPANY
180 North Michigan Avenue Chicago, Illinois

The Market Barometer

The September Crop Report

On page 2 you will find some facts and figures about the market situation on apples and potatoes. Here are some additional figures from the September crop report.

Dry Beans.—Compared to a month ago, the bean crop in California, Colorado, and New Mexico has improved. In Michigan an appreciable part of the crop may fail to mature before a frost. While some beans were frosted in New York in late August, the damage was not serious. The danger from frost, however, is not past. The September 1 U. S. estimate was for 15,133,000 hundred-pound bags, compared to last year's figure of 13,962,000 and a ten-year average of 13,086,000. The forecast for New York State is 1,087,000 bags, compared to last year's crop of 1,134,000.

Cabbage.—For Domestic cabbage, the New York State forecast is 95,000 tons, compared to last year's crop of 91,200 and a ten-year average of 96,200. The Wisconsin crop is much heavier than last year, and the U. S. forecast is 371,600 tons, compared to last year's crop of 297,900, and a ten-year average of 326,500.

The estimate on Danish cabbage for New York State is 147,200, compared to 134,600 last year and a ten-year average of 174,400. The crop of Danish cabbage in Wisconsin is also much ahead of last year. The U. S. forecast is 272,700 tons, compared to last year's crop of 240,400 and a ten-year average of 292,800.

Onions.—The expected crop of onions in New York State is 3,642,000 sacks, compared to last year's crop of 4,092,000 and a ten-year average of 2,327,000. Production of onions in late states is estimated at about 16 per cent more than last year and 15 per cent above the ten-year average. U. S. production is forecast at 11,787,000 sacks, compared to 13,964,000 last year and a ten-year average of 10,290,000.

Canning Crops.—New York's production of sweet corn for canning was just a bit under last year. U. S. production was higher, estimate being 704,300 tons, compared to 661,100 last year and a ten-year average of 676,100.

New York state tomatoes for canning have ripened slowly. Estimated crop is 129,900 tons, compared to 171,600 tons a year ago and a ten-year average of 110,300. U. S. estimate for this year is 1,811,300 tons, compared to last year's crop of 1,996,800.

Cauliflower.—The Long Island cauliflower acreage is slightly above last year. The crop is looking good, and started to market about the middle of the month. Late cauliflower growing states expect about 2,558,000 crates, compared to 2,294,000 a year ago.

Celery.—Late celery growing states expect 4,172,000 crates, an increase of about 18 per cent above last year and 31 per cent more than the ten-year average. Blight is showing up in Michigan, Pennsylvania, and New York, and a lot of celery in Michigan has been badly flooded.

Feed Crops.—The U. S. corn estimate is 2,297,186,000 bushels, just a little less than the ten-year average, but considerably lower than last year's crop of 2,619,137,000. The prospect for the corn crop increased about 5 per cent during the month of August.

September 1 U. S. estimate for wheat, both winter and spring, is 747,961,000 bushels—a little under last year's crop of 754,971,000.

Both oats and barley in New York are approximately the same as a year

ago, but for the entire U. S., both oats and barley are considerably better than a year ago.

The August Milk Price

The uniform price to milk producers for the month of August as announced by Administrator N. J. Cladakis is \$1.81 per hundred. This price is for milk testing 3.5 received in plants in the 201-210 mile zone. The August price is 13c above the July price. The uniform price was figured on a total of 448,956,399 lbs. of milk, delivered by 61,000 dairymen and valued at \$8,508,273.96.

D. M. Lasher, Administrator of the Niagara Frontier area, has announced that the uniform price to producers for August is \$1.74. Producers who deliver directly to plants in the marketing area get an additional 20c.

Drive to Sell More Apples

The National Apple Institute is asking retailers to put on several special apple drives. The first, to be known as National Apple Week, is October 24 to 31. The second drive will cover the period of Jan. 30 to Feb. 6, and the third, the week of March 13 to 20.

The National Apple Institute and local apple institutes, including the New York-New England Apple Institute, which make up its membership, deserve the support of all apple growers. Last year the special apple weeks were very successful. Chain stores and other retailers entered wholeheartedly into the efforts to sell more apples.

The Potato Situation

The government estimate indicates a good sized crop of late potatoes for the country as a whole, slightly over 383,000,000 bushels. This is about 19,000,000 bushels greater than the

final estimate of last year. Growers on Long Island and New Jersey, with whom we have discussed the situation lately, believe that the estimate is accurate because they have large crops. Many up-state New York growers, however, fail to agree with the government figures because they have such a light crop due to adverse growing conditions during the season, a severe frost late in August, and because of the prevalence of late blight in fields not cared for. However, taking the country as a whole, there is no question but what we have plenty of potatoes and those sections which are digging a light crop will be well cared for by shipments from surplus areas.

There is a decided trend on the part of New York potato growers to market their potatoes in better grades. A few years ago distributors of potatoes, such as wholesale growers, chain stores, etc., found it necessary to use Maine or other out of state potatoes if they handled a uniform product. Since New York potato growers realized the situation they resolved to give a better grade which has been effective in diverting out of state potatoes and keeping the market supplied with good local potatoes. They not only improved their grade but they have gradually supplied a market with the varieties the market wanted rather than varieties they liked to grow.

There is also a growing tendency to market potatoes in consumer packages.

The grocer likes to handle consumer packages of potatoes because they mean less work for him and his store, there is no dirt to sift out of burlap bags, and no potatoes to be thrown out in packaging in smaller units. The consumer apparently likes the consumer package because if a grade is maintained she is assured of uniform quality and size. The State Trade Mark has done much to standardize the retail package proposition because both consumer and grocer know that State Trade Mark products have passed a federal inspection. Another thing that consumer packaging has done with result of increased sales is to find a place in the front of the store along with fruits and fresh vegetables.

—H. J. Evans.

Jewish Holidays

Important fall Jewish Holiday period in observance of Hebrew New Year comes at an unusually late date this year. The first part of this observance, the New Year's, falls on Thursday and Friday, October 3 and 4, and The Day of Atonement will be observed on Saturday, October 12.

Best demand for poultry in preparation for these holiday periods is expected on Sept. 30—and Oct. 1 and Oct. 9-10. The Day of Atonement is a fast day but poultry products are in demand for serving prior to and following the holiday.

HEADS—You Win; TAILS—I Lose

(Continued from Page 11)

run potatoes, including the bruised, small, hollow, etc., to make 700 bushels when graded, the 1936 import quota of 18,018,000 bushels would have been equal to an extra 25,000,000 bushels as grown in the U. S., or 357,000,000.

The net result of Secretary Hull's Canadian trade agreement must be sooner or later to force a large number of our potato growers out of business. It is impossible to guess who will be hurt worst, those close to city markets, or those in states like Idaho and Maine.

Any increase or loss in potato supplies at once affects prices all over the United States. For example, on Nov. 5th to 8th, 1935, a severe freeze damaged a large part of the Idaho potato crop not yet dug. Though Aroostook is around 3,400 miles from Idaho Falls, the daily Maine price report on Nov. 8th stated "Practically nothing offered from growers, good wire inquiry, demand good, market stronger." By Nov. 17th prices to Maine growers had gone up nearly 40 cents per barrel. And bad news travels equally fast.

Secretary Hull's trade agreement first hits every potato grower, then, indirectly, every other farmer. Back in the lawless Middle Ages the Scotch people had the proverb "He whose house is burned must needs become a robber." Every grower driven out of the potato business must turn his land and his labor to the production of something else, which in turn must rob his brother farmer producing market milk, eggs, or some other farm product.

Abraham Lincoln used to tell funny stories which made people think afterward. Today he would have told this one—

A Spaniard and a Portuguese went hunting together. Both shot at the same time and killed a partridge. Later both shot another bird, a crow. Then came the difficult job of fairly dividing the game, the delicious partridge, and the uneatable crow.

Now in Europe the Portuguese have the name of being very sharp at a bargain, while the Spaniards are said to be so honest that they never suspect any one. So the Portuguese hunter said to the Spaniard, speaking very fast, "Now we want to be perfectly fair in dividing these two birds. Let us toss up a dollar. If it comes up 'heads' you take the crow and I will take the partridge. But if it comes up 'tails', then I will take the partridge and you take the crow." The Spaniard was a little puzzled, but said, "Why, yes, that sounds very fair to me."

The theory of Secretary Hull's trade agreement with Canada sounds very fair when read fast. But northern potato growers want to know why they always get the crow, and someone else always gets the partridge.

"Get Your House in Order"

(Continued from Page 7)

handling of union money. The Labor Monopoly handles millions of dollars for which it gives little or no accounting.

6. Settle more employer-employee disputes by negotiation, fewer by strike. A minimum of fifty per cent of strikes are unnecessary, being called by organizers who must try to justify their jobs. Lost income for worker, businessman, and inconvenience to the consumer are the unfigured costs of strikes. Make the standard of an organizer's job the number of disputes he can settle by negotiation without striking.

7. Cut out gangster strike methods. Labor only injures itself by using strongarm tactics. Because some unscrupulous employers may use them is small excuse for labor's going them one better.

There are many more conditions needing remedy. Part are not the fault of the worker who has had his rights pilfered by voracious monopolists, but are the abuses of government agencies. The House of Representatives' investigation of the National Labor Relations Board uncovered the fact that one member of the three-man board was charged with trying to start a boycott against a hosiery mill whose workers were on strike; this despite no appeal having been made to the NLRB and that the Board's only power is to review labor cases judicially, fairly and to render judgments. In another case a steel company had contracts with a

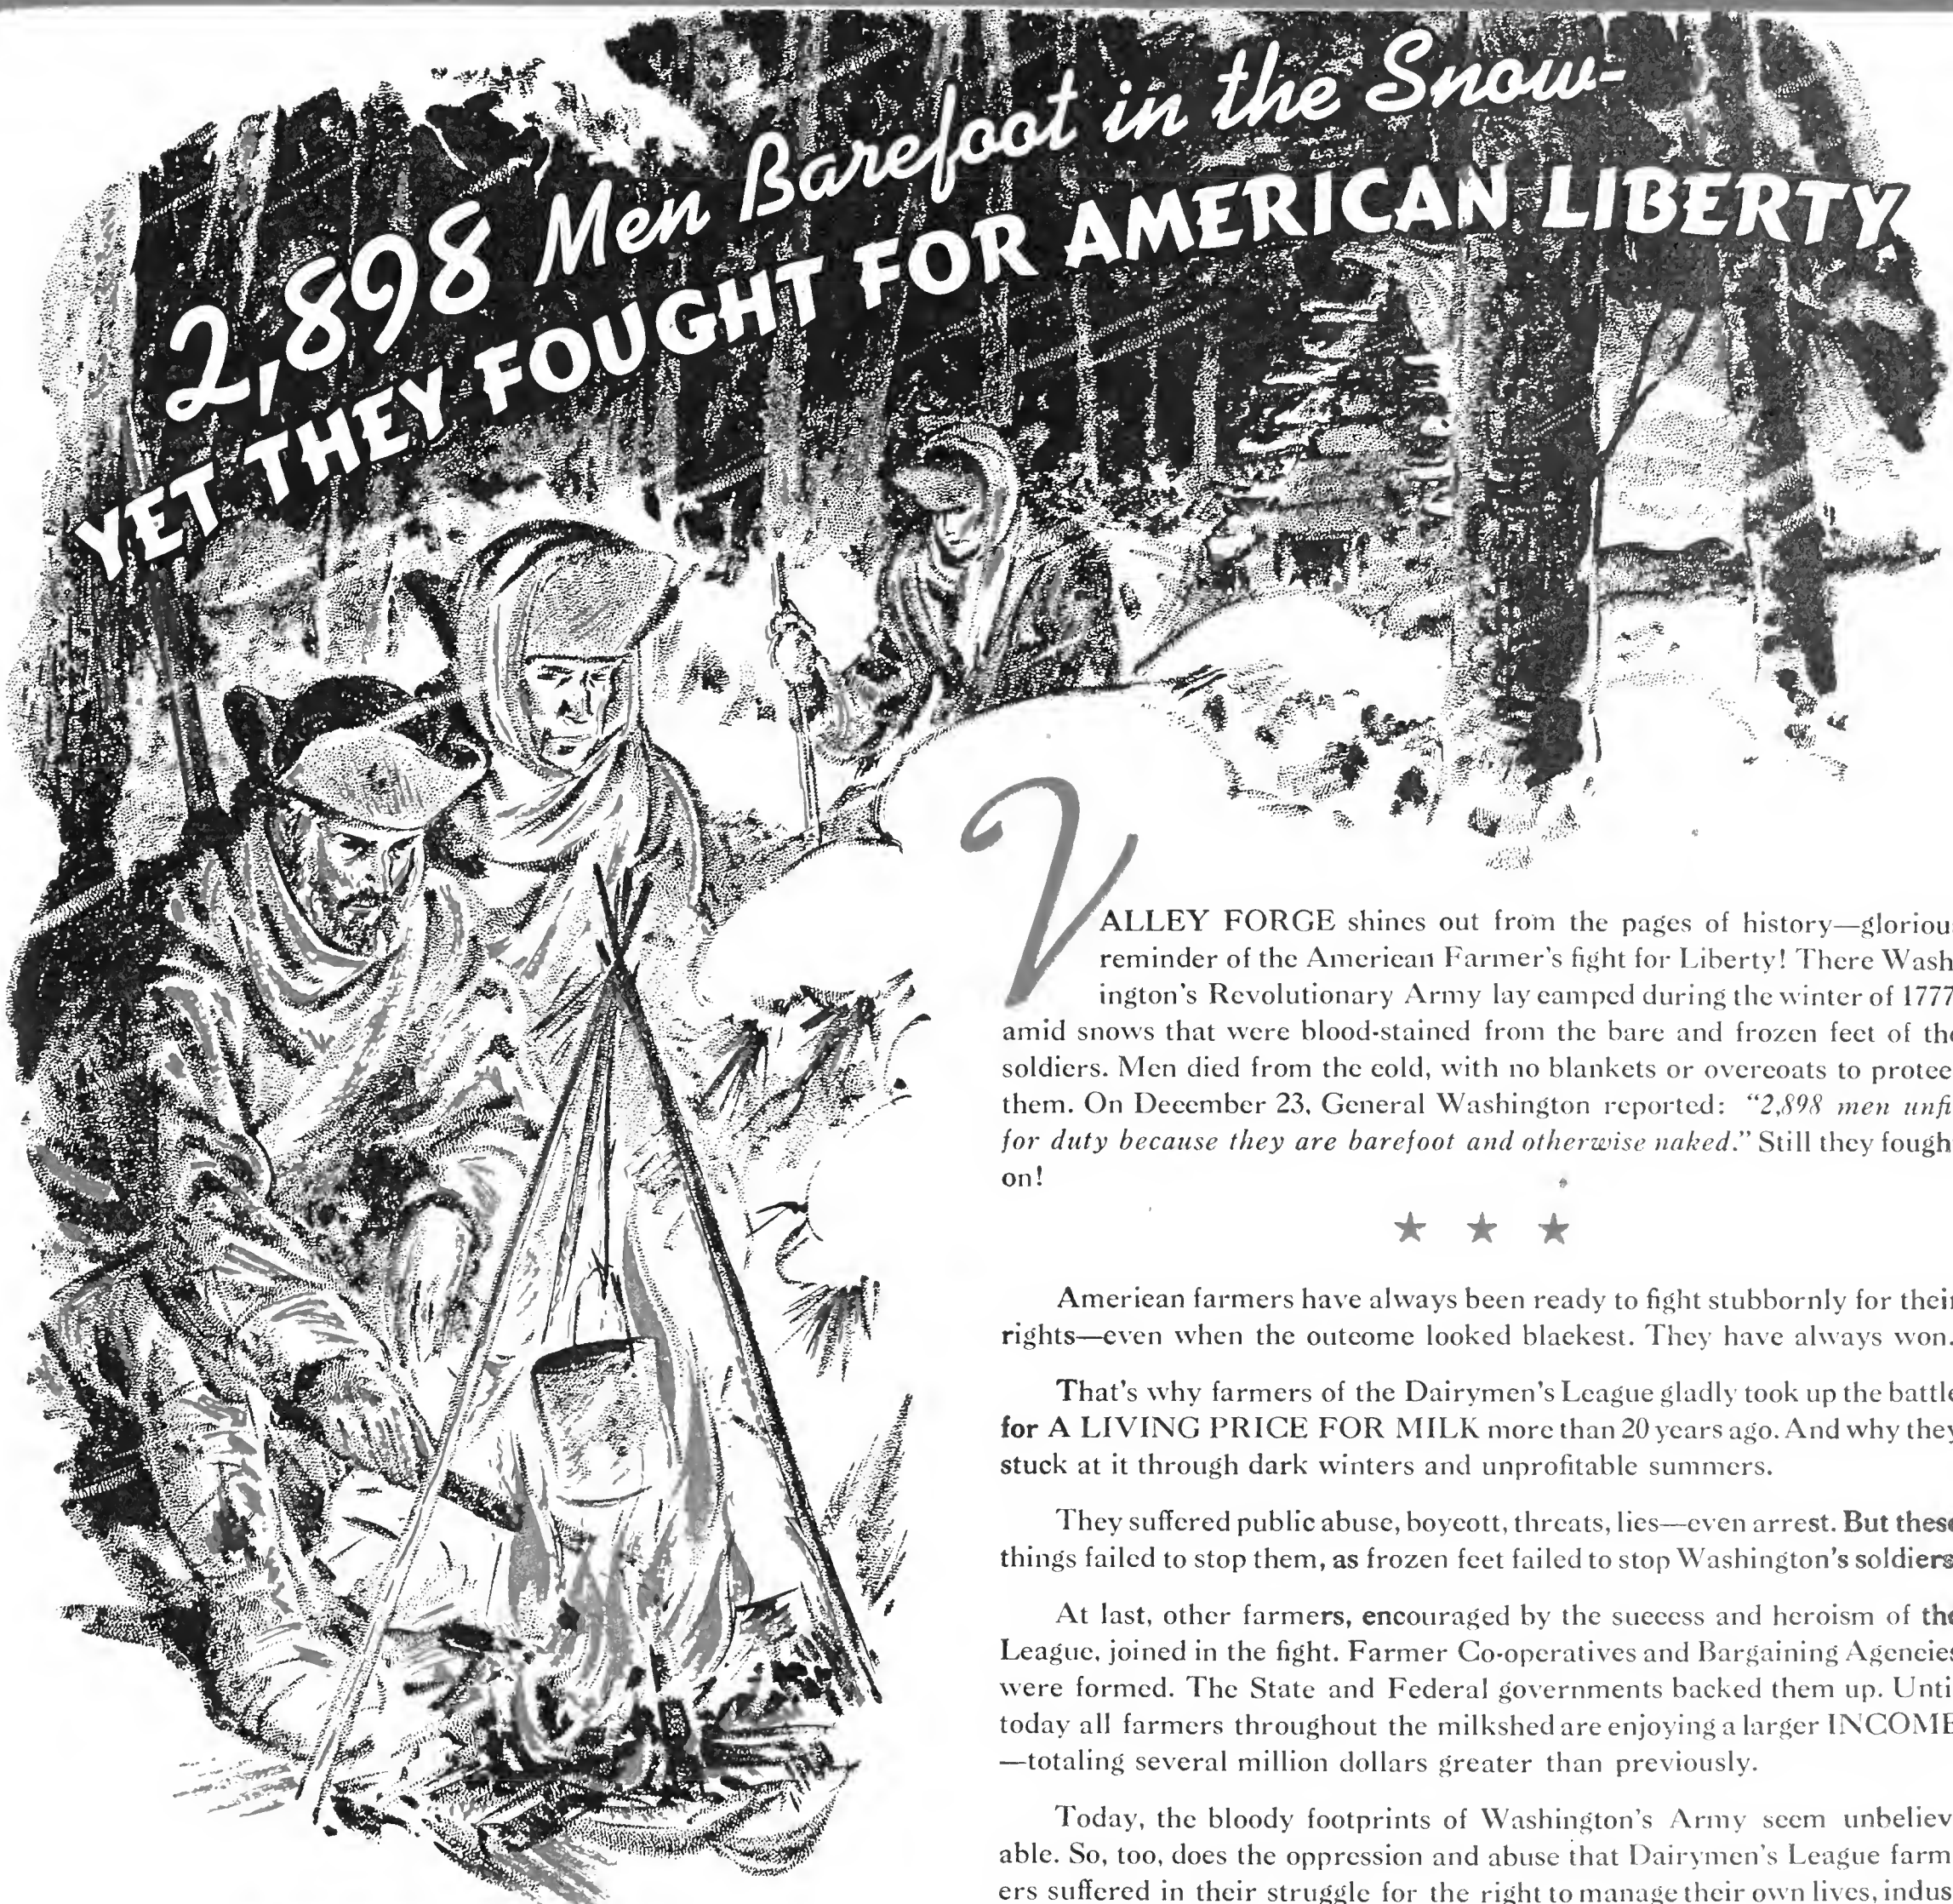

union to cover five of its six plants; despite one Board member's protest, the sixth plant at which no workers' election had been held was lumped along with the other five in a collective bargaining contract. One field investigator for the NLRB was instructed to make employers "fear" him.

It seems obvious that reforms in administration of labor laws are urgent, that in practice judging and mediation should be separate functions, that the board should consist of at least five men whose office terms are staggered, and that investigators should be chosen only on the basis of specified experience.

Certainly the Wagner Labor Relations Act needs amending or rewriting with a procedure set up to make negotiation of disputes easier, with licenses specified for labor organizers, with opportunity for both sides in a dispute to talk to the worker, with penalties for misrepresenting facts, and, most important, with chance for the worker to make his own decision on strike questions.

If organized labor can show itself fit to handle its own power—if workers can shake off the grip of the Labor Monopoly—farmers will be the first to commend union growth. Meantime they will fight to the last cornfield the Monopoly's attempt to invade agriculture. They strongly oppose as well the unfair attitude of government agencies which aid the Monopoly, and show little concern for the employer or the worker.

2,898 Men Barefoot in the Snow— YET THEY FOUGHT FOR AMERICAN LIBERTY

VALLEY FORGE shines out from the pages of history—glorious reminder of the American Farmer's fight for Liberty! There Washington's Revolutionary Army lay camped during the winter of 1777, amid snows that were blood-stained from the bare and frozen feet of the soldiers. Men died from the cold, with no blankets or overcoats to protect them. On December 23, General Washington reported: "2,898 men unfit for duty because they are barefoot and otherwise naked." Still they fought on!

American farmers have always been ready to fight stubbornly for their rights—even when the outcome looked blackest. They have always won.

That's why farmers of the Dairymen's League gladly took up the battle for A LIVING PRICE FOR MILK more than 20 years ago. And why they stuck at it through dark winters and unprofitable summers.

They suffered public abuse, boycott, threats, lies—even arrest. But these things failed to stop them, as frozen feet failed to stop Washington's soldiers.

At last, other farmers, encouraged by the success and heroism of the League, joined in the fight. Farmer Co-operatives and Bargaining Agencies were formed. The State and Federal governments backed them up. Until today all farmers throughout the milkshed are enjoying a larger INCOME—totaling several million dollars greater than previously.

Today, the bloody footprints of Washington's Army seem unbelievable. So, too, does the oppression and abuse that Dairymen's League farmers suffered in their struggle for the right to manage their own lives, industry and income. But let no one believe that the lessons these things teach have been forgotten. For League farmers of 1940 are as ready as their forefathers of 1777 were, to fight to the last ditch should tyranny and oppression lift their heads again.

DESCENDANT of REVOLUTIONARY SOLDIER says that *Both Liberty and Dairymen's League are Founded on Cooperation*

"The first member of my family came to America from England in 1720," says William Barden of Mansfield, Pa. "Back in England, the Barden Estate once comprised thousands of acres with a castle and a chapel, but a member of the family opposed William the Conqueror and it was all confiscated. So the first Barden in America came seeking, as he said, 'liberty of conscience and freedom of action.'"

"I was one of the first members of the Dairymen's League in this area. I helped to raise money to buy plants when this co-operative movement first started. And I traveled throughout Eastern New York and Vermont talking cooperation. I, too, believe in 'liberty of conscience and freedom of action.' And I believe that these rights and privileges come from cooperation with your neighbor."

CIRCULATION DEPARTMENT,
10 North Cherry St., Poughkeepsie, N. Y.

By J. F. (DOC.) ROBERTS

PUREBREDS vs. good breeding with purebred sires is a question none of us should talk too freely about, because conditions still alter cases. Yet neither should we straddle the fence.

In my humble opinion, the average farmer should maintain healthy, sizable, good-keeping, usable foundation stock in his females, whether horses, cows, sheep or hogs. Then he should be determined and never falter from the practice of breeding these animals to purebred sires. This is really good breeding practice.

* * *

Over 8,000 men are now on our airplane factory payrolls just here in Buffalo; our steel mills are running 100 per cent; foundries running day and night shifts, and that is what is making the most satisfactory demand for livestock that we have experienced in a long time. This demand is expressed in the feeder market more than in the fat stock market. We have already bought for October delivery over 20,000 feeder lambs to go into our northern

New York territory, and it is most unusual to contract so far ahead for future delivery of so many. Feeding cattle have already gotten away from us, good Texas steer calves selling down there from \$10.50 to \$11, with heifer calves \$9.50 to \$10.50. Hogs are lagging, with a great many coming to market weighing under 160 lbs., and selling the lowest, and showing how badly the confidence of the hog man has been broken in the past few years.

* * *

A regular Iowa cattle feeder told me the other day that, with the government order, he had sealed his corn for the past two years and had fed no cattle; that now his farm was full of this sealed corn, cattle were higher than ever. Taking off and putting nothing back had hurt his farm and his yields so that he now had to go to feeding cattle again, and there he was. This is only one of many just such cases in our Mid-West. Cattle feeding has made plenty of money the last two years.

Western yearling ewes are still selling at a price per head which, with a good lamb next spring at the present price and wool at its present price, will not only pay for this ewe the first year but pay for its keep as well. This does not mean that any old ewe in the neighborhood should be picked up for breeding purposes. Generally speaking, these picked-up ewes will not make money.

Feed for Efficient Pork Production

By JOHN P. WILLMAN,
Cornell University.

PORK PRODUCERS, both large and small, should be extremely interested in producing pork as economically as possible. The hog is known as the most efficient meat-producing farm animal but his efficiency as a pork producer may be affected considerably by his owner.

Experience has shown that pigs will make more rapid and economical gains on some rations than they will on others. Dry lot-fed pigs will require about 325 to 400 pounds of an adequate swine ration to produce 100 pounds of gain in live weight. The same kind of pigs fed in dry lot would need about 600 pounds of feed for 100 pounds of gain if their sole concentrated feed was corn.

A ration of yellow corn, meat scraps, linseed meal, ground alfalfa and minerals usually gives excellent results when fed to pigs that do not have access to good pasture. Some ground oats may be substituted for part of the corn and many feeders may wish to add some wheat middlings. Barley may be used in place of the corn. Digester tankage or fishmeal may be used in place of meat scraps and soybean oil meal or cottonseed meal may be substituted for the linseed meal. The ground alfalfa or clover hay is not needed if the pigs have access to pasture.

It is not necessary to include any meat scraps or linseed meal in the ra-

tion if a gallon of skim milk or buttermilk per pig daily is available. When fed at this rate to growing and fattening pigs the skim milk and buttermilk are worth, at the present time, about thirty cents for one hundred pounds f.o.b. your hog trough. Whey is worth about one-half as much as skim milk or buttermilk. A ration of ground barley and whey is an excellent ration for 125 pound fattening pigs. Younger pigs do not have the capacity to consume all the whey they need to balance their diet. Some feeds such as meat scraps, linseed meal, or middlings should be fed in addition to the barley and whey, at least until the pigs weigh a little over one hundred pounds each.

Pasture

Somewhat less dairy by-products or other protein rich feeds are needed when the pigs have access to good pasture. The use of good pasture also makes it unnecessary to include ground alfalfa hay in rations for swine. A summary of many experiments shows that an acre of clover or alfalfa which is pastured by growing or fattening pigs is equivalent to nearly 450 pounds of tankage and about 20 bushels of shelled corn fed to pigs in the dry lot. Most farmers would agree that this is a fair return for an acre of such crops.

Mineral Mixtures

The use of minerals in the ration of the hog is recommended in most cases. It is not necessary to feed expensive or complicated mineral mixtures because a home-mixed mineral supplement is all that is needed. A mixture of 40 pounds of finely ground limestone, 40 pounds of a ground steamed bone meal (feeding grade) and 20 pounds of salt is recommended. If you have experienced trouble from hairlessness in new born pigs then it is best to use iodized salt in the mixture fed to the bred sows. An easy way to feed a mineral mixture is to place it in a mineral box that is securely fastened in the hog house where the swine may have free access to it. Many pork producers prefer to add about one and a half or two pounds of this mineral mixture in each 100 pounds of the dry feed mixture.

"Which one did you say was your uncle?"

HELPS PROTECT YOUR FLOCK

AGAINST THE SPREAD OF
COLDS · ROUP · BRONCHITIS

Lost birds mean so much lost money. Many birds die from winter respiratory diseases that could be saved if proper measures were taken in time. Don't wait for these profit-killing diseases to get hold in YOUR flock. Start NOW to B-K your birds and equipment to promote higher sanitation, to help prevent spread of disease when it starts. When B-K Powder, the wonderful germ-killing agent, is dusted in the air above your birds, it makes them sneeze and cough, loosening the mucus, thus helping to relieve the congestion that so frequently leads to strangulation.

Add B-K to Drinking Water

One sick chick may infect your entire flock. Add B-K Powder to your birds' drinking water every day to help prevent spread of disease among flock. The daily use of B-K in the drinking water is helping to save millions of chicks and adult birds.

Disinfect coops and brooding houses by the regular use of B-K Powder, according to directions, to aid in preventing transmission of diseases.

Write for FREE sample

NEW YORK BOYS AT CAMP MINIWANCA

This group of New York State boys attended Camp Miniwanca at Shelby, Michigan, last summer. The boys are: Back row (left to right): Glenn E. Underwood, Instructor of Agriculture, Randolph, N. Y., who accompanied the F.F.A. group; Paul McCabe, Buffalo, Purina Representative; Clayton Young, Randolph, last year's president of the state F.F.A. organization; Norman Drummond, Gouverneur, last year's secretary of the state F.F.A. organization; and Marshall Dawes, Akron.

Middle row (left to right): Francis Warner, Albany area 4-H Club representative; Alton Borden, New York State College of Agriculture; Thomas McMullen, Worcester, F.F.A. representative; Richard McKee, Perry.

Front row (left to right): James Compton, New York City; Howard Brace, Randolph, F.F.A. representative; James Crolle, Buffalo, G.L.F. representative.

"KNOW" IS BETTER THAN "GUESS"

Many a man, when he begins to weigh the milk from his cows, finds that his previous snap judgment as to which were the best producers has to be revised. The RALSTON PURINA COMPANY, 898 Checkerboard Square, St. Louis, Mo., are offering a milk scale to their patrons at the especially low price of \$4.00. Also available from Purina dealers are milk record sheets at no cost. Dairymen who have tried it agree that weighing the milk from each cow is the first step in building up a better producing herd.

HEN TALK

It is remarkable how rapidly the poultry industry has expanded in the Northeast both in numbers of hens and in the quality of the care which they are getting. But no matter how good a poultryman a man is, a file of bulletins and pamphlets will help solve some of the problems that come up. The COOPERATIVE GLF EXCHANGE, Ithaca, New York, have just put out a new poultry hand book called "The GLF Patron, Poultry Edition." This is available at GLF stores or agencies, or can be secured direct from the Ithaca office.

PLAN BEFORE YOU BUILD

On many farms fall is building and repair time. The first step in building is to have a plan. In making plans, you will find the booklet "Greater Farm Profits from Better Farm Buildings" very helpful. To get it use the coupon you will find on page 11 of the September 14 issue, or write to WEYERHAEUSER SALES COMPANY, Box 514, Ithaca, New York.

JUNIORS GET MEDALS

At the annual convention of the Junior Vegetable Growers of America the GREAT ATLANTIC AND PACIFIC

TEA COMPANY entertained 190 young delegates at a great banquet. At this banquet prizes were awarded to winners in contests in grading, judging and identification. The Ohio team won first honors, but several northeastern vegetable growers were close to top. They were: Robert Simoni of Norwood, Mass.; Zelda and Louise Mullen of Stafford, New York; and Robert McKelligott of Florence, Mass. Among the speakers at the banquet were: W. R. Ward of the Atlantic Commission Company and William Leach, manager of the Atlantic Division of the A & P.

AN UNSEEN ENEMY

Internal parasites are an unseen drain on any animal they afflict. PARKE, DAVIS & COMPANY, Detroit, Michigan, Animal Industry Dept., Desk N-72-1, will be glad to send you their new booklet No. 650 giving information on ridding livestock, dogs and foxes of worms.

FOR BETTER ROADS

"Maintenance Tips on Calcium Chloride Surface Consolidated Roads" is the title of a new pocket-sized booklet which can be obtained without cost from the SOLVAY SALES CORPORATION, 40 Rector St., New York City. While it is designed primarily as a reference for those engaged in the actual work of maintaining roads, it is valuable to anyone interested in better roads. Copy will be sent to any subscriber who requests it. Drop a post card to the Solvay Sales Corporation.

WHITE GOLD

"White Gold for the Farmer's Profit" tells how to use salt on the farm for best results. It is published by the INTERNATIONAL SALT COMPANY of Scranton, Pa., and on request will be sent to any reader of American Agriculturist without cost.

John W. Thomas, president, (right) and Harvey S. Firestone, Jr., vice-president, of The Firestone Tire & Rubber Company, stand inside the largest tire ever built. This 36.00-40, 34-ply tire for huge earth scraping and hauling equipment is 10 feet high and 39 inches in cross section. Its carrying capacity is 55,200 pounds.

The tire weighs, with its tube and flap, 3,646 pounds, which is greater than the weight of most passenger cars. At the thickest part of the tread, the tire measures 5 inches of rubber and cord fabric.

To build this one tire, more than one and one-half bales of cotton, more than three-quarters of a ton of crude rubber, half a ton of compounds and 60 pounds of steel wire were used. These raw materi-

als are labeled in the picture.

The wheel required for this gigantic tire will be 40 inches in diameter, 26 inches wide, and it will have a flange 6 inches wide. The number of men required to mount or change the tire has not yet been determined.

Your Questions Answered

Culling the Loafers

In culling out the laying flock, should we pay more attention to pigment or to the rate of molting as shown by the loss of wing feathers?

Both loss of pigment and rate of molting are useful clues in culling hens, but in my opinion the rate of molting is the more valuable. I say this because any hen that lays much more than 100 eggs a year will have little pigment except as it is put back into the legs and beak when she stops laying and begins to molt. On the other hand, any bird that defers her molting period until late in the fall is pretty sure to be a good producer. It is also known that the best producers tend to molt faster, so if she sheds two or three wing feathers at a time, it is a good sign that she is a hen to keep.

Of course, a hen that has stopped laying because she is going through a complete molt is a rather sorry looking individual and you may be tempted to sell her, but it may be that she will grow her new feathers quickly and get back into production a little faster than the hen who loses her feathers deliberately and therefore looks a lot better.

Selling Eggs

How can a poultryman check on the reliability of the man to whom he ships eggs?

In the first place, most states have a licensing and bonding law whereby any dealer who buys farm produce on commission has to put up a satisfactory bond to guarantee payment to producers. However, it is not necessary for dealers who buy outright to become bonded. There are one of two commercial rating concerns, and the simplest way to get the information is to write to the American Agriculturist Service Bureau and have them check for you. There are a couple of things that you should not do. One is to ship eggs without checking to a man who promises you a premium over the market. The second is to ship to a man and let him get very far behind in his payments. This is an old scheme. The dealer apparently figures that if he gets behind in his pay for three or four cases, the poultryman is going to continue to ship for fear that he won't get pay for those already sent.

The third thing to avoid is selling to a man who picks them up and who, after the eggs are all loaded, tells you

that he is short of money and will pay you the next time he comes around. I might add that once you have discovered a buyer who treats you well, it is only fair to stick with him because, over a period of a year, you will get a better price than you would in trying out a new buyer every week or two.

Outwitting the Cannibals

Which of the various devices for preventing cannibalism do you feel is best?

This is entirely a matter of personal opinion. The three devices are, of course, vent shields, guards to put on the beaks, or so-called "specs" which interfere with the hens' vision. They are all used successfully by many poultrymen who have some reason for the type of appliance they prefer. The important thing, however, is to use one of these devices (you can pick your own) if an attack of cannibalism breaks out which you are unable to control. In fact, plenty of poultrymen use one of these devices as a preventative without waiting until they get an actual outbreak.

* * *

Keep Hens' Weight Up

Is there any relation between the weight of hens and the number of eggs they lay?

Strictly speaking, the ability to lay a large number of eggs is more a matter of heredity than it is of weight, yet most poultrymen prefer hens which are rather heavy for the breed. While we are speaking of weight, there is another angle which is even more important—namely, that if any hen begins to lose weight, she is pretty likely to stop laying and go into a molt. As a check, a good many poultrymen mark eight or ten hens in each pen and weigh them once a week. If hens are losing weight, they feed a little heavier. The time to prevent any slump is before they stop laying rather than after because once they stop and molt it takes some time to get them back into production.

* * *

Visitors Welcome?

Is it wise to allow visitors in the hen houses and on the ranges?

There is a good deal of difference of opinion about this among poultrymen. Some are very particular and do not like to have visitors at all. Others pay little attention. I think any poultry-

man is justified in refusing admittance of visitors either to growing ranges or hen houses, but that is only a gesture unless the poultryman himself takes the proper precautions to see that he does not visit other poultry farms and then travel all around his own range without disinfecting or changing his shoes.

Holding Back Pullets

I do not believe it pays to try to hold back pullets so they will not lay too young. What I do believe in is this—do not try to rush them to lay too young. Here is how I feed:

I have 75 Red Rocks 5 months old the 10th of September and have had as high as 10 eggs a day. I got two yesterday that would have weighed almost 22 oz. to the doz. Some of the pullets weigh close to 6 lbs.

The first 10 days I feed rolled oats, then growing mash, and at 15 days I begin to put in some fine grain and grit. At 4 weeks I feed about half grain, sometimes all corn and sometimes fifty-fifty corn and wheat. If I think they are not fat enough for the size of them, I feed more corn. I try to watch them to see that they have plenty of flesh on their backs, and feed growing mash until after they start to lay and have reached a good size. My 75 weigh from 4½ to 6 lbs. Now I am feeding almost half laying mash and the balance 3 parts of corn to 1 part of wheat. I weigh the birds occasionally to see that they are holding up on weight.—D. W. Phelps, Bridgewater, N. Y.

Poultry at the Syracuse Fair

PROFESSOR L. M. HURD of the New York State College of Agriculture tells us that the Poultry Show at the State Fair, while not the largest in history, was one of the best. One record was made, namely that during the week of the Fair not a single bird in the Show became sick.

In recent years there has been unusual interest in the Egg Show. There is no entry fee required, but the eggs become the property of the Fair management. After the Fair, these eggs were sent to the Onondaga County Orphanage for their use.

Professor E. Y. Smith, who had charge of the Turkey Show, says there were more good meat type turkeys this year than there have ever been before. The primary purpose of the Turkey Show is to emphasize the need for a better meat type of turkey.

A number of special prizes for the Production Show at the Fair were offered. Here are the show champions:

Cock—Won by George Bruzee, Geneva, N. Y. (Barred Plymouth Rock).

Hen—Won by Mrs. Harold F. McGuire, Bath, N. Y. (Rhode Island Red).

Cockerel—Won by Emma Terry, Ninevah, N. Y. (Rhode Island Red).

Pullet—Won by Farley Porter, Sodus, N. Y. (White Leghorn).

Trio (old)—Won by Farley Porter, Sodus, N. Y. (White Leghorns).

Trio (young)—Won by Harold Alexander, Union Springs, N. Y. (Rhode Island Reds).

Largest and best exhibit—Mediterranean breeds—1st, Farley Porter, Sodus, N. Y., (White Leghorns); 2nd, H. A. Borgeldt, DeRuyter, N. Y., (Brown Leghorns).

Largest and best exhibit—American Breeds—1st, A. E. Danish, Troy, N. Y., (New Hampshires); 2nd, George Bruzee, Geneva, N. Y., (Barred Plymouth Rocks).

Largest and best exhibit in the Production Show (cup given by Beacon Milling Co., Cayuga, N. Y.)—H. A. Borgeldt, DeRuyter, N. Y.

Largest and best exhibit of New Hampshires (cup given by Andrew Christie, Kingston, N. H.)—A. E. Danish, Troy, N. Y.

Fall Clothes

THE HOME SEAMSTRESS is right in her element this season with a market full of beautiful materials from which to choose and smart patterns available for every possible purpose. These, plus time and ingenuity on her part, can make her as smartly dressed as the women on Fifth Ave., for smartness is a matter of the way things are worn as well as of materials and styles.

Generally speaking, fabrics this season are smoother, simpler and with a drapery quality than heretofore. That applies both to coats and dresses, whether of the dressy or sports type. Lines, also, are softer and more natural. The silhouette is fitted and narrow, straight and slim. Any fullness is restrained, either concentrating at the back or the front in order not to detract from the straightness. Fullness is achieved by rolled gores, unpressed pleats or by pressed pleats in the greatest possible variety. The waistline is slightly longer but definitely marked, while the bodice always suggests easy fit.

The side drape varies from the extreme side-saddle drape to a very much modified one which only suggests it. Shoulder line is less accentuated than formerly, but is still padded. Fur collars have a round rather than a high look; the plastron and yoke of last year are gone, the shawl collar taking their

To Order These Patterns :

Side-Button Jacket Suit Pattern No. 3470—sizes 12 to 20. Size 16 requires 4 yards of 39-inch fabric for the skirt; 2½ yds. for the jacket.

Hat Pattern No. 3466—one size adaptable to any headsize. Material requirements on pattern envelope.

Tailored Suit Pattern No. 3413—sizes 16 to 48. Size 36 requires 3½ yards of 54-inch material.

Princess Frock Pattern No. 3444—sizes 12 to 40. Size 16 requires 3 yards of 54-inch fabric.

Casual Coat Pattern No. 3471—sizes 14 to 42. Size 36 requires 2½ yards of 54-inch fabric.

Versatile Frock Pattern No. 3406—sizes 12 to 40. Size 16 requires 4 yards of 39-inch fabric for draped dress (at left); 3½ yards for plain skirt version (at right).

All-Purpose Frock Pattern No. 3469—sizes 12 to 40. Size 16 requires 3¼ yards of 39-inch material.

Slimmer Silhouette Pattern No. 3467—sizes 14 to 46. Size 36 requires 3¾ yards of 39-inch fabric.

Panel Front Dress Pattern No. 3468—sizes 16 to 50. Size 36 requires 3 yards of 39-inch fabric with 1 yard of contrasting.

School Dress Pattern No. 3401—sizes 6 to 14. Size 8 requires 2¼ yards of 39-inch fabric with ¾ yard of contrasting.

TO ORDER: Write name, address, pattern size and number clearly and enclose 15c in stamps. Address Pattern Dept., American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our new fall and winter catalog.

Fall Clothes

(Continued from opposite page)

place. Suit jackets are longer, covering the hips. Pockets are important, mainly the novelty patch kind.

As for materials, they are smooth, soft, and rich, duvety appearing once more. Sports and casual coats feature fleeces, plaids, tweeds, camel's hair and mannish effects. Dress woollens are soft, sheer, pliable and will not scratch, running chiefly to soft Jersey-like woollens which drape and tailor well. Rabbit's hair types, wool crepes, basket weaves and novelties with fine stripes, checks or tweed effects are seen. Silks do not rustle and bustle but are now sheer, drapy and soft, suggesting woollens in texture and weave. Satin and velvet will be used; the new thin tissue velvet is capable of being pleated and shirred without bulk. Velveteen and corduroy appear in suits and sports clothes.

Black leads off in the color parade, with browns, blues and greens following. Indian Earth is a brown much in the limelight, while a new greyed blue is known as R.A.F. or carbon blue. The wine shades appear in casual coats, dresses and accessories. Sports clothes feature many plaids, some of them in rather weird combinations of color.

Interest is centered on hips and waistlines which have a neat, small look. Also waistlines are decidedly lowered. Midriff treatments are very popular. Belts, especially small ones, are numerous. Hip yokes, gathered drapes which encircle the figure, pepum effects, puffed, pouch or large pockets also feature this season's clothes. Skirts remain the same length having fullness without billowing. Trimming is often extravagant, appearing in the form of novelty ornaments, buttons, belts, embroidery, sequins and jewels.

Evening dresses are either of straightline simplicity or are of the Lillian Russell type with glamour galore. Bodices are soft, have slightly longer waistline. Dinner dresses often have long sleeves, although short sleeves are still used. Necklines are fairly high but use the Vee and heart-shaped also. Fullness is concentrated in the front or center back.

Simplicity is the keynote for gloves. Suedes and unfinished leathers are first in importance, followed by other skin gloves; fabric is used for the novelties.

Jewelry, necklaces chiefly because of the high necks, will be a bright feature of costumes. The big necklace is out. Jet takes the lead while fringes, tassels and antique effects also come to the fore. Lapel gadgets are still popular. High, close fitting surplice collars of the bib type edged with pleated ruffles push forward in neckwear. Yokes and panel front collars and rever V-shaped collars still lead. Faille, Venice and other laces, piques, georgette and nets are the main materials used.

Sleeves on blouses may be long for the dressy type, pushed up or short on shirts and school girl blouses. Shirts show pleatings, tucks, pockets and have

softer shoulders. Dressy blouses show draping and very ingenious necklines.

Hats cover the back of the head almost to the hairline. Since the pompadour has become fashionable hats, whether beret, turban, cap or brim model must be designed to show it off. Dressmaker details, such as tucks or stitching, bloused crowns, many pom-poms and veils, quills, feathers and bands of bright grosgrain ribbon, are some of the distinguishing trims. Shapes are pillboxes, accordion crowns, toques, Spanish sailors with enormous brims and porkpie type.

Bags are bigger than ever. They are huge, lavishly draped with an abundance of soft flowing folds and pleats in the more dressy types. The tailored bags are usually of the top handle variety.

JACKET SUIT No. 3470 emphasizes some of the season's best points, little girl collar, side front closing, interesting pockets, nipped in waist and easy swinging yet slim looking skirt. Furthermore, twin fabrics can be featured—plain for the jacket, plaid for the skirt.

Clever fingers can do much with Hat Pattern No. 3466 which includes cap, halo beret and pillbox illustrated here on different figures. With a perky quill or feather or some other novelty trim, this one pattern may serve to top off any outfit.

The larger woman may wear a suit if it is designed especially for her. Suit Pattern No. 3413 is just that, having a slim skirt and longer jacket with deeply rolling lapels.

Sheer wool will go anywhere; Princess Frock No. 3444 is exceedingly smart with its high pockets, new yoke and panel front.

The man-tailored jacket is exemplified in Pattern No. 3471. Its boxy casualness is one of this season's musts.

A basic dress is a great asset in any wardrobe. Frock Pattern No. 3406 will answer that purpose if made as shown in the second drawing (right); it yields a dressy afternoon frock if made up as shown in the first illustration (left) with side saddle drape, one of Fall's new features. Make it basic or make it dressy to suit yourself.

The all-purpose frock is a blessing to any woman. This season says that it shall have a soft neckline treatment and be slimly becoming. Such a frock is possible with Pattern No. 3469.

The more mature figure requires careful choice of designs. Dress Pattern No. 3467 is chock full of style and yet is decidedly slimming, besides being easy to construct.

The large woman gets another break in Dress Pattern No. 3468, with its smart contrasting panel which is decidedly flattering to the more mature figure. The soft neckline, the ease across the bust, and the slim skirt are other desirable features.

The school girl gets her innings in Dress Pattern No. 3401. Use one of the very popular plaids and put a perky bow at the neck if you want to please her.

It takes more than kisses to keep a man happy!

TRY ME!
I NEVER LET YOU
DOWN-OR YOUR
CAKE EITHER!

Davis' famous double action makes success doubly sure. Double economy, too! You pay less per can—you use less per baking! Try Davis. See for yourself. DOUBLE your money back guaranteed if Davis doesn't make the best cake you ever baked!

FRAGRANT SPICE CAKE

2 cups sifted flour	1 cup milk
2 level teaspoons Davis Baking Powder	1 teaspoon vanilla
1/4 teaspoon salt	1/2 cup shortening
1/4 teaspoon nutmeg	3/4 cup white sugar
1/4 teaspoon cloves	1/4 cup brown sugar
1 teaspoon cinnamon	2 eggs separated

Cream shortening and gradually add sugar, beating well. Add well beaten egg yolks. Beat until rich and creamy. Sift dry ingredients together twice. Add alternately with milk to which vanilla has been added. Fold in stiffly beaten egg whites. Bake in square pan, greased and lined with Cut-Rite Waxed Paper, in moderate oven (350° F.) about 45 minutes. Frost with Seven Minute Frosting or Caramel Frosting. Decorate sides of cake with coarsely chopped walnut meats.

RICK REDMOND

"The wife must have fresh eggs no matter where we go."

CHECKING UP on the Neighbors

By ROMEYN BERRY.

SOME nights after supper, my wife and I get into the car and drive around the town for half an hour to check up on our competitors; to see how their crops and the state of their farm work compare with our own. The supper dishes can wait thirty minutes, I guess, once in a while.

Our neighbors aren't our competitors in any sense of envy or antagonism, but most of them are good farmers, and the way things are going with them gives us a pretty good yardstick by which to measure our own progress and shortcomings.

Take potatoes! We cultivated our potatoes conscientiously for quite a while, but some time in August, along with the grain harvest and the threshing, the weeds got a little ahead of us. Not many, but a few here and there! If you bend over and sight along the tops of the vines, you can see quite a lot of things that stick up higher than any potato vine ever went. We don't think they'll hurt the crop, but naturally, we're self-conscious about them and glad that this year we put the potatoes in back of the corn where the neighbors can't see them from the road when they drive by to check up on us—the same as we check up on them.

The other evening we drove by Mr. "Potato" Smith's place over on Christian Hill, and ever since we've felt a lot better about our potatoes. Mr. Smith has a deserved reputation for potatoes, and is the only man in our town who ever received *American Agriculturist's* award as "Master Farmer." His potatoes, of course, looked clean and vigorous and well cultivated when we drove by, but they had some weeds in them—not many, just a few here and there—and you can't imagine what solid comfort, what peace of mind, we derived from that reassuring discovery. Anything that's good enough for Mr. "Potato" Smith on Christian Hill is certainly nothing for a little farm like Stoneposts to stay awake nights and worry about.

The other morning, too, I wasn't exactly amazed—after I'd waked up in the night stiff with cold and had fetched another blanket from the spare room—I wasn't exactly astonished to see a white coating on the barn roof and to find the squash vines in the garden black and wilted. We felt guilty about that, even though none of us likes squash much. Perhaps if we'd had more experience, we'd have anticipated that touch of frost and been alert enough to cover the squash with newspapers before we went to bed. But after supper, when we drove by and saw limp squash in Mr. Westervelt's garden and in Mr. Ginnever's too, we perked up a good deal—felt that nobody could accuse us of neglect or of lack of forethought if good farmers like Mr. Ginnever and Mr. Westervelt had been caught similarly flat-footed by the same unexpected change in the weather.

Some evenings, of course, our spying trips on the neighbors work the other way around and leave us far from smug and self-satisfied. Sometimes what we see acts just like a bee sting on the conscience, a stimulating spur to the ambition. One may have figured that he's well up to schedule in getting his fields fitted for wheat, only to drive by and find out that Mr. Abe Van Liew is a full week ahead of him; has his wheat land all dragged, smoothed, patted and ready to drill. That's a very annoying discovery because up our road Mr. Van Liew has been suspected for years of having advance information on both the weather and the market. Any time he's putting in wheat earlier than usual, he has a good reason for it, and ordinary guessers like ourselves had better speed up and keep

as closely as we can to Mr. Van Liew's coat tails.

Perhaps snooping on the neighbors that way, and checking up on their crops, isn't quite nice (like listening in on the party line telephone) but I guess most everybody does it in one way or another and gets a good deal of benefit from it without injuring anyone. One can learn, of course, from books, or the college bulletins, *American Agriculturist*, or the County Agent, but education so acquired doesn't bite in and stick to quite the same degree as do pointers picked up by watching smart neighbors and checking up on their results and imitating them. We don't regard that half hour spent in driving around the town after supper as wasted—not the least bit. We pick up something important every time we do it.

The practice proves, too, that while every farmer wants to earn a living and make money (and thinks that's the only reason he farms at all), his chief interest really centers in raising crops or animals, in trying to produce a little bit more and a little bit better food for the millions than his neighbor does. That's his chief incentive and the main source of his satisfaction all the time. The other things are incidental. We don't check up on whom the neighbors sell to or what price they get for their stuff; it's their crops we are peeking at when we drive by after supper and how they set about getting such nice ones.

Even though it all figures out the same in dollars and cents, any properly constructed farmer gets more satisfaction from raising a big crop at low prices than from a short crop of measly nubbins at high prices. We've been living lately in a little cycle of surplus production and low prices, but it wouldn't take more than a sneeze to turn a surplus into a shortage that would make the crops up our road pretty important again to a good many more people than just the neighbors and ourselves.

There isn't much of anything we can do about prices, but we can do something about improving the soil and the crops so as to be ready when the

tide turns. We're doing that (trying to, anyway) in many ways, including checking up on the neighbors and imitating the more progressive and energetic ones.

And I strongly suspect the neighbors don't mind the least bit—rather like it. Take Mr. Van Buskirk and his cabbages; five acres of the biggest, finest, evenest and cleanest cabbages you ever saw. I've no doubt Mr. Van Buskirk's first choice would be to get about \$50 a ton for them, but next to that, he likes to see my wife and me (when he looks out the window—doing a little honest peeking on his own account) drive up the road, slow down, and finally stop to enjoy those splendid cabbages. He knows we're talking about trying cabbages ourselves next year and are wondering how much of his success with them was due to good soil, good cultivation, and plenty of fertilizer, and how much to just dumb luck in the weather. You can't tell me that Mr. Van Buskirk doesn't enjoy having us do that—next, of course, to getting \$50 a ton for his cabbages.

Outlook Uncertain for Potato Prices

(Continued from Page 2)

trade by Ohio growers. The situation may be changed somewhat this year in view of the fact that Ohio has started a new marketing program with views to packing consumer size units. The Ohio crop is lighter than last year so that this may offer the first major outlet for Maine. Taking everything into consideration, the outlook for potato growers in Maine and other New England states during the next two or three months is not particularly bright and it is difficult to recognize any possibility of material increase in prices.

Trend May Be Upward

On the other hand, it is always darkest just before dawn and there are some favorable factors to be considered. Industrial activity is comparatively high so that we might look for an excellent demand for potatoes this year.

The Song of the Lazy Farmer

cess at milkin' them there cows, I guess, which goes to prove what I believe, that most things that we may achieve we git by goin' slow and sure and keepin' down our temp'rature. The easy-goin' feller may keep on a-goin' day by day, and while he may not make a splash he doesn't end up with a smash. There'll always be another day to dig the spuds or make the hay, so why explode around the place? I'd rather take a slower pace.

The Amateur Poet's Corner

Because of the number of contributions we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Send poems to Poetry Editor, *American Agriculturist* P O Box 367, Ithaca, N. Y.

Harvest and Seed Time

Pull up the garden, row on row,
Beets and carrots and cauliflower—
Summer lasted only an hour;
Turnips, onions and cabbages—
Frost is making ravages.
Pull up the garden, row on row,
And bed it down with a quilt of snow.

Next year summer will stay much longer,
Next year the back will be feeling stronger
And only a puny weed or so
Will thrive where these tall burdocks grow,
Next year, never shall drought obtain,
Or deluge or blast of hurricane.

Next year! Ever the heart shall sing
At thought of next year's gardening.

—Anna Matthews Cole,
Nicholville, N. Y.

Also some of us follow the theory that a good quality crop has a tendency to increase the demand even though we know that the demand for potatoes is comparatively inelastic. We have to consider too the possible effects of government programs. The Federal Surplus Commodity Corporation is now buying potatoes in New Jersey, Michigan and some other areas. Many leaders in the potato industry are urging the federal government to designate potatoes as a surplus commodity under the Stamp Program. Rumor has it that a starch diversion program will be offered in Aroostook County. These various programs will have a tendency to peg the market at its present level. Thus with the market at a low level now it would appear that those areas being able to wait for winter markets might easily see an upward trend but with the total production for the United States at 383 million bushels we must recognize that the ceiling on our winter market will not be very high.

However, the prospects for improvement later may be affected very definitely by the attitude adopted in Maine. With an estimated 45,000 cars Maine growers cannot sit back and plan to market their crop after January 1 as they have done successfully in the past two years when they had only 39-40,000 cars to ship. This may be one of those years when potato growers in the northeastern states as a whole must sacrifice part of their crop during the early part of the season in order that they may enjoy better prices later.

Good Books to Read

A SOUTHERNER DISCOVERS NEW ENGLAND, Jonathan Daniels. Mr. Daniels, who recently discovered his own South, has in this book explored New England with an open mind and a genuine interest in the problems which now perplex it, and at the same time enjoyed the beauties of the countryside.—The Macmillan Company, New York. \$3.00.

Good Movies to See

THE RETURN OF FRANK JAMES. Another Jesse James story, packed with thrills. Gene Tierney, Jackie Cooper, Henry Hull.

Today in Aunt Janet's Garden

Background Gives the Cue

RECENTLY I had the delightful experience of viewing a summer home which once had been an old mill. It was situated on the edge of a waterfall, and from its location the owner—Mrs. Sherman Peer of Ithaca, New York—had taken her cue as to decorating both house and garden.

In the house itself, she had made use of natural stone, wooden paneling, textured fabrics and colorful paints to radiate a clear freshness in keeping with the surroundings. Simplicity was the keynote and much of the interior was quite Scandinavian in effect.

In the garden, native plants were used in situations as nearly like their original home as possible. Beside the flagstone steps leading down to the waterfall were nestled, in the most at-home manner possible anemones, Dutchmen's breeches, ferns and other woodland plants. Meadow-rue, loosestrife and other tall native plants were used as background for lower-growing plants. Of course nursery stock had been used in the borders surrounding the lawn, but wherever possible the native stuff was used to advantage. The whole house and grounds were a beautiful example of what may be done in making a unit of the house and its grounds with a natural background, which in this case was tall trees, a mill pond and a rushing waterfall.

I don't recommend that everyone go into the woods and dig up nature's treasures there. In many cases where people have their own woodlands they can use their judgment about lifting plants if they wish to, but in no case should one indulge in reckless transplanting of wild flowers. Many of them have very specific requirements as to soil, shade, etc., and this should be learned before digging up any plant.

Others are protected by law to prevent their complete destruction. I know of at least two nursery companies who specialize in growing and collecting wild plants for sale. Since these nursery plants have been made ready for transplanting, they are far more apt to live than by the usual hit-or-miss method of gathering for one's self.

As in the rest of the garden, wild flowers should be selected with a view to having bloom at different seasons. This means marking them by stakes or otherwise while in bloom, and then moving them during their dormant period. Many people are attracted by the showy orange butterfly weed (*asclepias tuberosa*) and have attempted

How to Make Beautiful Quilts

If you are looking for a hobby which will give real pleasure to yourself and others, we suggest that you try home quilt-making. A beautifully designed, well-made quilt can be a work of art, something that your children, and your children's children, will take pride in inheriting. And you, yourself, will enjoy the fluffy warmth and lightness of a home-made comforter on some of those cold winter nights that lie ahead.

Simple easy methods of quilt-making are clearly described in *American Agriculturist's* new Home Service Bulletin, No. 12, entitled "Home Quilt-Making." This not only "tells how," but lists nearly 100 popular quilt designs, patterns for which can be obtained from *American Agriculturist*. To get this new bulletin, send 3 cents to *American Agriculturist*, Box 367-H, Ithaca, N. Y. Ask for Bul. 12, "Home Quilt-Making."

moving it while in bloom, only to see it fold up and dry away. If it is left until it has naturally cured, its large fleshy roots may be moved with less damage than during its active period. In any case this particular plant is easy to grow from seed and a young plant is much more easily transplanted. This is true of many wild flowers.

Many wild flower seeds are available from seedsmen and are listed in their catalogs. Fall is a good time for moving many plants.

Personal Problems

Is He Just Playing?

Dear Lucile: I am almost eighteen years old and have been going with a boy for six months. We have been great pals during that time. About a month ago he asked me if we should part, giving me no reason. Naturally I couldn't do anything but consent, for I wouldn't get any joy out of going places with him if he didn't care. We parted as friends and have met only once since at a dance. He gave me a birthday gift and I was rather surprised. He is now associating with a different girl. What could he mean with that gift? Could it be possible that he still cares or that he is just what might be termed playing with me?—Puzzled.

If a young man asks a girl that they stop seeing each other, giving no

reason for it, of course, all she can do is to comply with his request and begin to turn her attention to somebody else. Certainly, though, it does seem inconsistent for the young man to ask this of you and at the same time give you a birthday present.

I almost feel as though I would not have accepted a gift from him after his unexplainable actions toward you.

* * *

Stick to Home

Dear Lucile: I feel sure that you are a public friend and can feel the heartbreaks of the 16-year-old lad who is writing this letter.

I live on a small farm. My parents are getting old and my Dad is the main cause of everything. He is quick-tempered and will not stand noise or joking as my sister and I like to do just like other young folks. My sister is 18 and plans to marry this summer. My older brother is home now but plans to leave soon, then I will be left alone with my parents.

My mother is a lovely lady and good mother but my dad is a hard-hearted creature. I have no love for him. Since my brother is home he treats me terribly, tells me to go, that I'm no good and he doesn't want me here. Imagine a father saying this to his own son! So what am I to do? Brother tells me that he will stay home if I go.

I plan to go and want to go, but where to? What can a boy of my age do away from home? Can't you suggest something? I have thoughts of joining the circus as an errand boy. I have little money and have never been far away from home. Please tell me what to do.—An Outcast.

While you may be feeling a little discouraged about your family relationships just now, I do not believe it would be a wise thing for you to leave home.

The world is a mighty cold place to a young boy away from home with no money or training or experience. Nothing is harder than the job of circus roustabout and I am pretty positive that just one week of that routine would send you back to your nice, loving mother and jolly sister, convinced that for the benefits of a good home you could contrive to get along with a short-tempered father.

It may be that your parent is not in the best of health and for that reason a little irritable with you young

IT IS EASIER to discuss a personal problem with an absolute stranger than with a friend, unless that friend be unusually intimate and understanding. If you have a problem, write to Lucile, Personal Problems Editor, *American Agriculturist*, Box 367, Ithaca, N. Y. Be sure to sign your name and give your address, as unsigned letters will not be answered. Names of all persons writing Lucile are kept entirely confidential, and if your letter is printed in these columns, your identity will be carefully disguised. Please enclose a self-addressed, stamped envelope if you wish a reply by mail.

folks. At any rate, my best advice to you is to stay at home at least until you are 21 and have a little better equipment with which to battle the world, should you then decide to strike out for yourself.

Used Persuasion

Another woman writing directly to "Aching Heart" told how she, herself, had put in her application for a baby to adopt, knowing that sometimes it required a year or more before one could be sure of securing a child. During this time, she talked the matter over with her husband, and gradually won him over to her way of thinking. They took a three-year-old baby boy, who is now six, and they are enthusiastic in their venture.

ACT FAST WHEN A COLD THREATENS

Use This 3-PURPOSE Medicine

At the very first sniffle, sneeze, or sign of a cold put just a few drops of Vicks Va-tro-nol up each nostril. If used in time, Va-tro-nol's stimulating action actually helps prevent many colds from developing.

... And remember this, when a head cold makes you miserable, or transient congestion "fills up" nose at night, spoils sleep—3-purpose Va-tro-nol gives valuable help as it (1) shrinks swollen membranes, (2) relieves irritation, (3) helps flush out nasal passages, clearing clogging mucus. Enjoy the relief it brings.

If Ruptured Try This Out

Modern Protection Provides Great Comfort and Holding Security

Without Tortuous Truss Wearing

An "eye-opening" revelation in sensible and comfortable reducible rupture protection may be yours for the asking without cost or obligation. Simply send name and address to William S. Kernels, Screenings and Chaff

By H. E. BABCOCK.

ONCE MORE the United States Department of Agriculture is actively engaged with plans for storing corn on which the government makes loans. Presumably, acres of new metal tanks will be erected to hold the crop.

A Dangerous Situation

Apparently, it has occurred to no one in authority that Mr. Wallace's ever-normal granary, the way it is operated, constitutes a real weakness in our national defense. Before the government started the practice of loaning midwestern corn growers on their crop and taking possession of the corn and storing it in government bins, corn, as it was marketed, worked its way East where much of it was stored in eastern elevators, ships, and b a r g e s, and in the stores and warehouses of feed manufacturers and dealers. Since the government entered the market against them, however, it has become almost universal practice for feed handlers to carry minimum inventories. There are many sections today in the Northeast which depend almost entirely on imported grain for feeding poultry and livestock. *Many of these sections, if shipments were to be stopped for some reason, would be on a starvation basis within a week.*

Northeastern Grain Storage

Now, if I read the signs of the times correctly, there are good chances that events may take place which may seriously interfere with the movement of grain from the Midwest to the Northeast. For example, in the case of an attack along the Atlantic Coast, transportation facilities would probably be taxed to capacity to haul men and the paraphernalia of war. Also I shudder to think what a few well-placed bombs might do, if dropped around Buffalo, toward effectively cutting off the flow of grain and other foodstuffs to the Northeast.

The point to all this not too cheerful analysis is this: *If new storage must be built by the government to hold the grain in Mr. Wallace's ever-normal granary, why not build some of this storage up here in the Northeast, where the corn is sure to be needed in time, and fill it while the going is good?*

Certainly the sites for the metal bins won't cost as much here as they do in Iowa. The bins themselves can probably be erected here even more cheaply, and here is where much of the grain will eventually be used anyway.

How about suggesting to the next employee of the Department of Agriculture—you must know several, they are that thick,—that his boss give a little thought to the food

When our Hereford heifer calves came in last fall we picked the cull of the lot for an experiment in spaying. Contrary to what we had been led to believe, the spaying definitely set the animal back for two months, during which she did not seem to do well at all.

Due to this set-back and perhaps to the fact that she was naturally the poorest heifer in the lot anyway, when time came to turn out this spring our spayed heifer was still quite a way behind the other heifers in the herd in both weight and condition. At turning out time we put her in a box stall and started giving her a liberal feeding of grain.

During the winter she had been fed—along with the others—grass silage and a little grain each day. Along about June she began to get on her feed and come along. Because we had had no previous experience, however, we did not know when she would be ready to slaughter, so we had Professor R. B. Hinman, head of the beef cattle division at Cornell,

come out and look at her. He pronounced her fat enough and ready for slaughter on about the first of September.

This picture was taken on September 17. We will kill the heifer on the 24th—about three weeks after Professor Hinman pronounced her ready for the block.

We have arranged with Cornell University's meat laboratory to slaughter the heifer and give us the statistics on her. One-half of the carcass we will quick-freeze and store in our home quick-freezing and storage box, and the other half will be similarly handled by a neighbor.

We are now going to put on feed a couple of heifers which have not been spayed, just as soon as they come in from pasture. In due time we will thus get some idea of whether or not spaying pays. From our experience with this one heifer and talks we have had with others who have fed great numbers of both spayed and unsplayed females, we doubt if the practice will be worthwhile.

requirements of the poultry and dairy cattle of the Northeast in case of war?

Ever-Normal Haymow

The President of the Springfield Land Bank, Mr. E. H. Thomson, suggests that the term "reserve" haymow is more descriptive of the practice I have been advocating for some time of carrying over some hay each year here in the Northeast. I accept

the suggestion. On many farms of the Northeast today there is a plentiful supply of hay. It isn't worth much. Why not plan to set aside twenty per cent of it and twenty per cent of the silage (although in many sections this is a very poor year to do this) to have on hand when livestock is turned out next spring. I am going to do this myself because I sold my reserves out last spring at a nice price.

ing along nicely now. By tomorrow night the boys will probably finish the second watering, which is showing its effect in rapid growth. We got the figures together on our eighty acres of new alfalfa which was sown last September. The yield has far exceeded any hopes. The third cutting, of ninety-seven tons, brought the average yield per acre for the three cuttings to a little better than one ton per cutting, a total of 249 tons. The fourth cutting looks as if it would yield nearly a ton.

Tomorrow's primary election will climax most of the political activity in this state. Since this is the first time that the state has picked its candidates by primary, it has been interesting and amusing to watch. For the nominations for Congressman, the Democrats are running nine men, and the Republicans three. Other offices are confused much the same way. All in all, the Republicans seem strongest through cooperation among themselves and respect for opponents. The Democrats are fighting too hard among themselves for the importance of the primary.

The two months spell of dry weather is finally making itself felt in the range country. Up until this week, everybody has been carried along by the effects of earlier rains to the extent that they have felt that their pastures were better than they actually are. The rancher from whom we are buying our lambs paints a very sad picture of what his lambs will be by delivery time next month. I am discounting his opinion, naturally, but I am at the same time hoping that he is putting everything at its worst. In any event, we will have the feed to put them in shape.

Down Mexico Way

By H. E. BABCOCK, Jr.

September 13, 1940.

Following several cold days at the beginning of the week, the weather has now settled in a routine which we cannot expect to be broken by even a small shower until next April. This is the opinion of both experts and amateurs. The nights will be cool—twenty to thirty degrees below the highest daytime temperature, but seldom below freezing, with the daytime average not likely to be below fifty. It has been, and will be, to a certain extent monotonous. But it is ideal for farming.

We are still catching up on the odd jobs which had to be done before we went into the fall and winter season of harvesting over 130 acres of wheat-land maize and then feeding 3200 lambs. The odd jobs have consisted of getting our feed lots in shape, and rebuilding and repairing our wagons which will haul the grain from the

field and later haul the feed from the grinder to the self-feeders. To make these wagons more useful, we have increased the size of the box and at the same time have cut down the wheels and mounted them on second-hand rubber tires. Thus while decreasing the draft, we have increased the capacity.

Cotton picking, a job which will last until after the first of the year, has started on many farms in the Valley. We have not as yet had enough open to justify picking, but if it continues to open, we will start picking cotton on the twenty-third. Like chickens and eggs, cotton isn't counted until it is picked, but we feel more and more confident that our yield will go well over two bales to the acre. An unexpected hail-storm when much of the cotton is open may spoil our plans.

Our fourth cutting of alfalfa is com-

Conducted by H. L. COSLINE

Sympathy Cost Them Money

"MY HUSBAND and I had such an unpleasant experience this spring that I'm writing hoping it may warn some other poor couple even if it doesn't bring back what we lost.

"Usually we do not let traveling salesmen in, but the poor fellow was obliged to hop on one leg and seemed so cold that my husband let him warm his foot at our stove. We were interested when he explained that he lost his leg while working in a stove factory in Cleveland, Ohio. He said he was now employed by that company to drive over the country repairing stoves, using material for which he paid the firm, and not asking anything for his work as he received a salary.

"I asked if he had a grate to fit my old stove. He brought both a grate and a needed back lining. Asked the price, he said it was by weight entirely. When the price for the two was \$6.00 I persuaded my husband to let him put them in the stove and to overhaul it, hoping to improve it and at the same time help the poor fellow.

"His wife was called in, the fire put out, the stove moved out, ashes removed, etc. Materials were brought in and weighed. He found cracks and leaks all over it. It was hard to know what to do. The smoke was dreadful, and it was so cold I asked him what he'd need to fix the top of the oven so the ashes wouldn't sift through. He laid a sheet of asbestos across it, and said he'd fasten it in.

"I sat in the warm sitting room while he did the job. Imagine my horror when he claimed that it had taken 4 lbs. of crushed steel at \$9 a lb.—\$42—in that wreck of a stove. He finally came down to \$40. As we had to make out a check for that amount, he insisted that, as the banks were closed Saturday P. M., my husband drive 20 miles or more over bad roads until he found a man with enough money to cash the check. We are both old, my husband 78 and I 73. We could ill afford this. It was the entire profits on my husband's hard winter of wood chopping in the woods with an almost useless right hand from an accident. This man told us he lived in Cleveland, Ohio, and he had Ohio license plates, although we did not get the numbers."

—Mrs. C. W., Maine.

(EDITOR'S NOTE: In recent months we have received a number of letters similar to the one above. The fact that this man was in such a rush to get his pay indicates that he was not on the square. A number of stove companies have stated that they will prosecute any stove tinker-

er who claims to be representing them. So far as we know, no stove company hires such repair men. If a stove needs repairing, get a local man to do it. Then you will know where to find him in case the job isn't satisfactory.)

* * *

A Ridiculous Claim

"Have you any information regarding Baker's Hospital in Eureka Springs, Arkansas? They advertise to cure cancer without an operation.

"The free advice you give in the Service Bureau is worth many times over the price of the paper."

In my opinion no hospital or doctor that advertises to cure without an operation is worth thought. That anyone can make this claim without first seeing the patient or making a diagnosis is absolutely absurd.

In this case the American Medical Association has written up the Baker Hospital in no uncertain terms. If you want a reprint of this, send a post card to the American Medical Association of 535 No. Dearborn Street, Chicago, Ill.

As a result, Norman Baker sued the A.M.A. for half a million dollars. The case was tried in 1932 and the A.M.A. won.

* * *

Old Issues of A. A.

We have some old copies of *American Agriculturist*. If they would be of any use to you, we would be glad to send them.

We get close to a letter a week like this. We have in the office a complete file of *American Agriculturist*, going back to Volume 1 in 1842. As you may imagine, we value these very highly, but we have no need for duplicates.

Occasionally, also, people ask us if we know where there are old bound volumes or issues. These people are collectors who make a hobby of old books. We would be more than glad to serve as a go-between to bring buyer and seller together; so if you would like to buy old copies or volumes, let us know and we will try to put you in touch with subscribers who have them.

* * *

Moved

"A man who said his name was Mr. Fisher and that he was employed by the Central Appliance Corporation of Rochester got my electric cleaner to change the motor because our current had been changed. When it was returned some of the parts were missing and was again taken to Rochester and returned and some of the attachments are still missing and the cleaner smokes when I plug it in. I paid \$13.00 for the service.

"We attempted to call this situation to the attention of the Central Appliance Corporation and the letter came back marked 'moved and left no forwarding address.'"

If any of our readers have had any experience with or any information concerning the company or the whereabouts of Mr. Fisher, we would appreciate it.

Reading your editorial entitled "No Relief for Able-Bodied Men" inspired me to write and ask you to get me a job on a dairy farm the year around, \$25.00 a month, board and room, and Saturdays off. I will work on Sundays willingly. I do not know anything about a farm, but I am willing to learn if you can find a patient farmer (I can't). I am on relief, 24 years old, and single; and I am interested in learning farming. I will be very thankful for anything you can do for me because I hate W.P.A. with its 40c an hour.—G. L. H.

We received a letter from a Woodstown, N. J., subscriber signed M. H. L. We will be glad to answer it to the best of our ability if the writer will drop us a card with his full name and address.

MR. and MRS. NEWTON BOYCE of Interlaken, N. Y., were injured in this accident. Their car rammed into an unlighted truck. Each carried a policy. Both were paid while totally disabled.

★ ★ ★

April 21, 1940

Mr. E. C. Weatherby
North American Accident Insurance Company
Savings Bank Building
Ithaca, New York

Dear Mr. Weatherby:

We were very much pleased to receive our checks amounting to \$205.00 in payment of our claims for injuries, and wish to say that the money was most welcome.

We have carried these little policies with the North American for several years, never expecting to have to use them. We feel that for such a small cost everyone should have these policies. That night when we started out, the possibility of an accident was very remote in our minds, but our own case emphasizes the suddenness with which such things occur.

We are sending this letter to you with a picture of the car in which we were riding, in the hope that it may influence others to invest in a similar policy. You may publish the picture and this letter if you wish.

Very truly yours,

Mr. and Mrs. Newton E. Boyce

Keep Your Policy Renewed

NORTH AMERICAN ACCIDENT INSURANCE CO.

Oldest and Largest Exclusive Health and Accident Company in America

N.A. ASSOCIATES DEPARTMENT

POUGHKEEPSIE, N.Y.

Steel sheets are being used here to renew the roof and siding of an old barn. Unico 2-oz. zinc-coated steel sheets will add many years of usefulness to this building.

BATTLESHIPS, AIRPLANES, tanks, and guns are being built for national defense. Every day more men are put to work on defense orders. Every day more materials are being ordered for defense.

Conscription for military service is a reality. Men in the army can't make roofing, fencing, paint, and the things needed to keep up farm buildings and fences. Men in the army need guns and supplies that are made from the same stock-pile of materials used to make farm supplies.

What do all these moves add up to in their effect on farms?

There will probably be shortages in supplies needed on farms. This will lead to higher costs unless the government fixes prices.

In recognition of these facts, G.L.F. is mailing to farmers the Maintenance Edition of the G.L.F. PATRON. This edition discusses these problems and makes some suggestions on ways to repair, restore, and renew farm property.

Three things make this fall a good time to do this:

1. Labor costs will probably go up as conscription and defense industries take men from regular peacetime occupations.
2. Steel, paint, and other farm supplies are still low in price and easy to get. This may not be true six months from now.
3. Milk prices are better.

What to Do?

Fix the roofs.

Steel roofs do not wear out. They either rust out or sheets get loose from the action of temperature changes and wind.

Go over steel roofs carefully. Replace loosened nails with longer, **lead-headed, anchor-type nails**. These nails stay down. See that every sheet is tight to the roof.

If rust spots are beginning to show, give the roof a coat or two of **G.L.F. Zinc Metal Paint**.

Use a stiff bristle or wire brush to clean dirt and rust spots before painting.

G.L.F. Zinc Metal Paint comes in three colors—red, green, and gray; covers 800 sq. ft. per gallon first coat, 1000 sq. ft. per gallon second coat. This paint actually gives the roof a new coating of zinc.

If a new roof is needed, Unico 2-oz. Zinc Ridge Drain Steel Roofing is the best bet. **You can put it on yourself. It can be**

grounded to give protection from lightning. It has about twice the amount of zinc coating as regular galvanized sheets. This extra zinc coating gives years of added protection from rust.

Ask your G.L.F. Service Agency for Unico steel roofing with the Seal of Quality label, assuring full two ounce zinc coating.

How to Apply

Ridge Drain sheets can be laid over old shingles or composition roof. A better plan is to remove the old material. Nail down roof boards. Replace boards that are spongy and won't hold nails.

Bend 1½ inches of first sheets down over gable-end face-board and nail every 8 inches with **anchor-type lead-headed nails**. Lay in vertical rows from eaves to ridge. Lap each sheet **six inches**. It is a good plan to break the joints. This gives added strength and wind resistance.

Use ridge roll and valley strips of galvanized steel to make a complete steel roof.

Asphalt Roofing

This type of roofing is best on sheds and buildings where the roof is too flat for steel or shingles.

Asphalt roll roofing should be laid on smooth roof boards laid tight together. One roll covers 100 square feet and comes packed with necessary nails and cement.

G.L.F. Super 78-pound Asphalt roll roofing, properly laid on a good deck, will last for many years. G.L.F. also supplies other

grades down to the cheap material used for patching and temporary buildings.

Reviving Old Roofing

Hot sunshine is good for corn, bad for asphalt roofing. The action of sun and wind dries out the asphalt and makes the roof brittle. A coating of G.L.F. Liquid Asphalt Cement every three years keeps the felt base of roll roofing pliable and weather-tight—makes it last years longer.

Before painting with Liquid Asphalt, drive down all loose nails. Sweep the roof clean. Patch holes and flashings with Plastic Roof Cement. Do this job on a warm, sunny day. One gallon of G.L.F. Liquid Roof Cement covers 100 square feet.

Paint Farm Buildings

Fall is a good time to paint. The boards are dried out by summer heat so they will hold paint. Some painting pointers:

1. Paint on warm, sunny days.

2. Clean off old surfaces. Paint won't stick to grease, dust or dirt.

3. Scrape blistered or loose particles of old paint with putty knife or wire brush.

4. Touch up bare spots with G.L.F. Exterior Primer.

5. Dark colors over light colors give good coverage in one coat. Light colors over dark colors usually take at least two coats.

6. If the entire paint surface is badly weather-worn, give it one coat of G.L.F. Exterior Primer.

G.L.F. paints are all open formula. Exterior paints are made especially for farm conditions. They are available in many attractive colors. Get a color card from your G.L.F. Service Agency.

Brighten up furniture and inside woodwork.

Stockholders to Meet at Syracuse

THE 20TH ANNUAL G.L.F. Stockholders Meeting will be held at Syracuse, October 24 and 25. This year's meeting place will be the Coliseum at the State Fair grounds.

COOPERATIVE G.L.F. EXCHANGE, INC., ITHACA, N. Y.

RENEWING ASPHALT ROOFS—1. Pound down all loose nails and sweep the roof clean. 2. Before painting, patch holes, flashings, and joints with G.L.F. Plastic Roof Cement. 3. Go over entire roof with G.L.F. Liquid Roof Cement. A three knot roof brush is the handiest spreader.

AMERICAN AGRICULTURIST

THE FARM PAPER OF THE NORTHEAST

SAVE OR GO BROKE!

Editor's Note:—The following address was given by Mr. Page, representing the Citizens' Public Expenditure Survey, at the convention of the Association of Supervisors for the State of New York at Jamestown, New York, on August 6, 1940.

While the startling facts given are taken from the tax situation in New York, the problem is equally bad in all other states. Maine farmers, for example, are just about the most heavily taxed of any citizens in America.

Read this article and join your nearest taxpayers association, or if there is none, take steps to form one. For information on how to form a taxpayers association, write *American Agriculturist*, Ithaca, New York.

IT IS A great privilege to address this Association which numbers among its members the direct representatives of the people in what are, next to the Senate and the Assembly, the most powerful legislative divisions of government in the State of New York—the Boards of Supervisors.

You are responsible for—or at least you can count definitely upon being blamed for any deficiencies in—the health and sanitation conditions of your counties, the protection of persons and property, and the maintenance of public buildings.

You are charged with the supervision of county charities, comprising county homes, county farms, and an ever mounting burden of welfare and relief.

Your constituents and friends look to you as County officers to construct more miles of county roads and maintain better state and county roads than any other county government in the state. They look to you, as individual town officers, to wangle out of your colleagues a greater mileage of county constructed and maintained roads in your particular township than the total of all the other townships in the county.

Lastly, and by far the most important of all, you are directly responsible for estimating the annual cost of county government, estimating departmental revenues, and finally for determining, levying, and collecting the necessary taxes to keep your counties operating.

As individual town officials, you each have duties to perform with respect to the government of your townships and have much to do with the levying and collecting of town taxes and the disbursement of town funds.

The size of the fiscal operations with which you are concerned each year and some idea as to the extent of their growth during the past 10 years can be gained from a summary of

Special Reports of the Comptroller of the State of New York for the years 1929 and 1938—all figures quoted are *exclusive* of those pertaining to the five counties comprising New York City.

According to these reports, total county governmental expenditures for the year 1938 (the latest available) amounted to \$115,530,624, compared to similar expenditures for 1929 of

BY G. KEYES PAGE

percentage increases over 1929. However, the cost of General Government in 1938 was nearly \$17,000,000—an increase of more than 25 per cent. Highway expense was almost \$14,000,000—well over twice its 1929 figure. The item of interest on indebtedness consumes more than 11½ millions of county revenues

—Courtesy, New York State Taxpayer.

\$48,911,971—an increase of more than \$66,000,000! These totals do not include payments made for permanent improvements which amounted to about \$46,000,000 in 1929 and \$20,600,000 in 1938—the only item in the entire list to show a decline from the peak prosperity year.

As is to be expected, charities, emergency work, and home relief comprise both the largest dollar class of expenditure (approximately half of the total) and show the greatest per-

and has increased by more than 80 per cent over its total of 10 years ago.

Total indebtedness of these 57 counties has grown from about 168 millions of dollars to almost 300 millions—an increase of more than 130 millions, and less than one-third of this increase is represented by welfare and emergency relief indebtedness.

In the accounts of towns, taken from the same source, total governmental expenditures have risen from 38 mil- (Turn to Page 10)

THE ECONOMY TRUCKS

FORD

Big jobs are in the making for 1941. They're jobs that have got to be done fast, efficiently, economically. Here are the 1941 Ford Trucks that are built to meet these present-day dimensions for dollar-saving dependability.

They "have everything." Choice of power. Range of wheelbases. Wide range of body and chassis types. And the kind of economy that really counts — *over-all* economy.

The 95-hp Ford V-8 engine has made history since its introduction two years ago. With an extra margin of horsepower not offered in any other low-price truck, it has taken the Ford into heavier duty fields. The "95" sells at several hundred dollars less than any other truck with equal

horsepower rating. The 95-hp engine is teamed up with the famous Ford 85-hp engine that has proved its dependability and economy in billions of miles of payload performance.

There's new styling and there are many improvements and refinements added to the long list of outstanding features in Ford Trucks and Commercial Cars. Above all, there is the down-to-earth quality and economy that have made Ford V-8 a symbol of dollar-saving performance in nearly every kind of hauling and delivery work.

See the Ford V-8 Truck at your Ford dealer's. Put one to work on your job and test it your own way. Prove to yourself that this is the unit to do your job, in less time, at lower cost.

1941 FORD FEATURES

- ★ Two V-8 engines—95 and 85 hp
- ★ New 4-cylinder 30-hp engine for maximum economy in Commercial Cars, 3/4 and One-Ton Trucks
- ★ Six wheelbases—42 body and chassis types
- ★ Full-floating rear axles in all trucks—ring gear thrust plate
- ★ 3/4-floating axle in Commercial Cars
- ★ Straddle-mounted driving pinion
- ★ Big hydraulic brakes
- ★ Two-speed axle, also reinforced frame in trucks for heavy-duty service (optional at extra cost)

Making Cheese on a Jefferson County, N. Y. Dairy Farm

ON HIS 400-acre farm at Depauville, Jefferson County, New York, Joseph Vogt is making cheese—in fact, he is making limburger cheese. Starting 8 years ago, he repaired the cheese vats and equipment in a 100-year-old barn built by his father. Back of his venture is the belief that personal attention will produce a better cheese than can be made in a big factory.

Up at five each morning, he milks,

bring a premium when sold to consumers. Now, with the European situation reducing the importation of cheese, the idea sounds even better.

Sideline Blueberries

JOE PUTNAM, who is serving his 25th year as County Farm Bureau Agent of Franklin County, Massachusetts, has been growing cultivated blueberries as a sideline for some years. Not only does he have 15 varieties which are producing and from which he sells berries, he also grows quite a number of plants. Cuttings are made during the last two weeks of April and these are placed in wooden trays which set up off the ground on legs and which are filled with peat. It takes a long time for these plants to root and if from 60 to 75% live it is a mighty good average. Interest has been growing in the raising of cultivated blueberries and where conditions are favorable this crop offers interesting possibilities as a sideline.

Joseph Vogt of Depauville, N. Y.

and by eight o'clock the milk is in the vats. When the cheese is made, he salts, rubs, weighs and wraps it; and frequently in the afternoon he acts as salesman for his own product.

For some time it has been the belief of some who have studied the dairy situation that New York dairymen should give more attention to the production of types of cheese that will

medals and ribbons which his youngest son won on his bantams at the World's Poultry Congress at Cleveland.

Living as he does, on the outskirts of Greenfield, Joe, through his garden, his chickens and his berries, keeps in close contact with the soil. Farm Bureau members know him as a friend and a man who says what he thinks in plain everyday language.

Farming and Flying in New Hampshire

ONE OF THE four New Hampshire 4-H Club members to attend the National 4-H Club Camp at Washington last June was Daniel Harvey of Applehurst Farm, Epping, New Hampshire. Daniel, the son of Mr. and Mrs. Mathew Harvey, is twenty years old and the eldest of three children. For the past ten years he has been a 4-H Club member, has completed 24 projects, and for three years has been leader of the Pawtucket-away 4-H Club. Last spring, when Mr. Harvey injured his knee, Dan had an opportunity to show what he could do on the farm, a responsibility which he met in the usual 4-H manner. The Harvey farm has fifty acres of orchards, three acres in vegetables, as well as a dairy of twenty cows.

While farming is the main interest of this 4-H Club member, flying is a close second. He holds a pilot's license, with fifteen flying hours to his credit.

Looking ahead, Dan plans to build up the fertility on Applehurst Farm, with the use of the most

modern methods, and at the same time reserving one plot as a landing field. Early last spring he flew to East Otisfield, Maine, to purchase a cider mill in order to have it ready for operation on the farm this fall.

Daniel Harvey of Epping, New Hampshire—farmer, 4-H Club member, aviator.

Webster Celebrates Centennial

THIS 60-year-old reaper is still in working condition. The man on the seat is Henry Grundman of Webster, Monroe County, New York, and the picture was taken at the Webster Centennial last June. Webster is an attractive and prosperous town not far from Rochester, and when the residents decided to celebrate its 100th anniversary, they did a real job. In fact, the celebration began last February and continued through June.

One of the first steps was the giving by the local paper of ample space on a systematic plan to local historical

articles covering such topics as old families, old stores, old schools, and old mills. Then on February 6 there was a big birthday party, followed on the evening by a play in the school auditorium. This event depicted the original town meeting. The part of Town Supervisor was taken by G. Robert Witmer, a great-grandson of the first Supervisor, Byron Woodhull. The last event in the celebration was a pageant held in a natural amphitheatre on Lake Ontario at Nine Mile Point, at which the picture here shown was taken.

He Eats at the First Table

"FARMING may not be the most profitable business in the world, but certainly farm families who take full advantage of a situation are never required to eat at the second table. We figure on eating as much as we can of what we produce and selling the rest. We have three cows, and I am never satisfied unless I can have at least a cup of cream a day."

These are the sentiments of Dennis Cronin, who operates a 25-acre vegetable farm near Glens Falls in Warren County, N. Y. Mr. Cronin grows six acres of vegetables, including four acres of sweet corn, and an acre of potatoes. Some of his produce is sold at roadside market and the balance either to buyers who come right to the farm or on a retail route in Glens Falls, which he has served for thirty-six years. Said Mr. Cronin:

"Some of my first customers are still buying from me."

"How do you figure out the prices you ask?" I inquired.

"I find what the going price is in stores," said Mr. Cronin. "Then I add on an amount to represent my judgment of how much better my produce is. If I have vegetables that aren't good, I won't sell them. This summer sweet corn could be bought in stores for as low as 10c a dozen, but I had no trouble in selling all I could grow for 25c a dozen."

"I keep three cows. Mrs. Cronin makes butter, and we have a steady market for all we don't eat ourselves. Two pigs eat up the skim milk. I kill one of them in the fall, pack the meat away, and later the other one meets the same fate."

"How long have you been on this farm?" I asked.

"Forty-two years," was the reply. "I worked for a number of years as a hired man. Then I bought this place, continued to work out for some time,

and then Mrs. Cronin took pity on me, so we came here and have lived here ever since."

Twenty-three years ago Mr. Cronin helped organize the Warren County Farm Bureau, and has been a member since that time.

Located in the foothills of the Adirondacks, Warren County contains a

Dennis Cronin at his vegetable stand. In the background is B. L. Culver, who is Acting County Agent of Warren County while S. H. Fogg is on leave.

good percentage of hilly, mountainous territory. In the summer months thousands visit Lake George and other points in the county to escape city heat and enjoy outstanding scenery. Incidentally, vacationers provide a valuable market for farm products, particularly vegetables, milk and eggs. Although the area is rough, there are many excellent farms.

There has been some talk of forming a lumber marketing cooperative along lines similar to those followed in other areas, notably Tioga County, New York. Timber is an important crop, and farmers there feel that by banding together they can get a better return for it.—H. L. C.

Northeast Poultry Industry Grows

OF THE total hens in the Northeast, 62 per cent are in farm flocks containing less than 400 birds; while in the United States as a whole, 85 per cent are in farm flocks. This means that the Northeast is a great commercial poultry section. Fifteen to twenty per cent of the total income of northeastern farmers comes from poultry. About 50 per cent of northeastern farmers' income is from dairying, making a total of from 65 to 70 per cent of our total farm income from the dairy and poultry businesses.

In recent years there has been a rapid movement in the commercial poultry business from the Far West and Central West to the northeastern states. The reasons for this change are nearby markets, the best in the world, and a climate that is particularly well adapted to the poultry business. Possibly a further reason for rapidly increased poultry industry in the Northeast is the determination of producers to learn how to care for the birds on scientific and economic principles.

The Nation's poultry industry recently recognized three outstanding Northeastern poultrymen by making them important members of the new National Poultry and Egg Board. They are: Herman Demme of Sewell, N. J., chosen as President of the Board; Andrew Christie of Kingston, N. H., selected as First Vice-President; and Homer Huntington of Winsted, Conn., who has been given the key post of Manager.

To Get Out the Vote

SUPPOSING you were suddenly deprived of the right to vote? You men would be mad enough to shoulder a gun. And you women folks, do you remember how, several years ago, many of you worked to get the privilege of voting? How many of you now think enough of that privilege to use it?

Your country needs your vote this year more than ever. It is no one's business *how* you vote; it is the business of all of us that you *do* vote. Will you help *American Agriculturist* to get out the vote? See contest announcement on Page 19.

It May Be Your Turn Next

IS THERE any more soul-scaring fear which we humans experience than that aroused by the cry of "Fire!"? It is particularly terrifying in the country, because it is so difficult to get prompt help there.

Last year, something like 10,000 people perished in fires in the United States, with destruction of property amounting to more than \$300,000,000. Over half of the loss, both in lives and property, was in country districts. We hear much about automobile accidents; but do you know that one-third as many people were killed by fires and a much larger amount of property destroyed by fires last year than by automobile accidents? Another tragic result of fires is that many of the farm buildings destroyed can never be replaced.

That is the reason why October 6-12 was set aside as Fire Prevention Week. But, of course, every week in the year should be Fire Prevention Week. As we go into the season of heated build-

ings, take an hour or so off and check up on your fire dangers. What are some of them?

1. *Defective chimneys and heating apparatus.* The remedy here is plain.
2. *Combustible roofs.* Remedy: Use fireproof shingles when you put on a new roof. In the meantime, screen your chimneys to protect your roofs from falling sparks.
3. *Lightning.* Remedy: Well grounded lightning rods.
4. *Poor electrical connections and short circuits.* Remedy: Have the lines checked at least once a year.
5. *Fires from gasoline and kerosene.* Remedy: Handle them carefully. These servants of mankind are bad masters.
6. *Matches and smoking.* Remedy: Keep matches away from children and rodents. Don't smoke in barns where hay and chaff make a veritable powder house.
7. *In general.* Have two or three good hand fire extinguishers about the place, think what you would do in case of fire, consider the organization of a rural community volunteer fire fighting department.

We Shall Miss Them

IN SADNESS I record the recent death of V. B. Blatchley of Ithaca, New York, and of Mrs. Ann Phillips Duncan of Binghamton, New York. These lifelong friends of mine were also your friends, whether you knew them or not, because they spent their lives in the service of farm people.

As a young man, I went to school with Mr. Blatchley, known to his hundreds of friends as "Blatch". He was one of the first teachers of agriculture in the high schools in New York State, later became a Farm Bureau Agent, and then the very efficient and successful store manager of the G.L.F.'s first and largest retail store, located at Ithaca. All of these positions gave Blatch the opportunity and the privilege to work with and help common folks, and he never failed them. In all the years that I knew him, I never knew him to do a mean or an unkind thing.

Ann Duncan has for many years been a Home Demonstration Agent in southern tier New York counties, in recent years in Broome County, with headquarters at Binghamton. She was the oldest Home Demonstration Agent in length of service in the State. Like Blatch, Ann also had the com-

mon touch. She was loved by all who knew her, and that was a host. In addition to all of her public work, she found time, with her husband, Dr. Charles Duncan, to maintain a fine American home and to mother a family of four children.

When death comes to my friends I never feel sorry for those who go on either to a needed rest or to something infinitely better than this troubled world. But my sympathy does go out to the families and the friends who are left to pick up their stumbling steps and travel the Road made doubly hard and lonesome by the loss of beloved comrades who march with us no more.

What Do You Use to Think With?

MOST PEOPLE in the world today are thinking with their feelings instead of with their brains. Harsh criticism, violent prejudices, and almost universal hatred have taken the place of tolerance and good old commonsense. That is true right here in the United States and in the Northeast as well as in Europe.

For example, how about your decisions on the milk marketing problem? Are they based on hatreds and prejudices, or on the facts? It is the fundamental purpose of *American Agriculturist* to print the facts and to be fair. When we express an opinion it is a sincere one, but you don't have to accept it. What we do hope to do is to get more thinking done with brains instead of emotions.

Two articles in this issue illustrate this point, the one on the next page on the milk situation, and the one on Page 1 about taxes.

Eastman's Chestnut

DR. W. H. Martin, Dean and Director of the New Jersey State College of Agriculture, tells a good story about a couple of fishermen trying to outlie each other. They were out in a boat together and had fished for hours without results. Finally, one of them broke a long silence and said:

"I was out the other day and caught a landlocked salmon that weighed 15 pounds."

After a long while the other man said: "Well, I was fishing the other day and caught a lantern, and it was lighted."

Another long silence, then the first man said: "I'll take 10 pounds off that salmon if you'll blow out that lantern!"

MILK STRIKES or *Marketing Agreements?*

A GAIN dairymen are much worried over the milk situation. Some of those in the Dairy Farmers' Union are even talking strike. All are wondering what is ahead. This article is an effort to help all we can with a fair statement of the facts as we see them.

So far as milk prices in recent months are concerned, they are of course not as high as we would like them to be, but they are nearly twice as good as they were before the milk marketing agreements went into effect, and are good in comparison with prices for almost any other farm product. Neither milk prices nor other farm prices are going to be what they should until some way is found to raise the general price level. Until prosperity returns, all we can hope for from a marketing plan is to keep milk prices at least somewhat above the general price level.

Worried About Future Prices

What most dairymen are really worried about now is not present milk prices, but what they are likely to be in coming months. They know that the costs of producing milk are going up rapidly, they know that a ruinous early August frost destroyed thousands of acres of silage corn, which was none too good to start with. Dairymen know also that the cost of hired labor is rapidly advancing, and that it is getting almost impossible to find hired help. They expect also that feed costs are going up, although this may not happen.

One of the worst worries of dairymen is interference with the milk business by city politicians like Mayor LaGuardia of New York City. He kicked Grade A out of the market, and this alone will cost producers millions of dollars. But that is not the worst of it. LaGuardia has increased the regulations for Grade B, so as almost to make it of the old Grade A quality, greatly raising the cost to dairymen without increasing their price. Dairymen tell me, too, that they have never seen milk inspectors so strict and so ornery as they are now in enforcing the new regulations.

Rumor has it that LaGuardia wants to be Governor of New York State, or U. S. Senator from New York. Woe to dairymen if he ever is!

The Brighter Side

Above are some of the reasons why dairymen are worried. Now look at the better side of the picture for a moment:

The hay crop on most farms in the Northeast was the best in years. Some of it was hard to harvest because of the weather, so it is not of the best quality, but it will go a long way toward offsetting the short corn crop. More and more farmers are meeting the labor problem with machinery, including milking machines, which now are entirely practical. Dairymen as a whole are better organized than they ever were before. In New York State more than 60 milk marketing cooperatives (which is nearly all of them) are working together in the Metropolitan Bargaining Agency, and in the smaller bargaining agencies in the Rochester and Buffalo markets.

Next to good organization, the most helpful factors in both New York and New England are the milk marketing agreements, which for a year now have kept milk prices well above the price level of other farm products.

Fully realizing that conditions were rapidly changing, and that the costs of producing milk were increasing, the Bargaining Agency early this summer asked the Federal and State governments for hearings, at which evidence could be produced to support higher milk prices this fall and winter. Hearings were finally granted and are being held in New York City on October 7, at Syracuse on October 9, and at Albany on Oc-

tober 11. At these hearings, complete evidence of what dairymen are up against is being presented, and requests made for higher milk prices to farmers for the coming months. This evidence is being considered by the Federal and State Departments of Agriculture, and we will soon have the decision, which everybody expects will be favorable.

In the meantime, dairymen in the Dairy Farmers' Union have met in several counties and threatened to strike if a minimum final blended price of \$2.50 per hundred to farmers is not guaranteed under the marketing agreements for the next six months.

The Right to Strike or Not to Strike

Now, from the facts stated above, *American Agriculturist* would like to point out certain conclusions which seem right to us, but which are stated as a matter of our opinion, with the full knowledge that you have the right to your opinion also:

First. Farmers in the Dairy Farmers' Union, or in any other group, have the right to strike and to keep their milk home any time they want to. It is their milk.

Second. This country is still a Democracy, therefore any dairyman also has the right to deliver his milk without physical interference, threats, or violence of any kind. Men do also have the right to meet and try to convince a neighbor by honest argument as long as there is no intimidation.

Third. Dairymen certainly have the right to organize. They should organize, and they should join the group — which they sincerely feel can best serve their interests. In order to protect themselves, however, they should carefully study the advantages or disadvantages of any organization which they are asked to join, and should make the decision on the facts, not on prejudices and hatreds.

Fourth. Any organized group of farmers, such as the Dairy Farmers' Union, has a perfect right to join with any other organized groups in the Bargaining Agency or not to join, providing, of course, that any such group comes in on the same basis as other groups, that is, by being legally incorporated and having contracts with its producers. We of *American Agriculturist* feel that the Dairy Farmers' Union would be more successful in the long run if they either joined in a federation with other organized groups or at least if their leaders met occasionally in conference with other organized groups. After all, dairymen, no matter to what organization they belong, are after just one thing, that is a living price for milk, and the chances of getting that are of course much greater if all pull together. That wouldn't mean that they all have to be in one organization, or even in one federation. What is most needed is less criticism and fighting back and forth by all parties concerned, and a little more real cooperation.

Beware of City Labor Unions

Fifth. It is our opinion that the farmers in the Dairy Farmers' Union should be careful about any connection with city labor unions. Many labor unions are doing a good job for workmen, and they, like farmers, certainly have the right to organize. But some city labor unions are dominated by radical and Communistic leaders, whose purpose is not to help the laboring man at all but to advance the cause of Communism and other "isms" in the United States, all opposed to our American democratic principles. It is largely this radical type of leadership of

Friendly discussions of milk marketing or other problems is the American and the farmer's way of arriving at decisions—never by intimidation or violence. Read summary of present milk situation on this page.

unions in the cities who are looking toward the farm field, *not to help farmers but to build Communism and other Fifth Columns in the United States.* The Communists bragged during last year's milk strike of their connection with it, and carried articles in their publicity organs in the cities, supporting the farmers' milk strike. Farmers don't want that kind of support. No American farmer will tolerate that sort of leadership if he knows it, and there is no way by which the Dairy Farmers' Union or any other farm group can be more quickly ruined in anything it is trying to do for farmers than by cooperation with Communists or other radicals, who of course have no interest whatever in farmers but are only trying to advance their own dangerous and selfish causes.

Even the good city labor unions have nothing in common with farmers. Their whole interest naturally, as consumers, is to keep milk prices down, while the farmer's concern is to get a living price for his milk.

Watch the Politicians

Sixth. It is our opinion that any cooperation with a city politician who wants to use milk as a footstool to climb to a higher position is exceedingly dangerous to any farm group. Even at the best, a city mayor is interested in cheap milk, which means starvation prices to farmers. He is interested also in more and more milk regulation and inspection, increasing costs to farmers without increasing prices. When an ambitious politician like Mayor LaGuardia begins to cooperate with a farmers' organization, farmers in that organization had better watch out. When such a politician sympathizes with and even encourages a strike, farmers had better begin to ask themselves, "what is that politician after?" If there is a strike, and the supply of milk is cut off from New York City, anyone who can get milk for the city is a hero, even if (Turn to Page 14)

QUAKER STATE

*takes first place
on Big Ranches*

ON the 10,000-acre Conrad Kohrs Company ranch at Deer Lodge, Montana, Quaker State Motor Oil and Lubricants have been used exclusively for years.

Conrad K. Warren, manager, and grandson of the famous Western cattle king, Conrad Kohrs, who founded the ranch in 1866, tells us: "For the ranch equipment which includes two autos, two heavy-duty trucks, two tractors, four pump motors and five electric motors, Quaker State products have served with such economy and efficiency that I wouldn't consider buying any other brand of lubricant."

Mr. Warren, besides making a specialty of breeding stock, operates about 600 acres of irrigated land in grain crops and hay. Cultivating, planting and harvesting is by tractors and horses.

"Success of a modern ranch depends most of all upon economical machinery. Economical service from autos, trucks, tractors and stationary motors depends upon good lubrication. I use Quaker State because I know it's the best and cheapest lubricant on the market."

*Quaker State Winter Oils and Superfine Lubricants,
especially made for
cold-weather driving, are now available everywhere.*

This storage house on the farm of Charles Peck and Sons of Shelburne Falls, Mass., has a capacity of 12,000 bushels. The apples are taken in on the upper floor, a cold storage plant keeps them cool, and they are packed out on the lower floor.

Growing and Storing Apples in NEW ENGLAND

ON THIS PAGE are pictures of two New England farm storage plants for apples. Above is the storage on the farm of Charles Peck and Sons of Shelburne Falls, Mass. At the bottom is the storage house of the Scott Farm, operated by F. C. Holbrook, near Brattleboro, Vermont.

On the Peck farm I had a long visit with Roger, one of the sons, and a Past President of the Massachusetts Horticultural Society. There are 45 acres of producing orchards on the farm. An additional 45 acres are rented, and about 45 acres have been set to young trees. Everyone is interested in varieties, and on this farm young orchards consist of McIntosh, Cortlands, and Rome Beauties. In the old orchards the principal varieties are McIntosh, Delicious, Northern Spies, Baldwins, and Wealthies.

A lot of thinning is done. The aim is to thin Macs until they are 6" apart and Wealthies until they are from 8" to 10" apart. Most of the orchards are in sod, although some peaches are cultivated as well as the young orchards. Some of the older trees have been mulched with from 3 to 4 tons of hay or straw to the acre. There appears to be much interest, both in New England and New York, in the new spray to prevent drop. Roger Peck says he is trying it out this fall.

Some years ago dairying was the chief source of income on this farm. With 60 head of cattle on the place, dairying is still important.

Support the Apple Institute

A few hours later at the Scott Farm, F. C. Holbrook was emphatic in his

statement that the only hope for prosperity for the northeastern apple grower is the work being done by the New York-New England Apple Institute. Growers of other fruits have advertised and popularized their products, and as a result the consumption of apples has steadily declined while consumers have eaten more and more of other fruits.

"What do you consider the essentials in growing a good crop of fruit?" I asked.

"This year," Mr. Holbrook replied, "spraying has been particularly important. In any year spraying must be thorough and sprays must be put on at the right time. Our orchard has been in sod since it was planted. We have used some mulch, and we do quite a lot of thinning, particularly on Wealthies and Delicious. On vigorous trees, I like to have apples about 8" apart."

"I lean toward the idea that the younger trees are the more profitable. The fruit on them is of better quality, and it is easier to care for. If land is not too expensive, I think a grower can afford to take out some old trees while they are still producing and grow new ones in their place. It goes without saying that cull trees that are not profitable should be taken out at once and that great care should be taken in setting new trees only on land that is favorable for growing apples."

"I like the idea of the smaller trees, which are usually known as 'semi-standards.' Under some conditions, I believe they will fill a real need."

—H. L. Cosline.

Located on the "Scott Farm" near Brattleboro, Vermont, this apple storage has a capacity of nearly 25,000 bushels. It is equipped with a cold storage plant. The aim on this farm is to keep the apples moving out steadily and to get the last of them to market by the first of May.

Round Out Your Poultry Income by Following the PURINA PROGRAM!

NORTHEASTERN poultry raisers have learned that it doesn't pay to "put all your eggs in one basket." Instead of depending on market eggs alone for their entire income, they have learned to diversify their poultry raising.

Here are some of the products which you can produce and sell to help round out your poultry program and add to your income:

- | | |
|-----------------------|---------------------|
| 1. Quality table eggs | 4. Baby chicks |
| 2. Hatching eggs | 5. Quality broilers |
| 3. Breeding stock | 6. Poultry manure |

Realizing years ago that a poultry raiser needed several sources of income, Purina Mills has developed feeding and production programs to fit every need. The Layena Egg Plan, for example, enables you to produce eggs of the finest interior quality. By packing your eggs in the attractive checkerboard cartons (furnished free of charge by the Purina dealer) and using Layena egg selling helps, you can sell them for top prices.

The Purina Embryo Feeding Plan enables you to get high hatchability from your hatching eggs,

and to produce sturdy, vigorous chicks that sell for top prices. Both Layena eggs and Embryo-Fed chicks are backed by a great nation-wide advertising campaign, direct to prospective buyers.

Purina-fed broilers are today bringing top prices on some of the finest markets in the East. The Purina Broiler Plan is making it possible to produce broilers of the finest market quality, at a low cost per pound of gain. For the man who sells his own broilers, attractive broiler cartons are available at cost, plus other selling helps.

Back of these Purina feeding programs is 48 years of experience in milling quality feeds. Add to this the knowledge gained through constant study at the world's largest privately owned experimental farm and nutritional laboratory. It's no wonder that more and more Northeastern poultrymen are turning to the Purina Program.

Your Purina dealer has full details on all of these feeding and production plans, and will be glad to talk them over with you. See him today, won't you?

PLAY HARD

A "Fight by Producing"
Program

IN THESE DAYS while we WORK HARD we also need to PLAY HARD, which helps develop a body to stand the strain.

No one believes in Hard Work any more than I do. But I believe just as strongly that in order to work our hardest, at our best, we must also Play Hard. We must break the monotony, refresh our minds, give our bodies relief from the routine of hard work.

When I say "PLAY HARD" I see two pictures — the fun of actual play: horseshoes, softball, swimming, fishing, hiking, camping, or complete relaxation while we read or play checkers or just plain take it easy. All of which means putting everything you've got on the ball to quicken the bloodstream and relieve any pent-up tension. PLAY HARD. The second is a result picture — a radiance in your face, an appetite and "tummy" that can digest nails, a quick step indicating the joy of good health and built-up reserves of physical strength for the days ahead. PLAY HARD brings you this.

After plowing all day, or working with your cows or chickens, you may think, "Oh, I'm too tired to take any exercise. I don't need it anyway!" When you feel that way, balance up the day with a little play. Try pitching a game of horseshoes, or playing some other game that will turn your mind from the day's work. See how it refreshes you . . . tones you up for a good night's rest . . . so you can get up in the morning ready and eager to Work Hard!

You believe in our "Fight by Producing" program. You realize how necessary it is to WORK HARD and PLAY HARD. My next column will be PRAY HARD. This way of living challenges your best. In this great America of ours we need recruits. Pass along this slogan to five other people.

Will you give five other people the substance of this program? Let's each be a spokesman and

"WORK HARD
PLAY HARD
PRAY HARD

We Have a Victory to Win!"

Best of all, let's each make his own life a shining example that victories over weakness, selfishness, and inefficiency can be won when we put our minds on this simple but definite program.

What the railroads mean to farmers

(WRITTEN 80 YEARS AGO)

ALL of us in this modern world take a lot of things for granted, including the job that the railroads do.

But let's turn back the pages of history to what a great American philosopher saw when he looked at the railroads 80 years ago—in a day before coast-to-coast railroads had been completed—and when, to most of the people of the United States, Chicago was still "way out west."

He wrote: "A clever fellow was acquainted with the expansive force of steam; he also saw the wealth of wheat and grass rotting in Michigan. Then he cunningly screws on the steam-pipe to the wheat-crop. Puff now, O Steam! The steam puffs and expands as before, but this time it is dragging all Michigan at its back to hungry New York—

"When the farmers' peaches are taken from under the tree, and carried into town, they have a new look, and a hundredfold value over the fruit which grew on the same bough, and lies fulsomely on the ground."

Those words were written by a man named Ralph Waldo Emerson.

They are still true today. Fortunately for people who make their living on farms, the railroads have kept pace with the growth of America, in mileage, in speed, in carrying capacity, in operating efficiency.

To keep up the good work, all they need is fair and equal treatment with other forms of transportation—an opportunity to earn a living and keep their service moving ahead.

"See America" FOR \$90

Start from your home town now on a Grand Circle Tour of the United States—east coast, west coast, border to border—go by one route, return by another—

liberal stopovers—for \$90 railroad fare in coaches—\$135 in Pullmans (plus \$45 for one or two passengers in a lower berth).

WASHINGTON, D. C.

MARKET PROSPECTS for Vegetable Growers

By M. C. BOND,

New York State College of Agriculture.

A DELAYED season, various scattered crop disasters, and finally "shot-gun" frosts all played their part in adding to the complexity of the present vegetable marketing situation in the Northeast. According to September first reports, which do not, of course, fully reflect either the frost damage, or the favorable weather in September, some crops are showing higher productions than in 1939, others less. Likewise seasonal prices are in some cases ten to twenty per cent above last year, and others greatly below. In certain instances there seems to be little rhyme or reason in the price situation.

Cabbage Crop Larger Than Last Year

New York State cabbage supplies are larger than last year despite the ravages of worms and lack of rain in some areas, and although the acreage was increased only 2 per cent. The production of Danish type cabbage which normally accounts for almost two-thirds of the late crop in this state is estimated to be nine per cent above 1939, while domestic late cabbage is expected to be 4 per cent above. The intermediate crop in the state was 57 per cent greater than last year, which may be one of the reasons that prices offered have been below farmers' expectations.

The total United States' late crop is estimated at 644,300 tons which is 20 per cent above the short crop of last year and 4 per cent above the ten year average. The increase is principally in domestic cabbage which normally makes up slightly more than half the crop. However, the crop of Danish is estimated to be 13 per cent above 1939 though seven per cent below the average. Midwestern supplies are said to be liberal. The total intermediate crop was slightly above that of last year and noticeably above the average.

Prices in New York State have been holding 20-40 per cent below those of last year, a differential which some growers feel is greater than justified by differences in the size of crops. There is the possibility that, as effects of the over-sized intermediate crop wear off, prices may strengthen, but all things considered the outlook was not encouraging in late September and growers from cabbage producing counties met at Geneva and asked that a purchase program be worked out by the Surplus Marketing Administration. Several growers reported prices at kraut factories as low as \$3.00 a ton and all agreed that prices were lower than justified with a late cabbage crop only 4 per cent above the ten-year average.

Usually, in October and November, nearly all of the cabbage received at New York City and upstate New York markets comes from New York growers. By December considerable quantities of early "green" cabbage come from the southern states. Thus New York cabbage has little competition from other areas for about two months while from December first through February the New York City consumer gets a larger and larger proportion of his supply from the southern states. The production of cabbage in New York exceeds fresh market consumption and usually about one-fifth of the New York crop is sold to kraut manufacturers.

Fewer Onions; Prices Better

Viewing the situation in late September it appears that 11 per cent less onions will be hauled from New York

State fields this year than were produced in 1939 but that the crop will still be 19 per cent above the five-year average. As the harvest proceeds the state crop is estimated at 3,642,000 sacks.

The western U. S. crop is considerably shorter this year and the central states' crop equals that of 1939. For the nation the total crop seems to be about 17 per cent less than last year, and 7 per cent below the average. The early crop was extremely light, being 44 per cent less than the average and 40 per cent below 1939. The intermediate crop equalled 1939 but was 16 per cent short of average. Total production was estimated on September first at 16 per cent below 1939 but two per cent above average.

In September, prices for New York onions averaged well above last year but the difference decreased as the season advanced. Present prices are below 1937 and 1938 levels. Due to short early production, prices for the late crop probably started somewhat higher than would normally be expected, and gradually declined as the marketing season advanced.

The 1939 onion crop was the largest on record and brought low prices throughout the fall and winter months but prices rose spectacularly in late winter with prospects of a small early crop. The 1940 crop has started for market at prices somewhat higher than in 1939.

Plenty of Carrots; New York Prices Favorable

A look at the continuous expansion in the production of carrots makes me wonder if there is any limit to the quantity of carrots we Americans will eat. The U. S. acreage and production this year is three times that of 15 years ago. Of course, much of this expansion has occurred in areas which ship fresh carrots during the winter and spring season but nearby production is good this year.

New York producers are apparently set to provide 14 per cent more late carrots than they produced in 1939, 48 per cent more than their five-year average. The total late crop for the nation is 7 per cent over last year and 9 per cent above average. September estimates indicated a total United States carrot crop of about 17,511,000 bushels, which is 9 per cent higher than 1939 and 20 per cent above the average.

Both lateness of the season and the light intermediate crop (29 per cent below 1939), no doubt influenced prices which ranged, in September, about 10

(Continued on Page 14)

LABOR RACKETS

Must Stop!

More Justice for Members and Public—
Less Power for Leaders

ORGANIZATIONS among laboring men, like organizations of farmers, are necessary and commendable just so long as the members themselves remain in control. When racketeers, Reds, and bureaucrats move in, most of the good these labor groups do is buried under the greater evils they create. When laboring men cease telling their officers what to do, and the officers assume life and death powers over the economic life of labor organization members, certainly these labor groups have become unAmerican.

Read the following quotation carefully:

"They (referring to a farmers' organization) state a principle which is directly contrary to all recognized American practice. They (the farmers) thrust at the very heart of organized labor with the statement that they are in favor of 'upholding the principle of individual liberty, the right of men to work without paying tribute and without fear from any source as a result of the exercise of this right.'"

This little gem is from an editorial in a middle western labor journal and represents the official voice of the Labor Monopolists. If, as this statement would indicate, the principles of individual liberty and the right of a man to work are a thrust at the heart of American labor, then labor organizations as they are run by the labor dictators of today serve neither their own members nor the public.

The story reaches us of the farmer who had been a coal miner in Pennsylvania. He said:

"When the word came down from the 'top' the first few times that we were to strike, we didn't pay much attention to it. We thought we could decide for ourselves what we would do. A few of us went out, but the majority was satisfied with working conditions and wages. But later on, after some of us had been thoroughly beaten once or twice by thugs, we struck when the word came down from the top to strike, regardless of how we felt about it. We had not only our own safety, but that of our families and our jobs to think about.

Now there you have high-handed un-American methods of coercion and violence bad enough to make your blood boil! Under the threat of fines, loss of jobs, beatings, workers strike when they don't want to, aiding they know not what designs of the Labor Monopoly. Sounds like Russia, doesn't it?

But for farmers the real rub comes when labor leaders try to pull the same tricks on farms. According to testimony of Ivan G. McDaniel, representing western farmers before a Senate Committee, here's the kind of thing that happened in California:

"A lady who raised turkeys in northern California had a practice of hiring her women neighbors to come in and pick the turkeys. These women were experienced in picking turkeys. The turkey prices were particularly low and she couldn't afford to have them picked in the commercial plants in San Francisco. The butchers' union in San Francisco, with the support of Bridges, made an edict that no turkeys could enter San Francisco or the San Francisco markets unless they were picked and dressed by the union pickers. And the farmers that would not have their turkeys picked by the union pickers could find no market for their turkeys. . . ."

Further in his testimony he said:

"In some instances the turkey growers did accede to the union demands at a considerable loss, and in other cases, in order to get their turkeys into the market they had to pay what was known as a

picking fee, that is, they could bring them in if they didn't get union pickers on their ranch, provided they paid 20 cents a turkey to the union when they crossed the bridge."

In response to a Senator's question, McDaniel said:

"No, sir, we had no idea what became of the money. This embargo on turkeys lasted many weeks and those turkey growers lost thousands and thousands of dollars because they couldn't freely market their turkeys."

If single instances were all that we heard about, we might excuse them as unavoidable. If labor leaders immediately reprimanded those among themselves responsible for these attacks, we might excuse them. But they are multiple, and they are largely condoned and encouraged. In New York, Cali-

fornia, New Jersey, Wisconsin, Minnesota, Michigan, Arizona, Washington, Oregon, Maryland and Pennsylvania similar definite instances have occurred.

For example, tobacco planters usually have the skilled help on their plantations prepare the giant hogsheads in which the tobacco is marketed. But the Labor Monopoly wanted to get a cut out of the tobacco farmer's income so in at least one southern city, a cooperage union levies a tax of fifteen dollars on every hogshead coming into the market, which they do not make. If farmers refuse to pay this tribute, their tobacco is "Hot" and union truckmen will not cart it, union warehousemen will not handle it until the bribe is paid.

For the sake of our democracy and the good of the working man farmers must oppose these cancerous methods. They must draw the line carefully between the rights of the working man, and the abuses of the Labor Monopoly and fight the latter so long as they work against the best interests of the nation and the worker.

When an organized, militant minority works for its own ends, disregarding the public good and the interests of its own supporters, and receives the

ENCHANTED

By Eleanor Alletta Chaffee.

He who has walked a mountain path
May never tread it more,
But something will be calling him
Through every open door.

He who has seen the tide go out
With stars laid on its breast
Will know at every eventide
The fever of unrest.

He who has stood on some far height
Unsheltered and alone,
Walks with a mortgage on his heart
Along these streets of stone.

encouragement and implied support of the government's administration, then the ideals and practices of democracy have been corrupted. Can you believe otherwise when such statements as those at the beginning are made—that the principle of individual liberty is "thrusting at the heart of organized labor?"

Farmers are uniting to fight this under the slogan, "Millions for fair wages for the worker, but not one cent of tribute for the Labor Monopoly!"

HOW IT FEELS TO WORK IN LITENTUFS

Breeze along in this LIGHT modern footwear that's built for HEAVY farm duty!

OF COURSE, you won't really be able to fly! But what a relief when you change to the Original Goodrich Litentufs! When you feel how light and flexible they are—how they stretch—how easy they are to slip on and off. So comfortable—always snug at heel and instep—actually giving with every movement of your foot!

You'll have another reason to be proud of your good judgment in getting Litentufs, for they are built extra-tough by Goodrich's own special process. You get long money-saving wear! Why not drop in at your dealer's today?

(Continued from Page 1)

lions in 1929 to 48.8 millions in 1938—but 80 per cent of this increase is directly attributable to emergency relief expenditures. Furthermore, if the marked reduction in outlay for permanent improvements is considered in the total, aggregate town expenditures have actually decreased nearly 7 millions of dollars in spite of the added relief load. Likewise, town indebtedness has shown an overall decline of more than \$2,000,000—a reduction of 5 millions in bonded debt being partially offset by a \$2,800,000 jump in temporary loans.

The citizens of your communities placed you in office because they had confidence in your leadership, and they are looking to you to do your part in leading them out of the morass of heavy taxation in which they have become mired.

Taxes Are 22 Per Cent of Income

It is no news to you when I tell you that taxes are high. But do you know that in the United States as a whole there are now approximately 175,000 taxing jurisdictions which absorb more than 22 per cent of the total income of the country. These figures do not include the appropriations and authorizations made under our national defense program. There is no telling how high above that 22 per cent mark we may yet go.

You may not have realized that the aggregate cost of government—Federal, State and Local—which in 1938 totaled the almost incredible sum of 18 billion dollars, is more than the entire gross income, from all sources, of all of the states west of the Mississippi River.

It may have not occurred to you that the New York State Budget alone, which has more than doubled since 1926, is greater than the total gross agricultural income of this fertile, productive commonwealth.

The bewilderment of the average taxpayer over the intricate mazes of government finance and his lack of comprehension of what has been happening and what is in store for him reminds me of the old story of the southern dandy who was gazing complacently through the bars of a small-town jail when he was visited by his friend, Henry.

"Rastus," asked Henry, "What yu-all doin' in this here jail?"

"Oh, they jes' 'carcerated me heah."

"How long is you in foh?"

"Three weeks."

"What foh they put you in jail?"

"Jes cause I killed a man."

"Go on, niggah, you can't tell me you committed murther and they jes' put you in jail for three weeks. How come?"

"Oh, then they is going to hang me."

During the past two or three years, in particular, increasing thousands of Rastus taxpayers have been deciding not to accept their ultimate financial hanging without a fight. They have come to the conclusion that paying no attention to the growing taxes may result in their having no jobs of their own left with which to make a living.

The Millstone of Debt

Taxpayers are taking a broader look to see how their representatives in the Big Business of Government are handling the affairs of their stockholders. And what have they found? They have found that business expanding in all departments as if there were not a cloud in the sky. They have seen employees increased, public buildings

erected, mahogany and marble palaces constructed to provide increased educational capacity in districts where the birth rate and school attendance have declined for years, and they have witnessed the creation of alphabetical bureaus with a rapidity that put the old-fashioned multiplication table to shame. And they have said: "Isn't this wonderful? I wonder what is the matter with me, having to cut down so drastically on my personal expenditures in order to keep my job going?"

And then—taxpayers have looked at the annual financial statement of their Big Business Corporation of Government and at their own tax bills—and they have gotten the answer.

"Meek" Do NOT Inherit the Earth

The answer is that, as always, the taxpaying stockholder in the Government Business Corporation has been paying the bill; and worse, by his meek acceptance of the judgment of his elected managers, probably influenced by the clamor of organized minority spending groups, has permitted his government corporation to be mortgaged so heavily that future generations will be burdened with the problem of repayment.

The result of this awakening is that today the taxpayer is more constructively inquisitive and more tax-conscious than of any time since his ancestors staged the Boston Tea Party.

This result—this inquisitiveness and tax-consciousness—is manifesting itself throughout New York State and throughout the country in the organization of taxpayers' associations which differ broadly—and fortunately—from some of the ill-fated fiascos which have preceded them under the same or similar names. Modern taxpayers' associations may be militant, but in no sense of the word are they even intended to be destructive.

They are, in an increasing and gratifying degree, sponsored and led by sound, sane, fair-minded business men who are respected civic leaders in their communities. Organized on a strictly non-partisan and non-political basis, they are ably steered by their leaders on a constructive, middle-of-the-road path towards better and more efficient government. The objects of a typical group might be summarized as follows:

1. To scrutinize every dollar of public expenditure so that waste, inefficiency and duplication shall be eliminated.
2. To adhere at all times to proven facts without prejudice, partisanship or politics.
3. To foster economy and efficiency in public administration in the interest of improving the economic status and standard of living of all citizens of the community, while at the same time being assured of a full dollar's value for every dollar of tax outlay.

In a nutshell, if these groups adopted a slogan, it could properly be: "FACT-FINDING RATHER THAN FAULT-FINDING."

I feel confident that you will all agree that there is nothing in the foregoing platform, if it may be called that, which is particularly controversial. In keeping with their avowed purpose to substitute factfinding for fault-finding, taxpayers' associations start by trying to learn all they can about the operation of this Government Business Corporation in which they are all contributing stockholders.

Questions Bring Facts

There are two general methods which are being employed by these groups to acquaint themselves with some of the highlights of the science of modern government, and the first method is the simple, old-fashioned one of asking questions.

The taxpayer, having discovered that—as will always be true—he is paying the bill, becomes interested in the manner in which his money is being spent. He inquires about his highway system and usually concludes that it is not receiving anything like the attention and benefits to which it seems to be entitled.

Then he asks about the efficiency of welfare administration, and as a result demands the return of relief administration to the localities as the most economical and efficient method by which it can be handled.

When taxpayer groups go on to the consideration of matters of local government, they are employing to an increasing degree the second method of self-education—The Expenditure Survey. These surveys are prepared by trained experts in an wholly impartial manner for the single purpose of better informing the taxpayer as to how his particular unit of local government is operating and how, if at all, it might be operated more cheaply and efficiently without impairing necessary services.

Surveys of this type cover, for example, the matter of budgets—whether or not they really tell the whole story of estimated revenues and expenditures or are merely a partially complete set of figures designed chiefly for the purpose of arriving at a net sum to be raised by tax levy; whether or not budgets have actually been followed or have been over-spent, resulting in deficits to be funded or made up out of a subsequent increase in taxes.

The surveys made by taxpayers' associations present an analysis of the local debt situation in its bearing on future years' taxes and point out, with particular emphasis, whether the government unit is operating on a pay-as-you-go basis or is running into debt.

Let's Plug the Holes

The surveys have revealed, in some instances, that not only is gasoline being purchased at retail instead of under bulk contract, but that application has not even been made for the refund of State and Federal motor fuel taxes to which the purchasing governmental unit is entitled by law.

The surveys have pointed out what seem to be wide divergences in the

costs in similar counties of constructing identical types of county highways and thereby raise the question as to whether road-building within the county would be more economical for the taxpayers if done on a private contract basis or carried on by the local highway department.

The surveys analyze and comment on possible savings to be realized from the elimination of overlapping departments and, in some cases, the consolidation of sparsely-populated governmental subdivisions.

An Operation Needed

Some of the finds and the questions raised by these surveys are unavoidably controversial in nature—just as the discussion of possible reduction in the expenditures of any business on earth must always be. A relatively small number of toes must be stepped on to put through any program of curtailment, regardless of its type. But an increasing number of sane, balanced, straight-thinking taxpayers are coming definitely to the conclusion that an operation is preferable to a continuing infection and that a little pain now is better than an ultimate bankruptcy, toward which we are heading.

These tax reduction leaders throughout the state are not flag-waving, rabble-raising malcontents. They are your friends, neighbors, and the respected, successful business men of your communities. They are not, nor do they pretend to be, experts in local, state, or federal government. They are the taxpayers and, incidentally, the voters who have selected you, together with state and federal representatives, to look out for their interests in the most businesslike, constructive manner of which you are capable.

Their present concern is not necessarily a critical reflection on the manner in which you have discharged that trust. It is born of a realization that, partly through their own negligence, local, state and federal government in this country has gotten and is continuing to get itself into a financial position which, if followed in any kind of business under the sun, spells only bankruptcy and ruin.

What of Our Grandchildren?

And lastly, but by no means least, this taxpayer concern is being increased by the great cost of the defense program. The financing of the cost of this program is either going to impose upon our children and grandchildren the obligation of repayment of an indebtedness unequalled in history, or it is going to add incalculably to a tax burden which, after 10 years of depression, extravagance and experimentation, we are in no position to assume—or it may do both.

Economy in the local, state and non-essential expenditures of the federal government will help. RIGID economy in all three departments would go a long way toward defraying the entire cost of the defense program. Every dollar saved is one which will not have to be found when the defense bills begin coming in.

I would like to leave with you members of Boards of Supervisors two related thoughts:

First—any measure of cooperation which you can give to sincere, intelligent constituents who are interested in restoring common business principles to the operation of government is one of the most effective methods at your disposal for the discharge of your trusts as public officials.

Second—in view of the present state of our own finances and of existing world conditions, it is the patriotic duty of all officeholders not only to cooperate but to initiate economies in government for the single purpose of accelerating a state of financial and physical preparedness in the United States, which will brook no interference from any foreign source.

Grange Gleanings

CHARLES M. GARDNER

Editor of the National Grange Monthly and High Priest of De-meter of the National Grange.

GRANGE young people throughout the country are eagerly awaiting decision on the Highway Safety Essay Contest which has been in progress under the auspices of the National Grange, closing a short time ago. The national awards will be announced at the National Grange session at Syracuse. The first prize winner will be personally notified in season to go to Syracuse, inasmuch as the highest award in the contest is a paid all-expense trip to Syracuse for the entire nine days' session, regardless of how far away the successful essayist may live.

This contest has been conducted for many years, with the winner always taken to the National Grange session and there invited to read the winning essay. Some years a boy has captured the honor, although about as often it has been a girl; with sometimes a trip completely across the continent as a reward. Contestants must be under 18 years of age, in good standing in their home Grange, and their essay must indicate practical directions for promoting highway safety, always keeping in view the Grange contribution to such an improvement program. In former years the essays have been of high character and their reading before National Grange sessions has created intense interest.

TROUT RIVER Grange at East Berkshire, Vermont, recently paid tribute to one of the oldest Grange members in the Green Mountain State on his 96th birthday. Congratulations, flowers, cards and gifts were showered upon F. N. Oviatt, 36 years a member of the Grange and still retaining a keen interest in all its affairs, notwithstanding his advanced age. For a long time he served his Grange as chaplain, as well as in other official positions.

LEHIGH-NORTHAMPTON POMONA district in Pennsylvania has just successfully instituted its first Juvenile Grange unit with a fine charter list of youngsters and an excellent start. Newly-renovated rooms in the hall owned by Laurys Grange, No. 1570, in Lehigh County, will be utilized for meetings of the Juvenile boys and girls, these being held simultaneously with

the regular meeting nights of the parent Grange.

A FORMER MASTER of the Maine State Grange and one of New England's most prominent Patrons, John E. Abbott, 67, of North Berwick, recently passed away. He served as head of the Grange organization in Maine for six years, following the occupancy of many other stations in State, Pomona and Subordinate branches of the Order. Mr. Abbott had been prominent in the life of the Pine Tree State and few men in Maine had a wider circle of acquaintances than he.

AMONG the very successful special sixth degree meetings which are being put on throughout the state of New York in anticipation of the coming National Grange session at Syracuse in November, one of the most outstanding was at Glens Falls, when Warren, Saratoga and Washington counties combined. The result was an attendance of more than 600 Patrons and the class of sixth degree candidates numbered 342, a good share of whom will go to Syracuse for their Seventh Degree in November.

MAINE will have a Grange Senator in the coming Congress by the overwhelming election of former Governor Ralph O. Brewster of Dexter, who has been very prominent in Grange circles for a generation. In Vermont also there is a similar likelihood, as Governor Aiken, victorious in the Republican primaries, has every prospect of election as United States Senator in November. Governor Aiken joined the Grange immediately upon reaching the age of 14, and inasmuch as he has just celebrated his 48th birthday (carried out in a Grange hall, by the way), it will be apparent that his Grange membership and activity cover a period of fully one-third of a century.

EVERY NEW ENGLAND Grange state is likely to show a net membership gain for the year just closing, and the total will be very gratifying. Figures already completed show that Connecticut made a gain of 675 members; Massachusetts, 556; Rhode Island, 157.

ALL CONNECTICUT roads will lead to West Hartford on Wednesday evening, October 16, when a great rally night of Granges in that part of the state will be held. The special event of interest is the awarding of a Golden Sheaf certificate for 50 years of faithful service to Allen B. Cook, former State Master, and one of the most popular Patrons in Connecticut.

THE GREAT NEW ENGLAND Lecturers' Conference at Burlington, Vermont, had as a pleasant feature, the presentation of a beautiful wrist watch to Mrs. Rachel T. Lacross of Woodstock, lecturer of the Vermont State Grange, who was the hostess of the convention. A further compliment to her was paid by the conference when a similar gift was presented to Mr. Lacross—both hard workers for the Order over a long period in the Green Mountain State.

SALEM UNION GRANGE Juvenile unit in Washington County, New York, holds quite a distinction. First of all it is the home subordinate of State Master W. J. Rich, and is further noteworthy this year in having twin boys heading up the Juvenile organization for 1940. Ervin Wilson is master and Earl Wilson is overseer. The twins are 14 years of age, sophomores in the Salem High School and great lovers of their Juvenile. Mrs. Rich is the matron of Salem Union Juvenile, having filled that position consecutively for the past nine years.

"Is this what you're lookin' for pop—I've been makin' a boat."

"He's a Long Way Off— .. Better Use a SILVERTIP"

**CONTROLLED
DELAYED EXPANSION
PLUS DEEP PENETRATION**

1. On reaching point of greatest expansion—
2.—"nickel silver" jacket ruptures. Core bursts out—
3.—expands rapidly, insuring positive mushrooming.

WHEN the trophy you want is a long way off, you need the accuracy and all-range positive mushrooming of a Western Super-X SILVERTIP expanding bullet.

The unique SILVERTIP design assures positive mushrooming at all hunting ranges, from the shortest to the longest. The soft lead core is encased in a thin "nickel silver" jacket of copper, nickel and zinc, and around this, covering all but the bullet tip, is a tough jacket of Lubaloy metal.

Expansion is delayed by the silver colored jacket while the bullet pierces hide, muscle and bone. Then on reaching the vital organs, the lead core bursts through the thin jacket, expands rapidly, and spends its terrific force within the body cavity, where most effective! There are 18 Super-X SILVERTIP cartridges, in 15 popular calibers. Mail the coupon for full particulars.

from SKEFF'S NOTEBOOK

By L. B.
SKEFFINGTON

I HAVE had a spell of going to fairs. It is highly interesting and educational, not only because of the things one sees, but because of the people one meets. Here in Monroe County our fair made a "come-back" and after no fairs in the county the new Monroe County Fair Association staged its first annual exhibition.

It was an experiment in cooperation and proved successful. Two years ago the Rochester Exposition folded and with it went the old county fair which it had absorbed some years earlier. A year ago agitation was started to provide time and place for the 4-H Clubs and the Future Farmers to exhibit. Enough interest was expressed so that the fair became a reality this year, with both junior and open classes. Having no funds, the fair solicited about \$2,000 for premiums, sold memberships and staged a tag day.

The fair was staged out in the country on a six-acre plot, with an adjoining field for parking. Everything was housed under canvass and some 15,000 or more people took advantage of the free gate. Apparently the county found it wanted a fair. Now the question is whether it should continue to be a tent show, or whether permanent grounds should be acquired and a building or buildings be considered.

Personally, I would dislike to lose the gay spirit and color that resulted from the tent show, the parading volunteer firemen, the school bands and the numerous community activities. It seems to me that wooden fair buildings frequently become eyesores, they are costly to build and maintain, and they nail a fair to one spot. It is barely possible that in Monroe County the fair may wish to migrate around several towns before finding a permanent home. Anyway, the cheapest kind of a fair building would cost at least \$25,000. Six per cent interest on that would be \$1,500 annually. Add to this cost of upkeep, etc., and I can see where the association could pay \$1,000 annually for rent of tents and be ahead of the game.

World's Fair Lonesome

I went down to Long Island to visit Halsey Knapp at the State Institute of Applied Agriculture and spent parts of three days at the New York World's Fair. Late one night after much weary walking we rode around in a sight-seeing car. I asked the operator how the crowds had been and he said they had been staying away. I asked several people connected with the fair what the trouble was and they told me "the war," "lack of showmanship," "lack of advertising and publicity," and that the "public never really warmed up to the fair." Visiting on nearby Long Island people told me they seldom hear of or even thought of the fair.

I remember the great hit the Chicago fair made with the masses. I am inclined to believe the New York show got started with a bit too much "high hat" atmosphere.

Allentown Packs 'Em In

A few days later we took in "The Great Allentown Fair" at Allentown, Pa., which labels itself "America's

Greatest Country Fair." It had the exhibits, the concessions and the crowds. I wondered what the Allentown Fair had that the New York Fair lacked, and decided it was nothing more or less than the support of its public. There were 30 or 40 dining concessions operated by Granges, hospitals, churches, etc., and most of them seated 100 or more persons. All day and evening they were busy, because everybody came to the fair.

The boy with the candied apple concession told me he paid \$100 for a 10-foot frontage, and I presume he was making money.

Back home we went to the Palmyra Fair in Wayne County and were surprised to find nearly 100 head of stock in a beef cattle show. For the moment it seemed we must be farther west. Attendance was good at this fair and it seemed to me that the answer was that it appealed to the rural people

Milk Producers Heard

Kenneth F. Fee, director of the State Division of Milk Control, was the best witness for producers at a hearing on the petition of the Rochester Cooperative Milk Producers Bargaining Agency for revision of the marketing order. Actually, Fee was not a witness, but just asked some questions.

The attorney for the distributors in opposing any price advances for farmers, said that if such advances were granted "farmers again would increase production." He presented figures to show that month by month under the order production in the marketing area had increased. The order went into effect last Dec. 1 and production rose until August, compared to the December level.

Fee sat with Commissioner Noyes and Milo Kniffen, his counsel, who was conducting the hearing. "Was not that seasonal increase?" Fee asked. "I could not agree that the increase was due to the order."

At another point, the dealers' counsel said herds had been increased. Fee cited figures to show that every month under the order, except June, production in the marketing area had been below the corresponding months in the previous two years. He asked the dealers' counsel if he knew of dealers who previously bought milk from farmers but now obtained it from their own herds. The answer was that a number of dealers had become producers, that there were 38 of them now and later there might be 78. "Then it was the dealers who increased their herds," suggested Fee.

Producers offered evidence to show that while there had been a large hay crop its feeding qualities were low because of wet weather during harvest, and also that labor costs were moving upward.

Research Good Defense

In Wayne County the other night I met with the county agricultural defense committee. One of the points that brought united support was that during a period of emergency good defense is to use and expand agricul-

tural research institutions to their fullest capacity. Some thought was expressed that appropriations might be curtailed in the name of economy or defense, but the farmers present believed this would be false economy. Frank W. Beneway, Farm Bureau chairman, pointed out that research had enabled farmers to harvest 40 or more bushels per acre where a few years ago 30 bushels was considered a good yield.

Members expressed fear of labor shortage not so much because of the draft, but because of the attractions of civilian employment at high wages in factories producing defense commodities.

Ask Study of Stations

The defense committee after discussing the need for an accelerated program of research, adopted a resolution which previously had been adopted by the Western New York Joint Fruit Committee of the State Horticultural Society and Farm Bureau Federation. This suggested that study be given to determine if there is any duplication of work between Cornell and Geneva experiment stations, and

in such event suggests that certain lines of work might be transferred from one station to the other.

Sentiment expressed was that it may be proper and necessary to do certain things at one station or another, or at both, but in the main it was agreed that duplication should be avoided, with the Geneva station concentrating on work relating to fruits, vegetables, nursery stock, frozen foods, fruit juices and allied lines. The resolution points out that great strides have been made in certain lines of work, such as frozen foods and fruit juices, but that much remains to be done and in the meantime work is hampered by lack of facilities and equipment.

* * *

Apple Tax Studied

The Joint Fruit Committee, as the result of a questionnaire, finds a slight majority of grower opinion in favor of a state apple advertising tax as opposed to the present voluntary method of support for the Apple Institute. It is not ready to make any recommendation, but suggests continued support for the institute and co-ordinating committees.

A. A. - GRANGE Cookie Contest News

NEARLY two-thirds of the Pomona Granges in this State have held their county cookie contests and reported names of winners to us. Along with reports come enthusiastic accounts of the fun and interest which the contests provided at Pomona meetings.

Monroe County's chairman of Service and Hospitality Committee, Mrs. Ida Geil writes: "This has been a very interesting project. Our winner, Mrs. Elton Burmeister of Honeoye Falls Grange, had to be called by long distance to be notified that she was the winner and was asked to come to Pomona

one of the competitors for the title of State Cookie Champion in December at State Grange meeting. In the eight years that *American Agriculturist* and New York State Grange have been cooperating in sponsoring these baking contests, this is the first time that a man has won a county contest!

Here is the list of Pomona and Subordinate Grange winners whose names have been sent into us during the past two weeks:

Pomona Winners

COUNTY	GRANGE	WINNER
Albany	Colonie	Mrs. Spencer Duncan
Allegany	Belmont	Mrs. Lena Francisco
Cayuga	Weedsport	Mrs. John Baker
Chautauqua	Ross	Mrs. Kenneth Coombs
Chenango	Oxford	Mrs. Hiram Howland
Columbia	Chatham	Mrs. Alma George
Delaware	Wawaka	Mrs. Edna M. Reed
Dutchess	Millerton	Mrs. Harry Lawrence
Essex	Ticonderoga	Ralph Brock
Franklin	Burke	Mrs. Josie Hinks
Genesee	Oatka Falls	Alice Boatfield
Jefferson	Natural Bridge	Mrs. Emma Blanchard
Lewis	Lowville	Mrs. Louis Archer
Livingston	Hemlock	Mrs. Theodore Henry
Monroe	Honeoye Falls	Mrs. Elton Burmeister
Orange	Montgomery	Mrs. Walter Karsten
Otsego	Springfield	Mrs. V. M. Webster
Rensselaer	Pittstown	Mrs. Grace Sherman
Saratoga	Bacon Hill	Mrs. Henry C. Peck
Schoharie	Sharon	Mrs. Floyd Mereness
St. Lawrence	Cedars	Mrs. Geneva Richardson
Suffolk	Southold	Clara Tuthill
Sullivan	Bloomington	Mrs. Earl Fox
Tompkins	Waterburg	Mrs. Clinton Stevenson
Warren	Stony Creek	Mrs. Amanda Glassbrook
Washington	Argyle	Mrs. Herbert Kinney
Wayne	Ncwark	Mrs. Irving Heidenreich
Westchester	Yorktown	Mrs. Frederick Merk
Wyoming	North Java	Annabel Gebel

Subordinate Winners

Cattaraugus	Delevan	Mrs. Stella Lafferty
	North Otto	Mrs. Mary Bobbion
Cayuga	Owasco Lake	Mrs. Harry Hicks
	Springport	Jessie B. Yawger
Chautauqua	Busti	Mrs. H. W. Ayres
Chemung	Sullivanville	Bertha Linderberry
Cortland	Freetown	Mary Bronson
	Homer	Mrs. Henry Keep
	Marathon	Mrs. Charles Bustard
	Miller	Mrs. Katherine McGuire
Delaware	Utseyantha	Normina Buck
Herkim	Jordanville	Mrs. Ruth Calman
Lewis	Lcyden	Mrs. Ruth E. Miller
Livingston	Groveland	Mrs. John W. Tittsworth
Madison	Georgetown	Mrs. A. Vrolyk
	New Woodstock	Mrs. Lester Preston
	Owahgera	Mrs. Carleton Snyder
Monroe	Ogden	Mrs. Daisy Harroun
Onondaga	Fayetteville	Mrs. Elizabeth Benedict
	Geddes	Mrs. ElNott Baker
	Skaneateles	Jeanette Hawkins
Ontario	Canandaigua	Mrs. Clinton Ardell
	Enterprise	Mrs. Howard Skuse
	Farmington	Mrs. Oscar Gardner
	Manchester	Mrs. Ralph Hadden
Orleans	East Shelby	Mrs. Clifton Johnson
	Lyndonville	Mrs. Howard Corser
	Transit	Mrs. Eppo Poelma
Oswego	Hastings	Mrs. Mary Gardner
Otsego	Butternut Valley	Mrs. Robert Halbut
Steuben	Avoca	Mrs. Warren Hopkins
Tompkins	Groton	Mrs. Percy Brown
Washington	Mettowee	Mrs. Jane Lincoln
Wayne	Clyde	Mrs. Harry Benning

Mrs. Kenneth Coombs, of Jamestown, N. Y., member of Ross Grange, who won over 16 contestants in the Chautauqua County Pomona Grange cookie contest.

Grange meeting to have her picture taken by the *Democrat & Chronicle* photographer for that newspaper. Through winning this prize, she and her husband were on hand to take the Fifth Degree." Mrs. Burmeister's daughter came along, too, and before the meeting was over made her mother promise to bake a big enough batch of rolled sugar cookies to feed all her classmates!

Essex County Pomona Grange is proud of the fact that a Grange brother, Ralph Brock of Ticonderoga Grange, beat eight other contestants, all of the fair sex. Mr. Brock will be

SIX GENERATIONS of Rosebooms have Lived on this Farm

"My ancestors came from Holland to New Jersey more than 165 years ago," says Horace H. Roseboom of Westford, N. Y. "Great great grandfather Robert Roseboom and three of his brothers fought in the Revolution. Afterwards great great grandfather Robert took up land in what is now Otsego County. He came up the Hudson River on a packet and then over the Cherry Valley turnpike to his new home in 1782. It was the first farm settled in the town of Westford. Since then six generations of Rosebooms have lived here. I am the fifth generation, my son Lawrence is the sixth. And two of these generations have belonged to the Dairymen's League. Uncle Peter Roseboom, over in Oneonta, is another League member, who boasts that he never sold milk except through the League."

THE AMERICAN REVOLUTION was not won by men alone. Women played a part. Take the case of Mrs. Lindley Murray after the Battle of New York. She knew that General Washington's green troops had fled, and that the enemy was surrounding General Putnam's 4,000 regulars. But she knew also that Lord Howe, the enemy commander, had a weakness for good food. So she sent word, inviting him to lunch. He came gladly and brought his officers. They ate for two hours. Just as they finished, the last American soldier slipped safely up the Hudson. Washington's Army had been defeated for the moment, but through the daring and resource of a woman it had been saved from capture.

Again and again during the long fight for A LIVING PRICE FOR MILK, farmers of the Dairymen's League were outmaneuvered and surrounded by their opponents. The dark bitterness of defeat often seeped into their souls. But at home stood courageous and determined women cheering them on, comforting them when all seemed lost and when it seemed impossible to keep home and family together.

Under the inspiration of their womenfolk, the defeated League farmers always reformed their ranks, always returned to battle for the well-being of their families, and for A LIVING PRICE FOR MILK. And like Washington's soldiers, they finally won.

Today in farm homes all over the milkshed, the fruits of that victory can be plainly seen: In better-clothed, better-fed children and smiling, happier wives; in better-furnished homes that are secure from want — homes with the conveniences and comforts that lift drudgery from women's lives.

Freedom costs dear, but its rewards are great. That's why League men and women today — together with all other farmers and their wives in this milkshed — are determined that the right to "life, liberty and the pursuit of happiness" shall never be denied them again.

Published by

The Market Barometer

Producers Ask for Milk Price Increases

By the time you read this, the hearings on the Federal-State Milk Marketing Order will be in progress. Hearings will start October 7 at the McAlpin Hotel, New York City; will move to the Central High School in Syracuse October 9; and will go to Albany on the 11th.

The Metropolitan Bargaining Agency has approved five resolutions recommending changes by which they hope to secure a better price for milk. The proposed changes are:

1. Establishment of a \$2.82 price per hundredweight for Class I milk throughout the year.
2. A new system of fixing the price of milk used in the manufacture of cheese with a schedule based upon the actual sales price of the finished product.
3. A program for payment every ten days instead of every 30 days.
4. An increase in producer returns of four cents per hundredweight in six classes of skim milk.
5. Redefinition of the word "producer" to provide that no dairyman who has delivered to a plant under Board of Health approval during the last quarter of 1939 shall be barred from the benefits of the Order by removal of that plant from Board approval.

While the Bargaining Agency in its request for a hearing asked that price amendments only be considered, Secretary Wickard ruled that evidence would also be received concerning any other section of the Order. This ruling gave the Bargaining Agency the job not only of collecting evidence to substantiate their demand for better prices, but also of preparing evidence to oppose any proposal for amendments which would be detrimental to dairymen.

October Class Prices

Administrator Cladakis has announced that, based on the current price for butter, the Class I (fluid milk) price for the month of October will be \$2.45 and the Class II-A (fluid cream) will be \$1.80. Incidentally, the Class II-A price is subject to an additional differential for skim milk, to be announced not later than November 5.

November Price Announced

The Class 1 price for milk for the months of November and December as provided in the Order will be \$2.65 unless, of course, this price is raised as a result of amendments to the Order which are being considered at the present time.

Production High

Milk production in the New York Milk Shed has been steadily ahead of a year ago. Many have stated that better prices for milk brought by the Federal-State Milk Marketing Agreements is the reason. Doubtless this has had an effect, but it does not explain increased production in other areas. The U. S. Department of Agriculture reports that production per cow on September 1 was the highest for the date in 16 years of records, and that production per cow was high in ALL PARTS OF THE COUNTRY. Surely we can't blame the better prices in New York for increased production in other regions.

More Milk for City Children

Practically ready to go is a plan for providing 300,000 needy school children in New York City this fall with about 21,000,000 half pints of milk at a cost of 1c a half pint. In fact, part of it will be handled by the New York City Department of Welfare for free dis-

tribution with school lunches served without cost to about 18,000 children.

The Surplus Marketing Administration of the U. S. Department of Agriculture invites New York milk handlers to submit bids, and a federal subsidy to milk dealers would compensate them for processing and delivering the milk. Federal payments would also make up the difference between the price of 4c a quart, to be paid by children, and the special producer price for relief milk as specified in the Federal-State Milk Marketing Order. This special price for relief milk is 57c a hundred less than the regular Class I price.

It is expected that the milk which the children will drink will not in any way lower the amount of fluid milk consumed in the city.

Approval has also been given to a program for increasing the use of milk by families on relief in the City of Boston, Massachusetts. Relief milk, under the supervision of local welfare agencies, will be sold to eligible families at 90 depots for 6c a quart.

Milk Strikes or Marketing Agreements?

(Continued from Page 5)

that milk will cost the consumer 1/2c a quart more, as it will anyway later when the marketing agreements will bring a price rise to farmers. The politician also will be a hero among striking dairymen, and even non-striking dairymen, for stopping the strike, and thus has he used milk as a stepping stone for his own advancement in politics.

You Have the Right to Strike

Seventh. As stated above, we believe that a farmer or any group of farmers have a perfect right to keep their milk at home, but it is a right that should be exercised only as a last resort, and after very, very careful consideration, because what is lost may very easily be far, far greater than any gain. So when you are thinking of striking, ask yourself what you stand to gain and what you stand to lose.

On the gain side, if you are successful, you might get a higher price for a brief time before the higher prices under the marketing agreements can be put into effect. Even that is a doubtful possibility this year, because milk prices are already above the general price level.

Against that very doubtful gain, add up what you stand to lose:

1. Figure the actual dollars and cents loss for keeping your milk at home for a possible two or three weeks.
2. Figure that if a strike occurs, it is possible that dairymen may lose the milk marketing agreements entirely. Department of Agriculture officials are very emphatic in their statements that they will keep the agreements in force here only as long as they are assured that dairymen want them to, that they are tired of arguments and disagreement. Perhaps they are even looking for an excuse to withdraw.

Into the Dealers' Hands

3. Remember that a strike is just what a large number of milk dealers want, because it might help them to get rid of the marketing agreements. Many of these dealers have never liked these agreements, because the agreements forced them to cut their profits and to return to farmers at least what the market justifies.

We haven't heard much about chiseling lately, have we? Who gained by chiseling? The dealers. Who lost? The dairymen. When the agreements first went into effect, dealers took them in-

to the courts and succeeded in having them temporarily kicked out. What happened to milk prices then? Dairy-men just about starved before the agreements could be restored and prices to farmers jumped the very day the agreements went back into effect, after they had been approved by the United States Supreme Court. Do you want to play into the hands of these chiseling dealers again and by so doing lose the agreements? Do you want to go back to the old chiseling days?

You haven't heard very much yelling about surplus lately, have you? This in spite of the fact that we produced more milk during the past year than we have before in years. Why no complaint about surplus? Because the milk marketing agreements are the first successful surplus control plan we have ever had. It works, with the result that surplus is not allowed now to beat down the price for all the rest of the milk. Do you want to take a chance of losing this?

4. During 1940, dairymen of the New York milk shed have received \$21,000,000 more than they did in 1939, due to the milk marketing agreements, backed by farmers' organizations. Think what that has meant in better living conditions on thousands of farms. It is not as much as you should have, of course, but it is probably as much as you can expect, compared to other farm prices, until we get the general price level up. Anyway, do you want to take a chance of losing the marketing agreements which brought this extra money to dairy farmers?

Makes Enemies of Old Friends

And lastly, at this time when America should be united in standing against disorder of all kinds, is it worth while to put your old farm neighborhoods through all the trouble and hard feeling that is sure to come from a strike, especially if it is steered, financed, and often manned by radical city organizations? Will you women folks of the farm stand for another shocking upset that that kind of strike will surely bring, with fighting and bloodshed, burned buildings and destroyed property? Is it worth while, we ask?

Over 90 per cent of you voted for and have stood by the marketing agreements as a means of marketing your milk. You therefore represent majority opinion and the orderly and legal way of solving your problems. Sometimes it may take a little longer to do things in an orderly, legal, and democratic way, but you are in this dairy business for a long time, and what you are really interested in is a permanent plan. The milk marketing agreements, backed by your organizations, come the nearest to being such a permanent plan that we have ever had in this milk shed.

Again I say these are the facts and our conclusions as we see them. The decision is yours—also the consequences!

Market Prospects for Vegetable Growers

(Continued from Page 8)

per cent higher than 1939 and above the five-year average.

More Celery; Prices Higher

At this season of the year celery grown in New York provides most of the supply received at the New York market. In fact, from July through October, the receipts of celery at New York come almost entirely from the states of New York and New Jersey. California celery becomes a large factor in the supply in November and almost completely dominates the market in December. From January to May, Florida takes an increasingly important place in the market supply.

The upstate New York crop is now moving steadily to market. This year the crop which is being harvested at

‡ Preliminary.

—LELAND SPENCER,
Department of Agricultural Economics,
New York State College of Agriculture.

present, is estimated to be 18 per cent larger than 1939 and about 36 per cent above average.

New York State normally produces 41 per cent of this deal but is estimated to have 49 per cent of the current larger crop of about 2,080,000 crates. The United States intermediate and second early crops were 8 per cent below 1939 but well above the five-year average. Earlier crops were much larger than normal.

September celery prices, which may have been strengthened by a relatively smaller intermediate crop and the late season, were close to 20 per cent higher than 1939.

Smaller Eastern Dry Bean Crop; U. S. Crop Slightly Larger

To many people the high spot in the outlook for dry beans is the prospect for large exports to countries at war. During the past twenty years exports of dry beans have varied between 26,000 and 600,000 100-lb. bags. From 1931 to 1938 exports were less than 100,000 bags but in the year ending with August 1939 they were about 300,000 bags and from September 1939 through July 1940 we exported about 770,600 bags. This was an increase of 176 per cent over the same months in the previous year. The quantity of beans exported is still small compared with total production, only about 3.6 per cent in 1939, but if exports continue to increase they should have a stimulating effect on prices.

New York state farmers planted 11 per cent less acres to beans in 1940, but the total production is estimated to be only 4 per cent less than 1939, and 7 per cent below the five-year average. United States production is estimated at 8 per cent above both 1939 and the average. Crops in the Great Northern and Pinto producing areas, as well as in California are estimated to be 15-23 per cent above 1939 and 12-20 per cent above average. However, the Michigan area production is expected to be below average!

In September, New York farm prices for beans are ranging about 15 per cent higher than 1939.

Melons in New York State

Although not as large as in previous years, the melon crop in New York this season makes up in quality for what it lacks in quantity. Forty-eight counties in the state raise melons. Acreage has increased greatly in recent years due to rapid transportation and increasing popularity of roadside stands. All melons raised in the state are grown for local use and are picked at the mature stage.

The muskmelon or cantaloupe is a member of the cucumber family. Its history goes way back to the time before the Greeks and Romans, and it originated in tropical Africa or Asia. However, it is only in the past fifty years that melons have really come into their own and become the favorite fruit they are today.

HINTS for the Farm Mechanic

A Direct Drive Saw Rig By E. N. MOOT.

SECOND hand cars can be purchased in most rural sections at extremely low prices and the engines are often found to be in excellent condition. Edgar Handy, a former vocational student in the Sharon Springs Central School, purchased a second hand car and mounted his own buzz saw rig on

The drive shaft is unbolted from the differential at A and bolted to the saw shaft at B.

A close-up of the circular saw, mounted on the rear of an old car.

a hard wood frame attached directly to the stripped car chassis. He used steel bed rails as track for his saw table frame and saw cover.

The car drive shaft is easily changed from contact with the differential housing to the shaft on which a high grade thirty inch steel saw is mounted. Three different speeds of the saw are possible with this hook up, the same as in driving the standard shift car.

The whole rig is an extremely efficient labor saver as it is easily moved from one pile of top and buzz wood to another in the woodlot. There are no belts, elaborate leveling of equipment or excessive number of pulleys in this portable unit.

The whole procedure in buzzing wood with this home made outfit includes:

1. The trip to the farmer's woodlot, direct to the various piles of buzz wood.

2. Locating the car as near to the

All ready to start for the wood pile.

wood pile as possible.

3. Disconnecting the housing plate on drive shaft at A. (see illustration.)

4. Lifting drive shaft and connecting plate A to plate B on saw shaft.

5. Blocking rear wheels of car to prevent vibration due to running motor.

6. Start car motor, shift to low, run a few minutes, shift to second, then direct to high.

7. Saw wood.

No difficulty will be found in buzzing wood thicknesses found in the average farmer's buzz wood pile. Of course it is more practical to split some of the larger logs. Plenty of weight in the car chassis and motor prevents any tipping of the saw table which is directly attached to the chassis frame.

Keep After Rats

Remember that every rat you kill means at least two dollars saved in eggs, feed, grain and general damage. Probably more when you figure how you are checking the rat increase. Back the car or tractor up to the building, wire an old inner tube around the exhaust pipe, poke the other end into the holes, and gas them heavily. Trap them, poison them, any way to kill them.

Cement Putty for Window Panes

Some farmers have found that linseed oil and cement mixed to the consistency of putty does very nicely for making window panes weather tight. However, it is hard to beat ordinary

commercial putty into which a small amount of white lead has been worked, then applied after the wood has been given a coat of oil or thin paint.

Protect Underground Pipes

Underground pipes may freeze even at a depth of three or four feet unless properly protected. They should be laid with a gradual slope towards the well, so that by tripping a valve or opening a petcock they can be entirely drained. Insulation is of doubtful value underground unless coated with asphalt or other material so as to keep it dry. Coarse manure or hay or weeds piled along over the pipe so as to catch and hold snow is the most effective protection against frost.

Cutting Up Tires

It is difficult to cut up auto and truck tires for use as poultry waterers, water holders under grindstones, covering for steel wheels, etc. The bead wires especially are tough and so hard that most cold chisels will not touch them. The best way is to use a good sharp hacksaw and considerable patience. After they are cut in two, they can be tacked flat on a 2 by 4 and the bead ripped off with a handsaw or hacksaw. Further cutting can then be done with a sharp cold chisel.

GARAGES AND MACHINERY SHEDS

Cost Less

WHEN YOU USE THE FREE BLUE PRINTS AND MATERIAL LISTS FROM THE 4-SQUARE FARM BUILDING SERVICE

Farmers all agree that expensive tractors, cars, implements and tools, should be protected by adequate shelters. Depreciation is reduced and the working life of equipment prolonged. Now you can get the garage, the machinery shed and shop you need at lower costs for Agricultural Engineers have designed buildings that are economical to build —

buildings you can build yourself with the

Free Blue Prints and Material Lists available at your 4-Square lumber dealer. See your 4-Square Dealer today. See his designs. See how ready-to-use 4-Square Lumber fits into these plans without needless sawing and fitting. See how material waste is avoided, how stronger, more durable buildings result. The 4-Square Farm Building Service will save you money on farm construction. Tell your 4-Square Dealer you'd like to see it.

The 4-SQUARE FARM BUILDING SERVICE

216 designs of Farm Buildings and Equipment designed by engineers — complete with blue prints and material lists. There is a size and type of building to suit your program and preference at a big dollar saving.

THIS BOOK IS FREE

USE THE COUPON

Farm Homes and buildings for every type of livestock program — buildings for grain storage, milk houses, machinery sheds. Before you build or remodel, see the 4-Square Farm Building Service. You can build better and more economically with the free Blue Prints, Material Lists and Ready-to-use 4-Square lumber. Correctly designed farm structures, built with 4-Square lumber, have far longer life and can be economically remodeled to suit new needs.

"Greater Farm Profits from Better Farm Buildings" describes the 4-Square Farm Building Service and shows how agricultural engineers design better, more economical farm buildings. Write for a copy. It's free.

4-SQUARE LUMBER

THIS SIGN IDENTIFIES YOUR 4-SQUARE LUMBER DEALER

THE LUMBER FOR THE FARM
Cut to exact lengths, squared on ends and edges, smoothly surfaced and thoroughly seasoned, Weyerhaeuser 4-Square Lumber lowers the cost of farm buildings and equipment by reducing material waste and erection costs.

AMERICAN AGRICULTURIST
10 N. Cherry St., Poughkeepsie, N. Y.

**DOWN THE
Alley**

By J. F. (DOC.) ROBERTS

THE way prices on farm products are acting shows a sad reflection of the defeatist attitude of so many people. To be sure, we have all taken a long series of lickings economically, and we will continue, at least, to take price spankings until we regain confidence in ourselves as a united, busy, energetic nation.

Wool is one of many such examples. For a long time, no one would buy wool pelts on a basis of the value of the wool carried by those pelts, because the dealers and wool pulleries were afraid to speculate on the price the wool would bring by the time it was taken from the skin and, also, on uncertain labor costs. This has had a very decided downward influence on all wool prices. Today, wool pelts are bringing nearer their wool value than for a long time, and future wool price advances will be determined by how soon general economic confidence returns to us as a people. Hogs are in exactly the same position, with lard the product that carries a labor charge, and is sold on a future market. Not only is this true of farm products, but also of prices of farm land, farm homes, and even city homes and city businesses. We have been selling America short, and she doesn't deserve such treatment.

Working on a market every day, I sometimes wonder how long the distribution and marketing system is going to continue to return to the farmer less and less of his share of the worker's dollar. We have seen decentralizing of our farm markets since 1913 by little local auctions, roadside stands, and all sorts of channels through which foodstuffs have been getting to the consumer; and yet government figures show that of 58 foods in June of this year, the farmer received but 39c of the worker's dollar spent for those foods, whereas in 1913 the same foods returned the farmer 53c of the worker's dollar. We find that the consumer's pork dollar in June, 1940, was down to 51c returned to the farmer, as compared to 67c returned in 1937; that the dairy dollar was down to 41c this June, as compared to 45c in 1935, and 48c in 1937. The farmer's egg dollar was down to 53c this June, while it was 66c in 1935 and 59c in 1937; the white flour dollar was down to 36c, as compared to 52c in 1937; and, finally, we find that since 1937, the farm return has dropped from 93c to 77c.

All this may have no place in a livestock column, but nevertheless your animals must get into food channels, clothing channels and all sorts of channels, and this situation must get more attention from the farmer himself. This is self-evident.

Now that the State and County Fair

season is over and their tremendous value to all classes proved again, it is my observation that, particularly with the county fairs, their progress and their prosperity are in direct proportion to the interest, the attention, and the place they are giving to the boys and girls in both 4-H Club work and F.F.A. work. The successful county fair today owes more of its success to these young people than to any other group.

**Allegany-Steuben Holstein
Breeders' Club Hold
25th Sale**

ON THE twenty-fourth of this month the Holstein breeders of Allegany and Steuben counties, N. Y., hold their twenty-fifth annual sale, which R. Austin Backus, famed Holstein pedigree man and sales manager of Mexico, N. Y., claims to be the oldest consignment sale in the USA.

This long continued effort testifies to the cooperative spirit of these dairy-men, who through good times and bad, have had the fortitude to cling to the original idea of a sale to which is consigned each year the choice animals of their herds, to meet the uncertain fate of an audience that may be large or small depending on the vagaries of the weather, the price of milk, the amount of hay in the barn, and the need for dairy cows.

Dr. E. S. Harrison, master of the Cornell University herd, has selected the individuals. Out of 25 or 30 herds Professor Harrison has picked half a hundred large and rugged cows. Particular attention has been given to udders.

Not only do these cattle look the part, they are bred for great production. Hazel Segis Hengerveld Sylvia, a big strong six-year old consigned by James Young of Angelica is typical of the lot. Her own dairy herd improvement association record of 600 pounds of butterfat is supported by that of her dam and grand dam, each of whom produced with equal abundance.

A similar case is that of the several heifers consigned by Arling Cobb of Greenwood. All are rich in the blood of Kelco Lena Champion Sylvia, with a record at seven years of 27,008 of milk and 923 of butterfat, one of whose daughters recently completed a record of 31,105 of milk and 1161 pounds of butterfat, and three others have records up to 900 pounds of fat.

Beauty Not Neglected

The heifer consigned by A. H. Lyke of Howard was the junior champion at the Steuben county fair. Her style and beauty is not a matter of chance. She is sired by Cornell Pride 25, a bull in service in the first Steuben Holstein Association of which Mr. Lyke is a member. To mention but a few of the well known and accomplished ancestors of this heifer, her sire is by Cornell Pride, and he is a full brother of Cornell Pride Cottie and Connie, the winners of the produce of dam class at the recent New York State Fair.—Bill Stemple.

"Remember, Ed, next half it's my turn."

**We'll do your Milking
FREE!**

Your Universal dealer will loan you one of these new "1940 Sensation" milkers to try. You'll like it because it's newer — faster—cleaner—and easier to operate.

**Universal
Portable MILKER**

Either electric or gasoline motor

The only Portable Milker with ALL of these Outstanding Features:

- Famous alternating action — like milking with hands.
- Milks one or two cows at a time.
- Compact. No belts or pulleys. Operates with a 1/4 H.P. motor from any light socket.
- Milks with LOW VACUUM.
- Uses inflation-type test cups.
- Milks directly into milk can or milker pail.

With **AMERICAN**
AGRICULTURIST

Advertisers

This group of farm paper editors spent a pleasant and profitable day at DR. SALISBURY'S LABORATORIES at Charles City, Iowa, on September 20. After listening to talks by a number of men on the staff there a trip was taken through the manufacturing plant and out to the research farm.

In addition to making routine tests on the vaccines and other products manufactured, there is under way an extensive program of research to discover new products and new ways of controlling and curing poultry diseases.

More than the usual amount of grass silage has been put in this summer and some dairymen find that they do not have enough silo capacity to hold the corn. On a temporary basis the situation can be met by erecting a temporary silo. This is not difficult if definite directions are followed but it should not be attempted without such directions. One good source of information is a booklet called "How To Build Dependable Silalkraft Silos." Drop a postcard for the booklet to the SISALKRAFT COMPANY, 203-GG West Wacker Drive, Chicago, Illinois.

FOR PUBLIC SERVICE

At the recent Farm Week at the New York World's Fair, the B. F. GOODRICH COMPANY, makers of tires gave awards for distinguished public service to a number of men identified with agriculture. Those who received awards were: Wheeler McMillen, Editor of Farm Journal and Farmer's Wife and President of National Farm Chemurgic Council; Milton Hult, President of the National Dairy Council; Thomas A. Leadley, President of American Agricultural Editors' Association; Walter Lloyd, Editor of Ohio Farmer; Clifford Gregory, Associate Publisher of Wallaces' Farmer and Iowa Homestead and the Wisconsin Agriculturist and Farmer.

YEAST FOR POULTRY

To a farm housewife of a generation ago yeast had just one use; namely, making bread. Research has shown that yeast carries important vitamins, and its use in livestock feeding is now recommended. The story of yeast and its use for poultry is explained in a booklet "The Why of Live Yeast for Poultry." This information is available to any reader of *American Agriculturist*. Just drop a post card to the NORTHWESTERN YEAST COMPANY, 1750 North Ashland, Chicago, Illinois.

THE WAY TO A MAN'S HEART

The old saying that the way to a man's heart is through his stomach is still good. What better investment could you make than to spend 10c for information on better cooking? By mailing the advertisement on page 19 of the September 14 issue and 10c to R. B. DAVIS COMPANY, Dept. 300, Hoboken, New Jersey, you will get a booklet called "Master Pattern Baking Formulas—The Secret of Success in Baking."

BETTER FEEDING BRINGS PROFIT

THE AMERICAN FEED MANUFACTURERS' ASSOCIATION is sponsoring the 4th Annual National Feed Week, dates being October 14 to 19. They will stress the progress made in better feeding through cooperation of farmers and feed dealers. In some areas dealers are offering prizes in contests to discover the best feeding records. These records will be used to supplement the research work done in feed laboratories and on experimental farms. The observance of Nation-

al Feed Week will also include radio talks, special sales, and publicity for national campaigns to increase consumption of poultry and dairy products.

TALKING ANIMALS

If our farm animals could talk, they would tell us some startling tales. A series of advertisements run by the BELL TELEPHONE SYSTEM tells us what some of the farm animals might say. The words are interesting and amusing, and help us to a better realization of the benefits we get from telephones. If you haven't been doing so, look up and read the ones in the past few issues.

STREAMLINED MILK BOTTLES

THE BORDEN COMPANY is introducing a new streamlined milk bottle for New York City consumers. Three years ago the Borden Company replaced the old 26-ounce bottle with a bottle weighing 22 ounces. Now the new bottle weighs 17 ounces. It is reported that the first drop in bottle weight saved the milk industry three-quarters of a million dollars a year, and it is anticipated that the further reduction in weight will result in equal savings.

JERSEY PROGRESS

Through the courtesy of L. W. Morley, Executive Secretary, we have just received a report of the proceedings of the 72nd Annual Meeting of the AMERICAN JERSEY CATTLE CLUB. This is a booklet which every Jersey breeder should have and read. It carries important records of the breed, a report of the extension and promotion program of the group, and several talks which were given at the annual meeting. Copies have been sent to members of the American Jersey Cattle Club.

SHEEP SHEARING CONTEST

One of the big events at the International Livestock Exposition at Chicago is the sheep shearing contest. This year the third annual contest will be held Friday morning, December 6. There are two separate contests. One is for state champions, with prizes of \$100, \$50, \$25, and three \$10 prizes. The second contest is open to all comers, including past champions. Three prizes are offered of \$150, \$50, and \$25. The cash prizes are offered by the CHICAGO FLEXIBLE SHAFT COMPANY. The same company will also furnish the shearing equipment for the contest.

ANOTHER APPLE JUICER

Following mention some time ago of a small machine for extracting apple juice, we have received many requests for some information as well as some additional information. The latest concerns the VEGE-JUICER, a small machine designed primarily for home use. The juicer will extract juice from both vegetables and fruits. More information is available from the VEGE-JUICER COMPANY, Bent and Potomac, St. Louis, Missouri.

NEARBY MARKETS for NEARBY POULTRYMEN

The Hen Man Starts to Crow

By J. C. HUTTAR

THE most important advance in the poultry industry in the past ten years was the formation of the National Poultry and Egg Board. Poultry and egg production has changed from the home flock stage to a commercial stage where literally millions of farmers have come to look to their hens to bear part or all of their farm expenses. Changing from the 100-egg-a-year hen to the 200-egg-a-year hen has been fine, but it brought on its problems. It has given us many more eggs to sell. True, the population has increased while this change was taking place, but total egg production has changed much faster. Coupled with this, we have seen the producers of other foods wooing our egg eating public. And with notable success, don't you think?

Folks who have made their living out of egg production, broiler production, turkey production and chick production during the last twenty years have watched all this take place with greying heads. But, greying heads don't solve the problem. Many of the owners of these heads are now smiling hopefully. Something has at last been started to change this matter of eating eggs and poultry meat.

The Right Leaders

The success or failure of most activities can be traced to the quality of people who run them.

As I know and size up the men who will carry the ball as members of the executive committee and as manager, I would say that the Board is in good hands.

Let's look at them quickly:

Standing left to right:

Hobart Creighton: Poultry breeder of Warsaw, Indiana. Has about 20,000 hens. I visited his place in 1934 and it looked thrifty and well managed. He's one of the organizers and past president of the National Poultry Producers' Federation.

N. R. Clark: Vice-president of Swift and Co: In all my contacts with egg

and poultry dealers, I have found very few who can see the producers' side of the picture as sympathetically as Mr. Clark.

Seated, left to right:

Lloyd Tenny: Business Manager of the Chicago Mercantile Exchange. Former New York State County Agent. He has a good head for business and finance. He's treasurer of the Board. He feels that the prosperity of the egg and poultry dealer depends on the prosperity of the poultry producer.

Clyde Edmonds: General Manager of the Utah Cooperative Poultry Producers' Association. In case you don't know it, this farmer's cooperative has been so successful as to give us real competition in marketing our best eggs in Northeastern markets.

Herman Demme: For 20 years a poultry producer and breeder at Se-well, New Jersey.

Glenn Campbell: President of the Campbell-Sanford Advertising Agency. A graduate of Iowa State Agricultural College. Former instructor at the Connecticut Agricultural College. One of the men who helped put the World's Poultry Congress over.

Andrew Christie: Poultry producer and breeder from Kingston, New Hampshire.

Four producers and three business men.

It looks like a strong set-up to me.

Northeast Especially Honored

First, in the selection of its president, Herman Demme, then in the selection of its first vice-president, Andy Christie and finally in choosing the person for that all-important job of manager, Homer Huntington, the Board has shown its respect for Northeastern Poultry Leaders.

Three farmers hail from the Northeast. Here they are and a little more about them:

Herman Demme: In 1919, Herman and Carl Demme, with \$60.00 in cash and a lot of faith in the chicken busi-

"Maw,--kin we have a few more yo' pan cakes; these'r gittin' a might nicked."

GET LAYERS READY TO PRODUCE More Eggs

Fortified COD LIVER OIL

supplies ample Vitamins A & D—two of the important feed factors which layers require to keep up in weight, ward off many diseases, and fill the egg baskets during the winter laying season.

"NOPCO XX" *

is a thrifty way to supply your flocks with Vitamins A & D because it is so highly concentrated—so safe and reliable.

"NOPCO XX"

is the result of constant research, precise manufacturing methods and exacting tests. You can feed it with complete assurance that it delivers to you its guaranteed quota of 3000 U.S.P. units of Vitamin A and 400 A.O.A.C. units of Vitamin D per gram. Feed it in all your mashers to help you get high producing layers, top quality eggs and bigger hatches.

NATIONAL OIL PRODUCTS COMPANY
3090 ESSEX ST., HARRISON, N. J.
*Trademarks of National Oil Products Company

(Continued from opposite page)

ness, started the Dembro Poultry Farm, at Sewell, New Jersey.

They have built up a strain of Leghorns which has made quite a name for itself.

Here's a poultryman who has lots of faith in the future and is dead in earnest about the work of the Board.

Andy Christie: "I have the honor to have been one of the faithful and supremely confident pioneers of the New Hampshire fowls," Andy says about himself.

Another of his statements is this: "From the sale of 20,000 chicks in 1932 to the sale of over 1,000,000 each of hatching eggs and baby chicks in 1939, has been my expansion."

Andy has a big stake in getting people to eat more eggs. He's going to see it through.

Homer Huntington: Here's a poultryman the Northeast can be proud to loan to the nation. Here's a brief sketch of his life:

Born in Chicago, Illinois.

Graduated from University of Illinois, 1916.

1916-1918 Assistant Health Officer, Cumberland, Maryland.

1916-1924 Scientific Assistant, U. S. Public Health Service.

1918-1920 Assigned to Camp Pike and Eberts Field, Arkansas.

1920 Conducted health surveys in lead and zinc mining areas, Joplin, Missouri.

1920-1924 Health Officer, Government Reservation, Perryville, Maryland.

1924-1940 Breeder of White Leghorns, Winsted, Connecticut.

1938-1940 Executive Manager, New England Fresh Egg Institute.

His outstanding success in promoting the increased use of New England eggs by New England consumers is so well known that Homer was the natural first choice to run this national job.

Getting his voice tuned in the first year (organization and permanent financing) and then a good lusty crow throughout the years—that's what the hen man intends to do with his National Poultry and Egg Board. If we all join in and make it a chorus, success is assured.

Crooked Breast Bones

What is the cause of crooked breast bones and how can they be prevented?

Three causes have been given at various times for this trouble; namely, inadequate rations, heredity, and too early roosting. Probably all of them have some effect. There is good experimental evidence to show that inheritance is responsible for some crooked breast bones because some of the birds in any one flock will have them while others show no such tendency. Naturally, the answer here is to breed from the birds which have straight bones.

It is believed by some that even though there is sufficient Vitamin D in a ration, the lack of sufficient calcium and phosphorus will cause crooked breast bones. Some poultrymen feed oyster shells to growing birds as well as to the layers. The answer to this phase of the problem is to feed the very best ration you can get.

Undoubtedly, if birds spend a lot of time on narrow roosts, this is going to aggravate any tendency toward crooked bones. The roosts should be at least 2" wide, and if these are provided, plus a good ration, there should not be much trouble.

Vote! Vote! Vote!

IN A DEMOCRACY, the most valuable privilege of a citizen is the right to vote. It is more than a right—it is an obligation and a responsibility. Equally important is the right to decide how you will vote. In some countries, every citizen votes if he knows what is good for him, but he votes as he is told and not as he may wish.

To help get out the vote this fall, we are asking our readers to sign the pledge below. We are offering a prize of \$10.00 to the reader who secures the longest list of voters and signatures, and \$1.00 each for the next 15 longest lists. Every signature, of course, must be in the voter's handwriting, and the voter's address must be in the office of American Agriculturist, Department VP, Savings Bank Building, Ithaca, N. Y., by Saturday, November 9.

VOTERS' PLEDGE

I solemnly pledge to cast my vote in the coming election this fall, and to do my best to get my relatives and friends to do the same.

Name

Address

Attach blank paper for further signatures.

Don't wait for colds, roup, and bronchitis to kill YOUR birds and profits. Start NOW to dust your birds with B-K Powder when the first symptoms of these diseases appear. It makes them sneeze and cough, loosens mucus, and helps to relieve congestion and prevent strangulation.

BETTER THAN LIQUID SPRAYS

Poultry experts prefer the DRY DUSTING method of B-K; makes mass application easy; avoids possible excessive moisture risk from liquid sprays in cold weather.

ADD B-K TO BIRDS' DRINKING WATER

One sick bird can endanger your entire flock. Add B-K Powder to flock's water daily. Use B-K Powder frequently, according to directions, in coops and brooding houses to promote higher sanitation and to aid in preventing spread of diseases.

WRITE FOR FREE SAMPLE

General Laboratories Div., Penna. Salt Mfg. Co., Dept. AA Widener Bldg., Phila., Pa.

Send me, without obligation FREE sample of your B-K Powder, the germ-killing agent for poultry.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912 AND MARCH 3, 1933.

Of American Agriculturist, Inc., published every other week at 10 N. Cherry Street, Poughkeepsie, N. Y., for September 16, 1940.

State of New York, County of Tompkins, ss.

Before me, a notary public in and for the State and county aforesaid, personally appeared E. C. Weatherby, who, having been duly sworn according to law, deposes and says that he is the Secretary-Treasurer of The American Agriculturist, Inc., and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, as amended by the Act of March 3, 1933, embodied in section 537, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor and business managers are:

Publisher, American Agriculturist, Inc., Ithaca, N. Y.; Editor, E. R. Eastman, Savings Bank Bldg., Ithaca, New York; Managing Editor, None; Business Managers, None.

2. That the owner is: (If owned by a corporation, its name and address must be stated and also immediately thereunder the names and addresses of stockholders owning or holding one per cent or more of total amount of stock. If not owned by a corporation, the names and addresses of the individual owners must be given. If owned by a firm, company, or other unincorporated concern, its name and address, as well as those of each individual member must be given). American Agriculturist Foundation, Inc., Ithaca, N. Y. (A non-profit membership corporation without capital stock).

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent. or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear on the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is (This information is required from daily publications only.)

E. C. Weatherby, Secretary-Treasurer.

Sworn to and subscribed before me this 16th day of September, 1940.
(My commission expires March 30, 1942).
(Seal) Everett M. Carhart.

Farmers Will Fight Effort

Resolution

passed by Bargaining Agency
August 29th

- a. To request the State and Federal authorities to confine amendment hearings on the orders to those petitioned for by this Agency, as provided in the Rogers-Allen Law, and to receive evidence at such hearings only on the provisions of the orders which are subjects of such petitions,
- b. To present evidence, at any hearing that may be called on amendments to the State and Federal orders, in support of the Class I price amendment as petitioned for by the Agency, and
- c. To oppose and present evidence in opposition to any other changes which may be proposed in such hearings as to other provisions of the orders and particularly, but without limitation, to oppose any change in the following:
 1. Cooperative differentials.
 2. Class III-C price.
 3. Market service payments (except possible clarifications to eliminate any possible allowance on pipe line diversions), and
 4. Unpriced Class I milk (except a provision for such milk to be priced so as to carry a proportionate amount of surplus such as was proposed by this Agency in the October amendment hearings).

Brainardsville, N. Y.
September 24, 1940

Metropolitan Cooperative Milk Prod.
Bargaining Agency, Inc.
Room 118, Onondaga Hotel
Syracuse, New York

Gentlemen:

For thirty-six years I have been a dairy farmer. I have a herd of twenty-five head and deliver my milk to a plant at Chateaugay. I can speak from experience and want to express appreciation for the benefits that the surplus control plan is bringing to this North Country.

This last year has been my most happy and successful year of them all. I have enjoyed higher prices in past years, but the feeling of security and the peaceful milk market with good prices since the Order of July 1939 has given me cheer and hope.

The new health regulations just coming into effect are costing me a lot of money to cool my milk and do the other things that the regulations require. We must have a higher price to meet these additional costs, as well as the increased cost of labor.

I urge all dairymen to join hands and support evidence at hearings that will build for us a more helpful milk marketing order. I pledge to do my best.

Sincerely yours,

A. R. Cook

to Weaken Surplus Control Plan

They want it made **STRONGER!**

Every effort to weaken the SURPLUS CONTROL PLAN, by those who would profit by its weakening, will meet the full resistance of this organization. Yes, let's search for places where repairs may be made to make it stronger, just as farmers go over their farm machinery and make repairs. But FARMERS CANNOT ALLOW ANY SELFISH INTERESTS TO WEAKEN IT.

Of course we need a higher Class I price. On June 19th this organization petitioned State and Federal authorities for a higher Class I price. Hearings are now being held.

Surplus Control Plan Proved Right

Read the letter from Mr. Cook on this page. Thousands of other farmers in the milkshed feel the same way. They, too, are noticing the benefits of this orderly handling of the milk problem. There are happier farm homes in this milkshed because of steady markets and guaranteed payments. There are more prosperous communities in this milkshed because of this steady flow of milk to protected markets. For the SURPLUS CONTROL PLAN does control the surplus.

Improve It—And Make It Stronger

On August 29 the executive committee of this organization passed the resolutions printed elsewhere on this page. These resolutions show the determination of our nearly 50,000 farmer members in refusing to allow the SURPLUS CONTROL PLAN to be weakened. It is hardly likely that those who would profit by weakening the plan will attack it directly. It's the "sniping" that would undermine the effectiveness of the surplus control that we must guard against.

The 64 Co-operatives who form this organization welcome the help of all farmers who want to see these gains kept. We welcome and urge other Co-operatives to join us in this fight for A LIVING PRICE FOR MILK. We have the law on our side . . . we have State and Federal assistance and we now know the benefits possible. But selfish interests are already at work and we should like to repeat Mr. Cook's words, "I urge all dairymen to join hands and support evidence at hearings that will build for us a more helpful milk marketing order."

New KITCHEN for Old

*In the very
Same Spot!*

By Louise Price Bell

(Before): This is the ugly, inconvenient kitchen that the Bells found in the old farmhouse which they had bought.

(After): And this is the kitchen with "personality" that Mrs. Bell created in the very same spot as the old one. Imagination, paint, and elbow grease had a large share in the transformation.

WHEN we bought an old farmhouse, with the idea of remodeling it, we had to start at *scratch* with the kitchen, as the accompanying illustrations will show. The window in the "before" picture is the remodelled, over-the-sink one in the "after" picture but aside from that we, ourselves, find it hard to believe that the room is the same one!

We planned a white kitchen, with black tile drainboards and narrow black strips along the top of the lighter tile which was behind the sink. And we thought we were going to like our all-white kitchen even though it might require a little more care than one done in a darker color. When it was done it looked clean and fresh and chaste and sanitary. But it also looked hospital-like, uninteresting and drab. It lacked *personality*.

We decided that perhaps a gay patterned linoleum would liven the room up, so we went to town and selected just what we felt would do the trick. It was a Spanish tile-effect linoleum with a light background, two shades of green and splashes of red and black decorating it. We ordered it laid with a dark green border, and then my housewifery love of kitchen utensils drew me to the hardware section of the store while my husband looked at farming tools of which he was in need.

I selected a canister set and bread box, all with cherry-red covers and decorations that were exactly the shade of the red splotches in the linoleum. Even the green leaves on the cherries which formed the canister decorations matched the green in the floor covering!

With cans of red and green paint in these same shades I invaded our too-dull kitchen the next morning when my husband was safely busy in the far north lot. First of all I painted the linings to all of the cupboards red. It was daring,

yes . . . but I loved it and when I suddenly decided to paint the shelf-edges green, I felt my cupboards a masterpiece.

The kitchen stool came next. It received a coat of red paint while the ladder stool was painted green with red treads. The large hamper that I had begged from the market came in for its share of green paint, and a small tin waste basket was painted red on the inside . . . green on the outer side.

My piece box revealed a strip of calico which developed into stunning curtains for the window. It was cherry-red with white dots and although I held it to the window fearfully, thinking there might not be enough material, I found that there was enough for the curtains to have a three-inch hem . . . and still leave a strip of the material.

Almost feverishly I covered my pot holders which were of miscellaneous colors . . . then I crocheted black sansilk over the brass rings to given them a touch of black like the tile strips.

The next time I went to town I brought back two green iron flower-pot holders from the dime store and placed red flower pots on either side of the window. One held parsley, the other chives (picture taken before that purchase).

Then I viewed our kitchen with pleasure and beamed at my husband when he said: "Well, you sure have made the kitchen look like a picture in a magazine!" For I agreed with him; it really did and yet this brand new kitchen was in the very same spot that the dreadfully discouraging one had been. Imagination, paint, and elbow grease played a large part in the transformation.

1½ yards for long sleeved jacket. Hat Pattern No. 3082, one size adaptable to any headsize, must be ordered separately.

TO ORDER: Write name, address, pattern size and number clearly and enclose 15c in stamps. Address Pattern Dept., *American Agriculturist*, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our new fall and winter fashion book.

Today in Aunt Janet's Garden

How to Store Tender Tubers

NOTHING quite takes the place of the gladiolus in the home garden—that is if there is room to grow plants for cutting. Long ago, I gave up trying to use it in the border because if it is not staked, it lops over and looks untidy. I believe in growing it in the cutting garden where if it does lop over, no landscape effect is spoiled.

My present concern with glads, however, is to lift and store them so that they are ready next year to grow fine, healthy spikes. When the foliage is brown or before the first real frost, the glads are ready to be lifted. The tops should be cut off as fast as they are dug; by doing this any thrips in the tops are prevented from getting down into the bulb. Put tops on newspapers and burn to get rid of thrips or disease. Allow the bulbs to dry thoroughly on the outside for a few hours, then remove to a well ventilated place to continue drying until the shucks and all roots may be removed easily. Then pack down in naphthalene for a month or six weeks, using 1 ounce of naphthalene to about 100 corms. Then air and store in a cool place. My method of keeping varieties separate is to pack each group in a separate bag with the proper name written on it. Then I leave the top of the bag open to get air and do not have the bulbs more than four or five inches deep.

A temperature of around 40° is right for storing all tender bulbs, except tuberose which need a slightly higher temperature. Tuberose form their buds for the following season's bloom in the crown when they are growing and if that crown becomes chilled either when the bulb is stored or before it is dug, the buds are damaged.

Dahlias are lifted after the tops are blackened by frost. This is necessary in order for the proper curing to take place inside the roots. Unless there is danger of a real freeze, leave the roots in the ground for about a week or ten days after the tops are killed. If it is necessary to dig them before they can cure properly, the crowns must be inverted so that the sap can run out of the stems, else the roots are apt to rot.

If the cellar is fairly damp and cool during the winter, dahlia and canna roots will keep well without a cover. Soil may be left on the clumps to be set in open boxes on the cellar floor. Any cellar which will keep potatoes without shriveling is suitable for such clumps. In case the cellar is warm and dry, let the surface of the tubers dry thoroughly and remove all dirt, then store packed in dry sand, ashes or dry peatmoss, or coat the washed and thoroughly dried roots with a thin mixture of melted paraffin and wax. Paraffin eventually becomes brittle and chips off, hence the addition of beeswax to make it elastic. 10% to 20% of beeswax is the right proportion. The hot mixture should be between 140° to 160° in temperature. Any hotter would damage the roots. This process makes extra work but is worth the effort if named varieties are to be saved.

Canna roots may be handled in the same way. Hardy lily bulbs fare better in the ground, because it is disastrous for them to become dry.

BECOMING and PRACTICAL

GAIETY without gaudiness is the fall theme. The home dressmaker has unlimited possibilities for brightening up a costume by means of gay blouses and jackets, sometimes matching up a hat, scarf or belt for good measure. In such cases the basic dark dress is invaluable.

BLOUSE AND JUMPER PATTERN No. 3410 is tops in popularity with school girls because it is so becoming, yet practical. Pattern sizes are 12 to 20. Size 16 requires 2½ yards of 39-inch material for long sleeved blouse; 2¼ yards 54-inch for jumper.

BASIC DRESS PATTERN No. 3434 provides the ideal background for your new accessories. You can dress it up or down at a moment's notice to suit any occasion. Jacket pattern is included. Sizes 14 to 44. Size 36 requires 3½ yards of 39-inch material for dress;

"Start losing interest. It's stopped raining."

It takes more than kisses to keep a man happy!

LORD BALTIMORE CAKE

2 cups sifted cake flour 1 cup sugar
2 level teaspoons Davis Baking Powder 5 egg yolks
½ cup shortening ½ teaspoon salt 1 teaspoon vanilla
½ cup milk 1 teaspoon lemon juice

Sift flour, baking powder, and salt together twice. Measure milk, add vanilla. Cream shortening, gradually add sugar, mix well. Add well beaten egg yolks, beat well. Add dry ingredients alternately with milk. Add lemon juice. Beat well. Bake in 8-7-inch square layers (greased and lined with Cut-Rite Waxed Paper).

FILLING: Make Seven Minute Frosting. To ½ of frosting add ½ cup dry macaroons, crushed, or ½ cup toasted coconut, crushed, ½ cup toasted almonds chopped fine, 12 candied cherries cut small. Flavor with 2 teaspoons lemon juice and ½ teaspoon grated orange rind. Use rest of frosting (flavored with orange or lemon) to cover top and sides. Decorate with cherries and strips of angelica.

The RETURN of the Absent

WHEN my school—that first school up in Jericho—finally closed, and I had come back from “boarding round” to the Chase farm to pack my trunk, Aunt Milly slipped a little white sealed envelope into my hand, and said I was not to open it until I reached home.

On the long drive home I forgot the envelope, but chanced to recollect it that night after I had gone to bed, and rising hastily, I opened it. To my surprise it contained a ten dollar bill—just half the sum which Aunt Milly and Uncle Andrew received from the district for boarding me for ten weeks.

This little gift, and much more than that, their many kindnesses to me all winter would have touched the heart of the most careless young fellow. Thinking of all I had heard of their happy early life and their lonely old age, I greatly desired to do something to show my gratitude and sympathy.

It was not I, however, who first thought of a golden wedding for them, but a thoughtful young girl cousin who then lived at grandfather's with me; in such matters girls are usually more thoughtful than boys. One afternoon in August, the following summer, I drove up to Jericho to spend the night with Aunt Milly and Uncle Andrew, and invited this cousin, whose name was Theodora, to go with me.

It was Theodora who suggested that since next November Aunt Milly and Uncle Andrew would have been married fifty years, it would be a graceful thing for me to start the idea of a golden wedding for them. I caught at the suggestion with enthusiasm, and we at once began planning for its execution.

Theodora counseled great secrecy concerning it, however, and at once declared, with a finer appreciation than my own, that to make it really enjoyable for Aunt Milly and Uncle Andrew, their two far-off children must in some way be notified and induced to be present.

After considerable discussion, my fellow conspirator ventured on the following letter to Madam Sylvia Chase Poindexter in Mississippi, which, however, she deemed it best to send in my name, since I had been lately the schoolmaster in Jericho:

“Dear Madam. A number of friends and well-wishers greatly desire to cheer the lonely lives of Mr. and Mrs. Andrew Chase by making them a golden wedding on the fiftieth anniversary of their marriage, next November.

“Let me say at once, however, that the writer is merely the schoolmaster in the Jericho district, who boarded at the home of your parents last winter, and add that we all feel it would be presumptuous in us to proceed in such a matter without first notifying you and your brother, Mr. Lester Chase, of our plan, and putting ourselves under your directions for it, if you could by any means be present.

“We are well aware, of course, that our presence and best endeavors on such an occasion would be but of minor interest for Aunt Milly and Uncle Andrew compared with the presence of their own children, whom, it is evident, they greatly desire to see again in this life.”

Exactly two weeks later a reply arrived from Mississippi. We opened it with much eagerness.

“Dear good friend. Tears were in my eyes before I had finished reading your kind letter, received this morning. The tacit reproach contained in it is not less sharp that it was not designed. (We both winced a little at this.) That such thoughtfulness for my aged parents should have to come from those who are well-nigh strangers fills me with self-condemnation.

“But believe me, however neglectful I may seem, it has been less from forgetfulness of them and of my early home than from circumstances, sectional feel-

By C. A. STEPHENS

ing, distance and, if I must needs confess it, poverty. Since the Civil War I have been obliged to support myself and others almost wholly from literary work, which has been so mentally engrossing that I have had little leisure, even for the proper duties of life.

“None of these obstacles, however, shall longer prevent me from visiting home. If possible, I shall come to the golden wedding which your kindness has planned; and you may rest assured that you have, not my consent, but my sincere gratitude for your generous efforts.

“Your obliged friend,
“Sylvia Chase Poindexter.”

“Whatever has been said or thought of her, she has a good heart!” Theodora exclaimed, as we finished reading the letter. “The golden wedding will be a success.”

Col. Freeland Strong, who then resided at Hartford, Connecticut, and the Rev. Jesse Parsons in Philadelphia were also notified of the proposed event. Both replied, expressing a determination to attend. “With a wedding present in each hand,” the colonel wrote. Lest the secret should leak out, we thought it safer not to notify the immediate Jericho neighbors until one week before “the happy event” was to come off.

The plan was to assemble and drive to Aunt Milly's and Uncle Andrew's house at seven o'clock on the anniversary evening of the wedding night, drive up to their door with an orchestra, and give them a lively serenade—a serenade that would be well-nigh as sonorous as the one fifty years before, but rather more musical and differing wholly from it in being inspired by affection and good-will instead of spite.

Adverse circumstances arose, however. Continued serious illness in Mrs. Poindexter's family during October compelled her to defer the hoped-for visit North.

Postponement of the golden wedding was therefore necessary, and after some thought we decided that it would be quite as appropriate—perhaps more

so—to put it off until June, the next spring, the time when the original wedding tour was taken. Fortunately we had spoken about it to but few as yet.

In March we heard from Mrs. Poindexter by letter again, saying that she and Lester were still planning to reach the old homestead on May 1st.

May Day came at last, and word to all participants having been sent around, my cousin and I set off early in the afternoon to drive to Jericho.

Maine roads were still muddy, and night was at hand when we reached the little village at the ferry over the Androscoggin. Here Colonel Strong and the Rev. Jesse Parsons met us; but it was at the Corners, two miles below the old Chase homestead, that the large party of neighbors and friends, including the musicians, joined us. Thence we drove on together, twelve teams in all, keeping as quiet as possible until the schoolhouse was reached.

From the schoolhouse up it was a wild race, the cornetist sounding the bugle call all the way. The twelve teams dashed in, filling the yard with prancing horses, a French horn blared out, a drum rolled, and to add to the merry rout, those who had no instruments cheered loud and long.

By this time we expected to see Aunt Milly and Uncle Andrew rushing to the door, agape with astonishment. The house, however, gave no sign of life. It was lighted, apparently, in every room, too much lighted, in fact, but silent as a convention of deaf mutes.

“They mistrust something and are keeping quiet,” remarked a neighbor.

Thereupon I ran to the door, knocked, and then tried it. The door was not locked. I walked in, and went into the sitting room, then peeped into the parlor, then into the dining room and into the kitchen. There was not a soul anywhere.

Yet the dining room table and two other tables were laid with plates, cups and saucers, and were loaded, too, with food. There were cold ham, chicken, bread, doughnuts, preserves and cheese—food enough for fifty people. The teakettle and coffee pot were steaming on the stove. Evidently a large party had been expected, but who? And where were the host and hostess?

Returning hastily to my friends outside, I reported the conditions. Then, by virtue of my intimate acquaintance

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

When the Family's Away

When the family is away
And I at home must stay,
I fix the fires and light the lamp
To drive away the clinging damp
That houses have from dawn to dawn
When all the family is gone.

—Lawrence J. Smith,
Brownwood, Texas.

with the interior for two winters, I began searching high and low, from cellar to attic, expecting every moment to come upon them in hiding, and hale them forth to the company. But they were not in the house.

“I begin to smell a rat!” cried the colonel. “They got wind of us, somehow, and have levanted.”

“That's it, Freeland,” said the Rev. Parsons, with conviction, and he slapped his knee gleefully. “They were too smart for the serenaders fifty years ago, and they are showing us that they are too smart for serenaders still!”

I chanced then to think of a place which we had not searched. That was the old sugar camp up in the rock-maple orchard, fifty or sixty rods above the farmhouse. I knew the way well, and setting off alone, ran up there. The camp door stood ajar. I pushed it open and listened. All was quiet inside and very dark.

I struck a match, and as it blazed up, discovered both culprits sitting close together on a wooden horse, near the sap kettles. Their faces looked so blank in the darkness, and yet wore an expression so arch, that I burst out laughing, shouting, “You're caught! You're caught at last!”

“Why, 'tis 'Freeland' father!” exclaimed Aunt Milly. “You dear boy, we had no notion you were here!”

“No; we thought it was some of our old neighbors who meant to have a little sport with us tonight,” Uncle Andrew explained. “We found out a week ago that they were hatching some joke. So we set the table for them, and then came up here, to see what they would do.”

“But Aunt Milly and Uncle Andrew, this is your golden wedding eve!” I exclaimed, incautiously. “And there's a big surprise on hand! And you don't know who may be here! So come down!”

“Golden wedding!” said Aunt Milly, softly.

“Yes, golden wedding. Fifty years from your first one!” I ran on, uproariously, for a jubilant wedding spirit had fallen on us all that night.

Our return to the farmhouse was hailed with shouts of laughter and applause. Aunt Milly and Uncle Andrew were set upon with joyous violence and escorted to the parlor, where they were seated in state in two large chairs at the head of the room. The presence of so many of their early friends, particularly of Colonel Strong and the Rev. Jesse Parsons, was plainly a surprise for them. The true dimensions of the golden wedding began to appear to them. But as yet not an inkling of the

The Song of the Lazy Farmer

A LONG about this time of the year when corn is yellow in the ear, when leaves are turnin' red and gold and pastures lookin' brown and old, I like to bring a punkin in, a-shinin' yellow thru its skin, and give it to Mirandy Jane, it's time for punkin pie again. Of all the many foods there is, there's none like punkin pie, gee whiz, it fills you with a sense of peace and makes your troubles all decrease. There is a gladness in your eye when you have eaten half a pie, a kindly feeling in your soul for all mankind, you love the whole blamed human race and wish them well, and all you want to do is dwell in peace with all your neighbors and with ev'ryone in ev'ry land.

No man would want to fight and die if he was full of punkin pie, them Nazis, with their bombs and blitz, would put away their fightin' kits and bid this shootin' all goodbye if they could smell a punkin pie. We ought to load a Red Cross boat with all the punkins it would float and send it with a first-class cook to Germany; they'd take one look, and one smell of them punkin pies, and all break ranks, with eager cries they'd grab a piece, the Gestapo itself can't make them soldiers go and drop no bombs, or even try in competition with that pie. Then after they have et their fill they'll be so happy that they will have lost their fightin' spirit, they'll just stop the fightin' and turn tail; go home and plant some punkin seed, so they'll have pies in time of need.

with all the punkins it would float and send it with a first-class cook to Germany; they'd take one look, and one smell of them punkin pies, and all break ranks, with eager cries they'd grab a piece, the Gestapo itself can't make them soldiers go and drop no bombs, or even try in competition with that pie. Then after they have et their fill they'll be so happy that they will have lost their fightin' spirit, they'll just stop the fightin' and turn tail; go home and plant some punkin seed, so they'll have pies in time of need.

homecoming of their long absent children had reached them; and as I marked the flush deepen on Aunt Milly's fair old cheek the gathering brightness in Uncle Andrew's eye, I wondered what would happen if Sylvia and Lester were to appear too suddenly.

Meanwhile the orchestra, out in the hall, had struck up "Wedding Bells," with a babel of gleeful voices chanting and applauding, over all of which Colonel Strong's stentorian tones presently made themselves heard, demanding permission to announce the wedding and make a speech, which proved a jocular one.

"Fifty years is a long time, good friends," we at last heard him saying, as quiet began to prevail. "Almost everything runs out in fifty years. Notes become outlawed; leases expire; contracts terminate themselves if not renewed; and I'm worrying a little about Milly's and Andy's marriage contract. It may have been all right and straight fifty years ago. It probably was, though they do say that, owing to the bother some of us gave them, the knot was tied in a great hurry that night. It seems to me that it would be safer to have that knot tied over again, and tied by Brother Jesse Parsons here, who we know, understands his business. We want them tied up good and strong for fifty years more."

"It seems to me, my friends," said the reverend gentleman, rising, "that our comrade, the colonel, is getting a little giddy tonight, and is inclined to turn a solemn occasion into a season of mirth and hilarity. What he proposes for me to do, too, is, so far as I know, without precedent. A marriage that has held good for fifty years is of itself the best possible kind of evidence that it needs no reinforcement. There is an old saying, too, that in tying up a package, one square knot is just as good as more. Still, I do not know that there is any harm in tying double knots, and by virtue of all the authority vested in me, I ordain this marriage of half a century to be continued for another fifty years, or for life."

But at this point I heard the sound of a carriage being driven into the yard, and, almost unnoticed amidst the general hilarity, two newcomers entered—a graceful lady of middle age, still beautiful, with abundant hair, but white as snow, and a tall, grave man, with resolute eyes. No one recognized them. They came into the parlor quietly at the farther door, and found chairs just behind Aunt Milly and Uncle Andrew. My cousin and I instantly guessed who they were, however, and I began seriously to fear for the outcome, and to feel that, with our petty secrecy, we had been cruel. A look of concern also appeared on the faces of Colonel Strong and the Rev. Jesse Parsons, who alone knew that Sylvia and Lester were expected.

The colonel, however, proved equal to the emergency.

"I want to make another little

speech," said he, quickly. "I really must, for I have something good to tell. The Civil War and other untoward circumstances have sadly broken this family circle; but a golden wedding often acts as a magic talisman to bring all wanderers home. I hoped that it would be so here tonight. In fact, I hope so still. It wouldn't be so very astonishing. Stranger things happen every day. Freeland Chase died for his country, and fills a soldier's grave; but Sylvia and Lester Chase still live, and what more likely than that, they may come home tonight?"

By this time, Aunt Milly, whose eyes for the last few words had been strangely riveted on the colonel's face, started forward in her chair, exclaiming, "Oh, what are you saying? What do you mean, Freeland Strong?" Uncle Andrew, too, glanced suddenly round him, as one bewildered by some unseen presence.

Before either of them could rise or turn, however, there was a rustle behind Aunt Milly's chair, two arms were flung around her neck, and a soft

cheek was pressed lovingly to hers.

Dear Aunt Milly seemed not to stir. She sat back in her chair, and a smile of ineffable content and peace spread over her face, for she both felt and knew it was Sylvia. Lester, too, was now kneeling at her side.

But Uncle Andrew had sprung to his feet, oversetting his chair. "Lester! Sylvia! You here?" he cried. And we, who were outsiders at best, stole out of the room. The colonel, in fact, most of us, had other business for the moment—finding our handkerchiefs.

On my own part, however, I may as well confess I had thought so much about the return of Sylvia and Lester that a desire to see something of what took place so overcame my sense of delicacy that I stole back past the half-open door once and again. Those passing glimpses were a new revelation to me of the depth of parental affection. Yet once I could but laugh, for I overheard honest-hearted Aunt Milly cry out, "O Sylvia, Sylvia, you ran away a hundred times, but this is the first time you ever came back of your own accord!"

you magnify little acts of theirs into slights and snubs.

Now, there isn't any magic formula I can give you to overcome this condition, it must originate right in yourself; that is, you must just conclude that you are as good as anybody else and as attractive and have as much right to have a good time. Then proceed to go ahead and have a good time and pay no attention to what others may say. Pretty soon you will find, I think, that what they may say or the way they may act will not bother you so much nor seem as unkind toward you as it does now.

Almost every week I receive letters from girls like you who feel unpopular and slighted and it is almost always the case that the trouble lies within themselves. The world, you know, has just about the opinion of us that we have of ourselves and if our opinion is not good and if it reflects in our actions, then others will react unfavorably to us.

Incidentally, if you feel your size to be a serious handicap, why not try to reduce?

Personal Problems

Can't Force Marriage

Dear Lucile: I am 20 and have gone with a boy for two years, who is now 23. We planned to be married this summer, but because we would have to live with his family and because he owes some bills that he has to pay, he is disgusted and says we will not get married.

I don't think any of this makes any difference and want to go ahead and marry. What can I do?—*In Love.*

I do not know whether or not this is the advice which you will want to receive, but about the only thing I could

IT IS EASIER to discuss a personal problem with an absolute stranger than with a friend, unless that friend be unusually intimate and understanding. If you have a problem, write to Lucile, Personal Problems Editor, American Agriculturist, Box 367, Ithaca, N. Y. Be sure to sign your name and give your address, as unsigned letters will not be answered. Names of all persons writing Lucile are kept entirely confidential, and if your letter is printed in these columns, your identity will be carefully disguised. Please enclose a self-addressed, stamped envelope if you wish a reply by mail.

tell you is that you cannot force a young man into going ahead with marriage plans when he is convinced that the more sensible thing to do would be to either postpone or abandon them.

He probably knows his own condition better than you, whether or not he is ready or able at this time to take a wife into his home under the present circumstances, so I am afraid that about all you can do is to be guided by his wishes in the matter. You would not want to force him into any situation which might work out unhappily for both of you.

* * *

Don't Feel Inferior

Dear Lucile: I am one of a large family and have to stay at home to work, while my sisters work out. They dance the modern dances, while I haven't had a chance to learn them. They go with boys and have good times, but every time I get a boy friend, they and the boys they go with, make fun of me to him, so that he turns against me. I'm a big girl—much larger than my sisters, which worries me very much.—*Left At Home.*

I think your size has perhaps created in you a feeling of inferiority to your sisters and friends and for that reason

"So your wife says you deserve a raise. Well, I'll ask my wife if I can give you one."

"MIDDLE-AGE" WOMEN (38 to 52 Years Old)

HEED THIS TIMELY WARNING!

If you're approaching middle age and fear you're losing in physical attractiveness—if you're jealous of attentions other women get—if you worry over weak, dizzy spells and notice yourself getting restless, cranky, moody and **NERVOUS** at times—these annoying symptoms may be due to female functional distress—So be smart! Try Lydia E. Pinkham's Vegetable Compound.

REMARKABLE BENEFITS

For over 60 years Pinkham's Compound has helped hundreds of thousands of weak, rundown, nervous women to go smiling through "trying times," has helped calm upset nerves and lessen annoying female functional disorders.

Women report truly remarkable

benefits from taking Pinkham's Compound. They say "Pinkham's helped my daughter wonderfully." "It's wonderful to relieve distress during middle age." "I was rundown, weak—now I have more pep."

Pinkham's Compound is made especially for women. It has been tested and proven beneficial for over 3 generations. **WORTH TRYING!**

Lydia E. Pinkham's **Vegetable Compound**

Kernels, Screenings and Chaff

By H. E. BABCOCK.

QUITE without intending to, I seem to have stirred up quite a commotion by my suggestion that it might be a smart thing to store some of this year's surplus of corn east of Buffalo—*just in case*.

Up to Wickard

I have heard from farmers, college professors, and a governor. *No one has condemned the idea*, though some have kidded me about being overcautious.

All officials from whom I have heard have said that the matter was being referred to the Secretary of Agriculture. One official in a high place so far forgot himself as to say that he was taking the matter up with Secretary Wallace. I can't tell whether this man (who ought to know) really forgot that Henry Wallace is campaigning for the Vice-Presidency at the moment or whether he meant to infer, as many believe, that Wallace still is Secretary of Agriculture and the present incumbent only a figurehead.

Suggestion Repeated

At any rate, I have received encouragement enough to repeat the suggestion. It is this:

If the government is going to build more steel bins for holding surplus corn, why not build some of them east of Buffalo so that the Northeast, which is a great corn consumer, can have an emergency supply available within easy trucking distance of its dairy barns and hen houses.

Farm Notes

As a result of our announced decision not to grow any more winter barley until the breeders had improved the winter barley plant, we received gratis four samples of winter barley which are supposed to have some superior merits. We have sown these samples side by side in strips which total up to a couple of acres. We shall see!

On some of our alfalfa pieces we are cutting a fair third crop. On others, the third crop has not come along at all. The alfalfa plants in these fields have badly spotted and yellow leaves.

Obviously, something more is the matter with the alfalfa than just cool, dry weather.

We are trying out five acres of the new red crossbred wheat known as 5-7. The way this wheat has shown up in trials, it should make a great feed wheat.

One of the most successful practices we have ever tried in connection with raising pullets turns out to be the special grass range which we sowed very early this spring and on which we have grazed 1500 late heavy pullets. After three or four clippings with a mowing machine, the grass and clover on this range has become very thick. It is also very fine. Ladino clover predominates. Our records show a great saving in mash fed to the pullets on this range and their health has been perfect. We shall certainly seed a special range early the coming spring for the pullets we raise next summer.

Speaking of pullets, our February-hatched White Leghorns which cost so much to raise because of the expense of keeping their brooder house warm with oil brooder stoves and because it was too early to range them on grass, have completely liquidated their cost of raising. They are the "layingest" bunch of birds we have ever owned. They lay steadily at about a seventy-five per cent clip, and produced large eggs earlier than any other pullets we have ever raised.

When we get all our pullets under cover and sort our old birds down to two breeding pens, one of White Leghorns and one of Plymouth Rocks for the production of Red-Rock crossbreds, we will have about 2250 layers in our pens. Except for occasional day help, Jake is planning to take care of these birds and from seventy-five to one hundred beef calves alone. He will be able to do this only by feeding the calves once a day. The laying pens will probably be cleaned a couple of times this winter and the beef calf pens, two or three times.

This summer we went pretty light on hogs. As a result, we put only ten shoats into the feed lot to sell and kept over only two brood sows. These two sows have raised us twenty-one pigs this fall and we have bought some thirty more, so that when the ten shoats are sold we will replace them with fifty-odd pigs. We think we have enough winter and spring barley on hand to fatten this number. We shall see!

Down Mexico Way

By H. E. BABCOCK, Jr.

September 27, 1940.

OUR SHORT respite from regular farm work, during which we cleaned up a lot of odd jobs, is now over. Since the first of the week everything has been going at top speed, and with the exception of a day or two next week (fair and rodeo time) we will keep under pressure for some time. The fourth cutting of our favored eighty-acre alfalfa field will be finished and in the barn tomorrow night. That job done, the whole crew will be turned loose on a hundred-acre field with horses and tractors, plowing, fitting, and drilling the fall oat crop which will serve as pasture most of the winter.

We put off picking cotton from week to week until "One-Eye Pete," our Mexican cotton picker boss, nailed

Quick-Frozen Beef

On September 24 we killed our spayed Hereford heifer. You may remember having seen her picture two weeks ago and that she was the cull of a bunch of fifty Hereford calves which we bought last fall and carried through the winter almost entirely on grass silage.

We estimate that this heifer was around sixteen months old when we killed her. Her live weight was 771 pounds; the dressed weight of her carcass, after it was cold, was 435 pounds. On the basis of the latter weight, the dressing percentage was 56.5. Professor R. B. Hinman, in charge of Beef Cattle at the New York State College of Agriculture, and whose picture is shown inspecting the carcass, gave us the following facts about it:

The carcass graded, "good"; the heifer was plenty fat enough—perhaps a little too fat—we killed her three weeks after Professor Hinman said she was ready; the animal herself was light in the loin and had a tendency to put on gobs of fat in certain places instead of taking it on evenly. The wholesale value of the carcass and the hide on the day the heifer was killed, Professor Hinman figured to be \$72.45.

Two weeks from now we will show pictures of this heifer's carcass cut up into table cuts, wrapped for quick-freezing, and give its retail value. We will also show the picture of the box in which we will quick-freeze this meat and hold it in zero cold storage.

us down to giving him a definite starting date of September 30. Cotton pickers are at a premium right now due to late crops in Texas, and Pete is having a hard time keeping his usual gang lined up and ready to start when he wants them. Actually, our cotton has only now begun to open enough to pay the pickers for their trouble. But from now on we will keep Pete and his gang busy.

As time goes on we are becoming a little more conservative in estimating our cotton crop. From all appearances, our cotton looks as good or better than any we have seen. However, we can't overlook the effects of angular leaf spot which shows up quite badly in one or two fields. Convinced that we can best combat its effects with fertilizer, we are planning to apply a potash fertilizer to our cotton next year. Potash is present in all of the soil around here, but its unavailability causes problems even in feeding livestock.

Our granary is finished now with floor, roof, and connecting floor and roof to our grinding shed. In building the granary we have automatically set up a standard of production for our wheatland maize for each year to come. The granary should hold about 8,000

bushels. As soon as our oats are in, we will start combining our maize and will then begin to get a definite idea of how much we will have.

Irrigation is nearly at an end for the season. Our orchard will be given a good soaking to carry it through the winter and our alfalfa fields will be watered once again after the fourth cutting. With the exception of one or two small jobs which can be fitted in at convenience, this will clean us up. Fortunate it is, too, since most of our irrigators can make more money picking cotton and will desert us for that work. Prices for picking cotton are ranging between sixty-five and seventy-five cents a hundred at the present time. A good picker will average 400 pounds a day in good cotton. Average pickers will bring in 300 pounds a day.

Our geese have been relieved of their assignment in the cotton field and are now in concentration camp. Here they will become the object of much wrath from one and all until next season when they are again turned into the cotton field. If they work next year in the eradication of Johnson grass as they did this year, our wrath will subside and we will be at a loss to find words to describe their work. And they will have plenty of work.

Ashamed of First Name

Several subscribers have complained about non-receipt of pay for eggs shipped to Meyers Poultry Farms at 1455 Coney Island Avenue, Brooklyn, N. Y. Post cards soliciting shipments were signed "Meyers", but no first name or initial was given. The Packer Produce Mercantile Agency of New York City reported to us that they have not been able to locate any Mr. Meyers at this address and that his telephone was disconnected in August. No one knows where he has gone.

There are a number of people by the name of Meyers buying eggs in Brooklyn, and the absence of the first name makes it impossible to make any further check. This is just a hint to our readers that they view with suspicion any person who solicits eggs or other farm produce and who does not sign his full name. This is just another way of avoiding a checking up once they have discontinued business. The chances are that Meyers will be in business again shortly and that other people will lose money if they ship to him.

* * *

A Liar Weighed Them

"I am afraid you will think that we are not very intelligent to be taken in as we were. I don't suppose you can help us but maybe our experience will help someone else. I had 165 or 170 Leghorn pullets weighing about 4 lbs. each. They were starting to lay but were picking one another awfully and we didn't seem to be able to stop it. A chicken buyer from West Orange, N. J., came by our place and wanted to buy. I also had about 45 Leghorn roosters, 3 months old, about 40 heavy hens and 50 White Leghorns a year old, 75 Barred Rock pullets and roosters, and 60 Leghorn pullets. Well, the buyer told me he would buy all I had at 16c per pound, except the 60 old Leghorns which were 13c—making 385 birds at 16c and 50 at 13c. In weighing up those chickens he must have cheated us out of about 870 pounds. The way he weighed them all those chickens only weighed

600 and a few pounds. My husband was sick and I was so nervous I couldn't think until he had paid us and gone. We had \$117.48 for at least 1470 pounds of chicken. He kept me so busy doing this and that, I didn't have time to think, but when I did, I knew I had been cheated. He practically stole \$150.00 worth of chickens from us by those scales he had, for I saw them all weighed."

A few poultry buyers, and fortunately, there are only a few such, will cheat on weight. Once they have left the farm it is difficult to get a conviction because of the difficulty in identifying the hens, particularly if there are other hens on the same truck. We will like to see them caught and it may take a "trap" to do it. If any reader has evidence that a poultry buyer is giving him short weight, we suggest that a careful count of the hens be made, that the license number of the truck be taken and the State Police be notified immediately. In that way sufficient evidence might be accumulated to secure a conviction. Once the buyer has disposed of the hens there is no chance.

Incidentally we are notifying State Police of the activities of this buyer and asking them to keep an eye on him.

* * *

Mushrooms for Amateurs

"I am interested in mushroom raising and have received many ads from the Washington Mushroom Industries of Seattle, Wash. Can you tell me anything about this company? Are they reliable, and do you think there is any money in raising mushrooms?"

It is evident that this subscriber did not read this page carefully, because a short time ago we reported that the Post Office authorities had issued a fraud order against this particular firm.

Our position on the growing of mushrooms has been this: First, it is a highly specialized enterprise and there is definite evidence to show that nine out of every ten who deal with companies offering to buy back mushrooms never have any mushrooms to sell. Second, if a subscriber wants to experiment with mushrooms we suggest that he purchase spawn from a well-known seed company that handles it and try out the raising of mushrooms on a small scale.

Incidentally, mushroom growing is pretty well centralized into districts, one of the largest being in Pennsylvania. We might add that growers that have been in the business have not fared any too well in recent years.

An Announcement

In an attempt to help our readers, we have in the past months carried a number of requests for jobs or for help. Because this has resulted in an increasingly large number of requests for this service, we are forced to discontinue it; at the same time reserving the privilege of carrying an occasional note when, in our opinion, the circumstances are so unusual that we are warranted in so doing.

We are printing the ones below to fulfill promises already made.

THE G.L.F. PATRON

The basis of a sound business cooperative is voluntary use by fully informed patrons

When the Cows are in the Barn

COWS IN THE STABLE, a barn full of sweet smelling hay, a silo full of ensilage—these are the signs of a harvest season just ended. They are the fruits of a successful farm program.

Dairy and livestock farmers are in an excellent position to feed and care for their land in such a way that it keeps improving while growing larger crops.

The basis of this land improvement is manure and management.

Supplementing the Manure

Stable manure contains nitrogen and potash—very little phosphorus. Land needs all three. Legumes add nitrogen to the soil. Phosphoric acid and—on most dairy farms—lime are the two things that must be purchased for a complete land maintenance program.

Sprinkle 20% Gran-Phosphate on the stable floors and in the gutters every day. A pound per cow per day is enough if the manure will be spread heavily; two pounds if a very light application is used. This adds phosphoric acid to the manure; it improves the appearance of the barn; it promotes sanitation and cuts down odors; it makes a non-skid floor; it prevents loss of nitrogen from manure.

Stable manure is the basis of soil improvement.

Fall liming is a practice recommended by colleges and successful farmers. Have your County Agent test fields that are to grow legumes next year. Spread lime this fall on these fields at rates recommended by your County Agent.

Pasture Improvement

On many farms, pastures are parking lots for cows after June, rather than well-managed fields for growing feed. Many pastures have been grazed for fifty years or longer. Tons of grass have been taken from these pastures every year and little has been put back.

Many of these old pastures can become the most profitable land on the farm—land that will keep a cow to the acre for five or six months. It takes good crop land to do this.

Start this fall to make some of your pasture land a really productive and profitable part of your farm program.

Plant Food, Grazing, Fencing

Select a few acres of the best pasture. Spread 600 to 800 pounds of 20% Gran-Phosphate per acre. Divide it by fencing. Turn the cows in before grass is high; graze it down close. Give it two to four weeks rest and graze it again. Keep improving more land each year until you have an acre of improved pasture per cow.

A good plan is to divide the pasture into four lots, each containing a fourth as many acres as

there are cows. Each year spread super-phosphated manure on one of these lots.

An electric fence is a cheap and easy way to divide pastures. On rough land, a cyclone hand spreader will do a good job of spreading super-phosphate.

Give the pastures time to grow three or four inches of grass before the ground freezes in the fall. This gives better winter protection.

Milk inspectors accept the use of Gran-Phosphate in stables. It keeps the barn sweet and clean and helps kill bacteria. It supplements manure with needed phosphoric acid.

COWS AND CHICKENS ARE YOUR BEST MARKET FOR Home-Grown Grain

ON THE OPEN MARKET, home-grown grains may bring around a dollar per cwt.—maybe as low as 75¢ for buckwheat, perhaps as much as \$1.20 a hundred for wheat. Your cows and chickens will pay you \$1.30 to \$1.80 per cwt. for the home-grown grain you feed them.

Here are some rations that make good use of home-grown grains. Cost will vary somewhat according to freight rates, market conditions, and local handling charges.

Two 20% Dairy Feeds

1200 lbs. home-grown grains
800 lbs. 34% G.L.F. Dairy Supplement
2000 lbs. 20% dairy feed worth about \$32.30

Cost of supplement, grinding, and mixing about \$15.44. Value of home-grown grains \$16.86 or \$1.40 per cwt.

1000 lbs. home-grown grains
1000 lbs. G.L.F. 30% Dairy Supplement
2000 lbs. 20% dairy feed worth about \$32.30

Cost of supplement, grinding, and mixing,

Home-grown grain mixed with a G.L.F. supplement makes a complete dairy feed.

about \$17.40. Value of home-grown grains \$14.90 or \$1.49 per cwt.

An 18% Dairy Feed

1300 lbs. home-grown grains
700 lbs. G.L.F. 30% Dairy Supplement
2000 lbs. 18% dairy feed worth about \$31.50

Cost of supplement, grinding, and mixing about \$13.18. Value of home-grown grains \$18.32 or \$1.41 per cwt.

Laying Mash

1350 lbs. home-grown grains
650 lbs. G.L.F. Laying Mash Supplement
2000 lbs. Laying Mash worth about \$44.70

Cost of supplement, grinding, and mixing about \$20.72. Value of home-grown grains about \$21.98 or \$1.63 per cwt.

Scratch Grain

1000 lbs. home-grown grain (wheat, oats, buckwheat, etc.)
1000 lbs. cracked or whole corn
2000 lbs. scratch grains worth about \$35.20

Cost of cracked corn about \$16.85. Value of home-grown grains about \$18.35 or \$1.83 per cwt.

Oats, barley, wheat, and buckwheat may be used in any of these feeds; rye may be used in the dairy feeds. Wheat should be limited to 20%, rye or buckwheat should be limited to 15% of the dairy feeds.

A good combination for scratch grains is 1000 pounds cracked or whole corn, 700 pounds wheat, 300 pounds oats or buckwheat.

New Dairy Formulas

WAR HAS MADE IT almost impossible to get new supplies of coconut oil meal.

Possibility of a government loan program for soybeans is helping to keep a high price on soybean oil meal. Corn is still high in price compared to other ingredients.

On the other hand, a great flax crop has made linseed meal plentiful and a relatively cheap source of digestible nutrients and protein. Accordingly, on October 1, the G.L.F. Flexible Formula dairy feeds were changed by replacing the coconut oil meal and some of the soybean oil meal with linseed meal. Cost per pound of total digestible nutrients (T.D.N.) in the new formulas remains about the same.

Formulas of the Super feeds are not changed.

THE FARM PAPER OF THE NORTHEAST

Disease Threatens the Poultry Industry

\$150,000,000 is Nation's Loss—

The Northeast's Share is \$18,000,000

By H. L. COSLINE

One pullet is vigorous, healthy and ready to make a profit for her owner. The other is a total loss. Disease and parasites must be licked if poultrymen expect to stay in business.

that disease losses will continue to increase. It is time to take stock of the situation and lay out a program to cut down these losses.

There are at least two reasons for the problem. First is the evolution of poultry raising from the small farm flocks running at large to specialized poultry farms carrying thousands of hens, often under one roof. The second reason is the fact that until recent years veterinarians have given little or no consideration to the study of poultry diseases. As a result, attempts to control chicken troubles have not been based on scientific facts.

What can be done to help the situation? In

the first place, we can take full advantage of the facts that we do have. You remember the story about the man who was asked to attend a meeting where some new facts on farming were to be presented. He declined the invitation, saying, "I am not farming half as well as I know how now." If every poultryman used the available information on controlling and treating poultry diseases, losses could be cut in half. Take the old scourge of

two or three years.

Two other diseases, fowl pox and infectious laryngo tracheitis, can be controlled by vaccination. Once you start to vaccinate a flock, the program has to be continued; but that is far preferable to annual losses which eat up the profits.

Another disease which has killed millions of chickens is coccidiosis. While no program has yet been worked out to eradicate this disease, thousands of poultrymen have learned how to cut losses from it to a minimum. Where possible, chicken ranges are rotated so that chicks are raised on ground where no poultry has run for three years. Where this is not possible, bare spots are avoided by frequent moving of brooder houses and by maintaining a good grass sod on the range.

Then again there is the question of sanitation. Sanitation is in no sense a cure-all, but the man who neglects to put into operation a workable sanitary program is headed for disaster.

A sanitary program which worked out on one poultry farm was described on page 3 of the July 6, 1940, issue of *American Agriculturist*.

A hurdle that has to be jumped in any effective program of disease control is the too-prevalent belief that a chicken has too little value to warrant doctoring. There is an element of truth in this belief. A

sick hen in many cases should be killed rather than incur the expense of individual treatment and run the risk of spreading the disease to the rest of the flock; but it is just as true that every available remedy of known value should be used in flock treatment, particularly at the beginning of an outbreak where prompt action often cuts losses to a minimum.

To summarize the situation, let's buy healthy chicks, let's develop a sanitary program to keep surroundings healthful, let's use known remedies to con- (Turn to Page 19)

pullorum, formerly known as bacillary white diarrhea. This disease can be controlled. It is caused by bacteria which invade the ovaries of the hen. A diseased hen lays eggs containing the bacteria, and they are present in the chick's body when hatched. Starting from scratch, a poultryman can avoid this disease by buying chicks from a hatchery which has blood tested breeders until no reactors are found, or a poultryman can adopt a blood testing program on his own flock and, by removing reactors, can have a disease-free flock in

I Learned to be a GOOD HOUSEKEEPER

By MARY S. HITCHCOCK.

I WAS NOT a natural born housekeeper like some women are, and no one in the world gives me credit for half the struggle I have made to be a good homemaker. Because I have had experience with most of the problems that anxious young housekeepers encounter, I want to say a word to them and to tell them some of the things that helped me.

First of all, I had a very dear aunt who taught me to systematize my work—though not to the point of being a slave to it or putting it before everything else. I learned to plan my week this way:

Monday: Wash.

Tuesday: Cook and fold clothes. (Although cooking is an every day job, I found that it was a great help to have good bread, two or three kinds of cookies, a jar of doughnuts, and a couple of pie shells handy. A fruit pie made for Tuesday dinner and the shells for Wednesday and Thursday are very convenient. Fill your shells the day you wish to use them with chocolate, cream or lemon filling before you wash your breakfast dishes, and they will be cold and good for dinner.)

Wednesday: Iron. (Many think that they must iron on Monday or Tuesday, but if you do too much in one day you are too tired to finish out the week effectively. And don't iron forty things that are just as well without ironing! Fold your everyday sheets, towels and dish towels on the kitchen table smoothly. Place your bread board on them and weight it down with something heavy. Leave them over night and you will never know but what you ironed them—and don't iron everyday underclothes, night clothes and stockings. It's just a waste of time and strength.)

Thursday: Mend and do some more baking.

Friday: Clean thoroughly. (Of course you will have some cleaning and straightening up to do every day.)

Saturday: Cook enough to last over to Monday—if you can. (I know a young woman who sometimes, when she has a big day's work ahead of her, puts most of her dinner in the oven in the morning, and about a quarter to eleven she turns on the heat. She will have hamburger or salmon loaf, baked potatoes, squash, and bread pudding. When it's time for the menfolks and children, she sets the table, puts on bread and butter, pickles and cookies, makes tea, and dinner is ready with very little work. Sometimes she has a pot roast and steams her potatoes and vegetables over it.)

It's a great saving of time and strength and worry to plan your meals for the day right after breakfast, and to make preparations for them.

Let the Children Help

I lived on a farm without any of the modern improvements and there was always so much to do. One day my husband helped me out with a worthwhile suggestion. He thought I was working too hard and we could ill afford to hire help unless absolutely necessary.

"My dear," he said, "why do you not train the children to help you? They could do a lot. Let them help you in the morning before going to school. The men and I will bring the water and the wood."

So I tried it out with wonderful success. My eight-year-old girl was given the task of clearing the table. The ten-year-old boy made the beds, and the twelve-year-old boy swept and slicked up the living-rooms. It was a great

help, and it taught them that work must be done, that effort must be put forth to have a comfortable home. When they were grown up and went away from home, they thought of ways to save me work. With some of the first money he earned, my oldest boy bought me a washing machine. The second one bought me a sewing machine; and when my daughter began to teach she bought me a vacuum cleaner. And I never knew a thing about it until they came bringing them home.

Use Your Head

Try to make your head save your heels, as the old saying goes. If you have a house with many big rooms, shut some of them up. If possible, use your kitchen for a dining room. It saves so many, many steps. We have such pretty kitchens nowadays, and usually one corner can be used very nicely for a diningroom.

When you get swamped with work, hire someone to help you out for a day or two. It's a lot cheaper than doctor's bills. I know that from experience. Some women change work with each other. I know one young woman who likes to sew and is a good dressmaker. She changes work with a nearby neighbor who cooks and serves meals beautifully. Another woman I know lives in the village and has no garden. She hangs paper for a farm woman and takes her pay in vegetables, eggs and fruit.

"I get so many good things to eat and can—more than the money would have bought at the grocery store," says my friend, the paper hanger.

"It's such a help to me," says the farm woman, "and I can afford to pay her well with produce to hang paper for us."

So both are happy.

Now I want to say a word about closets and storage space to the housekeeper who doesn't have any. I used to live in an old-fashioned twelve-room house. I had one very small clothespress. "Clothespress" is the right word, for all the clothes were wedged in there so tight that they got well pressed—into wrinkles! Our house was built in 1838, 102 years ago. I don't believe they had many clothes in those days, or at least they didn't think much about building closets to put them in.

Well, in the corner of each bedroom in our house, we put up two three-cornered shelves, four and five feet respectively from the floor. Then I fastened pretty curtains across the top shelf. The shelves we used for folded articles, blankets, hats, etc.

We also built in wardrobes this way: A 5 ft. board was placed upright, its edge against the wall, four feet from a corner. Two shelves were then extended from this to the corner. Then two

POTATO ESTIMATE

Jumped Six Million Bushels

A Summary of the Present Market Situation

By H. E. Bryant, Aroostook County, Maine.

WITH THE RELEASE of the October Government Report it would seem desirable for us again to analyze market conditions in an endeavor to form some opinion as to the trend of our market. The total production in the United States as indicated by the Report released October 10th is approximately 6 million bushels over the figure of a month previous, bringing the total now up to 389,091,000 bushels as compared to the estimated total production last month of 383 million and a total for last season of 364 million. This compares with the 10-year average for the United States as a whole of 366 million bushels.

The breakdown by States shows major increases in North Dakota, Colorado, Idaho, Nebraska and Pennsylvania. This has one favorable angle for growers in the northeast in that the major portion of the raises may be accounted for by western states. Two states showed major decreases, namely, Wisconsin with a decrease of 1 million and Michigan with a decrease of 3,750,000 bushels. The Maine estimate was held at the same figure given in September, namely, 45,135,000.

Public Eating Fewer Potatoes

Based on these figures let us list a few of the favorable and unfavorable factors that may affect our price structure this season. First we will consider the unfavorable angles to this situation. At the present standing total production for the country is approximately 25 million bushels more than last season and nearly 23 million bushels more than the 10-year average for the period 1929-38. Back in the olden days when the per capita consumption of potatoes was approximately 4 bushels per person, we used to consider 400 million bushels a comparatively large crop. Now with the per capita consumption approximately $2\frac{1}{2}$ bushels per person we find ourselves confronted with a crop only 11 million bushels less than that figure. Unfortunately the major portion of our supplies are concentrated in the northeastern states. New Jersey has a large crop and Long Island is reporting one of the best crops in history. When taking into consideration purely state estimates we may not realize that Long Island has such a tremendous crop due to the fact that other parts of New York State have smaller crops than last year.

Shipments and distribution so far this season have not added to the attractiveness of our situation. The total shipments for the country to date are approximately one thousand cars behind last year for the same period. Maine particularly has made a poor showing, having moved only a little over 450 cars compared to 1600 cars last year and 5000 in 1937.

We have a peculiar situation here in Maine whereby growers can obtain more money for their potatoes from the starch factory than they can realize by shipping to terminal markets for food consumption. As a result of this condition growers and shippers in Maine although anxious to move stock are refusing to confirm any volume under 68c F.O.B. At present there are practically no markets that will justify such a price with the result that growers are moving some potatoes to the factory and the rest of the stock is going into storage to be held until some later date.

Maine Shipments Low

We are still convinced that Maine cannot play the waiting game this year

as she has successfully done during the past two seasons. Conditions are different and with nearly 7 million bushels more to market, Maine has got to start moving potatoes in volume very soon if they hope to market them orderly and successfully during the season. So far, what few potatoes have been shipped out of Maine have gone largely to the mid-western markets of Detroit, Cleveland, Columbus and Pittsburgh.

Reports from New Jersey indicate that they still have approximately 30% of their crop to move. Long Island really has not started to move their bumper crop as yet. Jersey and Long Island potatoes are bringing prices in the neighborhood of 80-85c per hundred F.O.B. Thus, we must realize that in

the northeast we have a plentiful supply of potatoes with shipments and distribution so far being comparatively light.

More Money to Spend

On the other hand we have some very favorable conditions such as increased business activities and increased employment which will mean that the average consumer will have more money to spend. With an excellent quality potato crop being reported from all areas available at attractive prices, we frankly believe that the consumption of potatoes may be increased quite materially and that distribution will be the best that we have seen for many years. Potato growers throughout the country also have assistance in the form of various programs for the stabilization of the market. The Federal Government is now carrying on various programs intended to bring relief and to peg the market at present levels. The Federal Surplus Commodity Administration is purchasing potatoes for relief purposes in New Jersey, Long Island, Minnesota, North Dakota and Colorado so that they now appear

to be the largest buyer of potatoes in the country. Potatoes have been named as a surplus commodity under the Stamp Program and we understand that the number of cities being placed under this Stamp Program is increasing very rapidly so that by having potatoes listed as a surplus commodity we may expect material assistance.

The Federal Government has been carrying on a Starch Diversion Program since the middle of September, which program benefits largely the State of Maine due to the fact that practically all factories are located in this State. This program provides for the payment of 80c per barrel bulk for all potatoes grading U. S. No. 2 or better diverted to the factory, of which amount 40c is paid by the Government and 40c by the factory. Naturally it has taken a little time to get all factories operating to capacity but Maine now has 22 factories grinding in the neighborhood of 300 cars per week. Naturally this program has had a tendency to peg the market in Maine at 80c and probably is one of the reasons

Milk Agreements Slow But Sure

AT THE milk hearing at Syracuse the other day to amend the Federal Order for higher prices to dairymen, one farmer asked why it was necessary to go through this slow and complicated rigmarole every time that farmers needed higher prices and needed them quickly.

One can understand and sympathize with the farmer who feels that way. Amending the Federal Order and getting a raise in price is a slow process. I think it is too slow and it should be speeded up. Slow, though it is, however, it is far better than anything that we had before the milk marketing agreement was in effect. Then the only way you had of getting a higher price was to fight it out with the dealers, sometimes by a strike, and if you got your price, you were lucky if it stayed up for more than two or three months. There was the surplus problem, the chiseling problem, the uncontrolled milk problem, all of which kept the market in a mess ever since I can remember.

The new way under the marketing agreement may be slow, but it is sure. Milk prices are not what we would like to see, but they are much above the price level of almost any other farm product, and amendments are now being considered to raise these milk prices. Resort to a strike if you want to. It is your privilege, and I have always maintained that it is your milk to do with what you want. I am only suggesting that while a strike might bring you *temporarily* better prices, it very likely would ruin this permanent milk marketing plan which you now have—and you are in the producing business not on a temporary but on a permanent basis.

Attention, Dairymen!

MAYOR LA GUARDIA came to Utica, New York, to speak at a meeting of the Dairy Farmers' Union on Monday, October 14. In his speech, among other things, the Mayor said:

"I cannot perform miracles all the time, but I am willing all the time to help you in the city whenever your interests are concerned We are interested in your welfare What bothers me is why such a large producing area should be made to serve so small a marketing area."

Let's look at Mayor La Guardia's record in helping farmers:

1. This summer, under his orders, the New York City Health Department did away with Grade A milk after thousands of producers had incurred extra costs to produce it.

2. At the same time, the Mayor's Department of Health increased regulations for Grade B milk.

These two regulations alone will cost dairymen of the New York milk shed hundreds of thousands of dollars annually. Is that the way the Mayor would help the dairy farmer?

3. Mayor LaGuardia says that he cannot understand why such a large producing area should be made to serve so small a marketing area.

That statement should make dairymen in northern and western New York who produce milk for the metropolitan market sit up and take notice. Apparently he doesn't think you dairymen beyond the 200 mile zone are necessary. If he had his way, where would your market be?

The Mayor also said:

"Those who have been exploiting the farmers for years don't want the Federal Order . . . For many years now the greedy middleman and the scheming politician have kept producers and consumers apart."

The Mayor is to be commended for supporting

the Federal milk marketing order. What he said about those who have been exploiting farmers for years not wanting the milk order is exactly so. But some of the very persons whom the Mayor is reported to have supported heretofore have been the Federal milk marketing order's most bitter enemies.

Mayor LaGuardia advised dairymen not to strike at this time, and that, of course, is wise. But perhaps the Mayor's most interesting statement is about scheming politicians. No one can read the newspaper account of the Mayor's speech without wondering why he so concerns himself with milk, particularly when it is known that the Mayor himself is a politician, and when the air is full of reports that he wants eventually to become either Governor of New York or United States Senator.

One wonders, also, when he hears the Mayor making promises about the agreements, who is administering these milk marketing agreements anyway. Is it the United States Department of Agriculture or is it the Mayor of the City of New York?

An American Crop

TO ME ONE of the most interesting of all exhibits at the New York State Fair was the corn show in the Indian Village, showing how corn has been developed by the Indians down through a thousand years of time. Each tribe and each period of time apparently had its typical kind. There was the Zuni blue corn used by the Indians in Mexico and Arizona, the bright-colored corns of the Pueblo Indians of the Rio Grande, the varieties used by the Plains or Sioux Indians, and those used by our own Iroquois Indians of New York.

Beginning with the Pilgrims, the white man took the Indian's corn and proceeded to develop and improve it. This was the flint type, and according to Dr. E. A. Bates, Adviser on Indian Extension Work at Cornell, this was the leading type until about 1873, when Ezra Cornell, Founder of Cornell University, began to experiment with the early dent type.

But the end of the history of corn development is not yet. In fact, under the leadership of the research scientists and of good farmers corn will continue to be improved, until possibly a hundred years from now it will be as much better than the types of today as ours is than those of yesterday.

Only the other day, Earl Beckwith of Ludlowville, New York, was in the office with some fine

Doesn't it give you some pride in this America of ours to ride along a country road this time of year and see a cornfield like the above stretching away to the horizon? Corn is indeed King of all crops. The piece on this page telling how the Indians developed the corn will interest you.

samples of dent corn developed from Cornell 29. The original Cornell 29 is one of the best dent corns grown in the East, but through careful selection Mr. Beckwith has shortened its growing season and improved its quality, until now he says it will ripen as early as any flint corn.

There is a romance about corn, possibly because of its ancient history and because it is so typically American, that has led hundreds of other men like Mr. Beckwith to work with it year after year. It can be said in all truth that Corn Is King!

Vote, Vote, Vote!

IN READING the political advertising in this issue, we remind you that any honest, reputable advertiser is welcome in our advertising columns, and that all political parties have the same opportunity of presenting their views to our readers.

Whichever party you may support, whatever your beliefs are, I hope you will register your convictions at the polls. Not since the election of Abraham Lincoln have the issues at stake been so important as they are at this election time. It is for that reason that in recent issues we have been offering cash prizes for the longest signed list of pledges to vote on Election Day. See Page 15.

"United We Stand"

NEARLY all the world is ablaze with the conflagration of war. New fires are starting almost daily in neutral countries. As a result, the year ahead promises to be the most uncertain and difficult of our generation.

The answer to all of our hard problems no man knows. The best we can do is to put ourselves in position to get all the facts and information and to join with our neighbors to meet each problem daily as it arises.

Farm men and women particularly will find it difficult to make decisions. That's the reason why I think this year more than any other we should join the Farm Bureau, the Home Bureau, the Grange, and the marketing cooperatives and attend their meetings, and read every issue of *American Agriculturist* so that we can get the facts and act together in trying to find the answers.

Eastman's Chestnut

ILIKE to tell the following story, because its point applies so well to our present times. The air is so full of lies and misleading propaganda on every subject that it is almost impossible to get the truth across. Anyway, here's the story:

A preacher one Sunday morning observed that many in his congregation were asleep. Suddenly, he paused, and then continued in a loud voice with a story that had no connection whatever with his sermon. Said he:

"I was once riding along a country road and I came to the house of a farmer, and halted to observe one of the most remarkable sights I have ever seen. There was a sow with a litter of ten little pigs. This sow and each of her offspring had a long curved horn growing out of the forehead between the ears."

The minister again paused and ran his eye over the congregation. Everybody was wide awake, sitting up straight. And then the minister said:

"Behold, how strange! A few minutes since when I was telling you the truth, you went to sleep; but now when you hear a whopping lie you are all wide awake!"

Spray Residue Restrictions Lessened

FOR YEARS, *American Agriculturist* emphatically maintained that the spray residue tolerance for lead and arsenic on apples and pears permitted by the Federal Government was unfair and worked great hardship on apple growers. Growers' cooperatives on the Pacific Coast, and that great farm paper the Pacific Rural Press, have also fought valiantly for years to lift or ease the residue permitted.

At last a new ruling was made this fall by the Federal government raising the tolerance for lead and arsenic on apples and pears to .05 of a grain of lead per pound and .025 grain of arsenic per pound.

This will help, but if these tolerances are right now they must have been right all the time, so one cannot help remembering the injustices and the unnecessary costs and trouble to fruit growers caused by a restriction or regulation now proved unnecessarily severe. In a court case against this regulation, it was stated that there had never been a single instance ever proved by the Federal government of actual poisoning from spray residue.

A New Order in the Farm Kitchen

SUGGESTED list for *The Purge* on the day when we maddened farm wives take over.

1. All Monday morning salesmen.
2. The hired man who is above such trifles as emptying his own wash basin. There are a few of these still surviving. Up and at 'em!
3. The husband who wonders every washday where you get all the washing. His mother never had so much, nor is there another woman in the township, county, or state who has so much.
4. The husband who takes a vacation with a male friend and thinks his wife ought to be satisfied with a trip to the dentist or to Aunt Sophronia's funeral.
5. The man who eats all of your cake and then asks why you don't get his sister Euphemia's recipe.
6. The husband who sits in the kitchen on rainy days and watches hopefully for something to go wrong. He is rarely disappointed.
7. The man who begins early Saturday morning to remind his wife that he wants to start extra early for town that night, so she'd better be ready before supper—that is, if she plans on going. Or doesn't she? (Answer is NO.)
8. Any other man who thinks he knows all about women and their work.

Can any of my long-suffering sisters add to this list? Patience, it's wonderful!

NOT SO PATIENT FARM WIFE.

Editor's Note: I've got my cyclone cellar all dug!

Your Copy of Eastman's Chestnut Book Free

"I find so many things in the *American Agriculturist* that I like that I thought I would write you a personal note and tell you."—F. L. W., N. Y.

EVERY mail brings letters like that which help us to carry on the tremendous responsibility of editing a great farm paper in these bad times. We could not carry on if we did not feel that a deep friendship lies between us of the staff and the thousands who read this publication.

You and I face a world far different, and in many respects far worse, than we have ever known. No one will escape all of the consequences of the present crisis, but those who suffer least will be those quick to meet change with change and those who keep their thinking straight by using common sense instead of their feelings.

For 98 years *American Agriculturist* has been the farmer's friend, fighting his battles. Through the crisis of the Civil War, the Spanish War, the World War, and in the panics and hard times that followed, *American Agriculturist* has always been right there, doing what it could—and that was much—for farmers and village folks.

When your subscription expires you can help

yourself and help us fight your battles by renewing it promptly. So anxious am I that you don't miss any copies of *American Agriculturist* in this time of crisis that I am going to give you a special inducement to renew your subscription right away.

I have had so much fun telling my chestnuts that I have made a collection of them in a neat little book, and I would like to give you one of these chestnut books. It's good for us to laugh. Look at the expiration date on the front page of your last issue of *American Agriculturist*. If your subscription has just expired, or if it will expire in the next three months, send \$2 for a three year renewal. Address your letter to me personally, care of *American Agriculturist*, Ithaca, New York, and I will send you free a personally autographed copy of the book "Eastman's Chestnuts."

To get the book of "Eastman's Chestnuts", send me your \$2.00 for the 3 year renewal BEFORE NOVEMBER 4, 1940. This offer is good only until that date, so act quickly.

Have You a Gun to Spare?

NO ONE of us has a keen enough imagination to have any idea of the dread, fear and horror which torture British men, women and children at the present time. Just try to think what it would mean if when you went to bed at night you thought that your home and your family might be blown to atoms before morning. Or that you might awaken to find an armed enemy parachutist or worse still a Fifth Columnist coming into your home. How would you feel if you had absolutely nothing with which to defend yourself?

That is the case in England, where the gov-

ernment before the War required every citizen to have a license to keep a gun. Therefore the majority of people there have no way of protecting themselves in their homes. So the American Committee for the Defense of British Homes has been formed to accept gifts of small arms and ammunition to be forwarded immediately to a British Civilian Committee.

If you have a serviceable gun to spare, think what that might mean to some British householder, and how much more it might mean to him than to you. Any gun or revolver is acceptable that is in good working order and will use modern ammunition. If you want to donate such a gun, clean and oil it and send it to the American Committee for the Defense of British Homes, 10 Warren Street, New York City.

Readers Talk Back

GROWING TOO SOFT

"Your article concerning your visit to the two-roomed cabin in New Hampshire where Daniel Webster was born, I read with interest, for I know the feeling that surged in you as you surveyed that sacred spot. My ancestry is not distinguished, but I believe that they played their part well. I have stood on the land in Lancaster County, Pennsylvania, that my great great grandfather bought from the heirs of William Penn at about \$1.25 per acre. I have read the old grants and the old wills and the record of descent of that property, and tried to visualize the physical conditions under which these people lived. They endured physical hardships but achieved liberty. We have overcome physical hardships and are fast losing liberty.—M. D. M.

* * *

LITTLE CHILDREN ON THE HIGHWAYS

"Some parents whom I know have two or three children in school, the younger ones being dismissed at 2:30 p. m. and the older ones at 4 p. m. They are making numerous trips with their boys and girls each day to and from the schoolhouse. When the family car is not available, some mothers are walking with their youngsters to be certain that no accidents occur. This whole matter presents a growing problem. While we all want good roads, the fact remains that here is a question which has not been given serious consideration in the road building programs of this state. The safety of small school children has been forgotten, so eager have we all been to get better and "faster" highways.

"The state at present is spending funds to beautify the roadsides, but in none of these developments have I seen a sidepath constructed for school children going back and forth to the district school. In the days of the bicycle we had such pathways in many localities. They were built by bicycle clubs. These cinder paths were destroyed when the wider state highways were projected. If we had these roadside paths today, I am sure many mothers would be relieved somewhat of their daily worries about little Johnny and Mary whom they have started for school.

"I am passing this thought along to you, as I feel that through the *American Agriculturist* the seriousness of the question as expressed to me by these farm women can be brought to the open for careful discussion. Doubtless, thousands of other rural mothers possess the same feelings as those who have talked with me. Perhaps you may even

I SAW THE MORNING BREAK

Ye that have faith to look with fearless eyes
Beyond the tragedy of a world at strife,
And know that out of death and night shall
rise

The dawn of ampler life
Rejoice, whatever anguish rend the heart,
That God has given you the priceless dower
To live in these great times and have your part
In Freedom's crowning hour,
That ye may tell your sons who see the light,
High in the heavens, their heritage to take:

I SAW THE POWERS OF DARKNESS TAKE
THEIR FLIGHT,

I SAW THE MORNING BREAK.

Found in a Soldier's pocket.

—Taken from the Children's Newspaper,
London, England, August 10, 1940.

wish to champion their cause through your columns if you believe the problem justifies it. No doubt, our farm organizations would also be willing to give the matter some study if it was brought to their attention."—C. G. B., New York.

(EDITOR'S NOTE: I think C. G. B. is right. What do you farm mothers think and what do you think we can do about it? These columns are open for a discussion on this important subject. Let me hear from you.)

* * *

DAMAGE FROM BEARS

"In a recent issue of the *Agriculturist* you had an article about dogs killing and damaging stock. It was good. Some time last fall you had an article that also was good, but I think that if you would substitute the word "bear" for "dog", in a few of your articles it would apply directly to this neck of the woods. Bears certainly damage fences worse than dogs. And trapping foxes is easy compared to bears when they get educated and bold, and they have even been known to break in a barn door to get at the sheep, and to get into the pig pen and walk off with the pig.

"With a little patience and good shooting you can soon stop dogs, but bears are very cunning and very hard to kill and I can say from experience that it doesn't make you feel good to get up in the morning and see what a bear did the night before. There isn't one quarter of the sheep in this section that there was about 18 years ago, and bears have done their part of the reducing."

(EDITOR'S NOTE: Some of our game laws must be overhauled to give less protection to destructive pests and more protection to farmers who are trying to make a living. Shall we organize a protest to get some needed changes in the legislatures of our various northeastern states during the coming year? If interested, let me hear from you.)

* * *

NEED FOR MORE PATRIOTS

"In response to your request for suggestions to improve *American Agriculturist* why not devote a section of your paper to the honorable cause of arousing the patriotic spirit of Americans. Your new page opposite the editorial page contained an article devoted to the life of Daniel Webster, whose contribution to the national spirit should be an inspiration to all Americans. That type of literature about our country, land of patriots, would in my opinion be a fine addition to *American Agriculturist*."—A Thankful American, N. Y.

We are doing everything possible to emphasize the fundamental principles of this democracy.

The Milk Hearings are Ended, and . . .

Here Are the Gains the Bargaining Agency has Asked for YOU:

**Only the Massed Strength of Co-
operating Farmers Could Demand
These Gains—And Only the Massed
Strength of Cooperating Farmers Can
Keep Them After They Are Granted**

Once again the voice of the majority of milk-producing farmers in the New York Milk Shed has thundered out with unmistakable emphasis in open hearings. It has boldly stated the rights of farmers, and has wisely pointed out the one road that best safeguards and advances their interests.

Once again the Metropolitan Cooperative Milk Producers Bargaining Agency—speaking for these majority farmers—has assured insofar as it is possible to predict in advance of the ruling, a stronger surplus control plan and a better price. Gains that will be won . . . not by threats and intimidations . . . not by putting a pistol at the head of government . . . but by showing the justice of the farmer's cause in a reasonable, logical and legal way.

But Where Do We Go From Here?

That's a reasonable question which every farmer should ask himself. And he'll find his first answer in the fact that the program of the Metropolitan Bargaining Agency is a long one. Its leaders are always looking ahead. Even as early as last June, leaders of the Metropolitan Bargaining Agency were

pointing out that milk prices were too low, and that hearings should be held to remedy the situation. Every farmer will resolve now to work more closely than ever before with his cooperative and thus to be ready for whatever the future brings.

He will resolve not to relax his guard for a single instant. Because experience has proved to us that gains won for the farmer are never permanently won unless we fight for them constantly. Our enemies are constantly at work. They wait only for us to lose interest, or to become self-satisfied, and then they start all over again.

It is true today that we are making progress—that we are building a sound foundation. But we must all keep our eyes wide open to every move of the opposition—for we must allow nothing to weaken the foundation we are building.

- 1 MORE MONEY** for your milk
(We have asked \$2.82 — 6c a quart — for fluid the year around. Also increases in other classifications which will return the highest possible blend price and still give every approved farmer a market.)
- 2 CONTINUATION and IMPROVEMENT** of the Federal-State Milk Marketing Orders
- 3 Assurance of a PEACEFUL and ORDERLY** market without interference or threats from non-farm and anti-farm sources

Says Grade Cows Are Not Too High

YOUR statement in the August 3rd issue of the *American Agriculturist* that few grade cows are worth more than \$100, needs some qualifying, I believe. My observation is that many milk producers have experiences which prove grade cows to be worth much more.

Among the records I will cite are some from my Father's herd at North Rose, but let me say that he has no grade cows for sale at any price, even \$200, although his herd consists of both registered and grade Guernseys.

In the spring of 1918, Robert L. Oaks, who was a fruit grower, decided to go more definitely into the dairy business. He journeyed to the farm of Otto Post on Owasco Lake by train and there purchased two cows and a bull. Trucks were few in those days, but he finally persuaded a man in Clyde to drive out for them. As they neared Auburn, a connecting rod burned out and this took two days to repair. In the meantime the frost had gone out of the ground and on the return trip it was twice necessary to hire a team to pull them out.

Those two cows were: Ledyard Bay II's Helen, No. 56069 and Ledyard Bay II's Rilma, No. 47761. The former was a perfect three-year old AR dam. The price paid was \$300. Today none of the progeny of Helen remains, because the strain failed to maintain itself. Rilma was a three-titter, five years old, and she had her first heifer calf when nearly 10 years old. Her offspring were all exceptionally good cows.

Desiring more cows and being unable to afford registered ones, Mr. Oaks journeyed to Charles Hornberg's in Cayuga county a year later and there purchased a beautiful two year old grade heifer, Lioness, for \$200. She had generations of registered Guernsey sires behind her and was bred to Proud Don. Before he could bring the heifer home, Mr. Hornberg informed him that if he wanted to sell her, a man would pay \$250. But as she later produced 10,000 pounds as a two year old, he was not sorry that he did not take the quick profit. Her first calf was Dorothy, the dam of several outstanding cows.

In 1928, needing more milk for his milk route in town, my father purchased of Homer Lake, a neighbor of George Ennis of Lyons, a two year old grade cow, Princess, at a price of \$150. The purchase was largely decided by the type and reputation of her dam, a high grade cow.

In 10½ years, Princess produced milk to the value of \$1748 above the cost of her feed. This was figured on current wholesale prices for milk. Her lifetime record as of March 1939 covering that period was 101,500 pounds of milk and 4911.4 pounds of fat. She is still living and still adding to her record in the herd of Fred Buisch of Lyons.

Her daughter Pauline exceeded Princess's two year old, three year old and four year old records. Pauline's lifetime record, in five years, was 57,766 pounds of milk and 3296.7 pounds of fat, with a value above feed costs of \$794.28, in a period when milk prices were much lower. Father was offered \$250 for her as a four year old.

Pauline's daughter, Pat, produced as a two year old, 8303 pounds of milk, 425.8 pounds of fat, and as a three year old, in 295 days made 10,438 pounds of milk, 544.6 pounds of fat, both records bettering those of her mother for the same ages.

Of Princess's ten female offspring, all who have freshened have exceeded Advanced Registry requirements.

He has purchased other grade two year olds, which while not equalling Princess's record, still have exceeded Advanced Registry requirements and have been a good investment at the price usually paid of \$150 as two year olds. In fact there was not a grade cow purchased which has not been in this class. All these records incidentally were made on two milkings a day, and under ordinary farm conditions.

—L. Robert Oaks, Fredonia, N. Y.

(EDITOR'S NOTE: One can fully agree with Mr. Oaks and still be right that the average price level of cows is too high. Over a period of years, milk prices are more apt to be low than high and it is difficult to make a living from low milk prices and high priced cows. We were not talking about good cows with high records.)

This Billy goat in the foreground earns his living in New York City's West Side Stock Yards by leading thousands of unsuspecting sheep to their slaughter. He has made the trip many times and knows the way perfectly, and the trusting sheep follow him without question. In the past, the old goat has been called Judas; but the picture was taken recently when he was re-christened "Hitler."

Don't Let THIN COWS Rob You of Milk Profits

Keep them in Top Condition with BEACON FEEDS

Too often we dairymen rely too much on late fall pasture. Cows left on pasture too long without adequate supplemental feeding lose flesh. Their milk production drops. And what is most important to you, they can never be brought back to the productive level they otherwise would have been able to maintain throughout the winter. Hence the vital need for proper fall feeding... liberal use of hay and silage or other roughage supplements and grain feeding equivalent to that followed in the winter.

Start this supplementary feeding *before your cows are brought into the barn*. It will help to maintain their live weight and to hold their milk production at a more profitable level.

Beacon Dairy Feeds are specially made to supplement the roughages fed on Northeastern farms and to produce maximum milk production. The formulas we use are the result of the most critical and thorough study of the nutritional needs of the dairy cow. The ingredients used in our feeds are chosen to give sustained high milk production and to help maintain the health and condition of the cow through years of heavy production. No fillers of low nutritive value are ever permitted in Beacon Rations.

Let Beacon Dairy Feeds help you get maximum profit from your cows, now and throughout the winter. Your nearest Beacon Dealer will gladly serve you. In case you don't know his name, write us.

Vermont Woman Wins A.A.'s One-Act Play Contest

GOOD ONE-ACT plays, suited to production by rural and small town dramatic groups, are hard to find and that is why *American Agriculturist* has been conducting, in cooperation with Cornell University Theatre, a contest to stimulate the writing of such plays. Our second annual contest closed July

Drummond, director of Cornell University Theatre; Professor H. W. Thompson, of the Cornell English Department; and Robert E. Gard, Rockefeller Fellow for New York State Rural Plays. We take pleasure in announcing the following cash prize winners:

First prize, \$15.00: Mrs. Carrie W. Ladd, Route 2, St. Albans, Vermont, for her play *Who is Wellington?*

Second prize, \$10.00: Mrs. Fannie H. Delameter, (last year's 2nd prize winner) Treadwell, N. Y., for her play *Dream in My Heart*.

Third prize, \$5.00: Mrs. Chester Partridge, Windham, N. Y., for her play *The Amazing Electric Fence*.

One or more of these prize winning plays may possibly be produced by the Cornell University Theatre. Mimeographed copies of two of them (first and third prize winners) may be obtained, royalty free, from *American Agriculturist*, at a cost of 20 cents a copy. For details of this offer to amateur groups, see the announcement in the box on this page.

Honorable Mentions

In addition to the cash prize winners, the judges also selected eleven plays for honorable mention.

The Scoop, by Mrs. Grace Smith Beers, Lanesboro, Mass., last year's first prize winner.

Country Landscape, by Gertrude Allen, New Salem, Mass.

Fractions, by Floyd Spicer Armstrong, West Winfield, N. Y.

Aunt Mchitable's Romance, by Mattie Mae Woodruff, Marlow, Oklahoma.

Mrs. Carrie Ladd, of St. Albans, Vt., whose comedy, "Who is Wellington?" won first prize in our play contest. Mrs. Ladd, or "Grandma Ladd" as she calls herself, is 72 years old, is full of the joy and zest of daily living, and holds the job of town librarian, with the library in her own home.

1st and brought in more than sixty plays dealing with farm and village life.

Judges for the contest were the same as last year: Professor A. M.

One-Act Plays Available to Amateur Groups

EVER SINCE we started our one-act play contest, we have been flooded with letters from Granges, Home Bureaus, high schools, church societies, Parent-Teachers' Associations, and other community groups, saying that they were interested in producing suitable one-act plays, and asking how they could get copies of our contest winners.

In view of this great interest in amateur dramatics, we have decided to mimeograph several of the plays, and to make them available at the low cost of 20 cents each, ROYALTY FREE, to community groups. The plays we are selecting for distribution are comedies, suitable for production by amateurs. Each takes one-half hour or less to play. Here is the list:

WHO IS WELLINGTON?, by Mrs. Carrie Ladd, this year's first prize winner. This is an entertaining and usable comedy for all kinds of dramatic groups. Plot centers around strange doings in the neighborhood parsonage. Setting is a simple small town livingroom. Cast is composed of 6 women and 1 man.

THE AMAZING ELECTRIC FENCE, by Mrs. Chester Partridge, this year's third prize winner. This was the most amusing and usable eccentric farce comedy entered in the contest. Especially good for small groups and Granges which want a short, entertaining play pertinent to farm life. Setting, a farm livingroom. 4 men, 2 women.

FRACTIONS, by Floyd Spicer Armstrong, who won Honorable Mention in this year's contest. An amusing play, highly suitable for Grange, high school and general amateur use. Situation is built about a young brother's distaste for fractions and his older sister's love affairs. Setting, a farm livingroom. 5 men, 3 women.

NOTHING DOING, by Grace Smith Beers, last year's first prize winner. The conclusion which Mrs. Beers

draws in her comedy is that modern farm life can be highly interesting and exciting. Setting, a simple farm livingroom. 4 women, 2 men.

FISHIN' WEATHER, by Samuel Sidney Hale, last year's third prize winner. A hilarious comedy and satire on wealthy city folks who come to the country looking for antiques. A simple exterior and some broken furniture and odds and ends complete the setting. 4 women, 5 men.

In addition to these plays, we have permission of Cornell University Theatre to distribute the following one-act plays which have proved to be very popular during the past year:

LET'S GET ON WITH TH' MARRY-IN', by Robert E. Gard. A comedy which is plotted upon the events of a frontier wedding. Time, about 1825. A simple cabin interior, 3 women, 4 men.

RAISIN' TH' DEVIL, by Robert E. Gard. A very amusing comedy about Ren Dow, the famous travelling preacher who has a hard time converting a horse thief and his daughter. A simple cabin interior. Time, 1830. 1 woman, 3 men.

A DAY IN THE VINEYARD, by E. Irene Baker and A. M. Drummond. Especially good for any community group, including high school girls' clubs, Granges, church societies, and so forth, who desire a play with a number of women characters. It is a modern folk comedy and offers a chance for the characters to do some singing. The simple music comes with the play. Simply staged. 8 women, 2 men.

To obtain copies of any of these plays, write to American Agriculturist, One-Act Play Dep't., Box 367, Ithaca, N. Y., and enclose 20 cents for each play wanted. Extra copies of a play will be furnished at the same price—20 cents each.

Third prize winner, Mrs. Chester Partridge, of Windham, N. Y., and her farm family. "I am very happy about being one of the winners," she wrote us, "and my whole family seems to be also."

Sauce for the Gander, by Ethel Bailey Stone, 133 Wildwood Drive, Rochester, N. Y.

The New Neighbors, by Mrs. William E. Bellen, Mayfield, N. Y.

Seasoning, by Mary Hitchcock, Hannawa Falls, N. Y.

1840, by Ruth Fisher Raymond, Henderson, N. Y.

Tomatoes; A Dull World; Footsteps—three plays by Mr. Samuel Hale, Oxford, N. Y., last year's third prize winner.

The only one of the "honorable mention" plays which we have ready for distribution at present is *Fractions*, by Floyd Spicer Armstrong. We hope to be able to make some of the others available later.

Another Play Contest Starts Nov. 1

There has been so much interest in this contest that we are planning to continue it for another year. The next one will run from November 1 to July 1, 1941. Rules are the same as last year, but prizes are bigger: \$20.00, first prize; \$10, second prize; \$5.00, third prize; and \$1 each for the first five honorable mentions.

Remember that the aim of this contest is to stimulate interest in the writing of rural life plays. You can draw on history or folklore or present day life for your plot, and your play may be a tragedy or comedy, or a jolly or ridiculous farce, but it must have a rural background. Plays should consist of one act, requiring about 30 minutes to play; stage setting should be simple enough for an amateur group to set up.

Plays should be submitted on plain paper, about 8½x11 size; they may be either typewritten or handwritten, but must be legible. Mail flat, in large envelop, to Play Contest Editor, *American Agriculturist*, Box 367, Ithaca, N. Y., not later than July 1, 1941. Decide now to enter this interesting "home-grown drama" contest.

"They won't work for anybody but Grandpaw."

THE G.L.F. PATRON

The basis of a sound business cooperative is voluntary use by fully informed patrons

Feeding Half a Million Cows

To meet conditions on thousands of farms,
your cooperative makes 13 Dairy feeds.

ABOUT HALF of all dairymen who use G.L.F. rations feed their cows either 20% Exchange Dairy or 24% Milk Maker. To take care of the needs of the other half, G.L.F. makes 11 other dairy feeds.

There are three main reasons for this:

First, cows differ in breed, in roughage consuming capacity, in size, in milk and fat production.

Second, the supply of home-grown feed varies from farm to farm.

Third, experienced dairymen have their own feeding practices.

All Kinds of Dairymen

In the territory served by G.L.F. there are all kinds of dairymen and all kinds of cows. There are barns filled with purebred, high-producing cows on official test. There are farmers who keep just one or two "family" cows. Some G.L.F. patrons regularly raise more hay than they can use. Others buy every bit that goes into the barn. Some farmers raise just enough oats to take care of the horses. Others produce hundreds—even thousands—of bushels of wheat, oats, and buckwheat every year.

G.L.F. makes 13 dairy feeds so that every patron can fit the feed he buys to

—his hay mow

—his home-grown grain
—his cows

These G.L.F. feeds are divided into three main groups—the Super Feeds, the Approved Flexible Formula Feeds, and the Cow Feeds. A brief review of this list will help you in selecting the feed or feeds that will fit conditions on your farm.

Approved Flexible Formula Feeds

These feeds are high in total digestible nutrients. The 4% fat level is right for most cows. They are economical because the formulas are changed from time to time to take advantage of changes in the price and supply of ingredients. The great majority of G.L.F. dairymen select their feeds from this group.

Nearly every dairyman knows the basic rule in protein: With first quality clover or alfalfa hay, a 16% or 18% grain ration. With good mixed hay or early cut timothy, a 20% feed. With poor quality hay, a 24% feed. The Approved Flexible Formula Feeds are made in three different protein levels—

18% Legume Dairy
20% Exchange Dairy
24% Milk Maker

This group of feeds also includes Fitting

Mr. J. V. D. Bergen, shown here with his son, puts up no silage at all but raises corn for grain. Part of his corn, with other grain grown on his Belle Mead, N. J., farm, he feeds to his 26 milkers, supplementing it with 24% Milk Maker

Ration, a 14% feed for young and dry stock; and two Dairy Supplements—30% and 34%. These two feeds may be mixed with home-grown grains to provide a well-balanced ration of any desired protein level

The Super Feeds

Dairymen who have particularly high producing cows, or who have cows on test and are more interested in production records than in feed cost per can of milk, often prefer the Super Feeds because they maintain the same formula month after month. These feeds are of exceptionally high quality. They contain ingredients which are not always easy to get in large quantities. Their fat guarantee is 4½%, which is desirable for high producers. The feeds—

16% Super Test Feed
20% Super Exchange Dairy
24% Super Milk Maker

The Cow Feeds

The ingredients used in these feeds are of precisely the same quality as used in the other G.L.F. feeds, but the mixtures are lower in fat and lower in total digestible nutrients. Not recommended for high producing herds, they are nevertheless good buys for many dairymen feeding cows of average milk-producing ability.

18% Cow Feed
20% Cow Feed
24% Cow Feed

All G.L.F. feeds are open formula. There are no secret ingredients. G.L.F. can buy the best materials, process and mix them cheaper because 75,000 dairymen put their buying power together. Savings that come from buying in large quantities, savings that come from volume manufacturing belong to the farmers who own and use G.L.F.

A row of white-clad milkers is not a common sight in Northeastern dairy barns. Yet, excepting the extra sanitary precautions called for by their select retail trade, Tarbell Farms at Smithville Flats, N. Y., operates much the same as any good dairy farm. The 155 Guernseys in the milking string receive G.L.F. 20% Super Exchange Dairy.

Cooperative G.L.F. Exchange, Inc.

Ithaca, New York

HOLSTEINS for Three Generations

IN THE PICTURE below is a nice bunch of young stock on the Miller farm at Vernon, Vermont. The Holstein herd on this farm was started by Ellwyn Miller's grandfather. Ellwyn, who is looking over the young stock, was County Agent in Essex County, Vermont, for three years and later served as Assistant County Agent in Chittenden County. For a number of years he has planned to return to the home farm and he did so this summer, making an arrangement to lease and operate the farm. His father is maintaining his interest and control of the breeding program on the Holstein herd.

The farm carries 100 head of stock,

about 50 of which are milking. Some pasture improvement has been done but Ellwyn feels that more can be done. Superphosphate has been used on the pastures and on some fields that are sandy complete fertilizer has been added.

This is the fourth summer that grass silage has been put up using molasses along with it. Dairy herd improvement figures show that the herd for the past year averaged 401 lbs. of butter fat. The milk goes to Springfield and any surplus over market requirements is used to feed calves. This is strictly a dairy farm with income coming from milk and surplus stock.

Bailey Hinman and Norman English of Whitney Point, New York, claim to be the only Americans in New York State who have learned how to sex chicks by the Japanese method. If that covers too much territory, we will be glad to stand corrected. They can sex 600 chicks an hour, and claim 95 per cent accuracy. Chicks are sexed when they are 36 hours old, and the two men have handled over 150,000 chicks this year. Mr. English is a partner with his father, G. R. English, in the English Poultry Farm at Whitney Point, and Mr. Hinman is a teacher of agriculture at the Whitney Point Central School.

Ladino Pasture Experience

We, as well as hundreds of other dairy farmers throughout our state, are growing Ladino for lower production costs of milk. Wherever records are kept on milk production and costs of production, it seems that this remarkable clover is the missing link between little and much profit from milk pro-

duced throughout the pasture months.

However, all have their own methods of seeding. We have the best results by plowing in September and harrowing in two tons of lime per acre and seeding to rye. The following April, as soon as possible, we sow two lbs. of Ladino and two lbs. of orchard grass per acre without any harrowing whatsoever. At the same time we top-dress with 500 lbs. of 20 per cent superphosphate and 100 lbs. of muriate of potash per acre, using this same treatment every year. The rye can then be pastured off, and the area fenced until about the middle of August; and then rotated by other strips of Ladino or other pasture. The secrets of Ladino as we see them are: adequate lime, regular applications of superphosphate and potash, and good common sense in rotating so as not to pull too many roots.

We, as well as others getting started in Ladino pasture, appreciate the advice and recommendations given by our County Agent and State College Agronomist, as well as the financial aid given by participating in the Agricultural Conservation program.—Fred Johnson, Woodstock, Conn.

One good way to apply superphosphate to the land is to use from a pound to two pounds per cow per day in the stable. In addition to adding the phosphorus, in which farm manure is deficient, this practice improves the appearance of the stable, tends to prevent slipping by the cows, and helps sanitation.

A Farm Women's Market

BELOW is an inside view of the Atlantic County, New Jersey, Farm Woman's Market. Started recently, it gives every promise of being an outstanding success in affording farm women a means of making a little extra money. The desire for extra cash has lead to the victimizing of many farm women who lose money to various fraudulent "work at home" schemes. These New Jersey women have the right answer. By working together they developed a market for their own products and they have full control of it.

Some of those who helped to make the market a success are: Frank Knowles, State College Extension Service; County Agent John Brockett; Harold Hoyt, Farm Security Administration; Mrs. Martha Pilhout, Egg Harbor; and Mrs. Bertha Plyllis, May's Landing.

The old covered bridge pictured above is located near Pillow, Dauphin County, Pennsylvania. While the exact date of construction is unknown, old residents recall that at least 83 years ago it was standing and looked just as it does today. About half a mile from the bridge is an old mill which years ago was run by a water wheel, but both the dam and water wheel have been gone for years.

For Better New York State Cheese

The men pictured at the right are actively engaged in studying cheese problems at the State Experiment Station at Geneva, N. Y. The findings of their work extend well beyond the borders of the state. They are J. C. Marquart, (left) and M. W. Yale. During the State Fair at Syracuse these men had one of the most difficult judging assignments—that of judging entries of limburger, Muenster, brie, camembert and Neufchatel cheeses.

"It is surprising how the consumer recognizes the high quality of these cheeses as made in our state," the men comment. "These cheeses have been modified in texture and package to meet the demands of present day consumption. New York State Limburger has a quality reputation throughout the nation."

HIGHLIGHTS from the Milk Hearings

Producers Present Convincing Evidence on Need for Higher Returns

WITNESSES at the New York City, Syracuse and Albany hearings on the Federal-State Milk Marketing Order can be roughly divided into three classes—witnesses for the Metropolitan Cooperative Milk Producers' Bargaining Agency, representatives of consumers and Communists, and speakers for midwestern dairy interests.

The principal amendment submitted by the Bargaining Agency proposed a year around Class I price of \$2.82 a hundred. L. C. Cunningham of the New York State College of Agriculture testified at the Syracuse hearing that labor costs are second only to feed costs in producing milk, and that in the past 75 years the amount of milk required to pay a month's wages on New York farms has about doubled. He also pointed out that dairymen have met these wage increases by producing more milk per man and by increasing the milk production per cow. Wages of hired men in July this year, said Mr. Cunningham, were 7 per cent higher than a year ago; and for the first seven months of this year were 26 per cent above pre-war average. Furthermore, it is becoming harder and harder to get good farm help.

The Cost of Milk Production

Harry Fuess of Waterville, who has kept cost accounts on his farm for some years, testified that his cost of producing 100 lbs. of milk was \$1.89 in 1938, \$2.17 in 1939, and \$1.87 for the first 9 months of 1940. Earl Laidlaw of Gouverneur, St. Lawrence County, stated that the taxes on his farm had increased \$50.00 since 1930, and that since 1935 his school taxes had advanced \$91.00.

Statements by these three witnesses were typical of other evidence given at the hearings. Other facts presented showed that weather conditions during the past summer have, in many areas, been unfavorable for the production of feed crops for dairy cows, and that recent changes in grade requirements by New York City have increased production costs.

The Bargaining Agency also proposed an amendment prohibiting diversion payments where milk is moved to a second plant on the same parcel of land or to a plant nearer than half a mile. Under the Order, milk handlers are paid 17c a hundred for all milk diverted to a manufacturing plant during certain months when there was a surplus.

The third proposal by the Bargaining Agency would raise the price to the producer of milk in all but three manufactured classes by 6c a hundred.

Communists Active

At the Syracuse hearing, held at Central High-School, a man and a woman stood at the entrance at the start of the morning session to hand out Communist literature. Just before two members of the Syracuse Police Department arrived, they ceased their activities. One of the bulletins wound up with the plea "vote Communist."

Harry Hollinshed, General Manager of the United Milk Producers of New Jersey, requested federal regulation of interstate shipment of milk into the New Jersey market.

A good part of the evidence presented by consumers and Communists was given at the New York City hearing. Testifying was a representative of the Milk Consumers' Protective Committee, an organization which has been highly

praised by "the Daily Worker," the official organ of the Communist party.

Dealer Opposes Price Increase

Particularly interesting was the testimony of Isadore Eisenstein of Rockdale Creamery, who opposed any increase in the Class I price. Eisenstein stated that there are about 61,000 producers under the Order and that probably 40,000 would be enough to supply the market. Cross examination brought

out the fact that 40,000 producers would not supply the market during a production slump, but the apparent desire to cut down the New York Milk Shed should interest and alarm milk producers in the outlying areas of the New York Milk Shed. (This concern was not lessened by the words of Mayor LaGuardia at Utica on October 14, when he said, "What bothers me is why such a large producing area should be made to serve so small a marketing area.") Eisenstein said that if milk prices were lowered, consumption would increase. Past history fails to support such an argument. In times when price cutting has brought ruinous returns to farmers, increases in consumption in New York City have been very small.

Also speaking against price increases

was Emil Greenberg, representing an organization known as Community Councils, as well as Mrs. I. Stein of the United Parents Association, and Rev. Clarence Boyer of the Council Against the High Cost of Milk.

The Western Viewpoint

Spokesmen for the Indiana Farm Bureau and other midwestern interests, including the Ohio Dairy Producer Association of Columbus, the Cream Shippers' Committee of Chicago, the Indiana Milk and Cream Improvement Association of Indianapolis, and the Commission of Interstate Cooperation of Indianapolis sought amendments that would increase prices on surplus classifications.

One of the spokesmen pointed out (Continued on Page 15)

BIG NEWS FOR THE BIG JOBS

Dairy farmers prefer the high powered Ford Pickup, 112" wheelbase illustrated, or 122" 1-ton Express for their fast haulage needs.

112" wheelbase Ford Pickup serves a wide variety of purposes. For fast trips to town or general hauling about the farm it's a money maker.

NO matter what your hauling needs, good news waits at your Ford Dealer's in the great Ford line for '41!

Good news in *variety* that offers the *right* unit for your job. In the Ford line you choose from 3 different engine sizes . . . 6 wheelbases . . . 42 body types! On-the-button size and power for over 95% of all the farm hauling in the country!

And good news again in value for your dollar! Low Ford prices buy you lots of "high-price" truck features . . . while the Ford engine and parts exchange plan assures you that repair and upkeep costs will stay *down* along with gas and oil costs!

For farmers who sell their produce from house-to-house, the new 4-cylinder 30 h.p. engine in the 112" and 122" wheelbase units, provides super economy.

Whatever the farm job is . . . you'll find good news in the new Ford line. See your dealer and arrange for an on-the-job test . . . now!

There is a never-ending variety of work for this Ford regular 134" wheelbase truck. (85 or 95 H.P. units.)

FOR 1941

AMERICA'S QUICK-THINKING YOUTH

*saved the
COLONIES FROM
SURPRISE ATTACK*

RIDING HOME in the dusk of an April evening in 1775, Solomon Brown — a 19-year-old American lad—passed 10 of the King's officers headed toward Lexington. "Why are they out so late at night?" wondered Solomon. He followed secretly to make sure; then galloped into Lexington. "The regulars are coming," he cried.

Meanwhile, Paul Revere was preparing to start on his famous ride. He had to row across the Charles river to reach his horse—row past the very shadow of the King's warship. His oars squeaked loudly as he shoved off. A slip of a girl—a relative of John Adams—tossed him a woolen cloth to muffle the oarlocks. It was warm, Revere noticed, as he wrapped it about the oars—the girl had given him her petticoat.

Both Solomon Brown and Paul Revere were captured later that night; but the quick thinking of this American boy and girl had saved the day for freedom.

Men, women and children gladly took their part in America's fight for freedom 165 years ago. For each recognized that he was fighting for himself as well as for the people and things he loved.

The same was true 50 years ago when farmers began their struggle for A LIVING PRICE FOR MILK. It is still true today when farmers must defend the federal and state marketing orders against threats of strike and violence by enemies who march and fight in the night.

But as the wives and children of Dairymen's League members faced boycott, poverty and violence unafraid during the League's early fight . . . so today they face the dangers of strike and violence with steady eyes and calm hearts. They know that the massed strength of the great majority of farmers—of co-operative and of independent farmers alike—is behind them. They know that the American farmer has never been defeated when he has stood shoulder-to-shoulder with his neighbors. And they know he will not be defeated now. The young Solomon Browns and Abigail Adams of today are confident and watchful. Let oppression start to march, they say; and that march will turn into a headlong retreat, as it did once before at Lexington in 1775.

Fruit Growers Need Organization

Like Dairymen's League, says Lockport Woman.

Miss Ida May Barnes, League member of Lockport, N. Y., has a fine herd of high-test cows and one of the largest quince orchards in New York State.

"We have no marketing organization in the fruit industry like our Dairymen's League," says Miss Barnes. "It is almost a case of accepting what the dealers offer for our fruit. An organization like the League would help a lot.

"I joined the Dairymen's League in 1928.

Previous to that I belonged to a local co-operative. Membership in the League means a lot to us. There is something about it that holds us together. At meetings I like to have a lot of music, and I believe people, also, like to have something to eat."

Miss Barnes lives in a century-old stone house filled with reminders of pioneer days. Her ancestors built it on land obtained from the old Holland Land Purchase.

Your Questions Answered

Early Cut Timothy

What is the comparative value of early cut timothy hay and alfalfa for feeding dairy cows?

A feeding test made at Cornell throws some light on this subject. They compared early cut timothy hay, which had been fertilized with a nitrogen carrier, with alfalfa. One lot of cows was fed alfalfa and the other the early cut timothy and, when the difference in protein content was adjusted by giving the cows fed timothy a higher protein grain mixture, there was practically no difference in the milk production of the two groups. Henry's Feeds and Feedings gives the protein content of timothy hay, cut in full bloom and from fields fertilized with a nitrogen carrier, as 8.8 per cent, and the average protein content of good alfalfa hay as 14.7 per cent.

In recent years dairymen have come to a better appreciation of early cut timothy as a roughage for dairy cows. There is no question about the superiority of alfalfa, but there are regions in the Northeast where conditions are so unfavorable for alfalfa that it cannot be grown except at heavy cost.

Scalding Hogs

What is the correct temperature for water used in scalding hogs?

The correct temperature is from 140° to 150° F. If the water is over 150° at the time the hogs are scalded, it is likely to set the bristles and make the cleaning operation much more difficult. The surest way is to use a thermometer to get the exact temperature. Incidentally, a teaspoon of lye to 30 gallons of water will help to remove the hair and the scurf. Also if the hair on some part of the hog comes off with difficulty, a bran sack can be laid over that part of the carcass and hot water poured over it.

Silage for Lambs

Is corn silage a good feed for lambs, and how much should be fed?

Tests have shown that lambs fed shell corn with a protein supplement, alfalfa hay, and corn silage make rapid gains. However, corn silage fed to lambs along with alfalfa hay gives better results than where corn silage is fed as the sole roughage.

Feeding Beet Pulp Dry

Is dried beet pulp ever fed dry, or is it always necessary to soak it?

At the West Virginia College some careful trials were made, and the conclusion reached that where dairy cows can drink all of the water they want, approximately the same results were secured in feeding them beet pulp soaked and in feeding it dry. The advantage of dry feeding, of course, is that it saves a considerable amount of labor.

Gravel for Concrete

I have been told that bank run gravel is unsatisfactory for making concrete foundations. Is this correct?

Unquestionably a good share of concrete work on farms is made with bank run gravel. It should, of course, be clean and if there is any appreciable amount of dirt in the gravel it should be washed before it is used. The other difficulty and the one which is more common is that bank run gravel contains too high a proportion of sand and too low a proportion of stone. Where this occurs you really need more cement to get a good job than you do where you mix 4 parts of stone, 2 parts

of sand and 1 part of cement. The way to handle this situation is to screen your bank run gravel through a 1/4" screen and re-mix it in the proper proportions. There is a lot of good information on making concrete in various bulletins put out by the College of Agriculture and by the Portland Cement Association.

Dynamite for Stumps

Where can I get information about the use of dynamite to take out stumps?

Manufacturers of dynamite have put out several excellent booklets that give very definite instructions. There is no question but that the use of dynamite is the quickest way to get rid of stumps, at least those which are too large to be pulled out with a tractor. There is little danger in the use of dynamite if directions are followed explicitly. The question for a man to decide where, for example, he has an old orchard where the trees have been cut but the stumps are still standing, is whether or not the cost of taking them out with dynamite is justified. It certainly is justified where there are just a few stumps in a field because it costs more to work around them than it would to take them out.

Cull Potatoes for Hog Feeding

How much value do cull potatoes have as a feed for hogs?

Potatoes, of course, are high in water and are, therefore a bulky food. Furthermore, they are high in starch and low in protein and some protein supplement should be used if many potatoes are fed. For hogs, potatoes are worth considerably more if they are cooked. Tests have shown that it takes about 420 pounds of cooked potatoes to equal in feeding value 100 pounds of corn or barley. Best results are obtained when not more than 4 pounds of potatoes are used to each pound of grain.

Minerals for Hogs

Would you suggest for me a simple mineral mixture for hogs?

The New York College of Agriculture suggests a mixture made up of 40 lbs. of finely ground limestone, 40 lbs. of ground steamed bone meal and 20 lbs. of salt. This can be mixed in the grain ration at the rate of 2 lbs. of the mixture to each 100 lbs. of grain or it can be used in a self-feeder.

I Learned to Be a Good Housekeeper

(Continued from Page 2)

more boards were put on each side of the front from the upper shelf to the floor. We painted the whole thing to match the woodwork and then filled the opening with a pretty curtain. A strong wire clothes line was strung six inches below the lower shelf, fastened at each end, and this provided lots of room to hang clothes on coat hangers.

Here is another arrangement that proved useful. Procure four empty wooden crates. Mine were orange crates about 1 ft. square and 3 ft. long. Pile one on top of the other, stain or paint the ends, stand against the wall, put a scarf over the top, and set something decorative on it. Put curtains in front and use the shelves for books and papers or anything you like. Mine held all sorts of magazines and papers.

There's nothing like plenty of closets and storage space for helping to keep things in order and to save constant "picking up."

IF YOUR NOSE "CLOSES UP" TIGHT AT NIGHT

HINDERS BREATHING—SPOILS SLEEP

3-PURPOSE MEDICINE

Here's mighty good news... If your nose "closes up" at night and makes breathing difficult, put 3-purpose Vicks Va-tro-nol up each nostril.

Va-tro-nol does 3 important things: (1) shrinks swollen membranes; (2) soothes irritation; (3) helps flush nasal passages, clearing clogging mucus, relieving transient congestion. It brings more comfort, makes breathing easier, invites sleep.

...And remember, it helps prevent colds from developing if used in time.

To Relieve Bad Cough, Mix This Recipe, at Home

Big Saving. No Cooking. So Easy.

You'll be surprised how quickly and easily you can relieve coughs due to colds, when you try this splendid recipe. It gives you about four times as much cough medicine for your money, and you'll find it truly wonderful, for real relief.

Make a syrup by stirring 2 cups of granulated sugar and one cup of water a few moments, until dissolved. No cooking needed—it's no trouble at all. Then put 2 1/2 ounces of Pinex (obtained from any druggist) into a pint bottle. Add your syrup and you have a full pint of medicine that will amaze you by its quick action. It never spoils, lasts a family a long time, and tastes fine—children love it.

This simple mixture takes right hold of a cough. For real results, you've never seen anything better. It loosens the phlegm, soothes the irritated membranes, and quickly eases soreness and difficult breathing.

Pinex is a compound containing Norway Pine and palatable guaiacol, in concentrated form, well-known for its prompt action in coughs and bronchial irritations. Money refunded if it doesn't please you in every way.

By L. B. SKEFFINGTON

From SKEFF'S NOTEBOOK

THE New York State Horticultural Society will move downtown next January for its annual meeting in Rochester. The state has leased the buildings at Edgerton Park for defense training purposes. The city has fitted up the former Duffy-Powers department store in the heart of downtown Rochester as a Civic Exhibits Building.

At first, society officers feared they might not be able to find a home in Rochester large enough to stage the annual show. Now they are enthused over the possibilities which the new building affords. The building is 10 stories high, of modern construction. The society will use the basement, the street floor and the next floor, affording much more space than was available at the former location.

The building is on Main Street, directly opposite the Powers Hotel, society headquarters, and across the corner from the Court House, one block from the Four Corners. Secretary Roy P. McPherson says advantages of the new location include:

1—Downtown accessibility, being much more convenient for growers, exhibitors and their families. Hotels, restaurants, shops and theaters are nearby.

2—Larger and more compact meeting and exhibit space, with everything under one roof.

3—Availability to the public to view exhibits, particularly the fruit show.

Big Fruit Show Planned

It is anticipated that the fruit show of the society will be changed and expanded. Considerable emphasis will be placed upon "selling" the good qualities of apples to the public. The old commercial exhibit as staged by the society and the Department of Agriculture and Markets in recent years will be abandoned. That was an educational exhibit intended to show growers and packers exactly how their fruit looked on the market.

Under the old plan departmental inspectors selected packages of fruit on the market at random, opened the packages at the show, and marked them for conformance to specifications of grade marked. Last year they went a step further and purchased apples in retail stores.

These exhibits were intended to show up defects in grading, packaging and handling. This time it is proposed to ask growers and packers to exhibit fruit of their own selection. Each grower or packer naturally will show his best fruit. The fruit will be judged according to varieties and possibly by counties, to create a little competitive spirit. The public will see a fine display of good fruit, and it also is expected there may be demonstrations of using the right apples for the right purposes.

The city of Rochester already has spent \$47,000 in refurbishing the exhibits building, which it hopes to operate all year-around as a permanent exhibit building.

Joint Committee to Report

The program now being shaped promises to be outstanding. For one thing, the Joint Fruit Committee named by the Society and the State Farm Bureau Federation last winter will make a report. This committee was empowered to begin studies to develop immediate and long-time recommendations for the fruit industry. It is not to be expected that the committee will be able to complete its report in one year, but Chairman Earl D. Merrill says complete and detailed progress reports will be offered by the commit-

tee and its various subcommittees.

There are six or seven subcommittees which have been wrestling with various problems, such as marketing, promotion and transportation. The plan for removal of undesirable trees, with government aid, sponsored by this committee already is in the making. The variety subcommittee, headed by George A. Morse, has presented tentative lists to be recommended for planting or elimination, as well as a "doubtful" list.

The promotion subcommittee headed by Frank W. Beneway has compiled some preliminary recommendations as the result of its own studies and submission of questionnaires to several hundred growers. A marketing committee is headed by Bruce P. Jones, transportation by John A. Hall and economics of production by Fred Nesbitt, with all groups actually at work. The winter meeting is being slated as the time when all of these committees

will present their ideas, discuss them and seek further instruction from growers generally. It is expected that a full day will be devoted to reports by the group, and for discussion of its objectives and methods to attain them.

* * *

SMA Buying Cabbage

Growers upstate are selling cabbage to the Surplus Marketing Administration at \$8.50 per ton loaded on car and in sacks. The program was set up in response to appeals by growers. The bulk of the crop is grown in Ontario County and growers report having sold cabbage as low as \$3 per ton. At the time the program was started the market was variously reported at from \$4 to \$6. Included in the \$8.50 price, costs reckoned include sacks, hauling and loading, and inspection fees.

An effort also is being made to have sauerkraut placed on the Food Stamp lists, which it is believed would help materially in easing the situation.

* * *

To Study Distribution

The State Land Use Planning Committee has a new subcommittee, that on distribution and marketing, headed by Roy A. Porter of Elba. Appointment of this committee bears out what I have been observing for a long time: When almost any group of farmers get together, for almost any purpose, sooner or later discussion turns to marketing and distribution problems. There is no problem so vital in agriculture as distribution, and it remains about the toughest nut to crack.

The Market Barometer

The Price Level of Farm Products

According to the New York State Department of Agriculture and Markets, New York farmers averaged to receive 3 per cent more for their products in mid-September than they did in mid-August. Average returns to farmers in mid-September were 2 per cent above the 1910-1914 level, compared to 9 per cent above for the same period last year.

Products on which the prices were above pre-war were: apples, with an index of 121; chickens, 106; dairy cows, 147; veal calves, 112; beef cattle, 108; sheep, 104; lambs, 138; wool, 157. The index for September milk is not yet available, but for August it was 128.

A price for farm products which averages 2 per cent above that of 1910-1914 doesn't look so bad until we examine farm costs. In mid-September farmers averaged to pay 22 per cent above pre-war prices for all supplies purchased. It took more pounds of milk, more eggs, more apples, more potatoes to buy any given quantity of farm supplies.

Egg Production Heavy

On October 1 hens the country over were laying at a higher rate than on any October 1 on record. Contributing factors were favorable weather and liberal feeding. According to crop reporters, however, production per hen in New York State was slightly below a year ago.

About mid-October the egg-feed ratio, as reported by the New York State Department of Agriculture and Markets, was 6.2. This means it took 6.2 doz. eggs to buy 100 lbs. of feed. A month ago the figure was 6.4; a year ago, 6.5; two years ago, 4.2.

At the same time, top wholesale price of white eggs in New York City was reported as 35c; for the same time last year, 34½c; two years ago, 42c.

About the first of October total cold storage holdings of eggs were estimated at 6,117,000 cases, of which the Surplus Marketing Administration held close to 1,000,000 cases. This report indicates slightly fewer eggs in storage than at the same time a year ago.

Reports also indicate that eggs have been coming out of storage at a rate higher than a year ago. In general, the market seems to have more confidence in the future of the egg deal, one of the reasons being an estimate that on January 1 the numbers of laying hens on farms will be 5 per cent smaller than a year earlier.

According to a New York City market reporter, the movement of poultry to market was exceedingly heavy dur-

ing August and September, as well as the first week in October. For the tenth successive week, receipts at the four largest cities established a new all-time high.

New York State is estimated to have 400,000 turkeys, approximately the same as 1939; but the U. S. turkey population of 33,138,000 is 1 per cent higher than a year ago.

September Milk Price

Administrator N. J. Cladakis announces that the September uniform price for milk in the New York City Milk Shed is \$1.92 a hundred. This is 11c more than the August price. This price is for 3.5 milk in the 201-210 mile zone, subject to the usual freight and butterfat differentials.

When we look at milk production records, it is easy to see why the uniform price for September is somewhat lower than last year. For the month of September, New York milk production was 7 per cent above a year ago and, with the exception of 1936, the highest for the month since records have been kept. As a result a higher per cent of total production went into manufactured products.

Pastures are much better than they were a year ago, and added to that is the fact that on October 1 feeding of grain and concentrates to dairy cows was heavier than in any year of nine in which records have been kept, not excepting the drought years of 1936 and 1939. Furthermore, dairymen report a slight increase in numbers of cows on farms.

Little Change in Apple Estimates

There was little change in the estimate on apples, although the harvest in New York is somewhat later than a year ago. October cold storage report indicated less than two-thirds as many apples in storage in New York State as there were a year ago and about four-fifths as many in the United States as a year ago. The apple crop in North Atlantic States, including New York, is estimated at about 31,000,000 bushels, compared with 47,000,000 a year ago and a ten-year average of 34,000,000 bushels. South Atlantic States, including Virginia, expect about 21,000,000 bushels, compared with 22,000,000 a year ago; (Continued on opposite page)

A.A.-Grange Cookie Contest News

ELEVEN more Pomona Granges have held their sugar cookie contests, making a total to date of forty-three county contests held. That leaves just ten more to go!

One of the fine things about this contest is the effort that contestants make to enter their cookies in spite of difficulties that may come up. Here is an interesting note from Greene County's chairman, Mrs. John C. Planck, about what happened to one of their contestants, Mrs. Lucia Towner:

"Mrs. Towner worked under hard circumstances, as her husband was in the

hospital and had just undergone a very serious operation. As she was staying in the hospital in Albany, quite a way from her home, I was surprised to receive her cookies, which she had baked up there in Albany on a stove she was not used to. I surely appreciated the effort it meant on her part and the true Grange spirit of cooperation it showed to send the cookies at this time."

Mrs. Towner tied for fourth place with Mrs. Susan Jarzembecki, and as the result of her effort Greene County has the perfect score of all Subordinate Granges being represented in the county contest.

From another county, Rensselaer, comes news which has greatly saddened us—the death of Mrs. Grace Sherman of Pittstown Grange, Melrose, N. Y. Mrs. Sherman recently won Rensselaer County's contest, and her sudden death from a heart attack on October 9th was a great shock to her friends and family.

Following is the list of Pomona and Subordinate winners which we have received during the past two weeks:

Pomona Winners

COUNTY	GRANGE	WINNER
Cortland	Texas Valley	Mrs. Lois De Mond
Erie	Akron	Mrs. Ethel Finch
Greene	Catskill Valley	Mrs. Sadie Newcomb
Madison	Morrisville	Mrs. Hollace Hicks
Montgomery	Glen	Mrs. Howard Young
Onondaga	Fayetteville	Mrs. Melvin Benedict
Ontario	Seneca	Mrs. Martha Phalen
Oswego	Pulaski	Mrs. Arthur Colvin
Schenectady	Gifford	Mrs. William Furbeck
Schuyler	Highland	Mrs. E. B. Elston
Yates	Barrington	Mrs. Frank Wager

Subordinate Grange Winners

COUNTY	GRANGE	WINNER
Herkimer	Winfield	Mrs. Lynn Jones

Yates County's cookie contest winner, Mrs. Frank Wager (shown at right in picture) receiving the congratulations of one of the judges, Mrs. M. D. Connors. Mrs. Wager is holding her plate of prize cookies.

National Apple Week

THE National Apple Institute and regional institutes throughout the country have selected October 24 to 31 as National Apple Week. Every effort will be made in cooperation with stores to push the sales of apples. The results obtained in a similar effort last year were outstanding. Later in the season other similar efforts to stimulate sales will be made.

Incidentally, a liberal use of apples in the farm family menu is quite as helpful as it is in villages and cities.

while western states expect 43,000,000 compared to 42,000,000 a year ago and a ten-year average of 47,000,000. This shows that the shortages of apples are mainly in the eastern and central states which are relatively close to market. Apples will have more competition from grapefruit. The prospective crop is 42,000,000 boxes, which is 22 per cent higher than last year's crop. The outlook for early and mid-season oranges, which compete with apples, is 44,000,000 boxes, compared with 39,000,000 last year and 42,000,000 two years ago.

Cabbage Crop Heavy

The late August and September rains were favorable for the growth of cabbage in New York State and in a majority of other late states. Following is the October 1 estimate of production of late cabbage, which includes production from which kraut packers secure their requirements:

	Average 1929-38 (Tons)	1939 (Tons)	Indicated 1940 (Tons)
DOMESTIC			
New York	96,200	91,200	114,500
Wisconsin	73,500	53,800	94,000
Pennsylvania	37,300	39,600	51,200
Michigan	32,000	31,500	37,100
Other States	87,500	81,800	86,200
Group Total	326,500	297,900	383,000
DANISH			
New York	174,400	134,600	166,900
Wisconsin	44,400	22,400	32,400
Colorado	27,700	31,900	30,400
Pennsylvania	20,000	22,400	28,900
Other States	26,300	29,100	32,500
Group Total	292,800	240,400	291,100

Dried Beans Crop Above 1939

The New York State bean crop was planted late and developed slowly. About 57 per cent of the crop was not ripe on October 1, compared to 12 per cent a year ago and a ten-year average

of 30 per cent. The U. S. estimate is the third largest in the 32 years in which records are available, and about 1,000,000 bags larger than last year. Here is the October estimate:

	Average 1929-38 (100-lb. bags, thousands)	1939	Indicated 1940
New York	1,062	1,134	1,057
Michigan	3,974	4,520	3,952
Idaho	1,522	1,551	1,560
Colorado	1,118	1,360	1,659
California	3,879	3,990	5,012
Other States	1,531	1,407	1,737
Total	13,086	13,962	14,977

Buckwheat Promises Full Crop

Because of early freezes, the New York buckwheat crop varied greatly in different areas. Small yields were the result in south-central and eastern New York. Even so, the October 1 estimate for New York was 2,186,000 bushels, compared to 2,077,000 a year ago. The Pennsylvania crop was slightly larger, and the national estimate was 6,048,000, compared to 5,739,000 a year ago and a ten-year average of 7,617,000.

Potato Estimate Jumps Six Million Bushels

(Continued from Page 3)

why more stock has not been shipped out of the State.

Chain Stores Help

In addition to the Federal Government, potato growers are looking for assistance from the large retail outlets. The National Association of Food Chains has pledged their assistance in urging all their member organizations to feature potatoes in an endeavor to move a large volume. So far we have not had real potato weather. Just as soon as we get colder weather we may naturally expect consumption to increase. Thus we can see that all factors are not unfavorable.

The potato market is still any one's guess although it is the opinion of the writer that barring unforeseen events we cannot expect better prices before January first at least. This, of course, applies more particularly to areas located some distance from the major markets. It is entirely possible that up-state New York may enjoy more favorable conditions than other areas due to the fact that the local crop in that area is comparatively light and probably will not be sufficiently large to supply the local demand.

Highlights from the Milk Hearings

(Continued from Page 11)

that midwestern dairymen are interested in the New York Order because in recent years they have been shipping much less cream East than they formerly did. Another speaker stated that midwestern dairymen cannot compete in milk by-products in the East under the present Order. Naturally, opening the market to the midwest will lose some of that market to eastern producers. Dr. L. Spencer of the New York State College of Agriculture gave testimony to show that eastern milk used for butter and cheese is a relatively small factor in the market.

Spokesmen for the Dairy Farmers' Union lined up with midwestern speakers in demanding substantial increases in prices of milk used for manufacturing. Other proposals advanced by the Dairy Farmers' Union included: elimination of producer contracts, the limiting of payments to cooperatives, a provision whereby the Milk Marketing Administrator could collect and disburse premium payments, and a proposal to reduce diversion payments.

Conducting the hearings were J. M. Durbin, senior attorney for the U. S. Department of Agriculture, and H. V. Noyes, Commissioner of Agriculture of the State of New York.

"He's a Big One... Be Ready with a SILVERTIP"

300 YDS.

SILVERTIP
30-'06, 180-grain Bullets

YOU'LL find the SILVERTIP expanding bullet made to order for the big fellows that take a lot of stopping.

Expansion is delayed by the "nickel silver" jacket, composed of copper, nickel and zinc, while the bullet ploughs through hide, muscle and bone.

On reaching the body cavity the pressure within the lead core of the bullet causes the core to burst through the thin silver-colored jacket and spend its terrific force within the vital organs.

At any hunting range, from the shortest to the longest, the SILVERTIP mushrooms perfectly because its expansion is controlled. SILVERTIP bullets are available in 18 Western SUPER-X cartridges, in 15 popular calibers for all types of big game. Mail the coupon for full particulars.

If you have been notified that your policy is to run out soon, renew it right away with our agent or direct to the office.

North American Accident Insurance Co.
N. A. ASSOCIATES DEPT.
10 NORTH CHERRY ST., Poughkeepsie, N. Y.

A Date for Nov. 5

Already voters' pledges, with long lists of names and addresses attached, are coming to the American Agriculturist office. If you haven't yet signed a pledge, won't you do so now and get the voting members of your family and neighbors to sign also? Just sign your name and address; then paste a blank sheet of paper at the bottom for names and addresses of other voters. For the longest list of signatures received in this office by Saturday, November 9, we will pay \$10.00, plus \$1.00 each for the next 15 longest lists. Address your envelopes to Department VP, American Agriculturist, Savings Bank Building, Ithaca, N. Y. Once an election is over, the American way is to forget party differences, accept the people's choice, and work together to make this the best country in the world.

VOTERS' PLEDGE

I solemnly pledge to cast my vote in the coming election this fall, and to do my best to get my relatives and friends do the same.

By J. F. (DOC.) ROBERTS

EVERY FALL there arises a new set of conditions for the winter feeding of your livestock, which is just another thing that makes farming an interesting as well as a highly intelligent job.

This year, for the first time in our history, protein supplements, particularly linseed, are selling below the price of corn. With good oats and barley selling in this locality at little better than 1c a pound, we have a combination that will take the place of corn in most any feeding operation. The protein supplement should be added at the rate of 10 or 12 pounds per hundred pounds of the smaller grains. This is especially efficient for ewes and lambs. Therefore, the importance of home-grown small grains becomes doubly important this year, and again I cannot help but say that it costs no more to feed your own home-grown grains to your own livestock than it costs you to market those grains.

Hay is different most every year, but this year the variation is greater than I have ever seen it, even on the same farm. This not only applies to hay cut at approximately the same time, but between first and second cuttings as well. There is a lot of rough, coarse hay around that will take twice as many pounds to get the same results that you usually get from your hay. Therefore, every man in the Northeast will have to watch his hay feeding this year closer than ever before, or he will surely wonder what is the matter with his livestock before the winter's over. Nevertheless, he can couple cheap, small grains with cheap protein supplement, and with this poor hay still

have a low-costing, good ration. Therefore, this feeding season should prove to be one of the most profitable winters for livestock that we have had in a long time.

How to feed ear-corn is being asked more and more every year, as our corn acreage increases. Most animals enjoy eating it right off the cob (I do), and this works out all right, unless you are feeding more than one animal at the same time, in the same manger, rack, or wherever. Some individual animals learn how to get it off the cob very rapidly. Some never learn well, or are just slow eaters, or their teeth are bad, etc. Therefore, when feeding animals together, ear-corn must either be broken up (and there are low-costing cutters that cut cob and all into five or six pieces), or it should be shelled. To grind cob and all is really not good, because while animals will eat it all, the cob has no food value and in most cases you will over-estimate the grain ration you are feeding. Corn stalks, except as ensilage, have no real food value, and without the corn itself the ensilage is hardly worth the time and expense of putting it into the silo.

Molasses will continue to be a good feed and conditioner, but the expense of mixing it with other grains will be too great this year, as compared to small grain and supplement costs. If you have a way of feeding molasses in bulk at no extra expense, that is fine, for it does have value. It may also be diluted one-half with water and sprinkled over some of this year's coarse hay. In this way, you can use up the hay, and if enough molasses is used you will get good results.

What to do with some of this immature corn this year? It is a lot of work, but it can be shocked in the field, brought in in amounts to last your livestock 24 to 48 hours, cut the same as for silage and left on the barn floor for this period of 24 to 48 hours; it will heat and soften, will become palatable and will have some value, but it must be done at least every 48 hours, and fed before it spoils.

Western New York's Sheep and Lamb Field Day and Dinner

THE little lamb and its papa and mama were honored by over 400 men at Batavia, N. Y., on Wednesday, October 2nd. The festivities were kept strictly on an educational basis and in the morning, over fifty 4-H Club and F. F. A. boys put on a judging contest of both rams and market lambs at the Fairgrounds, and after the most keen competition, "Pie" Starkweather received the first prize. In the afternoon, over 100 pure-bred rams of twelve different breeds were put on sale by their respective owners and over 50% of them were sold. Doctor Baker put on his usual highly interesting and profitable parasite control display. Doctor John Willman discussed various types of rams for various types and kinds of farms. Lambs were shown and discussed, which were bred by different breeds of rams from western ewes. A sheep dog exhibition, with sheep from the farm of Clark Walker received a great deal of applause, and the committee, consisting of Morris Johnson, Chairman, Batavia; Arthur Spiers, Batavia; W. W. Hawley, Jr., Batavia; George Maine, Bergen; Duane Fink, Alabama; Elbert Torrey, Stafford; Gilbert Prole, Stafford; Pierson Fleming, Stafford; Dennis Phelps, Basom; William Gall, LeRoy; John Pope, Oakfield; Earl Starr, Pavilion; and Clark Walker, South Byron, should be congratulated for their work in getting together such a fine program.

Over 300 men attended the banquet in the evening. Nine counties and five states were represented. Chairman

Morris Johnson introduced Dr. W. G. Kammlade, the guest speaker, from Urbana, Illinois, where he is a member of the Department of Animal Husbandry at the University of Illinois. He gave one of the best talks that this annual affair has had from a purely livestock standpoint, stressing the different situations under which lambs are raised in the West and in the range country, and therefore how they are sure to differ as to quality, weight and kind, when they get here as feeder lambs. He also said that studies have shown that these western ranch men

"Wow! Who'd have thought it would grow? I buried a ham bone there last fall."

work on a very small margin, the average being not over 30c or 40c per head, per ewe, per year. In discussing feeding problems, he stressed the balanced ration, not only from a chemical standpoint, but also from a physical standpoint, giving examples and details as to the importance of remembering that lambs and sheep were ruminants and must have lots of good roughage and when asked to subsist on heavy grain rations they simply could not hold this weight in their stomachs without the lighter roughage, which of course, led up again to the importance of good roughage for all livestock husbandry.

Again, you could not help but be impressed and inspired by such a large group of men gathering together in honor of sheep and lambs in western New York. They have a place in our agriculture, as every one of those men can well testify.—J. F. Roberts.

Seneca Cooperative Breeders Hold First Annual Meeting

IN THE SPRING and summer of 1939 dairymen in Seneca and Schuyler counties in New York set out to sign up enough cows in a new artificial breeding association to make possible an efficient, self-supporting cooperative. Strangely enough, in that land noted for almost everything but its cows, the 75 special dairy committeemen working on the plan had practically reached their goal at an organization meeting in late August of '39. Between 1100 and 1200 cows had been signed up by about 200 dairymen throughout the territory.

Reports given at the first annual meeting of the cooperative held at Romulus on September 26th indicate the degree of success with which it has operated. Graham Garlick of Geneva, secretary and treasurer of the association, presented the yearly financial statement. Total income for the fiscal year ending in October was estimated at \$7,064.67 and total expense including purchase of bulls and equipment at \$6,653.93.

The balance at the end of the year, therefore, will be approximately \$410. This much can be applied toward the depreciation of the bulls and equipment. Mr. Garlick says that probably this is not quite enough to take care of those items. They would like to have at least \$500 a year to set aside for purchase of new bulls and retirement of fixed costs. Approximately 1180 cows will have been bred artificially by the end of the first year's operation according to the reports made at the annual meeting.

This independent association was started nearly a year before the big new central organization was set up at Syracuse and the officers, directors and members are taking especial pride in operating it successfully. Fees were kept at a minimum from the start in order to give as many dairymen as possible an opportunity to join and everyone has entered into the spirit of holding down expenses to meet the income. Although the directors of the association say they still "have their fingers crossed," final and complete success seems just around the corner, for the 240 members now belonging to the association have already signed up 1422 cows. The 1941 budget adopted at the annual meeting calls for the breeding of 1400 cows. The operating income which this number of cows furnishes will just about cover the expected expenses for the year.

A feature of the annual meeting was an exhibit of two sturdy heifer calves sired by two of the association's five well-bred Guernsey and Holstein bulls. Three of the bulls are proved and two are young fellows selected on the basis of transmitting ability of their sires and dams.—Richard Pringle.

Stiff? NEVER!

HORSEHIDE HANDS

EVEN DRY

SOFT...

STAY SOFT ALWAYS

You'll cheer too when you feel the amazing softness and pliability of Horsehide Hands—see how they even dry soft after soaking. You'll cheer still more for the way they wear months longer—save you plenty on work gloves. Made by the makers of famous Wolverine Shell Horsehide Work shoes. If you don't know your dealer's name, write—Wolverine Shoe & Tanning Corp., Dept. A-1040, Rockford, Michigan.

Harvesting Blue Grass Seed

Here is how they harvest blue grass seed in Kansas. The machines revolve at high speed and strip the seed off, leaving the grass standing for pasture. The outfit is being hauled by an ALLIS CHALMERS Model WC tractor, equipped with GOOD-YEAR tires.

APPLES HANG LONGER

Seldom has a new development received such rapid acceptance as that accorded the new Hormone sprays to slow up the dropping of apples. E. I. DU PONT DE NEMOURS AND COMPANY, Wilmington, Delaware, is putting out a Hormone spray under the trade name of "Parmone." They also have a four-page folder entitled "Parmone—It's New," which gives directions for its use. These sprays have to be timed accurately. They begin to take effect within a couple of days after they are applied, and the effect of a spray lasts for periods varying from a week to four weeks, depending on variety.

* * *

WARM QUILTS

The art of making quilts is coming back, and winter is the time to do the work. Grandmother needed no directions. From girlhood she learned by helping mother, but most modern housewives were less fortunate. In one way they are more fortunate—for 10c they can get a well illustrated book that will give full directions. This is available from the LOCKPORT COTTON BATTING COMPANY, Department D-7, Lockport, New York.

* * *

CHECK POULTRY DISEASE

Two books for poultrymen are available from DR. SALSBUURY'S LABORATORIES, Charles City, Iowa. One is "Dr. Salsbury's First Aid to Poultry", which gives complete information about numerous chicken diseases and parasites. The other is "Turkey Talks", which gives equally valuable information for the turkey raiser.

* * *

A NEW BILLFOLD

THE WOLVERINE SHOE AND TANNING CORPORATION, Department A-940, Rockford, Michigan, are offering billfolds without cost to our readers. All they ask is that you call at one of their

dealers and try on a pair of their gloves which they call "Horsehide Hands." If you do not know your local dealer's name, drop a card to the address given above.

FAST BUILDING

Early in September a \$20,000 fire destroyed a considerable part of the hatchery of Melvin Moul of the Brentwood Poultry Farm, Exeter, New Hampshire. Three weeks after the fire Mr. Moul had rebuilt his hatchery and equipped it with streamlined BUCKEYE incubators with a capacity of 188,000 eggs.

* * *

HEIFERS AND DRY COWS

The first step in raising a profitable cow is growing a calf. Once she is grown, experiments have shown that proper care when she is dry has a very important effect on milk production during her next lactation period. "Herd Improvement Through Dry Cows and Calves" is the title of a booklet published by PURINA MILLS, St. Louis, Missouri. It is full of hints that will save you money.

* * *

THE ELECTRIC HIRED MAN

While electric lights are handy and safe, it is generally recognized that convenient, flexible power in the form of electric motors is even more important on most farms. The GENERAL ELECTRIC COMPANY of Schenectady, New York, have recently published a booklet "Electric Motors for the Farm," which gives complete information as to proper sized motors for various tasks. You are losing money when you let the hired man do anything that a motor can do. Two cents worth of electric current a day will pump your water, ten cents a month will do the laundry, and five cents worth of current will saw a cord of wood.

NEARBY MARKETS for NEARBY POULTRYMEN

New Poultry Equipment at NEPPCO

By L. E. WEAVER

WHAT'S new in the poultry world? I know of no better way to get the answer than to spend a couple of days at NEPPCO'S Annual Exposition. This year it was held in the beautiful and enormous auditorium at Atlantic City, New Jersey. As in other years, it was disappointing to see so few poultry keepers there. Of course, 1300 registered visitors sounds good for a single day's attendance, but that is nothing at all to what it should be.

L. E. Weaver.

One must make a choice between attending the discussions and seeing the exhibits, unless he stays several days. I chose to see the exhibits; spent two full days at it. Now I propose to tell of some of the newer things that impressed me.

Picking Chickens

I have always thought that some day someone would invent a machine that would pick feathers off chickens rapidly, cleanly, and without injury to the appearance of the dressed bird. Now

rather than the circular type. The eggs are picked up singly, carried along from one weighing station to another, deposited gently, weighed, and carried on again or rolled out at the side. The manufacturer makes a point of the fact that an arm holds the balances firmly in place while the egg is being placed in position for weighing, thus eliminating vibration and inaccuracy.

While I have felt that our present egg-graders are satisfactory, I think poultrymen will welcome this newcomer on the old established theory that healthy competition is a stimulation to improvement as well as the "life of trade."

A Gasoline Incubator

An old line incubator company, which has never made any but mammoth electric machines, now has a gasoline model. The mechanism for keeping the air in motion inside the machine is operated by a small gasoline motor. The exhaust from the motor is utilized as the source of heat. Thus the incubator is operated at a very low cost. This model makes it possible for those without electricity to replace their old hot-water machines with a more efficient modern type. It may also appeal to some who have had sad experiences with interruptions in their power service.

For years a box company has had an excellent line of shipping boxes for chicks, started chicks, and mature

Youthful 4-H egg judges from five northeastern states meet in competition at the NEPPCO Exposition in Atlantic City, October 1 to 4. Left to right: Alfred Cohen, Guilford, Conn.; George Lilieholm, Chatham, N. J.; Alfred Graves, Lewis, Delaware; Walter Gains, Greenfield, Mass.; and Howard Gwilt of Syracuse, New York.

that machine seems to have arrived. I watched while the demonstrator took a three-pound broiler, wet and steaming, from its slack-scald bath and, holding it against the revolving drum of the machine, rolling it over and back while the rubber fingers on the drum snatched away the feathers, held up the completed carcass in about 15 seconds. It was not quite finished. Some feathers left on the wing tips had to be removed by hand. With a full-scald there were no feathers left at all, even on the wing tips. However, the slack scald is preferred because it leaves the skin with no breaks or tears and the original bloom unimpaired. Birds given a full scald lose their bloom and are unsightly by the next day.

In a movie taken in a killing and dressing room, where the operators had become expert by long practice, four men were putting out dressed birds at the rate of six a minute—360 an hour. One man hung up the birds in shackles of five, killed, and bled them. Another scalded and pulled out the wing and tail feathers. One man operated the machine, and another finished the wings. At present the machines are too costly to be practical for any but the large operators, but I expect, in time, they will be available in smaller, less costly units.

Grading Eggs

A new egg-grading machine looks very good. It is of the straight-line

birds. A few years ago they introduced the "Liv-and-gro" brooder, a low-cost, small-capacity brooder that is a sort of glorified chick box with a wire floor. Now they have gone one step farther. They have a corrugated-board floor brooder that is a low-cost unit. Made in three sizes (32" x 32", 48" x 48", and 48" x 72") and heated by electric units, these brooders sell for much less than the more durable metal makes. The men with the exhibit indicated that the new models will not be on the market in any numbers until they are satisfied that the brooder fills a real place in the industry.

Battery Brooders and Cages

As with automobiles, each year adds refinements to battery brooders and laying cages. New features that I noticed were: sliding doors that make it easier to get the chicks in and out; a partition that divides one side of the brooder and heater from the other and makes it easy to reach the chicks; improved feeding troughs where the mash feeds down by itself; the deck type more commonly used.

A hen and a male, each without any gizzard yet apparently in the best of health and spirits, were on display at a booth promoting the sale of grit. I couldn't figure that one out. It seemed to prove that a chicken can get along without a gizzard and, therefore,

(Continued from opposite page)

does not need any grit. So I had a long talk with the two men in charge of the exhibit. They maintain that chickens need grit for more than one purpose. For grinding food? Yes, but that is not very important when mash is a large part of the ration. The gizzardless birds prove that. A more important function of grit, according to these men, is actually to supply certain essential minerals in very small amounts. Of course, to meet this requirement, one must use grit that contains these minerals. That the grit supplied by this company does keep birds in good shape is demonstrated by the gizzardless birds. Their mash contains the finely-ground grit. Iodine has been added to the product, and it is the opinion of these men that this is beneficial.

I found it difficult to hold my own in my discussion with Mr. Wood and his associate. They were on their own ground and were very well posted. We agreed completely, I think, that no one really knows much about two subjects we were trying to discuss—the functions of grit and the iodine requirements of chicks and laying hens. A three-year study of iodine in the ration is in progress at the Colorado Station under the expert direction of Dr. Wilgus. I hope that a similar study of the grit problem will be made.

For Sick Hens

"Poultry remedies" — does that phrase in an advertisement at once make you feel antagonistic? I believe such opposition goes back to the days when poultrymen were being swindled out of thousands of dollars by fake

remedies. It still happens often enough that I don't propose to let down my guard. I do believe that some concerns are trying as hard as any professional veterinarian to give honest and effective aid to poultrymen. It is rather unfair on my part to refuse to give them a hearing. So at the Exposition, I made a point of having long interviews with representatives of some of the better known companies.

I found that on the whole they agree with the teachings of our own veterinary college. Why shouldn't they? They are all graduates of veterinary colleges. They agree that sanitation to keep out infection and vaccination to protect against certain infections are the poultry keeper's best weapons against disease and losses. Probably they would agree that an ounce of this prevention is easily worth a pound of cures.

They do go farther with the cure. Where I have come to feel that ninety-five times out of a hundred the axe is the best treatment for a sick hen, these men are more optimistic. With improved worm capsules and new anticoccidiosis treatments, they would attempt cures instead of so much culling. I hope they are right, and I intend to check up carefully on that point as I go around the state.

I will merely mention the brooders heated by canned gas; wired roosts, in sections and all ready to go into place on one's dropping boards; corrugated egg cases that may supplant the wooden ones; a metal no-waste mash feeder that looks very good. Lack of space prevents even a mention of the new ideas in feeds and feeding ingredients, but they were plentiful.

Disease Threatens the Poultry Industry

(Continued from Page 1)

trol internal and external parasites and to cure hens that can be cured.

Incidentally, a point where many poultrymen slip is in the purchasing of mature stock. There is just one safe way to do this. Keep them isolated for a couple of weeks before you put them with your own stock, at the same time putting in with them a few of your own hens. There is a definite reason for this. A bird may appear healthy and yet have the ability to transmit disease to your flock. If your own hens which were put in with them keep healthy for two weeks, it is safe to introduce the purchased hens into your flock.

The research program to discover new facts about poultry diseases and new ways to control them should be enlarged. It is quite probable, for example, that families of hens can be bred with a definite resistance to certain diseases. That is worth following up, but a family of hens bred for resistance to one disease might take another disease very easily. Anyway a

program for breeding disease-resistant birds is slow and is something to which to look forward in the future rather than an immediate solution of any single disease.

We need more research, both by colleges and by private institutions. In the past the poultry industry has been notably unorganized and, therefore, unable to bring its needs to the attention of our legislators in an effective manner. This condition has been corrected to a considerable extent. The Northeastern Poultry Producers' Council is doing excellent work, and through it poultrymen can insist that appropriations for research be sufficient truly to meet the needs of the poultry industry, a business which brings to Northeastern farms more money than any other enterprise except dairying.

Another thing badly needed is more veterinarians trained in poultry diseases. Already there is a noteworthy change among veterinarians in general. No longer do they look upon the hen as too small to consider, but as yet we have too few men with the specialized training needed to advise on poultry troubles. Losses from poultry diseases and parasites are serious enough to warrant the best attention of every farm organization, every college of agriculture and veterinary medicine, every commercial concern interested in the poultry industry, and the farm press.

To these agencies the individual poultryman can lend aid and support, at the same time attacking the immediate problem of cutting down his losses right on his own farm. His first step is to realize more fully the seriousness of disease losses and to discard any idea that disease losses in the poultry flock are unavoidable. His second step is to lay out a program to use every bit of knowledge we now have which will keep disease out of the poultry flock, prevent its spread when unavoidably introduced, and to cure it in every case where that is possible.

"They can't do this to us! This farm is posted and I'll write to American Agriculturist's Protective Service Bureau!"

For LAYING HOUSES COW BARNs HORSE STABLES

Use STAZDRY the Amazing NEW Litter

Stazdry absorbs about 3½ times its own weight in water. It is light in color and practically dustless. Air circulates through it and therefore it tends to give off moisture faster and to stay drier longer.

An impartial test carried on at the New Jersey Agricultural Experiment Station showed Stazdry leading in 10 out of 13 desirable qualities.

The compact 100-lb. bales of Stazdry are easy to handle and cover a surprisingly large area of floor space. Order from your feed dealer.

Be On Your Guard

AGAINST THE SPREAD OF COLDS-ROUP-BRONCHITIS

When these winter respiratory diseases strike, they spread fast. One sick bird can endanger the health of your entire flock. Don't wait for trouble to come. B-K your birds frequently with B-K Powder, the wonderful germ-killing agent. Use with ordinary dust-gun. Makes birds sneeze and cough, loosening the mucus from the breathing passages.

Poultry experts prefer B-K Powder because the dry dusting method is easier, makes mass application simple, and avoids the too-much-dampness risk that may result from use of liquid sprays in cold weather.

ADD B-K TO DRINKING WATER

Be sure to add a little B-K Powder to your flock's drinking water every day, for one sick bird can endanger the health of your entire flock. Disinfect coops and brooding houses by the regular use of B-K Powder according to directions, to aid in preventing transmission of diseases.

SHOULDER *To* SHOULDER

WENDELL L. WILLKIE

CHARLES L. McNARY

United We Stand; Divided We Fall!

As a nation grows older and the wheels of society get more complicated, we become more and more dependent upon one another. We are all tied together.

When business is prosperous there is employment. Then the working man has a good job and good pay, and he can buy and pay a living price for the products of the farm. Instead of building class hatreds, as the New Deal has done, in playing one set of our people against another, we must realize more than ever that we

can march forward only by complete unity.

Under the leadership of Wendell Willkie, the Republican Party is determined to clear up misunderstandings and hatreds, to give everyone an equal opportunity with a fair and just administration of the law. We are determined to mobilize our people as a unit to solve our economic problems, and to defend the Nation against aggression, on the principle that in a Republic we must be ALL FOR ONE AND ONE FOR ALL.

PROTECT YOUR LIBERTIES! YOU ARE VOTING FOR

FIGHT *For* FREEDOM

VOTE *For* AMERICANISM

Us: NEW DEALISM

REGIMENTATION OR LOCAL CONTROL? The founders of this Republic well knew that its safety lay in keeping most of the control of government locally in the hands of the people. So they were careful to write into the Constitution only a few specific powers to the Federal government, and to keep all of the rest in the hands of the people in the states and the localities.

But the power-hungry New Deal has violated the spirit of the Constitution, stealing more and more of the people's local control and centralizing it in the executive branch in Washington. The New Deal has traded every grant of public money and every subsidy, for more and more power, until both business and agriculture have rapidly become tied up, regimented and controlled by government bureaucrats.

The Republican Party is determined to stop this trend toward government regimentation and return the control to the people. It will cooperate with the people locally whenever it can help, but it will not ask in return for that cooperation what amounts to a dictatorship over agriculture and business.

GIVE YOUNG PEOPLE A CHANCE. Today in America more than 4,000,000 young people are idle. Next to the World War that is the greatest tragedy of our time, and the biggest reflection on us fathers and mothers. America until the last few years has always been the Land of Opportunity for young people. It no longer is. We are not handing on the torch undimmed to the next generation. No, instead we have set the world afire by wars so that it is necessary for the first time in history to draft our own young men in peace time.

What can we do? Give them jobs! Raise the fear of government that has hung like a pall over American business for the last eight years, and give business and agriculture the clear green light to go ahead. Then there will be jobs for everybody, and particularly for the boys and girls, thousands of whom have struggled to get an education only to find when they got one that they are headed up a dead-end street.

RUINOUS TAXATION. Because of a centralized and wasteful government which has constantly tried to run your business and mine, the New Deal piled up the highest taxes and the largest government debt of all time.

Do you know that to pay for the lengthening shadow of government annually takes an amount equal to all of the income of all of the farmers and all the rest of the citizens of every state west of the Mississippi? Putting it another way, taxes now take 22 per cent of the total income of all America. Or if these figures mean nothing to you, compare your tax receipts now with those of seven years ago. Taxes hit farmers worst of all.

On top of this reckless spending, we must now add to the burden to pay for defense. Ruin lies ahead for all of us if we attempt to do both. Under the leadership of Wendell L. Willkie the Republican Party is determined:

1. To get a full dollar's value for every dollar spent in defense.
2. To tighten the belt of all other government spending without crippling necessary services.

VOTE ANYWAY! Rural people of the Northeast can control this election. Several of the northeastern states, and especially New York, are key states. The vote here may determine the national election, and the upstate vote can determine the state vote, as it has many times in the past. It's up to you.

The farm and village vote is an independent vote, because it is a thinking vote. But it does no good to think if you don't put your thinking into action. You would fight for the privilege of voting if you were in danger of losing it, but it can be lost by indifference and by failure to use it.

To you women particularly we appeal. Vote yourself and see that the qualified members of your family vote. We hope you will vote Republican, but vote anyway. Your country needs you!

BE SURE TO VOTE!

Your FUTURE NOV. 5

MEAL PLANNING

and Good Health

NOW THAT we are thinking a lot about national defense, the men, women and children of this country become more important than ever. Their daily health and strength are of vital concern to the nation, as well as to themselves and their families. Sometimes it takes an emergency to emphasize a fact which is true day in and day out, and this matter of health—so much a result of what we eat—is no exception.

Meat, bread and potatoes are good building and energy foods, but taken without other foods they lack the spark which keeps the body machinery working with the least wear and tear. For this the "protective foods" are necessary—dairy products, eggs, vegetables, fruits and certain meats. With the possible exception of the meats, this list falls easily within the range of any home having a vegetable garden, some fruit trees, chickens, and a cow or cows.

We are quite accustomed to paying for protection against enemies which we know and can see; but there are unrecognized dangers against which we also need protection. Small, misshapen and weak bones may result from a lack of lime and phosphorus and such a lack may exist for years before it is noticeable to the untrained eye. Lowered health and vigor may lead eventually to a breakdown in later life. If the diet contains plenty of lime (calcium) and phosphorus, teeth and bones remain healthy. This is especially important for expectant or nursing mothers; otherwise the mother's teeth and bones are robbed to supply the needs of her child.

A lack of phosphorus may definitely lower appetite. In animals such a lack causes a depraved taste, giving a desire to eat wood, cloth, etc. instead of good food. An abundance of milk would prevent any lack of calcium or phosphorus. A quart a day for children and a pint for adults is needed. In order for the body to make bones from calcium and phosphorus, vitamin D, the sunshine vitamin must be present. In fact if vitamin D is lacking, the minerals themselves are not utilized; this leads to rickets and other bone troubles, small stature, poor teeth and eventually to breakdown in later life. Vitamin D is supplied by cod liver, halibut liver and other fish oils, eggs and butter (providing the chickens and cows producing them have been out in the sunshine), milk and bread which has been irradiated.

Iron is another highly necessary mineral since it prevents anemia. The quantity of iron in foods depends largely upon the quantity available in the soil. In parts of Florida where soil is deficient in iron, 80% to 98% of school children were found to be anemic. Anemia is easier to prevent than to cure, and if we eat plenty of eggs, liver, wholewheat, beans and oatmeal we shall be getting our share of iron.

Iodine is not needed in large quantities but a little is absolutely necessary, especially in the goiter belt. New York State is on the edge of that belt. Seafood, shellfish particularly, provides iodine; iodized salt prevents goiter in both children and animals. Iodine as a medicine should be administered only by a physician. Other minerals needed by the body will be provided in the diet containing the protective foods.

Besides the protective qualities in food we have to consider ability to satisfy appetite, to give us that comfortable well-fed feeling and have a staying quality which prevents a hard-working man from having an all-gone sensation before the next mealtime comes around. Protein foods come nearest to filling all these qualifications. These are exemplified in meat, eggs, dairy products, peas and beans. Their chief function is to build body tissue, important for the growing child, and to replace tissue burned up by his activity. The adult needs only to replace tissue.

Proteins do furnish energy but it may be had

in cheaper foods such as cereals and cereal products, potatoes, starchy vegetables and sweets. The cooking of protein foods is important to their best absorption in the body; slow cooking at a moderate heat insures their tenderness besides making them more appetizing. This applies to milk dishes, cheese dishes, meats and eggs.

Cooking also has much to do with the vitamin and mineral content of vegetables whose value may be diminished by long cooking or cooking in too much water. A good rule to follow is to use as little water as possible and cook only until the vegetable is tender. Soda tends to destroy vitamin C. This vitamin is found in tomatoes, potatoes, green, leafy vegetables, citrus and other fruits. Vitamin C is essential to the health of teeth, bones and blood system, promotes firm gums and helps the body to resist hemorrhages. It prevents and cures scurvy which oftentimes exists in a

by
MRS. GRACE WATKINS HUCKETT

Milk, one of the pillars of a good balanced diet, can be served in a great variety of ways. The hot spiced nut milk, pictured here, goes over big with children or for tea guests. It can be kept hot for a time over hot water, if necessary. Here's how it is made:

Melt two tablespoons butter in saucepan, add four ounces shredded cocoanut and cook over a low flame, stirring constantly until cocoanut is golden brown. Add one teaspoon cinnamon and one quart of milk. Bring just to a boil, and simmer two or three minutes. Sweeten to taste.—Photo courtesy Nat'l Dairy Council.

Food Guide for Each Day

THE FOLLOWING daily diet will go a long way toward helping the average normal individual to be healthy, happy and wise:

MILK: From 2 to 4 cups daily as a beverage or in foods cooked with milk.

VEGETABLES, 3 servings: Potatoes 1 serving; other vegetables 2 servings. Use green or yellow vegetables daily if possible; at least three or four times a week.

FRUITS, 2 large servings: Include orange; grapefruit, or raw or canned tomatoes at least three or four times a week. Eat some raw fruit or vegetable each day.

EGGS: 1 each day if possible—at least 3 or 4 a week.

MEAT, fish, cheese, or dried beans: 1 serving daily.

WHOLE-GRAIN BREAD or cereal: Use at least as much whole grain as refined cereal products.

BUTTER: Three times a day.

WATER: 6 or more glasses.

ENOUGH STARCHY FOOD, fats, and sweets to maintain satisfactory body weight and to supply necessary energy.

light form without its presence being recognized. Babies that cry a lot or seem to be sore to touch when being lifted may have a mild case of scurvy.

Vitamin A has been found to be of supreme importance because of the great amount of flying and driving now being done. Its absence affects the efficiency of the eyes, especially at night or

under strain. Not only army flyers but automobile drivers and all of us who read or sew much, especially at night, have real reason to be careful to get enough vitamin A. It also plays an important part in developing resistance to infection in the linings of eyes and nose and the rest of the respiratory tract. We get vitamin A from whole milk, cream, butter, cheese made from whole milk, egg yolk, carrots, really green greens, tomatoes, liver and kidneys, codliver oil and other fish oils.

Other important vitamins are the B complex found in whole grain foods, milk, potatoes, legumes, lean pork and glandular meats; and riboflavin found in milk, green and leafy vegetables, egg yolk, liver and other meats. Nicotinic acid, a preventative of pellagra in humans and black tongue in dogs, is found in liver, kidneys, muscle meats, fish, milk and green leafy vegetables. Vitamins E and K are less well known, but are assuming new importance. E is apparently effective in preventing abortions or miscarriage, and K in preventing hemorrhages.

Now that we have listed the protective foods and the sources from which they may be obtained, tell me what is wrong with this diet: white bread, margarine, over-sweetened tea with a little milk, boiled cabbage, potatoes, tinned meat and tinned jam of the cheaper sort. This actually represents the diet commonly eaten by the poorer classes in England, and when fed to a group of white rats being used for experimental purposes, they did not increase in (Turn to Page 24)

Give Your Clothes
DISTINCTION

GIRL'S Frock Pattern No. 3496 emphasizes the patriotic motif with its red and white striped bodice, blue Peter Pan collar and skirt and star shaped trim. Sizes are 6 to 14. Size 8 requires 1½ yards of 35-inch material for skirt and collar; 1 yard 35-inch material for bodice. Same design, in misses' sizes 12 to 20 is Pattern No. 3498. Dress Pattern No. 3453 features a straight panel unbroken from throat to hem, and shirring where it is most becoming. It is wonderfully designed for that basic dress for the larger woman who wishes distinction in clothes. Make it of silk or rayon in a dark shade. Sizes 14 to 48. Size 36 requires 3¾ yards of 39-inch material.

TO ORDER: Write name, address,

"Would you mind reading in that line about 'No person shall be deprived of life, liberty or the pursuit of happiness'?"

Fall Planting Saves Spring Time

IT IS SAFE to transplant roses in the fall under New Jersey and southern New York conditions, while western New York and New England recommend spring planting. If roses are planted in the fall they should be hilled up now, and later when the ground starts to freeze they should be protected with leaves, strawy manure or other mulch, just as with the older established roses. Any newly moved plant or shrub, except evergreens, should have its top cut back severely. This prevents a heavy drain on the root system for water which might check the growth considerably the next season. It is a loss rather than a gain, leaving too much top on.

Plants moved with a ball of earth do not require such severe pruning, only moisture. Thorough watering of all newly planted stuff is necessary before the ground freezes because of the constant drying effect winds have on trunks and branches. Even well established evergreens, broad-leaved ones particularly, have to be soaked before freezing weather, if the soil is dry.

Mulch helps to keep the ground from freezing deeply around the roots, thus helping newly planted material to remain active longer and become more firmly established. It also helps to prevent evaporation.

If there is a lot of transplanting to do, the evergreens should be moved first—before deciduous shrubs or trees. The latter require less water during the winter and therefore have a better chance to survive. Evergreens need the chance to establish their roots.

Practically any hardy perennial may be transplanted during October, with the exception of the late-fall blooming kinds. Also, if bulbs have not been planted already, there is still time to put them in. They probably will not have as large blooms or as long stems as they would if planted earlier. Just remember they have a short growing season and must take up in this short time a good stock of food for making buds for the following year. This calls for fertile soil but remember—no fertilizer or manure should come in direct contact with the bulb.

If soil is light, plant the bulbs fairly deep. If the soil is heavy and not well drained, more shallow planting is better, not over 3 or 4 inches deep. The usual rule is to take the long diameter of the bulb and plant to about three times the depth of this measure.

It takes more than kisses
to keep a man happy!

RICH DEVIL'S FOOD CAKE

4 squares chocolate, 1 teaspoon soda melted
½ cup milk, 1 teaspoon salt
sweet or sour ½ cup butter
2 egg yolks 2 cups brown sugar
3 cups sifted flour 1 cup milk or coffee
2 level teaspoons Davis 2 teaspoons vanilla
Baking Powder 2 egg whites

Melt chocolate in milk in double boiler. Add egg yolks and stir till thick. Set aside to cool. Sift flour, baking powder, soda, and salt together. Cream butter and add sugar slowly while beating. Stir in cool chocolate mixture and mix well. Add dry ingredients alternately with the milk containing vanilla. Fold in stiffly beaten egg whites. Pour into three 8-inch layer pans, greased and lined with Cut-Rite Waxed Paper. Bake in moderate oven (350° F.) about 30 minutes. Cool and frost with Seven Minute Frosting.

TRY ME!
I NEVER LET YOU
DOWN-OR YOUR
CAKE EITHER!

Davis' famous double action makes success doubly sure. Double economy, too! You pay less per can—you use less per baking! Try Davis. See for yourself. DOUBLE your money back guaranteed if Davis doesn't make the best cake you ever baked!

"What a Clever Idea!"

That's what your friends will say when you bring on a plate of these cranberry turkeys to serve with roast turkey or chicken. They're easy to make with this special turkey cutter—the only one of its kind—made of sturdy red plastic, just the right size to cut one turkey from each slice of Ocean Spray Cranberry Sauce.

To get your turkey cutter, just write your name on the back of an Ocean Spray label and send it with 10 cents to

MINCE PIE

By Romeyn Berry

MINCE PIE is not what it used to be. I make this charge with regret—tinged with a certain amount of bitterness. People generally don't even understand any more what mince-meat is supposed to be. The essence of the whole trouble is that what was thought of as a meat pie is now imagined as a spiced fruit tart, no good for breakfast. When you pick it apart, modern mince-meat now turns out to have practically the same ingredients as a black fruit cake with the flour left out.

When I was a little boy, mince-meat was something very different, and the preparation of the winter supply drew upon the combined strength, skill and endurance of all members of the household. Small boys did most of the chopping, and let me tell you that by the time you'd chopped up 25 pounds of beef in a wooden bowl, your wrists knew they'd done an honest day's work. The basis of mince-meat, as I recall the appearance of the kitchen table, was a huge round or sirloin of beef, a basket of carefully selected apples, some chunks of suet, and a big yellow bowl of boiled cider. There were also, to be sure, certain mysterious admixtures of spice, sugar, raisins, nuts and citrons, but these varied with the views of the supervising artist.

Finally (with or without the addition of a preservative, depending largely on whether the family was Methodist, Baptist, Congregational or Episcopal) the ultimate product was put down in stone crocks, sealed on top with a layer of fat in the manner of sausage. Any time, then, through the winter when angry men clamored for more mince pies, all you had to do was roll out a crust and get the filling from one of those stone crocks.

Any hired man who started the day on a hearty breakfast, topped off with a generous wedge of that kind of mince pie with meat in it, had something that would stay with him like his faith in a glorious resurrection and the life everlasting.

People in the country do not engage in endless back-breaking toil to the extent they once did. One reason is they don't have to any more. The general introduction of labor-saving machinery, gas engines, and electrical power has made that sort of thing unnecessary—except on occasions. But the principal reason may be the disappearance of real mince pie with beef in it.

In my time, a man was obliged to labor prodigiously right up to noon in order to burn up his mince pie breakfast before it got to be dinner time. Who could be expected to split and stack two cords of stove wood, or to turn over an acre of heavy loam with a walking plow, when fueled up with no more than a perfumed fruit tart?

Size and color are also of the essence. The mince pie pictured in my recollections of childhood were fashioned more to the dimensions of a sofa cushion and cooked to the color of an active farmer's neck at the end of haying time; none of these pallid bits of pastry spread with mince-meat to the depth of a scant half inch. Mince pies, I submit, should run in family sizes. Mince-meat, I repeat, is not mince-meat unless it is composed primarily of beef. Until those truths are again universally recognized, I can see small hope of substantial improvement in America's mince pie situation.

These considerations are of immedi-

ate importance because the open season for mince pie will soon be upon us. The leaves have fallen from all except the oak trees and the beeches, the crops are in, the stove wood ought to be, and any day now the coarse bugles of the Canada geese may be heard in the clouds, warning dilatory farmers that the winter is on its way down from Hudson Bay and it's time to bank up the house and to get out the big wooden bowl and start chopping mince meat. If you can't get beef use venison, but anyway start chopping mince meat so that this year your men may be properly fueled for their winter work.

Vitamins, however important, can never quite take the place of lusty victuals to the plowman turning the upland furrows in the chilly afternoons, or in the morning to the wielders of flashing axes in the woodlot. Men have not deteriorated, but it's possible that their food has. If you want to get the same amount of cold-weather work out of your men folks that their pioneer ancestors are said to have performed, try stoking their fires with the same kind of fuel.

A gross, materialistic point of view, you say! "Man cannot live on bread alone"—or mince pie either. He needs, for a well-rounded life, a sense of spiritual values, an appreciation of the natural beauty by which he is surrounded, reverence for the Creator and the work of his hands, an eye for the loveliness of the landscape in all seasons, an ear for the music of running water in small brooks!

And I agree with you entirely. But I submit that when the farmer pauses at the furrow's end to rest the horses or to cool the tractor, when he removes his hat momentarily to "take the benediction of the air," he can more readily achieve a sense of reverence and appreciation on a full stomach than on an empty, growling one; and that for

the purpose of keeping the stomach in tune with proper spiritual considerations, there is nothing quite like a wedge of old-fashioned mince pie with meat in it.

In an ancient New England cook book, prepared to make life easy for the child-bride about to take over the administration of a farm kitchen, I find these pie admonitions—

"Take one-third each of boiled beef, suet and raw apples, chopped fine, also citron and raisins, as much as you like. Moisten with molasses and sweet cider, or wine, or sweet pickle vinegar. Add salt, nutmeg, clove and cinnamon. Only a trained taste can tell when mince-meat is just right. Put it in a kettle and heat it through before packing it down in jars to keep."

"At Thanksgiving time it saves labor to make seventy-five or a hundred pies and keep them on hand. Freeze them and slip the covered ones from the plates. Pack them in an earthen crock or large chest and thaw as needed."

Having shown the bride how thus to "save labor", this same book goes on to tell her how to occupy her spare time by giving "plain directions for soap making, brewing, candle dipping, clear starching, caring for the sick, and all duties of a careful housewife."

The publication and distribution of such a book at the present time would do no more, I think, than persuade the thousands of young girls now hanging in the balance to stay single or teach school. Even so, it would not be fair to accuse the modern generation of lacking the courage and stamina of their great-grandmothers. The difference, I submit, is one of diet and not of character. Take away their morning orange juice, toast and black coffee; give them again, to start the day, buckwheat cakes, sausages and mince pie; and I dare say our fine young women would leap into a life of soap making, brewing, candle dipping, pie baking by the hundreds, dyeing, and clear starching with the same intrepidity displayed by their pioneer grandmothers, whose mince-meat was mostly meat.

There is, moreover, a clear relation between this topic and the growing industrial demand for a 40-hour week. Here again it's largely a matter of breakfast. Give them pie again—good pie—and the whole controversy would vanish as the dew. A man who break-

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Autumn Leaves

Little, painted harlequins
Come dancing down the street,
Weaving multi-colored rugs
To spread beneath our feet.

They come twirling from the trees
To dance their merry jigs;
Some are dressed in russet boots,
And some have flaming wigs.

They are wearing rusty coats,
All patched with gold and jade,
How the merry-andrews romp
In autumn's gay parade!

—Blythe Gwyn Sears,
Amarillo, Texas.

fasts on old-fashioned mince pie with meat in it wants to work more than 40 hours. He's got to. If he didn't, he'd swell up and die.

Meal Planning and Good Health

(Continued from Page 22)

weight, became stunted and badly proportioned, and had poor coats. Furthermore, they were nervous and irritable and began to bite attendants. Another group of rats, fed on the regular rat-stock diet, lived happily together, increased in weight and flourished. The "rat-stock" diet consisted of eggs, meat (probably liver) milk and milk products, cheese, whole cereal, legumes, dried fruits, green and yellow vegetables, potatoes, citrus and other fruits and fat fish.

This list certainly is not impossible for the majority of human beings unless they live in countries where food is rationed or where there is a famine or shortage of some types of food. It is entirely worthwhile from a health point of view to know what foods are important and then to plan the scheme of living accordingly. Growing boys and girls need to know how to choose proper food. What they eat now ought to help to keep them well while on the job and prevent breakdowns in middle or later life.

Patterns for Balanced Diets

Low Cost

EVERY DAY

Cereal in porridge or pudding

Potatoes

Tomatoes (or oranges) for children

A green or yellow vegetable

A fruit or additional vegetable

Milk for all

TWO TO FOUR TIMES A WEEK

Tomatoes for all

Dried beans and peas or peanuts

Eggs (especially for children)

Lean meat, fish, or poultry or cheese

A greater variety of out-of-season fruits or vegetables, and the more expensive cuts of meat add to the cost of the diet, without necessarily adding to its food value. Such items have a definite appetite and eye appeal, however, and if income permits have their proper place on the menu from time to time. The daily food guide in the box on page 22 gives an idea of a day's dietary for a normal healthy individual. It is better to plan a whole day's meals as a unit than to plan meal by meal.

The Song of the Lazy Farmer

ELECTION DAY ain't so remote when we will have to go and vote, at any rate, I s'pose we should; yet if the weather isn't good a lot of folks won't bother to, they'll say they've got some work to do, and then they'll sit beside the fire, dressed in their ev'ryday attire, and doze away. They think it's grand to live in this here mighty land, with freedom in the very air, and yet they haven't time to spare to vote; they'd git up on their ear if we should git some fuhrer here who wouldn't let them vote no more, then you would hear them fellers roar.

In most the nations of the world the flag of liberty is furled, the folks don't have no rights no more, but work until their backs are sore. They've no choice who their rulers are, no candidates with a cigar come round to tell 'em what they'll do if they're elected, that's taboo. A feller that appreciates a-livin' in United States had ought to study up a

bit on candidates that seem most fit, and then, come mire or come snow, election day he'll up and go and vote the way he thinks he should, and go home feelin' mighty good, instead of stayin' home all day, then kickin' if the U. S. A. ain't run the way it ought to be; a feller that don't vote, by gee, at least might keep his croaker still, so folks won't know he's such a pill.

Two Weeks at CAMP MINIWANCA

By ARNOLD DAVIS.

(EDITOR'S NOTE: Last spring we announced a contest, the winner to receive a scholarship to Camp Miniwanca this summer. Later we announced that the winner was Arnold Davis of East Corinth, Maine. We asked him, after he returned, to give us a brief account of his experiences at the camp. The account is so interesting that we are passing it along to our readers.)

I LEFT BANGOR by bus Thursday evening, August 8, at 11 o'clock, in company with Basil Clements of Winterport. Basil, a student at the University of Maine and winner of the Danforth Scholarship, proved to be an excellent companion during the trip. We arrived at Muskegon, Michigan, on Sunday, stayed at the Occidental Hotel that night and left Muskegon by special bus at 8:30 next morning.

Upon arriving at camp, we registered in the "Tipi," one of the several buildings on the camp-ground. Here we were given our instructions as to our tent and tent-leader. Camp Miniwanca is very spacious. It has a three-quarter mile frontage on Lake Michigan and four hundred yards on Stony Lake. The camp functions on the Indian idea. There are six tribes in the Camp; namely, Blackfoot, Crowfoot, Susquehanna, Navajo, Dakota and Iroquois. Competition is carried on between the tribes in the form of athletics, scholarship and neatness.

In athletics, each tribe has four teams and these teams play the teams in the other tribes. Softball, soccer and volley ball are the games commonly played. We also had a track meet and an aquatic meet. In scholarship, all the grades of the campers are averaged. The tribe with the highest average wins in scholarship. Each day an inspector goes through the camp and inspects the tents. The tribe with the cleanest area wins the day's 100 points for neatness.

Ding, Dong! Ding, Dong! Hurry, hurry, hurry! This is what is heard each morning at 6:30. Everyone rushes to the flag pole for flag raising, and then to the beach of Lake Michigan for a few setting-up exercises and a dip into the cold water. At 7:15 we have a fifteen minute quiet period. Each day we have a paper given us, written by one of the leaders, on thoughts for the day. At 7:30 breakfast is served.

At camp we have five classes, four in the morning and one in the afternoon. The first class period begins at 8:30, and covers Four-Fold Living (physically, mentally, socially and religiously); at 9:20, The Life and Teachings of Jesus; at 10:30, an assembly, where standings of the tribes, news of the day and instructions are given; 10:45, The Art of Successful Living; 11:35, The Church Youth Program; dinner at 12:30, followed by a rest period until 2:05. At this time, the afternoon class begins. The first week we had Dramatics and the second Archery. From 2:45 until 4:00 the tribal events take place, after which an hour is spent swimming, canoeing and sailing. Supper is at 5:30.

Each evening at 7:00 we go to the top of Vesper Dune, where we sing hymns, hold prayer, and have a short talk by one of the camp leaders.

Some sort of entertainment is enjoyed each evening, starting at 7:30. Monday evening we had a general get-together, which found present nearly three hundred and fifty boys from thirty-eight states, Canada, England and China. Tuesday state meetings were held. A barn dance took place Wednesday, with half the fellows as girls and the others their escorts. The

following night was home-coming night, where we gathered together and asked riddles, etc. An indoor track meet was held the next night. On Saturday we had the first low council held in the council circle. Here stunts are put on to collect points for the tribes. Church and Sunday School were observed on Sunday morning, with the Vesper Service on Old Baldy that evening. Other evening events that week were: class meetings, corn roast, flashlight relay, low council, a rodeo, and a grand council where the different states put on short programs.

Thirteen members were in the graduation class, and graduation exercises were held Sunday forenoon. Emblems were given to the different classes, and the standings of the tribes were given, with the Blackfoot Tribe victorious. Camp closed after dinner.

Returning to Muskegon, we started home at 5:00 P. M. At New York City, Basil and I parted as he wanted to attend the World's Fair. I had previously been there, so continued on to Bangor, arriving Wednesday, August 28, after one of the best experiences one could enjoy.

I sincerely wish that every American boy could have a chance to attend such a wonderful camp. I am sure that the experience would remain with them the rest of their lives. I know that I will always try to live up to the camp motto—"My Own Self At My Very Best All The Time."

Personal Problems

Wait and See

Dear Lucile: I am very much in love with a young man who has worked for my father and he is in love with me. Lately he and my Dad have not gotten along, and he is going to leave. I don't want to have to break up with him, although my father wants me to. Can he force us to give each other up and not even write letters?—Dotty.

I do not gather that you are engaged to this young man, which seems to me to take away from the seriousness of the case. If it were an engagement your father was trying to break up, you would have more cause for concern.

If you are just friends, it would not seem that your father would object to your writing the young man, or being friendly with him when you see him. I believe I would not worry too much about it just now but see how things work out after the young man is gone.

* * *

Grandpa Knows Best

Dear Lucile: I am 15 years old and have lived in the city all my life and have been allowed to have many boy friends. But now I am with my grandfather on the farm and he thinks I am too young to have dates.

Now, there are two boys I like around here but can't choose between them. One is jealous of me and one isn't. I like the one who isn't jealous best, but he hasn't any car. What should I do?—Fifteen.

You had best be guided by your grandfather's wishes, since you are making your home with him. Perhaps he thinks you've been given too much rope for a girl of your age, and is trying to steady you up a bit.

As for the two boys . . . since your grandfather discourages dates, why try to decide between them? Can't you just be good friends with both? It will be much easier.

URGENT MESSAGE!

THE STATE OF NEW YORK SAYS:
LOOK BETTER, FEEL BETTER, DRINK FRESH MILK
THE ECONOMY FOOD

Kernels, Screenings and Chaff

By H. E. BABCOCK

GOVERNOR Lehman of New York State has sent me a letter written him by Secretary of Agriculture Wickard in which the Secretary turns down cold any thought of storing surplus corn in government bins east of Buffalo.

I would like to print the Secretary's letter but I haven't Governor Lehman's permission to do so, and I am afraid that if I did do such a thing just before election it would be interpreted as a political maneuver.

None of the reasons given by the Secretary for his refusal to consider the idea of protecting the feed supply of northeastern poultry and dairy cattle hold water. They reflect the Midwesterners' usual attitude and total lack of comprehension of northeastern agricultural conditions.

Regardless of which candidate for president is elected, this country will probably have a Midwesterner for Secretary of Agriculture. Under these circumstances, there is only one thing for northeastern farmers to do: *elect strong members to Congress who do know northeastern agriculture and who will fight for its rights.* Without taking any partisan, political position, I herewith urge the readers of this page who are not bound too tightly by partisan ties to vote for two candidates for Congress who, in my opinion, will give northeastern agriculture the representation it must have.

Vermont's Governor Aiken

Among all of the candidates from the northeast on both principal party tickets, there is one stand-out so far as agricultural interests are concerned. This man is Governor George D. Aiken of Vermont, candidate for election to the United States Senate from his state. I haven't space at my command to list Governor Aiken's qualifications to represent northeastern agriculture in the United States Senate. I wholeheartedly indorse him, however, as just the sort of a neighbor I would choose to represent and protect me as a farmer in Washington. It is just too bad that a lot of farmers from other states can't move over into Vermont for the election to be sure that the northeast lands at least one man in Congress who is competent to stand up against the farm lobbies from the Midwest and the South and demand a fair deal for northeastern farmers.

New York's Mary Donlon

Custom seems to dictate the election of one woman as Congressman-at-large for New York State. New York State's present Congresswoman-at-large is Caroline O'Day, who

is a candidate for re-election. Her opponent on the Republican ticket is Mary Donlon. Caroline O'Day, I am told, is a charming, wealthy widow who knows nothing about agriculture. *Certainly, so far as representing the agricultural interests of New York State is concerned, she has been a total loss.*

Mary Donlon, on the other hand, is an upstate woman who, to my certain knowledge, knows a lot about the agriculture of upstate New York and is loyal to it.

Miss Donlon seems to be the best chance we New York State farmers have to secure fresh, able representation of our problems in the House of Representatives. She would make a great co-worker with Governor Aiken; and with Miss Donlon and Governor Aiken in Congress, we would have the beginning of a congressional group which would be on the job and capable of insisting on a fair break for northeastern agriculture in all matters of national legislation.

Down Mexico Way

By H. E. BABCOCK, Jr.

October 12, 1940.

FOR THE past two weeks we have been continually set back in our farming schedule by occasional showers. Providing no definite good from

the water standpoint, the showers have served to keep us off the oat ground for part of each day, with the result that after two weeks we have only seventy acres planted. The first acres we planted are already beginning to show up. Pete, our Mexican cotton picking boss, has met with the same problem in getting his cotton picked. To date he has been able to pick only fifteen bales—about what he should put out in three days.

Last Monday our feeder lambs began to arrive. We now have four pens filled with a little over two thousand, and will expect eleven to twelve hundred more next week. We had feared from the rancher's report of his range conditions that they would be stunted, but fortunately this has not proven out. The lambs are well grown but thin. They are all of good vitality, and started eating well the first day they were penned.

When we were unable to work on the oat field we were busy grinding and filling the self-feeders for the lambs. With the feeders full in each pen we can now forget them until the end of next week. One man will make a check of the water troughs and make sure that the feeders are feeding down. This will take about an hour each morning and will provide all the labor necessary to feed the lambs for a week. When the feeders begin to get low, a crew of four will turn to and with two days' grinding will fill all the feeders for another week's run.

We will make every attempt to get into our maize fields Monday. We have enough old maize on hand to grind for the lambs once more, but we want to get some curing as soon as possible so it will be ready to grind. The wheatland maize we have grows to a height of thirty to thirty-six inches. The leaves are closely set, with as many on the stalk as the taller growing maizes. The heads stand about six inches above the last leaf. By converting our combine to a high-lift position we are able to cut only the heads,

and thus have only these heads to pass through the machine. As soon as the grain is off we will turn part of our feeder lambs into the eighty-acre field to clean up the spilled grain and leaves. They will also have access to some good alfalfa hay. The farm flock will be given the job of cleaning up the fifty-acre field.

The government loans on cotton are serving their purpose so far this year in that the cotton buyers are paying a little more than the loan value. However, this has not been done so much from the threat of the loan as from a fair demand, which the cotton buyers are afraid will not last. There has been considerable indignation in this section over the army's recent decision not to buy any materials made from irrigated cotton. This decision was made, no doubt, after some high-pressure southern politician had put the bee on an army procurement man. Since this is a young agricultural section, at every turn we see one government department defeating the attempts of another department to help us.

Conducted by H. I. COSLINE

Complaints Get Little Attention

Too many of our subscribers are reporting extreme dissatisfaction with roofing and other repair jobs done on farm buildings by a certain species of out-of-town contractor. Salesmen are travelling through farm country signing up farmers for jobs of this sort. They get the farmer's signature to a contract and note specifying regular monthly payments, then sell the note to a finance company. Often, when the job is done the farmer finds either that the work is unsatisfactory to him or that a local contractor would have done a far better job for less money. But by that time he is hooked. His name is on a note which has been sold to a third party and according to the law the note is collectible. A pretty good rule to follow is to patronize local business concerns, then if you are dissatisfied you know where to find them. Once they get your name on a note these out-of-town companies have little interest in complaints.

* * *

Reason to Be Dissatisfied

"A salesman for the _____ Company came to my place and asked if he could not submit a proof of a portrait to me which would put me under no obligation. He guaranteed the safe return of my portrait. When the representative came with my proof, it was so different from what they had shown as a sample that I did not approve it. Also, instead of \$2.98 the total cost with special frame was twelve dollars which I could not afford. I paid for the proof and was assured that my photograph would be returned within two weeks. This happened last May but I haven't received my picture. I have written two letters but haven't had any answer. If that is the way they carry on their business I think it should be looked into as it may involve more than a photograph some day."

First we want to say that based on the correspondence we get, hundreds of our readers are not satisfied with such picture enlargements.

Second that it is a common practice for many companies to deliver the pic-

ture in a frame for which there is an extra charge. While the customer is not required to take the frame, a lot of high pressured salesmanship is used to get them to pay for it.

Third, it seems to be the practice of many such concerns to withhold the original picture until they get the money for the enlargement. Where the picture is the only print the customer has, he will oftentimes pay for the enlargement he does not want in order to get the return of the original photograph. Photo enlarging companies know this and capitalize on it.

Fourth, we have come to believe that the most satisfactory way to get an enlargement is to take it to a local photographer. If you have a negative, they can use that, but if only a print is available, the photographer can copy it at a price that is less than most photo enlarging companies charge.

* * *

Address Wanted

"I am sending you a protested check given me by Edward Mason of Courtland, Virginia, in payment for some ducks I sent him. I am wondering if you can collect this for me?"

We wrote to Mr. Mason and received a letter signed by Lenwood Reed stating that Edward Mason had been sold out and that he had moved to Baltimore, Maryland. If any reader knows his present address, we would be glad to hear from him.

* * *

If any one knows the present address of Mrs. V. Burch who represents the American Cleaning Company of New York City, we would be glad to have the information.

* * *

Anyone knowing the whereabouts of Floyd Norton, formerly of Hamburg, New York, please get in touch with his youngest daughter, Mrs. Eleanor Cayea, Oakfield, New York. She hasn't seen him since she was eight years old, and would very much like to get in touch with him.

Reward Goes to Delaware Co., N. Y., Reader

THE FIRST NATIONAL BANK OF ITHACA			
ITHACA, N. Y.			
PAY TWENTY-FIVE AND 00/100 DOLLARS			
TO THE ORDER OF	Mr. & Mrs. Glenn Davidson		\$ 25.00
	Delhi, New York		
		AMERICAN AGRICULTURIST Inc.	
		<i>E. Weatherby</i>	
		TREAS.	

INFORMATION leading to the arrest and conviction of Myers Taylor won a \$25.00 reward for Mr. and Mrs. Glenn Davidson of Delhi, N. Y. The fraud which led up to the arrest consisted of calling upon farm homes by Taylor and stating that he had been authorized to take up collections for the burial of a child that had died in Delaware Academy. The child in question was purely imaginary, nevertheless, using the names of prominent men, Taylor collected about six dollars in amounts ranging from 25c to \$1.00. Finally one of his victims became suspicious and called the State Police barracks but it wasn't until Taylor appeared on the Davidson farm that he was arrested. Mrs. Davidson called Sheriff Austin and the arrest was made. Upon first thought, it might seem that the sentence of six months in Onondaga Penitentiary severe, but

the record shows that Taylor served 30 days in June 1939 for Petit Larceny and about two months ago he was given a suspended sentence of 60 days in Onondaga Penitentiary for Petit Larceny.

The Davidsons have been subscribers to the *American Agriculturist* for many years and have a Protective Service Bureau sign posted on a tree in their yard, thereby completing the requirements for the payment of the reward.

This standing offer for a reward by *American Agriculturist* applies to the arrest and imprisonment for at least 30 days of any one who attempts to defraud an *American Agriculturist* subscriber. The Service Bureau sign must be posted on the property at the time the fraud is committed. The reward does not apply to theft—only to cases of swindling or fraud.

In honor of the Minute Men at Lexington, Mass., where the first battle of the Revolutionary War was fought.

DON'T FORGET IT !

THE THIRD TERM IS *The* ISSUE

WHEN your farmer forefathers founded this Democracy out of their bitter Old World experience, they established certain unalienable rights and traditions which were carried by the pioneers from sea to shining sea, and became the platform of a free people, on which was built the greatest Democracy in the world.

But today we have a new doctrine—new in America but not in the Old World—that the government and not the individual is supreme, with the result that the sacred traditions which cost our fathers so much in blood and sacrifice are rapidly being lost to the people. Disappearing is the quality of self-reliance and initiative, that idea that we should do the job ourselves instead of asking the government to do it. Far gone is the American tradition of thrift. Instead we have the New Deal doctrine that either an individual or a government can SPEND its way out of hard times.

And then, finally, and possibly most dangerous of all, comes the violation of the American tradition that there should be no Third Term for any President, a tradition wisely established by our fathers, who, fresh from the Old World, well knew that with power-hungry men it was only a short step from a President to a King or a Dictator.

WHICH SIDE DO YOU CHOOSE?

FOR THE THIRD TERM:

EARL BROWDER, COMMUNIST PARTY CANDIDATE FOR PRESIDENT, says:

"The tradition against a third term in the presidency must be set aside."

NEW DEAL BOSS EDWARD J. KELLY OF CHICAGO, says:

"I suppose I was one of the very first to go on record for a third term."

NEW DEAL BOSS FRANK HAGUE OF NEW JERSEY, says:

"Absolutely one hundred per cent for a third term for Mr. Roosevelt."

HAROLD ICKES, NEW DEAL MOUTH-PIECE, says:

"After all, what is a 'sacred tradition' among friends?"

AGAINST THE THIRD TERM:

PRESIDENT GEORGE WASHINGTON, FATHER OF OUR COUNTRY, said:

"There cannot in my judgment be the least danger that the President will by any practicable intrigue ever be able to continue himself one moment in office, much less perpetuate himself, but in the last stage of corrupted morals and political depravity."

PRESIDENT THOMAS JEFFERSON, FOUNDER OF DEMOCRAT PARTY, said:

"Should a President consent to be a candidate for a third election, I trust he would be rejected on this demonstration of ambitious views."

PRESIDENT ANDREW JACKSON, AMERICA'S "OLD HICKORY", said:

"It would seem advisable to limit the service of the chief magistrate to a single term of either four or six years."

PRESIDENT WOODROW WILSON, WORLD WAR PRESIDENT, said:

"It is intolerable that any President should be permitted to determine who should succeed him . . . himself or another."

The Republican nominees are in ROW A on the voting machines this year. Many persons make mistakes in voting. Don't you do it. Look for ROW A, with the emblem of the eagle. Pull all the levers in that row down . . . and leave them down.

THERE NEVER WAS A MORE IMPORTANT ELECTION
BE SURE *you* VOTE NOV. 5

TO MARKET— TO MARKET— TO MARKET MENANDS — *Where Hundreds of Farmers "DICKER" Daily* With BUYERS

ONE BEAUTIFUL day this fall when the mellow harvest haze hung over the countryside, I stood in the upper story of the Administration Building of the Farmers' Cooperative Regional Market at Menands near Albany, New York, and watched great truckloads of farm produce roll in from every direction for fifty miles or more. Because the Albany section is such a natural market center, it has always been the scene of market activity since the earliest days.

From Albany clear to Canada run the upper reaches of the Hudson and the great Champlain Valley. To the east stretch the farm lands of old New England. To the south runs the Hudson, with farms and farmers than which there are no better; and westward stretch the Mohawk Valley and the Empire State. All of this

By E. R. EASTMAN

mighty farm country gravitates into the Albany district as naturally as water runs downhill.

It was natural, therefore, that the early officials of Albany should give much attention

Farmers' trucks at the gate of the Menands Central Market (near Albany) waiting for the 2:30 P. M. signal to rush in and get located, ready for the afternoon sales. See story on this page.

to marketing and marketing facilities. On July 22, 1686, 254 years ago, a charter was granted to the City of Albany by King James II and handed to Peter Schuyler, Mayor of Albany, by one Thomas Dongan, the first Provincial Governor of New York Colony. In that charter is a clause which reads:

"And further, for and on behalf of his said Majesty, his heirs and successors, I do, by these presents, grant to the said Mayor, Alderman and Commonality, that they and their successors shall and may forever hereafter, hold and keep within the said city, every week in the year, two market days, the one upon Wednesday and the other upon Saturday, weekly forever."

It is interesting to note, also, that markets and the food supply seemed to be the chief concern of the early officials of Albany, and probably this was true of all of the other cities also. My friend, Harry Crouch of the State Department of Agriculture and Markets, has made almost a lifetime study of markets and is responsible for much of the information in this article. He dug out from the old records a 1771 City of Albany Ordinance which went so far as to set the price of meat as follows:

Beef, mutton and lamb.....	5d. per lb.
(about 10c per lb.)	
Every head and pluck of calf 1s. & 6d. per lb.	
(about 26c per lb.)	
Every head and pluck of sheep.....	9d. per lb.
(about 18c per lb.)	
Every head and pluck of lamb.....	6d. per lb.
(about 12c per lb.)	

(Turn to Page 17)

A Mr. Ferris Waite, Manager of the Menands Market, explaining to a group of Farm Credit directors and officials how the market helps farmers. The Springfield Bank for Cooperatives aided farmers to finance this market with a loan at a low rate of interest.

◀ This farmer has just sold his load of produce to a buyer on the Menands Market and is transferring his load to the buyer's truck.

Announcing Another A.A. Tour — See Page 3.

"I recommend the Ford Truck to any one wanting a good truck to do a lot of hard work"

EDWIN HARRIS, farmer near Ririe, Idaho

● "We average 11.5 miles per gallon on our Ford Trucks which is better than we have ever done with other equipment. The Ford Trucks help us and our neighbors get good prices for our crops and we consider the Ford Truck the best truck a farmer can buy." L. C. Bryant, Lisman, Ky.

● "We have just received delivery on a 1940 158-in. C.O.E., with a 95-hp motor. This is the fifth (5th) Ford unit that I have purchased and feel sure that it is the most economical truck on the market. I like the power, handling and riding comfort, also the Ford Engine Exchange Plan. It is a great saving in time and money to have a new motor installed with so little loss of time at a nominal price." Robert V. George, Circleville, Ohio

● "The 1940 truck recently purchased is the finest I have ever had, and several tests under heavy load have shown that I am getting better than 10 miles per gallon.

"During the past six years, I have purchased several trucks of other makes, but my experience with these units, both from an operating and service view-point, have caused me to come back to Fords, and at present all my trucks and passenger car are 100% Ford." Goebel R. Adams, Hopkinsville, Kentucky

Try the new 1941 Ford Truck, even if you're not ready to buy one right now. Arrange for an "on-the-job" test with your Ford dealer. Take the truck and haul your own loads on and around your own place. Then you'll know exactly what Ford Truck owners are talking about when they mention *performance* and *economy*. Ford Motor Company, builders of Ford V-8 and Mercury Cars, Ford Trucks, Commercial Cars, Station Wagons and Transit Buses.

FORD TRUCK FEATURES FOR 1941

Two V-8 engines, 95 and 85 hp • Six wheelbases, 42 body and chassis types • Full-floating rear axle • Worm-and-roller steering • Straddle-mounted driving pinion, ring-gear thrust plate • Big hydraulic brakes • Factory-installed two-speed rear axle (optional at extra cost) • Ford Engine and Parts Exchange Plan to save time and money.

FORD V-8 TRUCKS

A Yankeeland Visit

By PAUL WORK

THINGS are changing pretty fast in the vegetable business in good old New England. The area around Boston has long been the home of fine market gardening and there is still opportunity for good business along the old fashioned lines. On the other hand, the modern vegetable production business is developing there as in New York and New Jersey with larger farms, fewer crops, more fertilizer and less manure, more machinery and perhaps, most significant of all, better packing, handling and marketing.

Paul Work

A visit at the farm of William O'Donnell at Rvere illustrated these tendencies very aptly. His neighbors call him Billy and his father ran the farm as a market garden for 50 years. The younger man now has a hundred acres or so—most of it in vegetables—and most of that cropped twice each season. Fertilizers, however, have not cut in very deeply as modern pork production is carried on in the neighborhood and the manure is available in large quantities. On the other hand, Mr. O'Donnell and Donald Griswold have joined forces to organize the Suffolk Farms Packing Company and they are installing equipment for the marketing of vegetables in frozen form.

As another illustration of modern marketing, they put up each week several hundred dozen bags made of cellulose film and containing shredded soup vegetables; cabbage for cold slaw; also, diced carrots and turnips. Rhubarb juice finds ready sale and the pop corn crop is marketed ready to nibble.

Pascal for Quality

Celery is still an important crop and the new summer Pascal developed by the Massachusetts Field Station at Waltham is being grown with considerable success. This is a green celery but somewhat earlier than the old Pascal, makes a good heart and has very smooth ribbed leaf stalks correcting a fault that has been prevalent in most of the Pascal stocks of the last several years. This celery is thick-stalked, tender, and delicious. Now that California is shipping green celery in quantity, the East is beginning to prick up its ears on the merits of these celeries which have met only neglect and sometimes contempt among most of our

Eastern producers. Boston has always appreciated good celery.

O'Donnell has a fine seasonal set-up. He grows thousands and thousands of early plants for sale in the spring—most of the customers coming right to the farm to get them. Spinach is an important crop and this comes early. Then, other crops carry through until celery time and the diced and shredded vegetables provide for good income during the winter.

The Old Market

The old Faneuil Hall Market is busy enough that trucks can hardly get around. That is one obstacle to doing business there either for farmers or for the produce houses which have been at it for many decades. It is still an important center for the distribution of vegetables and fruits but the enterprising grocer has to go a good many different places for his supplies. The New Haven railroad has a fine terminal in South Boston with unloading platforms and facilities for sales on the big floors where the produce is stacked. The great potato market and the terminal of the Boston & Maine are at Charlestown. Also the farmers have their establishment at Cambridge.

Cambridge Market

The Boston Regional Produce Market at Cambridge was established about five years ago by a group of farmers who subscribed for stock and arranged financing with the Farm Credit Administration. They selected a site on two big highways—one of them being Route 2 out of Boston, and on the Boston & Maine R. R. Land was leased and a few buildings erected. Heavy grading was required, some paving was done, and lights were installed.

This market has been carrying on for five years and commands patronage of 75 to 150 farmers daily according to the season and the day of the week. The market is held in the afternoon—most of the sales occurring between 6 and 8 o'clock in the evening. Grocers are more and more pleased with this idea as it eliminates a miserable journey early in the morning. Most stores now have facilities for keeping the vegetables in good shape.

C. F. Dutton is the manager and plans are on foot for refinancing the project to make possible the erection of permanent buildings, and there is already good assurance that several members of the produce trade are ready to use the Cambridge facilities.

Building markets and improving market situations is a long, slow process but Boston sadly needs consolidation of its facilities. If the Boston &

(Continued on Page 12)

Boston boxes sadly overloaded with cabbage.

It's a Date!

WITH Old Man Winter just around the corner, *American Agriculturist* has been busy these past few weeks planning another wonderful trip to the land of warmth and golden sunshine for A. A. folks. We have been getting so many letters from people who have gone on our other winter tours, and from friends of theirs who have heard about the good times we have, that we are announcing this one even before the printed itineraries are quite ready.

Before telling you about the grand vacation we have planned for you, we want to quote from a letter which we received from the *American Agriculturist* folks who went on our tour last February. The letter was written while they were in California, and was signed by all members of the party—more than sixty of 'em! We treasure this letter as one of the nicest we ever received. It reads:

"We of the *American Agriculturist* 1940 Vacation Tour to the West Coast want you to know just how much we are INDEBTED to you for this glorious trip. The only complaint we have to make is, 'The story is never told half strong enough in advance', because neither the itinerary nor the descriptions in *American Agriculturist* begin to tell all of the interesting places we have visited and the pleasant surprises we are having. Trips such as these must be taken to be appreciated.

"Our trip could never be complete if we neglected to mention our escort, Mr. V. L. BeDell, with his genial manner and thoughtfulness. We all say, 'Long live *American Agriculturist*!', and we shall all watch with eager anticipation for the next trip that your magazine sponsors."

We've often said that if people felt the same way about our trips *before* they took one as they do *after* they have been on one, there wouldn't be enough trains in the country to carry all of them! Even if we do say it

ANNOUNCING another . . . A. A. TOUR February 22nd to March 16th

ourselves, *American Agriculturist* tours are the finest ever. They are planned to provide a real vacation, free from travel worries, with a maximum of travel comfort, of good fellowship, and of fascinating and beautiful places to be visited.

We are especially pleased with the trip which we have planned this time because it includes some outstanding attractions that are off the beaten

↑ Delicious meals and fine hotel accommodations are a part of every American Agriculturist tour. While visiting the Monterey Bay region, our home will be the famous Hotel Del Monte, whose setting is a magnificent park.

← These are the lucky folks who went on last winter's tour and who wrote and signed the letter printed on this page. Says our tour escort, Mr. BeDell (seated at front): "American Agriculturist tourists are the grandest people in the world to travel with."

path. This time we are going to visit the world's most glamorous underground fairyland, the Carlsbad Caverns in New Mexico. We are going to see Santa Catalina Island, that romantic spot out in the blue Pacific where the charm of early California lives on. We'll visit far-famed Monterey Bay, the region which has been called the "Circle of Enchantment" because of its marvelous and unique scenery. We'll spend the night there at the beautiful Hotel Del Monte, whose setting is a magnificent park.

We'll motor through the orchards of Santa Clara country to the Santa Cruz grove of giant Redwood trees, the world's oldest living things. These giants of the forest are thousands of years old, rear hundreds of feet into the sky, and measure dozens of feet in diameter.

One of our first excursions on reaching the West Coast will be a delightful boat trip from Seattle over to the

Olympic Peninsula, giving us a chance to see the finest views of the picturesque Olympic Mountains.

But let's begin at the beginning—which will be one wintry day next February, Saturday the 22nd, when our party will head westward. First, there'll be the fun of getting acquainted, and that doesn't take long in an *American Agriculturist* party, with our genial Mr. BeDell on hand to make everyone feel happy and comfortable.

Before we know it, we'll be rolling along through Minnesota's 10,000 lakes region, North Dakota's farming and ranching areas, and then through the spectacular Rockies and across the Continental Divide, a thrilling experience. Among the many things on this trip across the country that you will never forget will be the delicious meals, the generous portions, and the courteous service of the Northern Pacific Company's crack train, the "North Coast Limited."

↑ Our party will see this strange, fairy-like world when we visit the Carlsbad Caverns, one of the wonders of all time. Picture shows some of the beautiful and colossal formations in the "Big Room", estimated by scientists to be 60,000,000 years old.

When we reach the Pacific Northwest, we'll find spring in the air and Old Man Winter will fade completely into forgetfulness. The trip over to the Olympic Peninsula from Seattle will include two and one-half hours of pleasant cruising on Puget Sound and a sight of the Bremerton Navy Yards, now humming with activity as the nation prepares to defend itself against future trouble.

There isn't space this time to tell in detail all of the interesting and beautiful places and things we will see, but just to mention some in passing: Enroute to San Francisco, we'll see majestic, snow-capped Mount Shasta. A stay of two days and three nights in San Francisco will give us time for some delightful motor trips to places of interest in and around that great city. After the trip to Del Monte and Monterey Bay, we'll see another California beauty spot, Santa Barbara, home of the Santa Barbara Mission.

Los Angeles and its environs will be visited, and from there we go to Santa

(Continued on Page 17)

begin.

—Old Country Saying.

America for Americans

IF GERMANY wins (God forbid), America faces an economic war which is almost sure to result in long years of the hardest times we Americans have ever known. We will surely lose many of the accustomed comforts and even the necessities which we have been used to.

On the other hand, if England wins, the situation for us may be almost as bad. A successful Germany will try to crowd our foreign commerce off the map, and she will likely be able to do so. England, in case she is successful, will of course trade first with her own colonies. Every nation will strive furiously to raise its own supplies and, if we permit, to overwhelm us with its products produced by cheap labor.

The answer for us Americans is to get ourselves in position quickly to tell them all where to go. That means that we should be able to get out of the export business. It means that we must grow nearly everything we need right here ourselves. Now, that will be hard work. It will mean difficult adjustments. Cotton and wheat growers, who have depended on the export trade, will have to make the hardest adjustments. But the problem is not what we want to do. It is what we must do. And it can be done.

In the first place, farm exports, in comparison with our total production, are not very large. Did you know that we import about \$500,000,000 more of farm products than we export? Why not learn to grow substitutes for those farm products that we now buy from other countries? Instead of continuing to worry about the disappearing European markets, why not develop our own markets? Why not grow our own vegetable oils instead of importing millions of dollars worth? Why should we buy the other countries' jute and flax and products of that kind? Why not grow them here? Why spend millions for Japanese silk?

New uses for the soybean are just in their infancy. What we need in this country is research and more research to develop our markets and to find new products and new uses for old products. Instead of paying farmers for cutting down production, why not pay them for experimenting, under proper guidance, with the growing of new products?

This is a changing world—never so much so as now. Those nations and those individuals who survive these changes will be the ones who learn quickest and best how to meet change with change.

Common Sense Preparedness

MY FRIEND, John E. Pickett, editor of the Pacific Rural Press, says that 25 bombs placed in the right places would practically maroon the West coast from the East coast of the United States, so far as rail and highway transportation are concerned.

Ed Babcock has made the same statement in different ways several times in his *Kernels*, *Screenings* and *Chaff* in this paper. Two or three bombs on Buffalo would seriously, if not completely, cut off the Northeast dairyman and poultryman's supplies, so Ed rightly concludes that just as a matter of plain commonsense, some of the government grain should be stored in this section. Even more likely is a serious tie-up of

railroads due to congestion by defense material freight.

Mr. Pickett goes a step further in talking to his California farmers and advises them, as a matter of defense, to make California as a State, and their own farms, more self-sufficient and thereby not be out on a limb if and when that limb is sawed off.

Says Mr. Pickett, "If both the German and the Japanese programs succeed, a sounder and more diversified development of the home market is the only economic answer the United States can give. . . . Approximately one-third of America is agricultural. It's the basic third. If war comes, agriculture should be ready. Good thinking and good planning now will surely find that military preparedness and the economic preparedness of agriculture are twins. These two are the guardians of our democracy, and of our homes."

Miss Rose Retires

THE THOUSANDS of friends of Dr. Flora Rose, for many years Director of the New York State College of Home Economics at Ithaca, N. Y., are both glad and sorry that she retired October 15 from the active direction of the College—glad that she will now have opportunity to enjoy a rest and do some of the things she has planned for a long time, and sorry that she is to leave the home economics work which she did so much to build. Her work at the College of Home Economics will go forward under the able leadership of Miss Mary F. Henry, Acting Director.

No other woman of her time has made a greater contribution to the happiness and well-being of country people than has Flora Rose. She first came to Cornell in 1907 as a lecturer on home economics subjects. There was, of course, no home economics college then, nor even any well-established courses. Soon after this, she joined in a partnership and friendship with Miss Martha Van Rensselaer, which was to last until Miss Van Rensselaer's death. The two of them laid the foundations and pioneered the work on which has been built much of the modern science of home economics.

I first became acquainted with Miss Rose and

DR. FLORA ROSE

Now retiring as Director of the
New York State College of Home Economics.

Miss Van Rensselaer about 1912, when I was the school principal and teacher of agriculture in a village not far from Cornell. They arranged with me to give their home economics girls some practice teaching work in my high school. From that time to this, I have never lost my interest and my enthusiasm for the training of girls in the greatest of all professions—homemaking. Probably the largest contribution that both Miss Rose and Miss Van Rensselaer made was their ability to arouse the enthusiasm, interest and support of others, as they did mine, for the great work which they were doing.

Research Men Should Speed Up

"It is not safe for cattle owners to conclude from impressions obtained without the benefit of scientific research data or controlled experiments that vaccines are the solution to the Bang's control problem."—Dr. V. S. Larson, Wisconsin State Livestock Sanitation Chief.

NO ONE has greater respect for the research scientists that I, but it is time that some of them got wise to themselves and got out in front, instead of being regularly behind the procession. Vaccination to control Bang's disease is a good illustration of my point. From all parts of the livestock sections of America come hundreds of reports — many of which have been printed from time to time in *American Agriculturist*—which prove from the actual experience of livestock owners that calfhood vaccination is a practical, safe method of controlling Bang's disease. Yet some scientists are still talking against it.

It's all right to be reasonably cautious, but these are changing times, and in such times we often need help and need it now—not ten years from now. After farmers have adopted a practice, it is too late for the scientists to tell them it is O. K.

Down the Wind

EDITOR'S NOTE: A few days ago, Ed Babcock and I, riding across the country, caught the heavy odor from a dairy barn, a combination of smells of silage, hay and manure. We agreed that there was something in that scent from a barn, mingled with winter's frosty air, that always made an old-time countryman a little homesick. Then I came back to the office and found in the mail this little poem which expresses the same idea much better than I can.

Wind and storm and down the wind the scent
Of someone's barn, its pleasant rankness blent
With one man's memory of youth—long past.
Strange how immaterial odors last
And stir the heart years after they are blown
Beyond the hills of time. You cannot know—
You, the city born—the poignancy
Of this remembered pungence, borne to me
Upon the winter wind. I hear once more
The creaking stanchions . . . see the cattle pour
From tie-up to the barnyard, warm with sun
And deep with drifted snow. O halcyon
Boyhood, loved and lost! How many white
And windy storms stretch back to that delight?

—HARRY ELMORE HURD.

Eastman's Chestnut

"THERE are some ungodly young men over in that corner having fun with the girls," said the preacher solemnly as he paused in the middle of his sermon and pointed accusingly in the direction of the graceless youths.

"When they get done," he continued ponderously, "perhaps they will give me a chance."

Business and Vacation in One Package

WHENEVER I get discouraged or panic-stricken about the war and the state of the nation and think everything is going to the bow-wows, I get out and visit with farmers like those who attended the G. L. F. Annual Meeting at Syracuse on October 24 and 25. No one could look into the faces of that great meeting of more than 5,000 farmers or talk with dozens of them personally, as I did, without having faith renewed both in agriculture and in mankind.

As I watched the faces of that big audience, with representatives from almost every neighborhood in New York, New Jersey and Pennsylvania, I thought how the cooperative movement had grown in my time. Such a meeting would have been impossible even twenty years ago, when the first annual meeting of the G. L. F. was held. In the first place, it would have been difficult for so many people to transport themselves to a central meeting place. In the second place, there was little of the background of experience and leadership needed to organize such a big meeting with such a well-planned program.

One of the chief benefits from such a large meeting is that it gives so many thousands of farmers a much-needed and well-earned vacation, from which they return to the old farm with renewed enthusiasm and faith in this business of farming.

Another mark of progress which has been evident more recently is the better understanding and tolerance which now prevail between leaders of the cooperative movement and other businesses which are also serving agriculture. There is room and need for both the cooperative and corporate type of business in agriculture. Each helps to keep the other on its toes, and each progresses in direct proportion to the service it renders.

"Hit Winter Hard"

ON EVERY table in a restaurant in Syracuse where I stopped for lunch the other day was an attractive little picture of a football player, with the title "Hit Winter Hard". Inside the folder was a brief statement which read:

"Now is the time to train for winter. Drink fresh milk every day. Rich in cold-fighting Vitamin A, it helps build up bodily resistance to the colds and cold infections that lie in wait for you in the months ahead."

Attached, also, was a coupon where you could sign your name and address, mail it to the Bureau of Milk Publicity, Albany, New York, and get a booklet free entitled "Getting More Out of Life—with Milk."

This educational campaign to boost milk, backed by the prestige of the great state of New York, with literature distributed in thousands of hotels and restaurants and in many other places, can't help but increase the consumption of milk.

The statement which I have quoted made me wonder if my family and I were using enough milk. *Are you using enough milk?* If it is cheap to the city consumer at the price he has to pay, it is three times as cheap for you.

A Free Copy of Eastman's Chestnuts

THOUSANDS of you have had a lot of fun out of the Chestnuts I have printed in recent years in every issue of *American Agriculturist*. Because there are so many who apparently have enjoyed them, I have collected over 150 of the best ones in an attractive little book. You will find that this book will give you many a laugh.

It's great for a Christmas present, and if you ever have an occasion to tell stories to your friends or at a meeting, you never will find a better supply of Chestnuts anywhere. Last issue I promised to send a copy of this book, *Eastman's Chestnuts*, free to everyone who would send me \$2.00 for a three-year renewal subscription before November 4, 1940. Orders have been rolling in so fast that we have decided to extend this offer.

If you want *Eastman's Chestnuts*, send in a three-year renewal for yourself or a three-year subscription for a friend before November 20,

and I will send you an autographed copy of *Eastman's Chestnuts* free. If you want extra copies for your friends, you may have them for 50c apiece.

Address your orders to: E. R. Eastman, *American Agriculturist*, P. O. Box 367, Ithaca, New York.

"Let 'em Roar"

A FRIEND the other day told me that he always took a day or two before winter shut down in earnest to make his place shipshape for the winter. When I asked him just what he did, he told me that he cleaned up and burned the dead stuff in his garden, put every machine under cover, nailed a loose board or a shingle here and there, mulched the strawberries and the perennial flowers for the wife, and in general picked up and cleaned up the loose stuff around the place.

"Then", said he, "when the blizzards come, I just let 'em roar!"

Fall Plowing

RIDING across the farm country during the past week, I saw dozens of farmers preparing for another seed time by getting their fall plowing done. Tractors, of course, were much in evidence; but so were the good farm teams. The weather has been ideal.

As I watched one of these farmers turning the furrow across the landscape, I thought of a piece I recently read by an English writer. He said that while standing on the cliffs of Dover, he looked out across the English Channel toward

France where Britain's enemies now lie, and that he was impressed with the calm, serene indifference of nature, no matter how much war and trouble little man stirred up. The skies could be filled with bombers, the sea with warships, but the sun rose and set just the same and nature went her calm accustomed way.

Well, the rolling seasons and the fall plowing are like that. There are wars and rumors of war, political administrations come and go, the world changes; but the plowing, the seed time, and the harvest go on just the same. No matter what comes, the farmer in the fall and early spring turns the sod, knowing that there has always been a seed time and a harvest and there always will be.

How to Sell Your Products

WE NEVER plan an issue of this paper without doing everything possible to help you sell your stuff. That is the kind of information that may save you hundreds of dollars.

If you will leaf through any or every issue of *American Agriculturist*, particularly during the fall and early winter when farmers have the most stuff to sell, you will find articles and suggestions on markets and prices throughout the paper, written by men who know what they are talking about.

We do not attempt to give you day-by-day prices. We do tell you about the trends in the market and what we think you may expect as to whether prices will go up or down. A good example of just what I am talking about is Mr. Bryant's discussion in every issue on potato markets. See Page 14.

Readers Talk Back

WARNS OF HARD WEATHER AHEAD

"Based on the theory that the general pattern of weather phenomena repeats itself every 23 years, I would like to tell you my forecast for the next few months. The 23 year cycle theory has been 80 to 90 per cent correct. The most remarkable feature of the forecast for this coming winter is a prolonged period of intense cold.

"The following is a summary of the weather to be expected until Spring, based on the records of 1917-1918:

"**NOVEMBER:** Outside of the first few cold days, the following three weeks show a period of settled dry warm weather over almost all northern and middle districts, and about normal temperature in the South. The latter part of the month cold in Northeastern sections but continued warm from the lakes and central valleys westward. The month to average cooler than normal in the East, but from Lake Michigan and Middle Mississippi Valley westward decidedly warm — 10 degrees above average and milder than October. Decidedly dry this month over most of the country, unfavorable to winter wheat, but excellent for drying corn.

"**DECEMBER:** A marked cold wave about the end of the first week, 15 degrees below normal and continuing until the end of the month with no let-up except for a few days in the central valley regions. Nearly everywhere east of the Rockies, snowfall greater than usual and doing much to protect winter grains.

"**JANUARY:** Steady and severe cold everywhere, persisting right through the month, notably cold in Florida and the Gulf States. Temperatures east of the Rockies, the lowest in 20 years. Snowfall unusually heavy, except for deficiencies in Michigan and Texas.

"**FEBRUARY:** Following a week of intense cold the temperature turns up ending one of the severest and most prolonged cold periods on record. Not much precipitation during the month."

—E. B. Tustin, Jr.,
Worcester Salt Co.

EDITOR'S NOTE: Save this and see how close Mr. Tustin hits it.

THE HIRED MAN'S SIDE

"In the *American Agriculturist* of August 31, an article headed 'No relief for Able-bodied men' rather makes one wonder if there isn't another side to it. I certainly agree with you as far as men on relief

are concerned, I never have been on relief and have always felt I had rather starve first, but I have a family to consider too.

"You tell how scarce farm labor is. I have been looking for a farm job for several weeks. I have 2 boys, ages 9 and 11, and no one around here will give work to me when they know about the children. They just don't want children around, or they don't have room for them. My boys are not destructive, nor saucy, never were allowed to be. So that is no excuse.

"I am willing to do any kind of work and so is my wife, and I am reliable and honest."—G. M. W.

EDITOR'S NOTE: Another letter from a hired man accuses us of stating only the farmer's side of the help problem. We have not meant to be unfair and we do realize that there are two sides. One of the problems we have called attention to is the poor tenant houses in which many hired men and their families live. With farm help becoming more and more difficult to get, it is evident that farmers must make all adjustments possible to meet the hired man half way.

LIKES THE CHESTNUT BOOK

"Enclosed find my check for \$3.00 to renew my subscription to *American Agriculturist* for five years, and to take advantage of your offer of a free, autographed copy of *Eastman's Chestnuts*. I always enjoy the Chestnuts and feel sure that both my father and myself will enjoy the book."—A. E.

EDITOR'S NOTE: This is an example of the many letters that have come rolling in, in answer to my offer in the last issue to send a free autographed copy of my book *Eastman's Chestnuts* to any reader who would renew his or her subscription to *American Agriculturist* for \$2.00 for 3 years, or \$3.00 for 5 years. I have extended this offer now to November 20. Be sure to take advantage of it if your subscription expires soon. This book will make a splendid Christmas present.

A. A. BACKS WHAT YOU WANT

"I only wish that more publications like *American Agriculturist* tried as hard to help the farmer, instead of trying to tear down what farmers have been so many years building."—Mrs. E. D.

EDITOR'S NOTE: It has always been our editorial policy to find out what farmers themselves want, and then to get back of it, instead of trying to put over some scheme of our own.

The Farm News in PICTURES

NATION'S POULTRY INDUSTRY'S No. 1 Salesman welcomes two new assistants: Homer I. Huntington, manager of the National Egg and Poultry Board, (center) congratulates two New Jersey 4-H girls, Miss Micky Mills of Stone Harbor (left) and Miss Eleanore White of Cape May Court House, on their demonstration on the effective use of eggs in the diet at the exposition of the Northeastern Poultry Producers Council, Atlantic City, Oct. 1-4. Standing at the extreme left is Ralph Brent, radio announcer.

(Right) **W. J. RICH** of Salem, Master of the New York State Grange, at the right, shakes hands with Roy Brooks, Master of the Maryland State Grange. The occasion was a special meeting of the Grange at Geneva, New York, at which more than 250 members received the Sixth Degree in anticipation of joining National Grange when it meets in Syracuse. The meeting was one of a series which has been held covering the entire state.

Says Mrs. E. B. Heustis: "This is Billy Goldsmith, a six-year-old friend of mine, with a sample of the kind of potatoes we raise at Fort Ann, N. Y."

STEBUEN COUNTY, N. Y., with fifty new members on October 15, now has 200 herds on test in dairy herd improvement associations. A recent project of these boosters for profitable dairying was the display at the Steuben County Fair of the top cows in each of the four dairy breeds. Lisle Hopkins at the left proudly poses with a Holstein cow of the I. J. Calkin's herd of Avoca whose production was 729 pounds of butterfat. The Ayrshire, out of the Francis Foster herd, has a production of 538 pounds, and is held by Frank Carroll. Earl Hendee of Fremont is the owner of the Guernsey cow, highest producer of that breed by virtue of a 613 pound record. Her attendant is John Higgins. The Jersey cow, owned by Arthur Dunn of Fremont, has to her credit a production of 580 pounds. She is held by Steuben's veteran tester, Robert Drake.

CALVIN DE GOLYER (right) of Castile, Wyoming County, N. Y., gathering eggs from the hens in his 4-H Poultry Project. Calvin has been a 4-H Club member for eight years. In addition to his poultry projects, he has raised sheep and calves, until he now owns six cows and heifers.

MORTGAGE LIFTERS!—John Culbertson, of Dansville, N. Y., always has a bunch of sheep on the farm. Where conditions are favorable, the addition of a few sheep where a man wants to diversify is worth thinking about.

JOHN, I'M GOING TO
MAKE GOOD MONEY
THIS WINTER!

SURE, he's going to make good money. Milk prices are right for it.

And he's taking advantage of the situation by going after top production from his cows. He's going to have **PLENTY OF MILK** to sell at those high prices.

He has put his herd on the **PURINA PROGRAM** of feeding and management, and the cows have started to come right up in milk. Besides that, they're in the best condition he's had them in years, with indications of steady high production right through the winter months—when milk prices are at their peak.

Hundreds of dairymen all over the East are putting their herds on the Purina Program this winter to get **LOTS OF MILK** to sell at good prices. They're feeding Cow Chow to the milking herd, and Purina Dry and Freshening Chow to the dry cows for successful calving and extra milk during the following lactation.

Why not feed your own herd for real production on the famous Purina Cow Chow and "D. & F." Chow Program this winter? Now is the time to see your Purina Dealer.

WEIGH - Don't Guess

You don't have to guess whether the Purina Program will make lots of milk. Your Purina Dealer will gladly furnish you milk record cards without cost and milk scales at the special low price of \$4.00 so you can **PROVE** what feed will pay you best. Get a scale with your first order of Cow Chow. Weigh the difference in milk yield.

MADE TO FIT YOUR NEEDS

IF YOU DON'T RAISE GRAIN
16% and 20% Cow Chow Are Made for
Straight Feeding

IF YOU HAVE GRAIN

THERE'S LOTS OF MILK IN COW CHOW**

PRAY HARD
A "Fight by Producing"
Program

WORK HARD, PLAY HARD—both must be directed, guided, inspired by a righteous cause. Pray Hard, then, must be the last part of our program to win the War of Production. Below is a small reproduction of an oil painting that is hanging in my office, directly facing my desk. It is a copy of Hofmann's masterpiece, "Christ in Gethsemane," and will be placed in the new Chapel, built alongside our Pilgrim Church in St. Louis.

There is something very comforting to me to have this unforgettable painting in my office at this time. Here is our Lord in his hour of trial. Here is our everlasting reminder that Prayer is our refuge. Here is our assurance that ultimately Right makes Might.

If you will look into this face of Christ in prayer, it will give you comfort, and assurance, and strength as it has me.

I know the world is unsettled now. But in the end—six months, a year, two years, or maybe we won't even see it in our lives—watch how the kinks straighten out, watch how civilization untangles itself. Naturally and smoothly, as if it had been planned, civilization will again take up its normal course!

So let me urge you again, as I urged my other friends upon leaving for France in the World War: "Work Hard, Play Hard, Pray Hard. We have a Victory to Win!" This time it's to win a War of Production . . . to produce food for the starving millions of the world. Won't you join with me in Georgia Harkness' prayer:

"O God of toil, who callest us to labor
Within the common life of mills and
marts,
Help us to see each human soul as
neighbor;
Grant us the gift of understanding
hearts."

PRAY HARD

CALF LOSSES Can Be Controlled

By E. S. HARRISON

MANY problems concerning calfhood diseases are still being debated. One group believes that improper feeding is responsible for most of our calf losses, while another equally well-informed group feels that unsatisfactory housing is the most important factor. A careful survey of calfhood diseases reveals the fact that neither of these theories provides a satisfactory answer. For example, I have visited some small herds and found the calves, though tied in dirty, unsanitary quarters and receiving no special care or feed, in thrifty growing condition. On the other hand, at some of the large breeding establishments, where the calves are housed in an up-to-date calf barn, where every detail concerning sanitation has been met and the calves fed in accordance with recommended practices, calfhood diseases are taking an extremely high toll.

What then is the answer? From my experience at Cornell and my contacts with many other herds, I am convinced that the presence of disease producing bacteria is directly responsible for all calfhood diseases. In the absence of these disease producing bacteria, calves can be raised with some degree of success even under rather unfavorable housing and feeding conditions. If the disease producing bacteria are present, however, elaborate calf barns and expert feeding will not prevent the outbreak of disease.

This does not mean that satisfactory housing and proper feeding are of no importance. If the bacteria capable of producing a specific disease are present, unsatisfactory housing and improper feeding operate to lower the calf's resistance to the disease and thus become contributing factors.

Another observation that has some significance to me is that calf losses are greater in the large herds, notwithstanding the fact that in general they are better equipped to handle calves than the small herds. This means that the more serious calfhood diseases increase in virulence as the period between infections is shortened. In other words, adding new calves to an infected group can be compared to adding fuel to a fire.

For years we employed, at Cornell, a rigid sanitary program and followed the best recommended feeding and management practices, but failed to control or even reduce our calf losses. Our failure to control calf disease convinced us that, if calf losses were to be prevented in the large herd, a program must be developed that would, as nearly as possible, duplicate conditions found in the small herd where calf diseases are not a problem.

Accordingly we built several small brooder-type calf barns that would hold

from 8 to 10 calves. During a period of heavy freshening, one of these units is filled in less than two weeks. Once filled, no additions are made. Thus, if we are successful in getting a group of calves started free of infection, we run no risk of introducing an infection by adding new calves. On the other hand, if an infection develops, it is confined to a small group and we do not have an epidemic of disease spreading through the entire calf herd.

If an infection develops in one group of calves, the man caring for the infected unit has no contact with the other calf units. We also lock each unit which prevents hired help or visitors from traveling from one unit to another, thus guarding against carrying an infection from one unit to another.

The calves are kept in these units until about three months of age, when we transfer them as a group to a barn designed to handle older heifers. The brooder house, entirely empty, is then thoroughly cleaned and disinfected and allowed to remain idle for as long a period as possible.

Young calves may also become infected in the maternity stalls. Therefore, the maternity stall is thoroughly cleaned and disinfected after each freshening before being used again. In addition to this, it is best to provide maternity stalls whenever possible in two different barns so they will not be in continuous use. That is, follow the same program with the calving stalls as has been discussed for housing the calves.

This program of housing in no way lessens the importance of proper feeding. Calves in thrifty, growing condition have a great deal more resistance to infection, and if infected, have a better chance to live through the disease.

This program of housing has resulted.
(Continued on Page 19)

Above is a sketch of the cross-section of the calf barn explained on this page. Below is the floor plan. A study of the sketches, plus the information in the article, will enable any reader to build such a barn.

Everybody Listens When THIS VOICE SPEAKS

And the Bargaining Agency Gives Every Farmer a Part in Directing His Business

Dealers, newspapers, lawmakers, businessmen and consumers—everybody listens when the powerful voice of The Metropolitan Co-operative Milk Producers Bargaining Agency thunders out a demand . . . for A LIVING PRICE FOR MILK! . . . for justice and fairplay for ALL farmers!

That's because The Bargaining Agency is recognized as the authorized and lawful spokesman for sober-minded and responsible farmers in all parts of the milkshed.

The power of The Bargaining Agency is the power of these united farmers. Its voice is MIGHTY only because it echoes and magnifies many smaller, but clear voices back on thousands of farms throughout the milkshed. The voice of The Bargaining Agency is YOUR voice—strengthened and multiplied by the voices of thousands of other farmers in 64 farmer co-operatives throughout the milkshed. It is YOU and YOUR fellow farmers speaking with NEW courage, NEW confidence and NEW authority.

So no wonder they listen! No wonder that YOUR milk checks are larger—your life is fuller, more enjoyable.

And no wonder that YOUR future is more secure . . . that YOUR relations with your neighbors are friendlier and happier. Because united farmers working together are free from the old bickerings and divisions that have caused quarrels, financial loss and violence in the past.

But We're Not Out of the Woods Yet

Our present favorable condition will remain only so long as farmers recognize it . . . value it . . . and work to preserve it. The very minute that you let up on your end of the job, your neighbor is going to let up on his. Then, very quickly, your enemies will realize that you are dozing . . . and then they'll attack you. Maybe defeat you.

Today YOUR voice is mighty. Today everyone listens. But don't let that voice dwindle to a whisper. Work closely with your Co-operative. Give it your whole support. YOUR income, YOUR future, the welfare of YOUR home depends upon you and your fellow farmers speaking and acting TOGETHER.

MULTIPLY this picture by the number of cars and trucks in this country today, and you have a miracle such as the world has never seen before—a miracle which is unmatched anywhere in the world today outside America.

It is the miracle of 25 million people owning and enjoying a mechanism as complex and competent as an automobile.

In a single year—this year, for instance—the industrial genius of America turns out some three million new cars—more than the *total* owned in any other country on the face of the globe.

Many things make this miracle possible—including the American railroads.

For mass production depends on *mass transportation*.

And what that means is this:

There are more than 17,000 parts in a single automobile—many of them made in widely scattered cities. One industrial writer has estimated that the materials in an automobile travel by rail an average of six times before the car finally rolls from the assembly line.

The materials needed for building automobiles come from every state in the union. Cotton must travel an average of 1,300 miles, copper 1,500 miles, wool 1,700 miles, lead 1,100 miles—iron and steel travel from mines to mills to factories where frames, bodies and other parts are made before arriving at the point where the cars are finally built.

So the automobile industry has come to depend on the clocklike regularity of the railroads. Many plants handle parts straight from freight car to assembly line with no stored supply or “float” of motors, frames, wheels, transmissions or other parts on hand. This helps reduce the cost of your car.

Perhaps you have never paused to consider such facts as these—any more than you have realized that much of the food you eat, the clothes you wear, most of the things you use every day were brought together from every part of the nation by rail.

As a matter of fact, that's the finest tribute anyone could pay to railroad service. It works so dependably and smoothly, you almost forget it's there.

WASHINGTON, D. C.

Empire State Welcomes National Grange

ON WEDNESDAY morning, November 13, in the City of Syracuse, the gavel will fall to open the 74th session of the National Grange. Within a 250-mile radius of Syracuse there live more than a quarter of a million Grangers, and it has been predicted that between 20,000 and 25,000 of them will be in Syracuse for one or more sessions of the National Grange.

Among the features of the nine days session program, unusual interest will center around the annual report of Fred Brenckman, Washington legislative representative of the Grange, which will be given on one of the early days of the first week. The Grange legislative office at the National Capital has been very active the past year, and with the assembling of the new Congress in January the legislative program of the Grange will be vigorously pushed.

Not only Representative Brenckman, but National Master Louis J. Taber and members of the executive committee of the National Grange have frequently appeared before committees of Congress the past year in behalf of many subjects of vital interest to agriculture: Restoration of the Farm Credit Administration to an independent basis; lower interest rates for farmers; transportation discriminations; regulation of motor trucks in interstate commerce; raising farm income to a parity basis; as well as the subject of our increasing national debt and the unbalanced budget.

In addition to a conference of Grange insurance workers, one of Grange lecturers and secretaries, and a coopera-

tive breakfast, to which prominent leaders from all over the country will come, announcement is made that a conference of Home Economics workers will be held at Syracuse, conducted by the national chairman, Mrs. Cora D. Tucker of Connecticut; and another of Juvenile Grange workers, under the direction of Mrs. Margaret H. Caldwell of North Carolina, national superintendent. This is not the biennial election year of the National Grange and the only officer to be chosen is one member of the executive committee for three years. The expiring term is that of Eugene A. Eckert of Illinois, who has served many years in that capacity and most of that time, as at present, secretary of the committee.

All day Thursday, November 14, at Syracuse, two big sessions will be going on simultaneously, one at Loew's Theater, where at least four classes of candidates will be receiving the highest degree of the organization, and an “overflow” at the Lincoln Auditorium, the two meetings synchronizing according to the degree schedule, whose first class starts at 10 A. M., with the last one probably finishing shortly before midnight.

Meanwhile, Grange members unable to go to Syracuse, and thousands of others interested, will be looking forward to the 60-minute broadcast from the Syracuse session, which occurs Saturday, November 16, from 12:30 to 1:30 Eastern Standard Time. This will be put on by the National Broadcasting Company over a coast-to-coast network, with a special setup at Syracuse for this particular broadcast.

CHARLES M. GARDNER

Editor of the National Grange Monthly and High Priest of Democracy of the National Grange

GRANGE CIRCLES throughout the country are greatly satisfied over the excellent organization record made by this fraternity during its fiscal year which ended September 30. In spite of conditions which made the going hard for most fraternal groups, the Grange reports for the nation were the organization of 168 new subordinate units, 157 new Juveniles and 17 new Pomonas; these organizations distributed over 33 of the 37 organized states, while the addition of Wyoming as a newly-organized State Grange is one of the most important facts of the year.

New York and Ohio had a close race in the organization of new Juveniles, the former winning 25 to 21. New York organized five new subordinate units; Connecticut, 8; Massachusetts, 7; Vermont, 5; and Maine, 3. Every New England state showed a membership gain, and for the country as a whole a substantial net gain is reported by National Secretary Harry A. Caton of Coshocton, Ohio. These figures furnish encouragement and enthusiasm to the 74th annual session of the National Grange, as it convenes at Syracuse, New York, November 13, for nine days.

* * *

A RECORD in Grange meeting attendance that will be hard to match has just been made by Providence Grange in Rhode Island, which meets in the heart of the latter city. It was Booster

Night, September 26, and the roll call showed an attendance of 684 Patrons coming from 85 subordinate Granges in three states. It is not unusual at Rhode Island Grange meetings to have practically every subordinate in the state respond to the roll call.

* * *

HAVERHILL GRANGE, No. 154, in Essex County, Massachusetts, is very proud of the fact that it has among its membership nine holders of Golden Sheaf certificates, attesting 50 years or more of continuous Grange service. Hardwick Grange in the same state has held the Massachusetts record in this respect with eight Golden Sheaf members, but on the evening of October 23 two more presentations were added to the Haverhill group, putting the latter at the top of the list. Although this Grange was organized nearly 53 years ago, one of the original charter members is still living, and very proud of his Golden Sheaf distinction.

* * *

VERMONT State Grange annual session just held was featured by some—

“Great Scott! How much longer are we gonna have to wait?”

THE G.L.F. PATRON

The basis of a sound business cooperative is voluntary use by fully informed patrons

SEED FOR NEXT SPRING'S SOWING

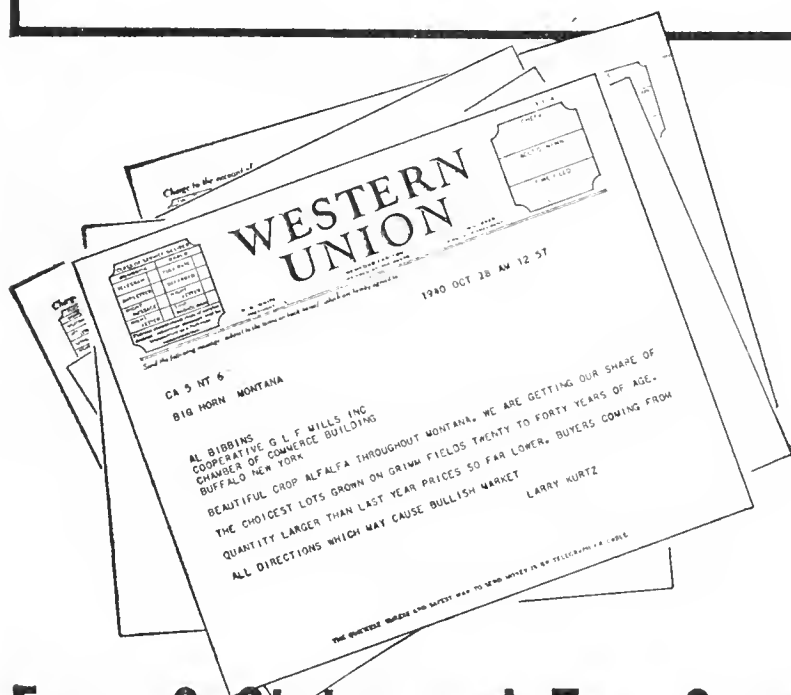

DURING the winter and spring, G.L.F. seedsmen are busy cleaning, treating, testing, and packing seed for G.L.F. patrons. These same seedsmen spend most of the summer and fall traveling through seed-growing areas, inspecting fields and selecting seed.

The seed they buy is chosen from areas that are free of disease, grown by reliable farmers on fields whose history is known for many years back. It is seed of selected origin—selected for its hardiness, freedom from disease, and yielding ability.

The telegrams shown on this page are typical of those received daily by Mr. A. L. Bibbins, head of the G.L.F. seed service, from your hired men in the field. They are presented here to inform patrons of the condition of the seed crop.

Larry Kurtz, G.L.F. seed specialist, inspecting a seed sample on a Montana farm before an interested audience of one.

From 9 States and Two Canadian Provinces G.L.F. Seedsmen Report on the Seed Crop

Fort Wayne, Indiana, October 15

We have accumulated over 10,000 bushels of the finest red clover raised in Ohio and Indiana this year. This is old strain seed which has proven so hardy in New York State. Also have several thousand bushels of alsike. Not buying much now as farmers are busy sowing fall wheat and cutting corn which delays threshing.—*Gene Kraus*

Prince Albert, Saskatchewan, October 10

Frosts injured crop. Failure of alfalfa seed crop in Eastern Ontario has brought many of their buyers to this area, advancing prices considerably. Market now too high for us since we must pay four dollars duty to get it into the States. Have two thousand bushels beautiful Grimm lined up but fearful price will be too high for us to buy.—*Lloyd Vogel*

Paulding, Ohio, October 10

Alsike crop practically moved. Many farmers so disappointed with prices took their seed home. Have selected 3000 bushels of beautiful alsike and will continue. Also selecting some fine red clover. Mammoth clover is scarce.—*Eli Dickey*

Grayling, Michigan, October 11

Northern Michigan has very little seed. Michigan will have to bring in Alfalfa from the west to meet planting needs. Rains prevented Mammoth Clover from setting. Some spots have some nice Red Clover but much damaged by rains and lying in fields for over two weeks. Will not be able to select much seed that will meet G.L.F. standards this year.—*Chi Fick*

Arrow Lock, Idaho, October 10

Seventy percent Idaho red clover and alfalfa still lying in fields after three weeks of rain. This will reduce alfalfa yields close to fifty percent and injure most of it. Practically impossible to purchase seed that will meet G.L.F. standards. Nevertheless have secured over one thousand bushels very fine variegated seed from our old growers. Leaving in morning for Utah mountains.—*Wally Russow*

Big Trails, Wyoming, October 15

Alfalfa plants rank in growth. Rains causing great difficulty in harvesting, damaging some seed, reducing yields on many fields. Market very firm. New buyers arriving every day. Rains holding up threshing. Frosts at the higher altitudes. Although difficult to buy have selected several of the finest lots of variegated alfalfa.—*Ivan Sours*

Bemidji, Minnesota, October 12

Over four million pounds alfalfa seed ruined by freezes. Continuous rains practically ruined red clover crop in Minnesota and Wisconsin. There will not be enough high grade alfalfa or red clover raised in these states to meet local needs. Have secured from our old established growers 1400 bushels very fine Grimm 800 bushels beautiful alsike but no red clover. Temperatures down to 18. Now busy loading out seed previously selected.—*Mel Stolquist*

Like many other western Indians, Joseph Wellknown, of Lodge Grass, Montana (shown here with his wife) leases his land to seed growers. This land produces some of the best hardy legume seed for eastern farmers.

Independence, Iowa, October 19

Great crop. Practically all moved. Got more than our share of best timothy seed in Iowa and Minnesota. Continuous rains ruined red clover. Can find no seed that will meet G.L.F. standards so going to Northwestern Illinois.—*G. H. Valentine*

LaPrairie, Illinois, October 11

Good yields of red clover. Much of it damaged by rains. Have secured 1600 bushels very fine seed. Moving out of here to one of our other sections with expectations of selecting at least 1000 bushels more.—*Jim Fleming*

Weston, Ontario, October 11

Absolutely no alfalfa this year. Spring rains made the crop late. Late rains failed to permit setting of seed. If weather clears there may be some red clover to fill local needs. Ontario will be forced to buy alfalfa seed from the west or from the States.—*Paul Mullen*

Last Minute Flash

Just as this is going to press, Mr. Bibbins telephoned that rain and freezing weather in Wyoming and Montana is seriously hurting the alfalfa which is ready to thresh. A large percentage of the Northern grown hardy seed is of poor color and poor quality. There is not as much desirable seed as was first believed. The poorer quality seed may be offered at lower prices.

In general, however, there is enough seed of the right quality to take care of the needs of G.L.F. patrons.

G.L.F. Service Agencies are now taking orders for next spring delivery of selected origin seed at prices lower than last year. Orders taken now are protected against price increases. If prices go lower, patrons who order now will get the benefit of the decline.

COOPERATIVE G.L.F. EXCHANGE, INC., ITHACA, N. Y.

Do You Worry
about getting
a Good Cure
AT THE BONE?

IT'S easy to have perfectly cured meat — tender, juicy, and sweet as a nut right down to the bone. Cure your meat the famous **MORTON WAY** with Morton meat curing products.

Almost a million farm families have turned to this better, surer, **EASIER** way. No bone taint . . . No gray under-cured spots . . . No salty, over-cured meat on the outside. Cure the **MORTON WAY** this year. Ask your dealer for Morton meat curing products and full instructions.

— Cures From the Inside OUT and From the Outside IN
Morton's Tender-Quick cures outward from the bone area — Morton's Sugar-Cure cures inward from the outside. That's the secret of fast, perfect meat curing — wonderful quality and wonderful flavor.

FIRST..Pump With Morton's Tender-Quick

Mix Tender-Quick with water to make a mild, fast-curing pickle. Pump this pickle into hams and shoulders around the bones. That begins the cure **INSIDE** before taint or souring can start.

ASK YOUR DEALER for these famous products—See them, smell them—get that rich, wood-smoke fragrance. This year cure meat the Morton Way.

THEN... Rub With Morton's Sugar-Cure

This rich, honey-brown Sugar-Cure contains salt, sugars, spices and other curing ingredients. It strikes in fast, from the **OUTSIDE**, and as it cures gives meat a delicious wood-smoke flavor.

CURING FOLDER FREE
How to cure ham, bacon, corned beef, etc. Fully illustrated. Ask your dealer for a copy, or write: Morton Salt Co., Chicago, Ill.

MORTON SALT CO.

One-Act Plays for Amateurs

TO OBTAIN copies of any of the following one-act plays, write to *American Agriculturist*, One-Act Play Dep't., Box 367, Ithaca, N. Y., and enclose 20 cents for each play wanted. Plays are *royalty free* to amateur groups. All eight of these comedies have been carefully selected and will be found suitable for production by Granges, Home Bureaus, 4-H Clubs, schools, churches, and other community organizations. Each takes one-half hour or less to play:

Who is Wellington? by Mrs. Carrie Ladd. Plot centers around strange doings in the neighborhood parsonage. Setting is a simple small town livingroom. 6 women, 1 man.

The Amazing Electric Fence, by Mrs. Chester Partridge. Especially good for Granges and small groups which want a short, entertaining play pertinent to farm life. Setting, a farm livingroom. 4 men, 2 women.

Fractions, by Floyd Spicer Armstrong. Situation is built about a young brother's distaste for fractions and his older sister's love affairs. Setting, a farm livingroom. 5 men, 3 women.

Nothing Doing, by Grace Smith Beers. A wealthy widower from the city wants

to marry Mrs. Parker, a capable farm woman, but finds that she has made her country life too interesting to give it up. Setting, a simple farm livingroom. 4 women, 2 men.

Fishin' Weather, by Samuel Sidney Hale. A hilarious comedy and satire on wealthy city folks who come to the country looking for antiques. Simple setting. 4 women, 5 men.

Let's Get On With th' Marryin', by Robert E. Gard. Plot centers around a simple frontier wedding. Time, about 1825. Simple cabin interior. 3 women, 4 men.

Raisin' th' Devil, by Robert E. Gard. A very amusing comedy about Ren Dow, the famous travelling preacher who has a hard time converting a horse thief and his daughter. Simple cabin interior. Time, 1830. 1 woman, 3 men.

A Day in the Vineyard, by E. Irene Baker and A. M. Drummond. A modern folk comedy, offering the characters a chance to do some singing. The simple music comes with the play. Simply staged. 8 women, 2 men.

Extra copies of any of these plays will be furnished at the same price—20 cents each. Please send coins or checks when ordering (no stamps).

A Yankeeland Visit

(Continued from Page 2)

Maine and the New Haven could agree on joint facilities at the new market, it would mean a great advance for the produce business of the metropolitan area. Unfortunately, both roads have heavy investments at their present terminals—particularly, the New Haven which is comparatively new.

Fine Vegetables on Markets

The visitor is impressed with the fine quality of produce on Boston markets, the way it is put up, and all in all — the conduct of business on a rather high plane. The atmosphere of the market is not so rough and racketsy as in New York, and there is less of the harsh bark and banter that is too prevalent on a good many of our markets.

The Boston Box

The old Boston Box is still in general use but is being very badly treated in that it is over filled with the result that its advantages in truck loading and handling are largely lost. Cabbage will be almost as deep above the edge of the box as below and the same goes for spinach. In this case, spinach has to be loaded with boxes on their edges, face to face. On the other hand, celery is packed 12 wrapped bunches in a shallow Boston box, iced, with paper liner. However, the tops are allowed to stick away out and damage is bound to occur. Several farms are putting up fine packs of sprouting broccoli and commanding good prices most of the time. The old Essex hybrid squash of the turban type is still there.

Massachusetts Horticultural Society

THE Massachusetts Horticultural Society is a grand old organization which has been holding up the banner of better gardening for many decades. They hold a number of exhibits each year and the harvest show in October makes special feature of vegetables. They have classes for commercial gardeners as well as for estates and home gardens. A fine array of vegetables were on display. The Massachusetts State College put up a grand general display of vegetables at the end of the hall. Wilfrid Wheeler, formerly of Concord, took the prizes for the best collection of watermelons and muskmelons. He had a 48-pound Early Kansas and quite an array of other varieties. Mr. Wheeler was the leader in the enterprise in Massachusetts 35 years ago which commanded the services of J. B. Norton and which gave us our Mary

Washington asparagus. The show included a number of collections of gourds in widest variety which were exceedingly interesting.

Farmers Neglect Food Shows

While I was East, the Boston Foods Show was on. Farmers do not make sufficient use of these occasions, which carry ideas directly to the thousands who eat our products. Only one special horticultural exhibit was there. The New York and New England Apple Institute had a booth in which they showed the packaging of apples, and polled the public on questions of quality and packaging. Why do not more of our vegetable associations take advantage of these shows to promote interest in vegetables? Nearly all the booths are of the sort where a young "Miss America" dressed from tip to toe in a white academic gown offers a little cracker with a nibble of cheese and another booth gives you about a quarter of an ounce of cranberry juice. Incidentally, cranberries were there also:—a good illustration of what can be done.

Marketing Officials Meet

That same week, the National Association of Marketing Officials met in Boston and toured New England. This is a society of the directors of markets, of the state departments of agriculture from all over the country:—such men as Louis Webster of Massachusetts, Webster Birdsall of New York, Warren Oley of New Jersey. The program was right down to brass tacks. One all-day session was devoted to the distributor's needs and the other to the consumer's needs. State workers, college people, representatives of retail and wholesale organizations all contributed.

"O-h, Farmer Jones! I'm afraid I've made a drastic mistake!"

Coal Bin Dividends

WHEN "open season" was declared on anthracite in Pennsylvania a few years ago, problems developed in adjoining states that resulted in considerable legislation but which have not yet been solved in a satisfactory manner. Probably they will not be until further changes are made, or consumers make it their own business to protect themselves from frauds. Certainly consumers are in better position to do this than all the policemen, courts, weights and measures officials and legislators combined.

As a county sealer of weights and measures, the writer is convinced that some coal truckers are dishonest as often as they dare be; that the laws are unfair as between competitors; that consumers are generally sympathetic to the man who is trying to make a living by selling coal in competition with established and perhaps wealthy corporate dealers and glad to help him keep off relief; that when they have suffered a substantial "gypping," they are disinclined to prosecute for fraud or for violation of statutory regulations. Perhaps this is as it should be.

Pending a more equitable law than at present exists in New York State, there is little that can be done to prevent fraud except that which can be done by the consumer himself, and not much he can do except to apply some sort of checkup on each delivery of coal, regardless of weights shown by weight tickets. It is a wise precaution, in any event, because even an honest dealer may have a truck driver who at times diverts part of a load after leaving the plant, and no matter how accurate a scale may be, a dishonest dealer, if the buyer isn't present, can make a ticket showing four tons, net, even if the scale reads 6800 pounds.

If coal from all mines weighed the same per cubic foot, sales by volume instead of by weight would be a great improvement, and some such plan may become effective, or at least optional. Most loads can be measured on the truck to determine the volume of the load with sufficient accuracy to prevent substantial shortage, and payment can be made for the volume delivered. It is more difficult in the case of divided loads, while heaped loads or bulging truck bodies make it practically impossible. The real answer is a coal bin of pre-determined floor area, square corners and parallel walls. Then by leveling the delivery and determining the depth, the volume can readily be computed, or a coal bin chart will dis-

close the contents without the use of a pencil.

Anthracite, chestnut size, is said to average 52 pounds to the cubic foot. Larger sizes should weigh a bit more and smaller sizes less. Shallow mine coals are said to be considerably lighter, and the very dense coals somewhat heavier. By having a box of exactly one cubic foot capacity, and weighing a sample of the coal offered by your favorite dealer it is possible to check up his weights quite accurately so long as he dispenses that particular kind of coal.

Every consumer of coal should know the law relating to weight tickets and, in New York State, accept no delivery of a hundred pounds or more without a ticket meeting with legal requirements. Any weights and measures official or attorney can readily provide this information. In New York State the sections of the Agriculture and Markets Law involved are 197-b and 197-g, the latter providing for weighing coal motored into the state on the scale nearest to the point of delivery.

This is the section most frequently violated, perhaps because of the dealer's objection to having his customer disclosed to a competitor, the local weighmaster. Tickets must show the name of the buyer.

The seller will usually think twice—and then decide not to do it—before trying to cheat a customer who knows the regulations and who makes it his business to see that the seller follows those regulations and delivers full weight. Naturally, if he must cheat someone he will pick on those who are careless. The buyer is entitled to a weight ticket and should examine it carefully before allowing the coal to be unloaded, and should not pay until satisfied with the delivery in weight, or volume, and quality.

Quite naturally, too, if a dealer does you once and gets away with it without a squawk, whom do you think he will try it on the next time he needs a little easy money? If you accept three and a half tons for four once, he might be afraid to deliver you a full four the next time, thinking you might remember that the first delivery was smaller. He knows, too, that some people have marks in their bins showing how deeply certain tonnages fill it. Repeat-

Rusty Sled

By Harry Elmore Hurd

So far from town that few men pass,
I came upon a traverse sled
Getting nowhere in the grass:
Worm-eaten pole and weathered bed
Gave evidence of long disuse.

Who left it there to rot and rust?
He must have had a good excuse,
Like war or sickness, to intrust
His property to thieving time
So long ago that shrub and tree
Possess the fields and briers, climb
About the sled tenaciously
As though they owned it.

Something must
Be keeping him who owns the sled:
He would not leave it there to rust
Like something worthless . . . some-
thing dead. . . .

ed short deliveries make continuous losses; repeated full deliveries, if you get them, will result in dividends amply repaying you for building a measurable and dependable coal bin.

HOW IT FEELS TO WORK IN LITENTUFS

Fly through chores in the footwear that's light—
EASY on your feet, good for **HARD** wear!

OF COURSE, you won't really be able to float through the air! But what a relief when you change to the Original Goodrich Litentufs! When you feel how light and flexible they are—how they stretch—how easy they are to slip on and off. So comfortable—always snug at heel and instep—actually giving with every movement of your foot!

You'll have another reason to be proud of your good judgment in getting Litentufs, for they are built extra-tough by Goodrich's own special process. You get long money-saving wear! Why not drop in at your dealer's today?

POTATO GROWERS Hope for Cold Weather

By H. E. BRYANT,
Presque Isle, Maine.

DURING the past two weeks the potato market has held steady at present low prices, but the movement through the retail channels has been slow. Potato men in both the terminal markets and growing sections are looking forward to an increased demand as soon as the weather becomes colder. Even the short cold spell of last week improved the movement somewhat. Reports from New Jersey indicate that approximately 70 to 80% of their crop has been moved. It will take some time yet to clean up their holdings. Prices on Jersey stock remain unchanged at 80-85c per hundred. Long Island holdings now are probably about as large as their total crop of last season. They are dominating the New York market, with prices ranging from 80-95c hundred delivered, depending on variety and quality.

Harvesting About Completed in Aroostook

Harvesting operations are practically completed in Aroostook County. It is true that a few potatoes were in the ground during the freeze and snow storm of last week, but the damage was very slight. Shipments out of Maine continue light. The total up to October 26th was 1235 cars compared to 2764 cars up to the same date last year and 7250 in 1937. It is estimated that approximately 1200 cars have been diverted to starch factories in Aroostook County due to the Starch Diversion Program. When this factor is taken into consideration we must realize that the movement in Maine is nearly up to last year's figure. The writer feels that even so, Maine growers should be moving stock much faster. Last year we got by with light shipments early because of a light crop. With 45 million bushels we cannot expect a waiting policy to be as successful as last year. In 1936 Maine had a 45 million bushel crop and up to October 26th had moved a total of 7808 cars. The movement out of Maine will have considerable effect on prices

in the entire Northeast during the winter months.

Prices to growers in Aroostook range between 75-80c per barrel bulk. The price is pegged for the time being at this level as a result of the Government subsidized starch program whereby growers obtain 80c for potatoes grading U. S. No. 2 or better. This price is higher than can be justified by shipment to most terminal markets. As a result of this high price level and competition of other areas, distribution out of Maine so far has been confined to a few markets in Ohio, Pennsylvania, Michigan and Upstate New York.

It is reported that potatoes in the ground were damaged by frost in Upstate New York last week. If true it will reduce an already short crop and should mean higher prices for growers of that area.

As pointed out in previous issues of this paper, with an estimated 389 million bushel crop and a concentration of supplies in the Northeast, the ceiling on this potato market cannot be very high this year. We have also ventured the opinion that prices could not improve materially for the next two months. We make this prediction because of heavy supplies in New Jersey, Long Island and Connecticut, which areas cannot store potatoes in very large quantities and therefore will have to move stock into trade channels quite freely. We also must recognize that local supplies will be available for some time yet.

On the other hand, some people are taking the attitude that any change will have to be for the better due to the following reasons: Prices are so low that they cannot drop materially; people are going to work; cold weather will improve demand. We are inclined to agree with this viewpoint, but we do not believe that these factors are going to have an effect on a long time trend and hesitate to make any definite predictions too far in the future due

(Continued on Page 23)

Severe Freeze Damages New York Potatoes

With the temperature registering 10 degrees in some of the central and western New York potato sections as early as October 19, potato growers as well as growers of other crops realized that a very unstable growing season had ended with one of the most severe freezes ever recorded in October. The fall in temperature was very sudden and the damage to the crop has been aggravated by ten days of below freezing temperatures every night.

Those fields which were fairly well hilled, upon being dug are showing from 20 to 50% freezing. How extensive this damage is or what effect it will have on the total production for the state is hard to estimate because at this writing, October 29, many growers haven't considered it safe to do any digging but are still hopeful that the warm weather will follow giving them an opportunity to move their crop. By actual count one grower who finished his digging regardless of weather threw away at least 50% of his potatoes and those he saved are showing considerable injury.

One of the sad features of a severe freeze is that the affected tubers can not always be detected promptly and break down in storage. As a result of this process tubers throughout the bin which may be sound are so badly af-

fected in appearance that they are unsuitable for market.

Growers of early potatoes reported pretty good yields although in most cases not unusual. Most up-land growers were forced to plant late due to a wet spring. Blight took its toll and on August 25th frost killed some fields. As a result many growers of small fields of potatoes are finding it more economical to buy their potatoes than to dig a crop of very small tubers. On the other hand many of our expert potato growers who are giving more details to potato production report very good yields and high averages for their particular farms. Some sections of western New York report highest yield in years of good quality potatoes, while only a few miles distant we find very discouraging crops.

It seems to be the opinion of potato growers who think about such things that the up-state New York crop is going to total much less than last year. This is not reflected in market prices at the present time. In fact marketing of the local crop is severely handicapped by low prices for high quality potatoes being shipped in from Long Island and New Jersey. Those sections report the highest yield in years and they must find a market before their weather gets too severe—H. J. Evans.

On An Eastern New York DAIRY FARM

ON A SIDE ROAD a little way from Route 9 in Warren County, New York, you will find an attractive dairy farm of 173 acres owned by William Taylor. Twenty-six grade Holsteins make up the dairy, and right now twenty-two of them are being milked. Some years ago Mr. Taylor sold an entire herd because they were badly affected with Bangs disease. He has had no trouble with that disease since, and the herd, of course, is accredited as free from TB.

"Where do you get your replacements?" I asked.

"I raise them," was the reply. "I find that it is hard to buy heifers that are grown in accordance with my ideas, and anyway I believe, with the attention I have given to improving the herd, I can raise better producers than I can buy."

"I do not turn calves out on pasture until they are about a year old. Even if the pasture is good, the flies bother them; and I know I can make them grow faster by keeping them in the barn."

On any dairy farm the problem of growing roughage is of prime importance. Mr. Taylor has improved his pastures by putting on superphosphate and some manure; and on fields that can be mowed, he cuts the grass when it gets too high.

"I don't seem to be able to grow clear alfalfa, but I always mix some alfalfa into the seeding. I figure on making the first cutting as close to the middle of June as I can."

"When it comes to haying, we have one condition that is a little unusual. At least early in the season, before we get too much hay in the barn, we can get seven loads of hay under cover at one time. That saves a lot of time because when it looks as though it might rain, we can just drive it in and unload it the next morning while there is still too much dew to work in the field."

"For silage, I have been growing Sweepstakes, although recently I have been changing over to 29-3."

"What are the essentials of growing a good crop of silage corn?" I asked.

"If you can get your land so it will grow clover, you won't have any trouble growing corn. I use the farm manure on the new seeding, and I also use about 300 lbs. of 5-20-5 fertilizer to the acre. Then it is just a question of keeping out weeds and watching it grow."—H. L. C.

Grange Gleanings

(Continued from Page 10)

thing unusual. Every one of the 13 officers of the State Grange and the two members of the executive committee whose three-year terms expired, were reelected for another two year term. Most of the State Grange offi-

cers have served more than two years, and State Master Henry A. Stoddard, who is returned for another term of leadership, has already served for six years as chief executive in Green Mountain State Grange activities.

RHODE ISLAND PATRONS are very proud of the fact that at one of their Booster Nights to which Governor William H. Vanderbilt had been invited the Chief Executive sent a cordial greeting, in which he paid high tribute to the Grange contribution to the best things in Rhode Island, and added, "The Grange is an organization which stands on its own feet and does not depend upon any subsidy from any source whatever. The thing that appeals to me most about the Grange is the fact that you do things yourselves."

SHILOH GRANGE, No. 16, in New Jersey, made a great success this year of its annual fair and bazaar, in which handiwork and flower exhibits were especially stressed, and excellent products assembled. The merchants of the community responded heartily in providing prizes for the exhibits, and all the other civic groups in that vicinity backed up the Grange in making the fair very attractive.

NEW HAMPSHIRE has three more new Juvenile Granges of recent institution, and again the one responsible for them is Deputy Marion Atwood, who has done such valiant work in Juvenile Grange promotion in the Granite State. The three new units were organized within a 12-day period, and Deputy Atwood conducted all the institution exercises, also installing the new officers.

22 SPECIAL SESSIONS of the New York State Grange, covering all parts of the Empire State for the conferring of the sixth degree previous to the Seventh Degree at the National Grange session on Thursday, November 14, resulted in classes whose total was 4,558 candidates. Heading the list was the meeting at Ithaca, when the class numbered 387; with the meetings at Glens Falls and Pine Plains both close behind with 340 each; and those at Binghamton and Utica running 322 and 314 respectively.

SHERMAN K. IVES, State Master of Connecticut is a thorough believer in Juvenile Granges and is heartily supported in this view by Mrs. Ives. Both have proven their faith in this phase of Grange work by organizing within six days' time three new Juvenile units in the Nutmeg State. These are located at Bethlehem, Mystic and Colebrook, and in each case with a substantial charter list of both active and honorary members.

Grass Silage — Investigation by state college farm management department of use of grass silage by Massachusetts farmers in the past season shows an average yield of 7.2 tons per acre on farms covered by report.

Clover and grass together accounted for more than 38 per cent of the 10,600 tons put up, with clover and alfalfa in second place, accounting for 22.5 per cent of the total. Small grains, millet and Sudan grass, and grain and legumes were other combinations used.

Twenty-nine dairymen reported that grass silage increased their milk production, while 11 others reported no increase. Some dairymen stated that the cows were in better physical condition and the milk-color was better when grass silage was fed.—W. E. Piper.

"Don't let her do that, Hiram—it might sour the milk."

THE WONDERFUL DE LAVAL MAGNETIC SPEEDWAY MILKER PROVES ITS SUPERIORITY

- 1 BEST, FASTEST, CLEANEST MILKING
- 2 SAVES MOST TIME AND LABOR
- 3 PRODUCES HIGHEST QUALITY MILK

BECAUSE the wonderful De Laval Magnetic Speedway Milker so quickly and convincingly proves its all around superiority, thousands of outfits are already in use — and more new De Laval Milkers are being installed than ever before.

Best, fastest, cleanest milking—uniform, regular rhythmic milking speed and action controlled by magnetic force—highest herd production—largest savings of time and labor—cleaner milk—complete dependability—these are some of the all-important features that constitute De Laval Magnetic Speedway superiority.

The De Laval Magnetic Speedway proves its superiority on the cow—on every cow in the herd.

De Laval Cream Separators

World's best and most complete line of separators. World's Standard Series unmatched for performance, quality, convenience and beauty.

De Laval Junior Series offers De Laval quality and performance in smaller capacity machines and which can now be furnished with electric motor drives. Remember—there is a De Laval quality separator of a size and style for every need and purse.

SEE YOUR DE LAVAL DEALER TODAY FOR A FREE TRIAL DEMONSTRATION

The only way to measure and appreciate the unequalled performance of the DE LAVAL MAGNETIC SPEEDWAY is to use it on your own cows. Your local De Laval Dealer will gladly arrange such a free trial—with absolutely no obligation to you. See him today.

"GO AHEAD!"

Liberty and Independence Forever"

— DAVY CROCKETT

*We're Glad We Came to America,
says this Czech Family . . .*

"There's no country for us like the good old U. S. A.," says Stephen Boor, League member of Horseheads, N. Y.

"My father, John Boor, and we boys, John, Jr., Michael, and myself, were born in Czechoslovakia. Father owned about 30 acres there and a grist mill. But we wanted to own land, a lot of land. We felt crowded in the old country. So we came to America, 27 years ago, locating first in Texas, then coming back to Pittsburgh, where father worked in a factory.

"One day he saw a 200-acre farm in Chemung County advertised for sale. We bought it and moved in 22 years ago. Today I'm living on that farm. Father lives with me.

I also run an adjoining farm of 125 acres. My two brothers, John, Jr., and Michael, live on farms nearby. All four of us are members of the League. We believe in cooperation. We believe in America. What's happened in Czechoslovakia we don't know. We haven't heard from our relatives there for a long time."

IT WAS March 5, 1836. Inside the Alamo Mission at San Antonio, Davy Crockett and a handful of Texans — outnumbered 20 to 1 — were fighting for their lives. Hope of reinforcement had vanished. Crockett scrawled this in his diary: "March 5 — Pop, pop, pop. Boom, boom, boom throughout the day. No time for memorandums now. Go ahead. LIBERTY AND INDEPENDENCE FOREVER."

On March 6, the Mexican band played the Dequelo, music which means "no quarter." And 4,000 Mexicans swarmed over the crumbling walls where six wounded Americans lay waiting. There the story ends. No one knows what happened. But one of the most colorful figures in American history died that day, fighting with his last breath for "liberty and independence forever."

"Be sure you're right, then go ahead," was the motto Davy Crockett lived by. It took him from a backwoods farm to Congress. And it took him to his death. When—surrounded by the Mexican army—he wrote, "Go ahead. Liberty and independence forever," he was sure he was right.

Farmers everywhere have shared his confidence. They too have risked greatly for independence. For almost a quarter of a century, farmers of the Dairymen's League—outnumbered more than 20 to 1—fought for the right to rule their own lives, to be free from the domination of dealers.

Other farmers and the government were indifferent at first—just as other Americans and the government were indifferent when Davy Crockett died. Then there came a change. And just as an avenging American army swept into Mexico crying, "Remember the Alamo," so aroused farmers in the New York milkshed joined their local co-operatives crying, "A LIVING PRICE FOR MILK." Both the State and Federal governments heard the cry of those united farmers. The Rogers-Allen bill, the marketing orders, the surplus control plan all followed as a result.

Today the southern border of the United States is safer because Davy Crockett died at the Alamo. And all farmers in this milkshed are more secure in their homes and pocketbooks because of the struggle of the Dairymen's League. So let's all be thankful for what they did. Let us all resolve that the gains so dearly won are not taken away from us, now or forever. We know we're right. LET'S GO AHEAD!

Published by

To Market—To Market

(Continued from Page 1)

Bet you don't know what a "pluck" is. I didn't either until I looked it up. It means the heart, liver and lungs.

More recently, visitors to Albany will recall the old market in the center of the city which has been in operation for many years. Here came farmers, first with their horse-drawn vehicles, and later with their trucks loaded with all of the varied products of the whole countryside; and here in this city market those same farmers sat for long hours waiting to dispose of their products. Prices which they received were generally too low, and the labor and time involved to dispose of their produce on this market were something to discourage even the hardiest.

Business on a Cabbage Patch

It became evident to farmers and their local organizations that they must have something better in the way of a market. Out of that conviction, the Central Market of Menands was set up and opened for business on July 16, 1934, when the Capital District Co-operative Association, Inc., was created for the purpose of taking over the project. The Menands site was originally just a cabbage patch. It is located halfway between Troy and Albany on an area of 25 acres, where more land is also available later for expansion.

Menands Market has the combined facilities for marketing produce shipped by railroad, water and truck, as well as facilities for handling produce grown and trucked in by the growers themselves. On this original cabbage patch site, the selection of which was bitterly criticized, there is now a roaring business, owned, guided and controlled by farmers themselves. In this food-handling center there are also facilities for handling feeds and fertilizers, farm seeds and equipment, together with business offices for produce brokers, telegraph offices, banking rooms, and restaurants. Plans are already contemplated for the establishment of wholesale grocery houses, meat packing plants, cold storage and other food handling facilities.

Farmers Licked the Opposition

The whole produce business of Albany is practically all relocated at Menands. Three large commission houses with rail connections have been added this season. The jobbers' stores are completely occupied, and plans are under way for the expansion of railroad facilities and the adding of a cold and dry storage plant and packing house. Probably the most important addition already made is a fine store built by the Grange League Federation Exchange to handle its egg and poultry business.

When the market was taken out of the City of Albany and established at Menands, and after it became apparent that it would be a success, Albany city officials set up the bitterest kind of opposition. They viewed with alarm the transfer from the city to Menands of a

business amounting to a total of more than \$10,000,000 a year. Naturally they wanted to keep this business within the city limits and in their old market. But for years the surrounding farmers had begged these officials to enlarge and improve the city market without avail. So the aroused farmers decided that the time had come to do something different; and when farmers once get their dander up and work together, they can always do things and go places. They licked the bitter competition and the opposition of the city. The Farm Bureaus of the local counties, and particularly the Granges, supported the farmer leaders of Menands Market. The Regional Bank for Cooperatives, with headquarters in Springfield, Mass., loaned the farmers 60 per cent of their financial needs for Menands at a low rate of interest. And so Menands Market has grown and prospered because its farmer leaders had faith and determination and because they were backed by the united support of the entire farming community.

Short and Snappy Trading

Farmers who own and direct the Menands Market have a right to be enthusiastic. The operation itself is interesting and efficient. Farmers, with their trucks, collect in a long line at the gate. Promptly at 2:30 P. M. the whistle blows, and the farmers drive their trucks in and find their places on the market. Buyers are not permitted to circulate through the farmers' market until another whistle blows at 3:00 P. M. During this half hour the growers arrange their displays, size up their offerings, exchange views on prices, and decide what to ask. Then at 3:00 the buying and selling start.

The buyers are given three-quarters of an hour to make their purchases. No deliveries are permitted until 3:45. In this short time buying is speeded up, which helps to stiffen prices. There is little opportunity for going from one seller to another to beat down prices, because the buyer knows that he has only a short time to make his purchases and must buy promptly in order to get what he wants.

I was interested to see the market in action when the signal was given for the delivery of produce. Instead of farmers trucking their deliveries by hand trucks or carrying them on their backs, they draw out of their stalls and deliver direct from their trucks to the buyers' trucks (see picture). This again speeds up operation and reduces cost. It also results in the produce being handled more carefully, which is important with perishable stuff.

Usually, practically all of the heavy buyers have secured their loads and loaded them ready to leave the market before 6:00 P. M. Many move out at 5:00. This is some contrast with the old Albany market where it often took a farmer from three to six hours even to find a place on the market, and several hours to sell and deliver. On peak

days, when there have been as high as 400 farmers at the market, the volume of business has been estimated at 400 tons.

When 400 Farmers Meet 300 Buyers

Now, see what this means when there are 40 or more different kinds of produce sold on the farmers' section, with 400 farmers on one side and 300 buyers on the other. That is real marketing. All business is on a cash basis. There is no credit and little bookkeeping. Every man has to be on his toes in order to keep up with the procession.

The G.L.F. egg business on this market is a big business in itself. During the past five years the G.L.F. has developed a business amounting in total to \$231,000 in 1939. It handled 26,400 cases of eggs, besides live poultry and other food products.

I have always maintained that it was foolish to talk about growing two blades of grass where one grew before unless both blades could be sold at a profit and a living price to the farmer. Farmers know how to grow stuff. What they need is help to sell it. Consumers also profit from good markets. A good central market like that at Menands, operated and controlled by farmers, brings the producer closer to the buyer and, therefore, to the consumer, shortens and cheapens distribution, and is one answer to the marketing problem.

It's a Date!

(Continued from Page 3)

Catalina Island, where we'll step ashore at Avalon and hear the famous chimes ring out their welcome to us. Incidentally, the scenic background at Santa Catalina is so like the South Sea Islands that many South Sea movies have been made there.

The trip to Carlsbad Caverns National Park will come after we reach El Paso, Texas. Large air-conditioned motor coaches will take us to this great national park which is 750 feet below the earth's surface! These marvelously beautiful caverns, with their countless stalactites of unbelievable beauty, were first discovered only 39 years ago by a cowboy, and it was not until 1930 that the government created a national park there. There are broad, dry, easy trails throughout the caverns and exit is made by elevator. Temperature there is always the same, 56 degrees, so that only a light wrap is needed in the way of a coat.

Other high spots will be our visits to old San Antonio, home of the Alamo, and to the South's most fascinating city, New Orleans, where the old and the new world meet. In our next issue we hope to publish a complete itinerary of this marvelous trip. In the meantime, if you think that you can possibly come with us on this tour, fill out the blank on page 3 and mail it to E. R. Eastman, Editor, *American Agriculturist*, Box 367-T, Ithaca, N. Y. Then as soon as the folder describing our tour is ready, we will mail it to you. This will bring you full details, including the exact price of the "all-expense ticket", which includes every cent the trip will cost you, except for such personal items as souvenirs and laundry.

The cost is reasonable, less than it would be if you were taking the trip alone; and remember that when you travel with us, you don't have to worry about spending more than you bargained for. In fact, you don't have to worry about anything. We look after every travel detail, and guarantee you the time of your life.

Decide now to come with us and send in the blank today. It is not too early to make your plans, for if anything happens later to prevent your coming with us, we will promptly cancel your reservation and return any deposit paid.

Sure preservation
inviting color—
delicious taste

All assured by the "exclusive ingredient" in Sterling Sugar Curing Meat Salt

THE "exclusive ingredient" in this quality meat curing salt is the unusual experience of the producer in developing new and better products and processes for meat curing and preservation. For instance, many of the largest and best known meat packing companies make sure of quality and flavor by using the correct grades of salt and the famous Lixate Process produced by International.

The same skill, the same experience, the same patient research so helpful to leading packers of meats, produced Sterling Sugar Curing Meat Salt for you. That's why you know that it is dependable. Your home cured meats will be safely preserved, with appetizing color and delicious flavor. All this is gained by one simple operation, by this balanced formula. Take no chances with your winter's supply of meat. Ask for Sterling Sugar Curing Meat Salt by name. Sold in 2 lb. 2 oz. cans, to cure up to 20 lbs. of meat, and in 10 lb. cans to cure up to 100 lbs. of meat.

● VALUABLE PREMIUMS

In each 10 lb. can of Sterling Sugar Curing Meat Salt is a coupon which entitles you to a carbon steel butcher knife, a blued-steel bell scraper for removing bristles, or both, at about half the usual retail price. Get these before your next butchering.

● STERLING SEASONING

For delicious sausage, or for meat loaf, roasts, poultry dressings and other kitchen uses, is packed in 3 oz., 10 oz. and 7 lb. 8 oz. cans.

● SALT FOR LIVESTOCK

Give young livestock a good start in life—help all livestock to grow and thrive better, by proper feeding of salt. The International book, "White Gold For The Farmer's Profit," sent free on request, tells how salt can produce more profit for the investment than almost anything else bought for profit on the farm.

INTERNATIONAL SALT COMPANY, Inc.

INTERNATIONAL
SALT
"WHITE GOLD"
for the farmer's profit

It is becoming more and more difficult to sell loose hay. Practically all of the hay purchased is moved by truck and buyers demand that it be baled. One of the newer practices in hay-making is to bale in the field. Of course, a large acreage is necessary in order to afford a hay baler like the one illustrated, but frequently it is possible to hire the work done on a custom basis. If necessary, these bales can stand in the field for some time and shed rain like a duck's back.

Even where hay is not sold, baling solves the problem if storage room is scarce.

Northeast Markets for Northeast Producers

nual Eastern Meeting, Kingston.

By J. F. (DOC.) ROBERTS

JUST why should *American Agriculturist*, a farm paper devoted to the Northeast, carry a livestock column? They know that in the one month of September of this year, there were killed 247,038 sheep and lambs, that had been brought into the state of New York alive and which were sold to Northeastern people. On top of that, there were killed 178,308 hogs which had been brought into the state alive; 66,348 calves and 38,405 cattle; and this is only the kill under Federal Meat Inspection in the New York City area. It does not include those killed in Boston or in any other of the northeastern cities or towns. This is a total of 530,099 animals killed in the New York area for just the one month of September, this year.

The question now arises, where do all of these animals come from, and how many of them are being furnished by northeastern agriculture itself? Figures show that the Northeast does not raise enough meat animals to supply its own section for over a two-week period in any one year. All of our State universities have livestock extension departments which are encouraging the raising of meat animals, and yet the progress is slow.

I am asked a good many times why this should be, and why the Northeast, with all the available pasture lands and hay, is not supplying more of its own meat animal demand. Probably the main reason is that the average northeastern farmer today has not been raised with a thorough meat animal production knowledge, or a knowledge of buying and selling meat animals. This is definitely true as compared to the livestock knowledge of our grandfathers and great-grandfathers, and therefore there is a reluctance to get into meat production. Then, of course, there is the matter of fences, parasites, over-emphasis on milk production, and cash crops. From all this, it can readily be seen what a tremendous field the Northeast has before it for livestock meat production.

* * *

Hogs continue to sell at low prices, partly because they have been, and are continuing to be, over-marketed. During the month of September, this country consumed more pork than in almost any month in its history. It is believed that hogs will continue to be over-marketed for the next 30 or 40 days, and that soon after the first of the year, or possibly before, hogs will not be marketed fast enough to meet the demand, and the entire situation will go on a decidedly up-price basis. Do not get caught without any hogs this winter and next spring. In other words, do not over-market yourselves.

Cows for meat purposes have met quite a sizable reaction in price within the past few weeks and while there will continue to be a good demand for them, they will not meet the advance that other classes of livestock are almost sure to. The reason is that there is about 10% more cattle on feed this year than a year ago and cows and heifers have not been over-marketed. In fact, they have been under-marketed for the past year or so. Therefore, there is no opportunity for a short supply.

Sheep and lambs are in a very strong position, not because of lack of numbers, but because they are a two-way animal and wool has advanced very rapidly in the past few weeks. In fact, pelt values to the packer are now about 40% higher than they were six or eight

weeks ago, and wool is bringing from 40c to 47c a lb. on farms at the present time. This, coupled with no more on feed than a year ago, and with the anticipated increased demand for meat, will undoubtedly result in both sheep and lambs working higher. In fact, they are selling too low now.

The livestock picture in the Northeast deserves more interest, energy and attention.

Calf Losses Can Be Controlled

(Continued from Page 8)

ed in reducing our calf losses by more than 75 per cent.

The accompanying drawings show the floor plans for one of the brooder houses as well as a cross section. In some cases it will be more convenient to build a double unit with a solid partition in the middle. The double unit can be built for less money than two separate houses.

The following are a few details of construction we believe important to observe.

1. Each stall should be surrounded by a 6-inch curb.

2. The stall fronts should be solid, with the exception of the door which is built of slats to permit air circulation in the pen.

3. The side-walk should be insulated with 2 inches of insulation. The ceiling

can be insulated with sawdust or shavings.

4. In cold climates the ceiling should not be more than 7½ feet high.

5. Avoid openings on the cold side of the barn.

6. The Fairbanks and Goodman ventilation system, consisting of side wall intakes and flue out-take, has proven highly satisfactory.

7. The walls of the feed room should extend to the ceiling so that this room provides a storm door entrance into the building for use in cold weather.

8. The barn should be wired heavily enough to permit the use of a small electric heater in severe weather, but no other means of heat is necessary.

9. In construction, avoid as far as possible all corners and cracks that would make the unit difficult to clean and disinfect.

10. The large door at the end of the unit should be insulated.

11. The interior of the barn should be finished in a good grade of water-proof varnish which is not only attractive and cheap, but will withstand washing and cleaning.

12. Locate the barn on a well-drained spot where there is adequate space for an outside exercise yard for each unit.

13. The roof should be constructed quite steep so as to provide overhead storage for hay and straw.

Distillers' and Brewers' Dried Grains for Lambs

By JOHN WILLMAN

DISTILLERS' corn dried grains and brewers' dried grains are widely used in rations for dairy cattle, but there has been little definite information concerning the value of these feeds for sheep or lambs. A number of commercial lamb feeders in the western part of New York State have used some of these feeds for several years. These feeds, which are rich in protein, are available in large quantities and are sometimes cheaper than grain in this part of the country. The experiments conducted at Cornell University were planned to determine their value when fed as a partial substitute for corn and also as a protein supplement.

Three separate experiments have been conducted. The experimental lots each consisted of at least twenty-one white-faced western feeder lambs. The average initial weight of the lambs used in these trials has been between fifty-five and sixty pounds and the average final weight per lot has been approximately ninety pounds. The lowest average rate of gain per lot in any one year has been about 0.35 pounds while the greatest average gain was about 0.42 pounds per head daily.

The lambs in all lots were offered the same amount of hay. The amount of concentrates offered was varied as the feeding period progressed so that as

nearly equal average daily gains as possible were made by all lots. This method of experimentation made it possible to learn just how much of the feed to be tested was required to yield the same amount of animal products as was produced by a definite amount of the standard feed, which in these trials was shelled corn.

The results of the three experiments indicate, in so far as the amount of feed required for 100 pounds of gain is concerned, that distillers' corn dried grains are equal or slightly superior to shelled corn when used as a substitute for one-third of the shelled corn in the ration. On the basis of feed required for a unit of gain, 100 pounds of distillers' corn dried grains fed in this manner probably are equal in value to about 105 pounds of shelled corn. An average of the three experiments indicates that 100 pounds of brewers' dried grains when fed in a similar manner, are equal in value to about 97 pounds of shelled corn.

During the two most recent experiments one lot of lambs was fed a concentrate mixture of one-half distillers' corn dried grains and one-half shelled corn, by weight. The results of these tests indicate that this by-product feed has a much lower value when fed at this high level than when fed as a substitute for only one-third of the corn in the ration.

Distillers' corn dried grains and brewers' dried grains gave satisfactory results when fed as protein supplements to a ration of shelled corn and first cutting alfalfa hay. These supplements seemed to give about as good results as when a similar amount of total protein per lamb daily was supplied in the form of a mixture of equal parts, by weight, of linseed meal and cottonseed meal.

For More Twins

Is there any proof that the practice of flushing ewes has any merit?

Yes. Flushing is the name given to the practice of feeding ewes liberally for at least two weeks before the breeding season and continuing it until after the ewes are bred. Careful checks have shown that this practice will increase the number of twins produced.

"—an' then you say it comes out here?"

WATCH OUT for PUFFS and STRAINS when teams are soft—they may mean COSTLY LAY-UPS—

Shoulders sore, hocks puffed. Just the luck when there's work to do. But wise farmers use Absorbine at first sign of swelling.

Absorbine's action tends to speed up local circulation. This helps to wash out "muscle acid" that causes soreness and swelling. Congestion is reduced often within a few hours.

It is also used to relieve windgall, collar gall, fresh bog spavin and similar troubles. It will not blister or remove hair. \$2.50 a long-lasting bottle at all druggists, or postpaid.

W. F. Young, Inc., Springfield, Mass.

Putting it off, prepare now to fight
COLDS ROUP BRONCHITIS

Don't wait for colds, roup, and bronchitis to kill YOUR birds and profits. Start NOW to dust your birds with B-K Powder when the first symptoms of these diseases appear. It makes them sneeze and cough, loosens mucus, and helps to relieve congestion and prevent strangulation.

BETTER THAN LIQUID SPRAYS

Poultry experts prefer the DRY DUSTING method of B-K; makes mass application easy; avoids possible excessive moisture risk from liquid sprays in cold weather.

ADD B-K TO BIRDS' DRINKING WATER

One sick bird can endanger your entire flock. Add B-K Powder to flock's water daily. Use B-K Powder frequently, according to directions, in coops and brooding houses to promote higher sanitation and to aid in preventing spread of diseases.

NEARBY MARKETS for NEARBY POULTRYMEN

Back from Hawaii By L. E. WEAVER

MORE THAN a year ago I embarked on a glorious adventure. I closed my desk in the Poultry Building at Cornell, put out of my mind the twice-a-month stories for *American Agriculturist*, also the affairs of Weaver Brothers' farm. I turned my back on

L. E. Weaver

all this, confident that other hands would carry on, and looked forward with enthusiasm to a year in Hawaii, the Paradise of the Pacific.

While I enjoyed every minute of the trip, it was not taken primarily for pleasure. I spent a year teaching poultry in the university there. This was on an exchange basis with Professor Bice, whom some of you have met during

his year here and who took my place at the College of Agriculture.

No one, I believe, is ever entirely indispensable. There is always someone who is able to fill his shoes, and probably to do a better job. As far as I can see, things have gone about as well in my absence as though I had been here. I don't intend ever to deny myself the delights of travel because of any delusion that I cannot be spared.

Scattered over the *American Agriculturist* territory are many fine people whom I have met through by extension activities and this column. I feel sure that they will pardon me if in this issue and perhaps one more, I say very little about poultry but tell about my trip.

From Ithaca to San Francisco I went by car. Prof. E. A. White had recently retired from his position as Head of the Department of Floriculture and Ornamental Horticulture at Cornell. He was starting on a trip around the world and we combined forces. In his car, a coupe with plenty of room for baggage, we drove across the country. We took turns at the wheel, changing every 100 miles and for the most part we stayed at tourist cabins. West of the Mississippi they are called "Auto courts" or "Motels" and are more elaborate than in the east. We also stayed at tourist homes and at hotels. All were satisfactory when we took pains to select them in quiet locations.

We stopped off at the Poultry Congress in Cleveland. Then we headed for Denver, Colorado Springs, Pike's Peak, Santa Fe, Bandelier National Park with its cliff-dweller ruins, Grand Canyon, Boulder Dam, and spent a week in and around Los Angeles. Study a map and you will see that a much more direct route could have been selected, so the fact that we spent 15 days on the road does not mean much.

From San Francisco we went cabin class on the steamship "President Coolidge" of the American President lines. The fare was \$85. Had we gone first class, or in the choicer cabins of the cabin class, we would have had to pay between 100 and 200 dollars. The food and service were excellent, the trip smooth and restful. For a genuine vacation where one may relax completely, I recommend highly an ocean trip.

At Honolulu we had a choice of living near the beach as most tourists do, with swimming and sun-bathing always available, or staying in the residential section nearer the University.

Here, because of the higher altitude, the nights are cooler but rain is more frequent. We chose the beach and never regretted our choice even though I had to make the long trip between our apartment and the office by car or bus.

The war changed Professor White's plans. He could not proceed around the world, but after four months in the islands in which he gave a series of lectures at the University he made a long tour of Japan, the Philippines, the East Indies, India, Australia, New Zealand, then back to Honolulu, and to the mainland.

My hours at the poultry farm and in the office were from 8 a.m. to 4 p.m. That gave ample time for swimming, surf-board riding, and basking in the afternoon sun, but no chance to get outside of Honolulu during the week. Over week-ends I took hikes with the "Trails of the Mountain Club." I found what the mountainous section of the island of Oahu looks like. During vacations I made trips to other islands—Hawaii, Molokai, and Maui. No two islands are alike. Each has its characteristic points of interest; its own beauty spots.

I think it is unfortunate that so many who go to Hawaii fail to get to all the islands. They land in Honolulu and there they remain, and Honolulu is not at all typical of the islands. It is a modern city differing very little from any mainland city except in the appearance of its inhabitants. Distances between the islands and the cost of getting from one to another are greater than one expects. I suppose tourists feel they cannot afford the trips. Perhaps they think nothing could possibly be more delightful than to spend the days on the beach at Waikiki. And so the other islands are not visited.

I was fortunate. After my work at the University was finished I did not rush back to the mainland. I joined the Honolulu Cruising Club, and thus was able to get to all the outside islands at very reasonable cost, including return trips to those I had already seen. The trips were made in a forty-foot, two-masted sailing boat carrying, as a rule, about twelve people. I must admit that at first I was not a good sailor, but one has a marvelous appetite after a spell of seasickness. Furthermore there was no seasickness after the first few trips. I got a few pictures in color but it is not easy to get good pictures when one is on a rolling boat.

One real disappointment was in not getting to see Mauna Loa in action. This mighty volcano is on the island of Hawaii, two hundred miles from Honolulu. The only other volcanoes that have been active in the past one hundred years are Kiluea and Mauna Kea on Hawaii, and possibly Haleakala on the island of Maui. It had been several years since any of these had shown any activity, so when Mauna Loa started throwing up smoke and fiery lava through a crack in the floor of the crater it made headline news. Army bombers from Oahu flew over the volcano and took pictures. The Inter-Island Airways started carrying passengers over the mountain and circling the crater. Air currents were too erratic to make it safe to fly directly over the crater. All this time I was hoping that the eruption would continue until I could get over to the island on a trip which had been scheduled for a long time. At last the day arrived, but just a day too late. The flow had almost completely stopped and the planes were no longer flying. However, I did see Kiluea where over an

TURKEYS

HOLLAND FARM WHITE HOLLANDS—1940 breeders and 1941 poults. BELCHERTOWN, MASSACHUSETTS.

area of several hundred acres steam continually escapes from cracks in the ground and between the rocks. Here is a crater that looks as I had expected craters to look. It is an almost circular hole seven hundred feet deep, eighteen acres in area, and with perpendicular sides. No molten lava has been seen for years, but the floor of the crater is so hot that no one can, with safety, go down into the crater.

On the island of Kauai I saw a can-

yon that rivals in coloring the Grand Canyon of the Colorado, but it is only seven miles across. The Grand Canyon is thirteen miles from rim to rim. Many people are surprised to know that on the Island of Hawaii there is the second largest cattle ranch in the world. On this famous Parker ranch they grow Herefords that resemble the prize-winners at the International. It takes all these and many more to supply the beef needed for the islands.

Watch the "Leaks" That Steal Poultry Profits

THERE MAY be an occasional man who keeps hens for fun, but I have yet to run across a poultryman who didn't expect a little profit. Incidentally, if it is fun you want, you can get a lot more out of it when the balance sheet shows the proper difference between expenses and income.

When egg prices are good, I have often heard a poultryman say, "If prices would just stay like this, it would be fun keeping poultry, and I could make a good living." At such a time, there is one thing of which you can be sure—that prices won't stay that good. Consequently, it is a question of studying the business, and getting ready for the tougher times that are ahead. Those tough times were here this past summer. For the past few weeks the outlook has been a little more rosy, but it is still necessary to keep expenses as low as possible and to get the best possible price for your eggs.

No individual poultryman can do much to affect the price level at which he sells, yet there are a number of things he can do to improve his income. First comes culling. In my opinion, the most important factor in making profits is egg production per hen. Of course, the egg production of any individual hen is largely determined by heredity, but there is one way to keep flock production above 50 per cent. That is to cull out a few birds every time production drops below the 50 per cent mark. It is possible, of course, that you might end up without any hens at all; but even that would be preferable to keeping them and losing money on them. Any poultryman who has studied culling at all can go into a flock and pick out the non-layers.

The second thing is to prevent production slumps. That is not so easy because it really involves a lot of different problems. The house has to be kept dry and reasonably warm, and you must feed a ration that supplies the raw materials a hen needs to make eggs. Once these essentials are met, be sure to keep the hens' weight up to normal. There is just one way to do that, and that is to persuade them or cajole them into eating enough feed so that they won't lose weight. Marking a few hens and weighing them once a

week will give you a check on their condition.

To be profitable, a flock has to be healthy, but it doesn't pay to do too much doctoring. It is a question of following a program of sanitation, keeping the hens reasonably free of parasites, feeding them well, and then discarding those that haven't the stamina to keep in good health.

Labor is one of the big items in the cost of producing a dozen eggs, and some careful study will show you how to save steps. There is an old saying that time is money, but that all depends on what you do with it. Arranging your layout so that you can save time makes it possible for one man to care for more hens. That brings up another question—the profitable sized flock to keep. My own idea on that is that there are three profitable flock sizes. First is the home flock, kept primarily to provide eggs used on the farm. In the summer such a flock can pick up a good deal of its living.

Second comes the sideline farm flock. To come in this class, I think such a flock has to have at least 400 hens in order to make it possible for one man to care for them and make a profit. Third, of course, comes the commercial poultryman who has from 1,000 hens up, and makes poultry chief income.

Selling at Retail

As I have already said, an individual poultryman can't do too much about the price he gets, but he can do something. In the first place, he can take the necessary care in gathering and marketing eggs so that he will get top prices for them. That is a program which *American Agriculturist* has been hitting hard for the past ten years and much progress has been made.

The second thing a poultryman can do to get a better price is to supply the local market, either by delivering to retail customers or by selling to consumers at the farm. That takes time so it is not all gain, but where a man has a small flock, retail selling is the logical answer.

Too many poultrymen lose money by shipping eggs for which they get no pay. Never ship to a man until you have some check on his reliability. The Service Bureau is always glad to give this information. There are some signs of unreliability which you should keep in mind.

First, be suspicious of the man who solicits your egg shipments by promising you a cent or two above the going market price. He may pay for a few shipments, but the chances are that he will disappear owing you money.

The second good rule to follow is to avoid shipping to men who are not located in the egg market section of the city to which you ship. It is more difficult to check on the reliability of such buyers.

The third rule is this—once you have found a buyer who treats you fairly, stick with him.

"The real poultryman is not an in-and-outer. He realizes that the poultry business has its ups and downs, but he figures on sticking to the business and on trimming his sails when he meets bad weather.—H. L. Cosline.

"I'm waiting for American Agriculturist to come so Pop will be in a good humor when I show him my report card."

"The farmer won't be out today—nothing but wings could get over these snow-drifts."

"That's what you think—but he can get almost anywhere he wants by telephone."

THE fields are white with winter; the snow piled high from yesterday's storm; and you sit by the fire toasting your shins. There are fruits and vegetables in the cellar and hay in the mow for the cattle. And there is the merry jingle of the telephone; the welcome voice of neighbor or friend to make the day pleasant and full of good cheer.

GET ON THE RIGHT TRACK

WHETHER you need a product now or at some time in the future, get the habit of reading the advertisements in *AMERICAN AGRICULTURIST*. Get on the right track by posting yourself in advance. Learn the features of a good up-to-date radio, tractor, or automobile; read about quality soaps, breakfast foods, household equipment, furniture and the like. Make out your shopping list before you go to town and ask for the advertised brands. Then you know you are buying right, for only goods which the public has accepted as worth their price can be persistently advertised. This is especially true of advertisements you see in *AMERICAN AGRICULTURIST*, because only advertisements from dependable manufacturers are accepted. Mention *AMERICAN AGRICULTURIST* when you write to these advertisers.

DEMOCRACY IN ACTION.

G.L.F. farmers at their 20th Annual Meeting discuss their problems, town meeting style, from the floor. A portable microphone was passed to anyone who wanted to talk.

"Making Democracy Work", Theme of G.L.F. Annual Meeting

A G.L.F. army of farmers 5000 strong invaded Syracuse, N. Y., on October 24th and 25th to attend the 20th annual meeting of their organization.

There are few places in the state large enough for such a great meeting, but the problem was solved at Syracuse by using the large Coliseum at the State Fairgrounds. The theme of the meeting was very appropriate—*Making Democracy Work*, and in keeping with this theme the decorations for the occasion were red, white and blue.

Much of the first day was used by the delegates and the visitors to study the attractive exhibits of commodities handled by the G.L.F. President L. G. Kirkland opened the meeting in a talk in which he urged the delegates to guard against acquiring a "false sense of security because your organization has gained a good standing." Mr. Kirkland said that the challenge to G.L.F. farmers is to keep striving for better ways of making G.L.F. work.

An interesting part of the first day's meeting was the doodle-bug pulling contest. Nine G.L.F. patrons entered their home-made tractors in the contest, which was finally won by Floyd Peck of Freetown Corners, whose doodle-bug tractor registered a pull of 9¾ tons. (The record for teams weighing over 3000 pounds is a pull of two tons.)

Reports of the organization's business were made by Secretary E. V. Underwood and General Manager J. A. McConnell. Mr. McConnell pointed out that the steady support of the organization by G.L.F. patrons had enabled their organization to return to farmers patronage dividends of \$1,200,000 after setting aside ample reserves. Mr. McConnell emphasized the dangers of these uncertain times and warned that the preparedness program will have far-reaching effects on every organization and every individual, including farmers and the G.L.F. The General Manager also pointed out the dangers of a growing labor monopoly in this country. He said that labor had a perfect right to organize for collective bargaining, but he was very emphatic in his point that no labor monopoly should take away the right of farmers to choose employees in an organization run with farmers' capital, by farmers and for farmers.

The final part of the two-day session was a town meeting forum conducted by H. E. Babcock. Portable microphones made it possible for anyone who cared to, to enter the discussion from the floor.

One important subject brought up during the forum related to the storage of surplus grain in the Northeast.

Mr. Babcock reported that he and Mr. McConnell had tried to interest state and federal officials in the establishment of ever-normal granary bins in the areas east of Buffalo.

In case transportation facilities around Buffalo should be affected by war, the northeastern farmers would be cut off in a few days from all their supplies of grain. Grain storages in the Northeast would be insurance against this emergency. The G.L.F. adopted a resolution asking the G.L.F. to continue their efforts to get these surplus grain insurance storage facilities.

Directors Elected

Frank M. Smith of Springfield Center, N. Y., Edison J. Walrath, of Evans Mills, Ralph L. Culver of Laceyville, Pa., were re-elected to the Board of Trustees. Thomas W. Davis of Woodstown, N. J., and Leon Atwood of Champlain, N. Y., were elected to first terms on the Board.

Following the close of the stockholders' meeting, the Board of Directors met. Leigh G. Kirkland was re-elected president; Frank M. Smith was re-elected first vice-president; Edson J. Walrath second vice-president and

A.A.-Grange Cookie Contest News

TWO Grange brothers were among the thirteen contestants who took part in Onondaga County's Pomona Grange cookie contest. Maybe it was the number "13" that kept them from winning, but anyway the first prize was carried off by Mrs. Christina Stooks,

Mrs. Henry C. Peck, of Schuylerville, N. Y., winner of Saratoga County's Pomona Grange sugar cookie contest. Mrs. Peck was a charter member of Bacon Hill Grange, organized in 1897. She has held many offices in her Grange and is now serving her 18th year as Chaplain.

treasurer; E. V. Underwood was re-elected secretary.

Heuvelton Wins Judging Contest

Stock judging teams from 35 northern New York high schools competed recently in the 29th Annual Stock Judging Contest at the Canton State School of Agriculture. When the smoke of battle had cleared away, the team from Heuvelton, made up of Maurice Mix, Ellis Fishbeck and Glen Hastings were in the first spot. They also won last year.

Second place went to the Gouverneur team, followed in close order by Lowville, Hammond and Nedrow. In individual scoring, Hastings and Mix of the Heuvelton team were first and second, and Howard Richardson of Gouverneur was third. Results of the contest were given and awards made at a banquet in the evening.

New York 4-H Judging Team At Harrisburg

New York's 4-H dairy cattle judging team placed second among teams from 27 states at the National Dairy Show in Harrisburg. Michigan won first honors.

Though denied first place in team ranking, New York's representative, Douglas Stanton of Greenville, Albany County, was the high scoring individual in the contest. Other members of the Empire state team were Robert Thompson and Llewellyn Mix, both of Heuvelton, St. Lawrence County.

The New York team placed first in judging Brown Swiss, second in Ayrshires, fifth in Guernseys and Jerseys, and ninth in Holsteins. Individually, Stanton was second in judging Jerseys, and Thompson was second in judging Ayrshires.

The records show that the New York boys made the highest score ever achieved by a New York team at the National Dairy Show. Their scores have risen steadily ever since oral reasons were made a part of the judging contest.

A college team from Illinois placed first in inter-collegiate judging, as the Cornell team trailed. Stevenson Close of Ithaca placed fifth in the contest, but was first in judging Ayrshires and fourth in judging Guernseys. Other team members were Mervin Liebowitz

of Middletown, who was ninth in judging Guernseys, and Ralph Sigsbee of Tully. Contestants had to judge 15 classes of cattle.

Agricultural Conservation Checks

Carl Wooster of Union Hill, New York, Chairman of the New York State Agricultural Conservation Committee, tells us that New York State farmers received about \$4,580,000 as payments for taking part in the Agricultural Conservation Program. During the year, 76,000 New York State farmers were enrolled, and the average conservation adjustment payment is about \$60 per farm.

A large part of these payments were for materials used to improve soil fertility. 277,408 tons of lime were used and 20,925 tons of superphosphate, the value of these materials amounting to \$1,677,000.

Payments for soil building practices totaled \$3,218,000, and payments per acreage stabilization included: \$110,000 for wheat, \$141,000 for vegetables, \$355,000 for potatoes, and \$10,000 for tobacco.

Soil Conservation Districts

Four counties in New York State have been declared Soil Conservation Districts under a new law which went into effect last spring. They are Schoharie, Yates, Schuylerville and Chenango.

L. D. Kelsey of the New York State College of Agriculture reports that other counties showing interest in Soil Conservation Districts are: Madison, Steuben, Tompkins, Seneca, Wyoming, Erie and Montgomery.

Subsidized Milk for N. Y. City Schools

A plan was adopted October 14 whereby certain school children in the City of New York are supplied with milk at a cost of 1c a glass. This milk is paid for by dealers at 57c a hundred less than Class I price, and the Federal Government subsidizes part of the cost of the program to the extent of the difference between 4c a quart the children pay and the actual cost of the milk.

Administrator Cladakis states that during the first week this was tried, children in grade schools increased milk consumption six times and high school students drank twice as much milk.

At a state-wide contest in Syracuse, Miss Hilda L. Merritt, 15, daughter of Mr. and Mrs. Nelson H. Merritt of Sheridan, Chautauqua County, was adjudged the healthiest 4-H Club girl in New York. With Ronald Roff of Broome County, she will represent the state in the national contest at the forthcoming 4-H Club Congress in Chicago.

who is seventy-five years old and never misses a meeting of Seifert Corner's Grange.

Cattaraugus County also had a Grange brother in its contest, who placed 6th among ten contestants.

Rensselaer County will be represented in the State contest by Mrs. Allan Hayner, Brunswick Grange, Troy, N. Y., who placed second in the county contest with a score of 97. First prize winner was Mrs. Grace Sherman, of Melrose, N. Y., whose recent death was a great shock to her friends and family.

Four Pomona Granges have reported names of winners to us since last time:

Pomona Winners

COUNTY	GRANGE	WINNERS
Cattaraugus	Farmersville	Mrs. Leon Leonard
Fulton	Kolenska	Mrs. Lyman Fox
Oneida	Seifert Corners	Mrs. Christina Stooks
Tioga	North Barton	Mrs. Gladys Shipman

Subordinate Granges

Orleans	Medina	Mrs. Howard Vincent
---------	--------	---------------------

The State contest is only about one month away, and all county winners who have not yet sent in their sugar cookie recipes and pictures are urged to do so as soon as possible. No recipe will be printed until after the State contest is over.

The following counties have not yet reported names of winners: Chemung, Herkimer, Niagara (contest to be held Nov. 9), Orleans, Seneca, Ulster. We will be glad to have their reports as soon as their contests are held.

The Market Barometer

Crop Prospects

The Agricultural Market Service reports that 212,780 acres of strawberries have been planted for picking next spring. If this acreage survives the winter, it will be the largest strawberry acreage since records were started in 1918. Previous high acreage is 207,330 in 1928. Last year's acreage was 99,750. Compared with the strawberry acreage last spring the greatest increases are in the second early states of Arkansas, North Carolina, Tennessee and Virginia. The increases in intermediate and late states were smaller and there was a small decrease in early states.

In the group of states made up of Colorado, Michigan, New York, Ohio, Oregon and Pennsylvania the late celery crop declined 10% during the month of September, making the October 1 estimate 3,748,000 crates compared with 3,543,000 crates a year ago.

In another group of states comprising Indiana, New Jersey, Utah and Washington, late celery was estimated at 567,000 crates, 7% less than the crop of those states a year ago. The New York State crop is estimated at 1,924,000 crates and last year was 1,462,000.

The cauliflower crop on Long Island estimated 1,340,000 crates, slightly less than last year's crop.

The late carrot crop for the entire country is estimated at 3,161,000 bushels which is 10% more than last year's crop and 12% above the average for 1929-1938. The late carrot crop in New York State is estimated at 1,350,000 bushels as compared to last year, 1,188,000 bushels.

In the Norfolk section of Virginia, North Carolina and South Carolina there are 2,670 acres of early cabbage for fall and winter distribution. This is an increase from 2,330 acres of early cabbage a year ago. Also in the early states of Arizona, California, Florida and Texas growers have reported their intention to increase cabbage acreage from 49,650 acres a year ago to 54,850 acres this year. The biggest increases are in Texas and Florida.

Late Onions

In late onion growing states the onion crop is estimated at 12,218,000 sacks as compared to 13,964,000 sacks a year ago and 10,290,000 sacks, the average for the years 1929-1938, as compared with the September 1 estimate. Onion yields are reported better in New York, Ohio, Indiana, Illinois and Colorado. Lower yields are prevalent in Massachusetts, Utah, Oregon and California.

What About Turkeys?

This year's turkey crop is estimated at about 33,000,000 birds, about 1% more than last year. With the exception of Pennsylvania and Vermont most Northeastern states raised less turkeys than last year but several western states grew more.

In general turkey prices have been about a cent a pound below last year but as the season progresses, this spread has narrowed. Therefore, the big question every turkey grower wants answered is this, "Will the trend continue and will prices be better a little later in the season?"

Growers have indicated an intention to market more birds earlier in the season than they did a year ago. Based on these intentions, about 12% of the total turkeys were marketed in October as compared to 10% a year ago and about 45% will be marketed

in November as compared to 39% a year ago. After January if these intentions are carried out, there will be about 11% of the year's turkey crop to sell as compared to 13% a year ago.

One favorable side of the situation is the fact that factories all over the country are busy and with more people at work, more money will be available to spend. Also, farmers raised 12% fewer chickens this year than they did a year ago and surplus of other meats will, in general, be smaller.

Due primarily to better disease control, turkey growing has been expanded considerably in recent years. For example, the average turkey production between 1932 and 1936 was 23,081,000.

On the unfavorable side of the ledger are storage holdings which are just about double those of last year.

Apples for Consumers on Relief

Recent reports indicate that the New York apple crop is running smaller than expected. The October 1 estimate for New York State was 12,936,000 bushels, just about half last year's crop. The greatest shortage compared to last year is shown in western New York, while the best conditions in the state are apparently in the Hudson Valley. The yields of Wealthy and McIntosh are light compared to last season when the crop was heavy. Recent New York City quotations on McIntosh were \$1.15 to \$1.88 and very occasionally \$2.00. Other quotations toward the latter part of October were Greenings \$.85 to \$1.50, Cortland \$.85 to \$1.00, Delicious \$1.13 to \$1.50, and Northern Spies \$1.10 to \$1.75.

The Federal Surplus Market Administration has announced that several carloads of apples will be purchased about six weeks after the close of the harvest season and will be stored for relief distribution later. Storage charges will be paid by the S.M.A. Prices will be \$.75 a bushel for certain varieties grading U. S. No. 1, 2 1/4 inches to 2 1/2 inches, and \$.65 a bushel for a combination U. S. No. 1 and Utility Grade measuring 2 1/4 inches.

A year ago the purchase of apples for relief distribution totalled 9,040,000 bushels. Because this year's commercial crop is much smaller than a year ago, it is probable that purchases for relief this year will be smaller. Apples have also been designated as a surplus commodity so that low income consumers can buy them with food stamps.

Butter and Cheese

For the first nine months of 1940 the production of creamery butter for the entire country was 1,419,585,000 lbs., 1.4% greater than a year ago. In New England the increase was 3% and in New York, New Jersey and Pennsylvania there was a decrease of 1%. It is also interesting to note that for the first three weeks in October U. S. butter production was from 8 to 12% higher than for the same period last year. Storage holdings of butter have been below last year. Around the middle of October the estimate was 120,850,000 lbs., compared to last year's figures on the same date of 145,515,000 lbs.

For the first eight months of 1940 production of oleomargarine was 9,246,870 lbs., about 5% higher than for the same months last year.

For the first nine months of the year, the total U.S. cheese production was 597,900,000 lbs., which is 9% more than

for the same period in 1939. In north-eastern states the increase in cheese production was 12%.

The storage holdings of American cheese on October 1 were 127,054,000 lbs., about 29,500,000 lbs. more than on the same date a year ago. Storage holdings on all other kinds of cheese totalled 21,531,000 lbs., roughly two and a half million lbs. more than a year ago. However, the heavier storage holdings are worrying no one. In fact it is doubtful if they will be sufficient to offset the expected heavy drop in our cheese imports.

Feed for Stock

On October 1 the U. S. supply of feed grains including corn under government seal and the 1940 crop totalled 113,000,000 tons, the second largest supply in twenty years and 12% more than the average for 1928-32. The number of animals on farms to eat this grain is estimated at about 5% below average, consequently the supply of feed grains per animal will be the largest on record.

The total carryover of corn on October 1, including 430,000,000 bushels under government seal, was around 701,000,000 bushels as compared to 583,000,000 bushels a year ago. The 1941 corn crop is estimated at 3,057,000,000 bushels compared with 3,202,000,000 bushels a year ago.

Stocks of wheat on October 1 including wheat on farms and in mills and elevators totalled 548,364,000 bushels as compared with 494,520,000 bushels on October 1 a year ago.

Potato Growers Hope for Cold Weather

(Continued from Page 14)

to unforeseen factors which may change the picture quite materially. One of the factors that will have considerable influence on winter prices is the movement during the fall months.

When considering a seasonal trend in the potato market, we feel that two opposing factors that may ordinarily be overlooked by growers will have considerable influence. First, as an unfavorable factor, is the realization that a crop slightly larger than normal has an extremely detrimental effect on prices. A crop slightly over normal production may lower the price in percentage figures many times over the percentage increase of the crop, and, on the other hand, a crop slightly lower than normal may increase the price many times over. For example, in 1936 with 331 million bushels the average price per bushel for the country was \$1.14, whereas in 1937 with 395 million bushels the average price was 52c, and in 1938 with 374 million the average price was 55c per bushel.

The other factor which is favorable to our condition this year is that of general price levels of all commodities. With the same size crop, growers may realize considerably more money for their crops if the general price level is high. We cannot help but feel that the index of wholesale commodities is one of the major factors affecting the price of potatoes and may at times influence the price nearly as much as the supply feature. For example, in 1927 and 1932 crops were quite comparable in size. With 369 million bushels in 1927 the average price for the country was approximately \$1.08, whereas with 376 million bushels for 1932 the average price for the country was 39c per bushel. However, in 1927 the index for all commodities was 139, compared to an index of 95 for 1932. Thus we must realize that the index of wholesale commodities has a very definite effect on the price of potatoes, regardless of supplies. This factor is favorable to potato growers this year with a comparatively high index of 114.

NEW YORK MILK PRICES WITH COMPARISONS

Poultry Notes from New England

MASSACHUSETTS

Poultrymen Organize—Newest in poultry organization in Bay State is Southern Middlesex County Poultry Association, organized at meeting in Framingham last fortnight. President of new association is Thomas Mallory of Sherborn; Vice-President, Ted Raymond of Natick; Secretary-Treasurer, Mrs. Thomas Mallory, Sherborn. Directors: Mr. A. W. Hardy, Ashland; Mrs. H. A. Harris, Holliston; Mr. M. D. McLaskey, Framingham; Mr. Walter Wood, Sherborn; Mr. W. F. Andrews, Hopkinton; Mrs. H. F. Banfill, Southboro. Monthly meetings are planned for this organization during the coming season.

—Walter E. Piper.

* * *

MAINE

Eggs at Fair Price—Maine poultrymen are "keeping going" because egg prices are fairly high; they are discouraged at the low price of poultry meat; old hens are being culled but the price is about 10 cents to 12 cents a pound; some are keeping over the best of the year old birds, refusing to sell at such low prices. Men who make a specialty of growing only broilers report a pretty good business. Some dress off their roasters and get a fair price and others have a regular and steady price for live broilers and get around 16 cents a pound.

—Vincent Canham.

NEW HAMPSHIRE

Egg Contest Leaders—Winners in the 11th month of the state contest were literally scattered from one end of the state to the other, with a flock in Berlin at the North end and one in Nashua at the South end. Winner in the large flock class of 2,000 birds or over was George C. Gove of Raymond, with Barred Rocks. In the 1,500 bird class, Arthur J. Denault of East Hampstead was the winner with White Leghorns. Edgar W. Smith's flock of R. I. Reds led the field in the 1,000 bird class, while Alcide Flamand of Berlin led the 500 class with his flock of New Hampshires. In the 100 bird class, Dana L. Clark, Sr., of Nashua took first place with New Hampshires and Leghorns; and in the small flock class of less than 100, R. H. Holmes of Claremont led with Barred Rocks.—Alfred L. French.

Connecticut Tobacco Crop Smaller Than Year Ago

Production of tobacco in the Connecticut Valley is estimated as nearly 32 million pounds, which is 9 per cent less than the 1939 crop, but 1 per cent more than the ten-year average production. Broadleaf tobacco is estimated at 12,522,000 pounds as compared with 12,798,000 pounds last year. Havana seed estimate is 13,410,000 pounds compared with last year's production of 13,593,000 pounds. Due largely to decreased acreage, Connecticut Valley shade-grown production is expected to total only 5,940,000 pounds, as against 8,624,000 pounds a year ago.

Total production of cigar type tobacco in the United States is estimated at 127,460,000 pounds, compared with 125,849,000 pounds last year.

For Christmas Gifts

BY MRS. GRACE WATKINS HUCKETT

CHRISTMAS will soon be here and it is not a moment too early to get things ready. For a fraction of their cost in the shops, a woman can assemble heart-warming gifts, the makings of which she probably can find in her own piece bag or at the remnant counter.

Patterns Only

For those who want just patterns and instructions, we submit stuffed animal pattern No. 2501 which includes patterns for the baby panda, the pussycat, and the little pig all

dressed up to go to market—alluring toys for your little folks or for the sales tables at the bazaar.

Pajama pattern No. 3303 is designed to satisfy the most exacting soul when it comes to hand-made lingerie. Buy your own material, dimity, batiste, silk or flannel, trim it up daintily, and you have a most luxurious present.

Even the dolls must be patriotic this year and wear All-American costumes. Dolly can be a sailor girl or an aviatrix or even a Red Cross nurse if you have doll clothes pattern No. 3495.

For the home-loving individual whose ambition it is to have an appliqued quilt, choose Pattern No. 1121, the lovely water lily pattern. It finishes to make a quilt about 7 ft. 2 in.

by 8 ft. 6 in. The appliqued squares alternate with plain squares and there is a colored border around the edge.

Any little girl would be charmed with the idea of having her dolly's dress match her very own. Pattern No. 3499 provides for just this combination, including girl's blouse and jumper with matching doll's outfit.

Making an apron from one yard of material adds interest to the well designed apron pattern No. 3490. Can't you visualize this made up in red and green figured dimity, trimmed with red and green ric-rac braid? Its gored skirt is up-to-the-minute in fashion.

The littlest folks on your list will love the cuddly bunny and perky chick

toys, pattern No. 1000. You will have a lot of fun yourself in making them.

For that smart person who likes stunning accessories, use pattern No. 3012 to make a jumperette or jerkin—whichever you call it—and a very novel belt. A hat (not shown) is included also. Suede cloth, wool jersey, velveteen or corduroy in the beautiful new colors and pliable softness offer a wide choice for this striking ensemble. You'll find clever buttons a-plenty on the market.

It just wouldn't be Christmas without a rag doll, so here is a whole family of them, brother and sister, mother, father, baby and even a black mammy nurse. Pattern No. 34581 includes the whole lot.

Ready-to-Make Gifts

For those who wish their materials assembled for them, we have selected the following fancy work items, none of which require too much work:

With about a half hour's work, the gay red oilcloth rack, M726, to hold

umbrella and rubbers, may be put together. It fits right on to the hanger with the rain coat, has two pockets, is bound with black double fold, and has a funny silhouette to applique.

For that amusing small gift, the Eskimo bath mit, M669, is ideal. It is of white terry cloth with smiling tan face ready for a few simple stitches before being appliqued. A lively youngster can make the little Eskimo perform many amusing antics.

Tea towels are an absolute necessity on any well organized Christmas list. Set M822M begins with roast fowl on Sunday, followed by hash en casserole, then soup; Wednesday boasts a new cake, Thursday a shopper's lunch, Friday fish and Saturday baked beans in a good old stone pot. The set is stamped on seven dainty hemmed and bordered towels of fine absorbent cloth.

Towels, especially those for the guest, are always acceptable to any housekeeper-bridal or experienced veteran. No. B8330 and No. B8332 have very attractive designs stamped on oyster linen, fringed. Sides are selvage.

Baby blanket No. B8490, of pink or blue heavy pile blanket material, with darling pup and chick patches for easy applique.

Little red hen bib and matching toy set No. B8494. Bib comes readymade with flannel lining, blue check print

(Continued on opposite page)

Colorful Cranberry Relishes

Make an uncooked relish to serve with meats by combining a can of cranberry sauce with a No. 2 can of drained crushed pineapple and the grated rind of one orange. Place in a refrigerator for about an hour to ripen.

Quince, Apple and Cranberry Conserve

2 cups apple pulp 2 cups quince pulp
4 cups sugar 2 cups cranberry pulp
¾ cup English wal- Juice and grated rind
nuts, if desired of 1 orange

Combine all ingredients except the nuts and cook mixture rapidly until thick. Remove from fire, add nuts, blanch and cut in small pieces. Mix well and pour into clean hot glasses. When cold, seal with hot paraffin.

Cranberry and Damson Plum Marmalade

1 cup diced tart apples 1 quart cooked seeded
1 cup cranberries plums
4½ cups sugar

Mix all ingredients and cook until clear. When partially cool, pour into small containers and seal.

(Continued from opposite page)

pocket, red binding and strings with colorful percale for bib and toy included.

TO ORDER PAPER PATTERNS

Pattern No. 2501—Stuffed Animals, baby panda, pussy cat and little pig. For material requirements, see pattern envelope. Pattern No. 3303—Pajamas. Sizes 12 to 40. Size 16 requires 4½ yards of 39-inch material, 3 yards beading, 3½ yards lace edging.

Pattern No. 3495—American Doll Clothes. Designed for 14, 16, 18 or 20-inch dolls. See pattern envelope for material requirements.

Pattern No. 1121—Quilt pattern—water lily design.

Pattern No. 3499—Girl's blouse and Jumper with Matching Doll's Outfit. Sizes 2 to 8. Size 4 requires 1½ yards of 35-inch material for girl's blouse; 1½ yards for

girl's jumper. Doll's dress is designed for 18-inch doll, and requires ¾ yard of 35-inch material for blouse; ½ yard for jumper.

Pattern No. 3490—Gift Apron. One size. Requires 1 yard of 36-inch material.

Pattern No. 1000—Stuffed toys. Bunny 14 inches high (without ears); chick 10 inches high. For material requirements, see pattern envelope.

Pattern No. 3012—Jumperette or jerkin, belt and hat (not shown); sizes small, medium and large. Medium size requires ¾ yard 54-inch material for jumperette; ¾ yard for belt.

Pattern No. 34581—Rag doll family. For material requirements, see pattern envelope.

TO ORDER: Write name, address, pattern size and number clearly and enclose 15c in stamps. Address Pattern Dept., American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our Fall and Winter catalog.

B8330 and B8332—Fine quality oyster

linen guest towels, stamped, size 14" x 20", each50

B8490—Baby blanket, size 30" x 36" in pink or blue. State color. Applique patches and floss included..... 1.50

B8491—Little Red Hen Bib and Toy

Set. Bib is ready made, percale patches for bib and toy, and floss included \$.50

TO ORDER: Write name, address and pattern number clearly and enclose remittance. Address Embroidery Dept., American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y.

Today in Aunt Janet's Garden

Good Drainage Lessens Winter Damage

MOST OF MY losses among perennials during winter have resulted from lack of good drainage, especially where plants have crowns. It is well worth anybody's time to work deeply enough and prepare the soil to prevent water standing around plants.

If roses are being planted, soil should be deeply dug and gravel or coarse sand put at the bottom; above this, good loam mixed with well rotted manure, and above this garden soil. The same care as to drainage applies to beds for bulbs.

It is also a good plan if strawy manure is to be used for mulch to be sure that it does not exclude air from the plant. Columbines, foxgloves, hardy pinks and other perennials which keep some leaves during the winter, will rot unless the air can circulate around them. My own experience with chrysanthemums has been that they do better if not protected too much.

In the case of hydrangeas, the hardy ones, H. arborescens and H. paniculata, and their varieties Hills of Snow and Peegee, do not need any protection. It is the French or florist's hydrangea which needs it. There are several ways of doing this. One is to strip the leaves off after they have been killed by frost and wrap the plant either in straw or black building paper, (not tar paper but asphalt). Another way is to cover with a keg which has had the bottom knocked out, then fill with leaves. Oak leaves do not tend to pack and hold water as much as do maple leaves. This method does not make a beautiful landscape but it works.

It takes more than kisses to keep a man happy!

DAVIS BAKING POWDER
Double Acting

SEND FOR MY MASTER PATTERN BAKING FORMULAS

Send 10¢ for "DAVIS MASTER PATTERN BAKING FORMULAS—THE SECRET OF SUCCESS IN BAKING." Shows you how simple it is to make any cake, cookie, pie or bread successfully if you follow these master patterns. Mail this ad with 10¢ to R. B. Davis Company, Dept. No. 302, Hoboken, New Jersey.

OLD-FASHIONED APPLE UPSIDE DOWN CAKE

1½ cups sifted cake flour 1 cup sugar
1¼ level teaspoons Davis 1 teaspoon Baking Powder lemon juice
½ teaspoon salt 5 tablespoons boiling water
2 eggs

Beat eggs till thick and light, add sugar gradually beating as you add. Add lemon juice. Sift dry ingredients together twice. Fold in alternately with hot water, blending well after each addition, but mixing quickly. Pour batter over specially prepared topping arranged in 8-inch square pan. Bake in moderate oven (350° F.) for 50 minutes. Turn out on plate while hot, fruit side up. Serves 8.

TOPPING: Melt 4 tablespoons butter in bottom of the cake pan. Over this, spread ¾ cup brown sugar. On sugar, arrange 2 cups sliced tart apples. Pour batter over and bake.

Splendid Cough Remedy Easily Mixed at Home

Needs No Cooking. Big Saving.

To get quick and satisfying relief from coughs due to colds, mix your own remedy at home. Once tried, you'll never be without it, and it's so simple and easy.

First, make a syrup by stirring 2 cups granulated sugar and one cup of water a few moments, until dissolved. A child could do it. No cooking needed.

Then get 2½ ounces of Pinex from any druggist. This is a compound containing Norway Pine and palatable guaiacol, in concentrated form, well-known for its prompt action on throat and bronchial membranes.

Put the Pinex into a pint bottle, and add your syrup. Thus you make a full pint of really splendid medicine and you get about four times as much for your money. It never spoils, and children love its pleasant taste.

And for quick, blessed relief, it is amazing. You can feel it take hold in a way that means business. It loosens the phlegm, soothes the irritated membranes, and eases the soreness. Thus it makes breathing easy, and lets you get restful sleep. Just try it, and if not pleased, your money will be refunded.

WHEN the YOUNG BIRDS CAME BACK

A Thanksgiving Story

By C. A. STEPHENS

IF THERE IS a lonesome place in all the world when Thanksgiving Day comes, it is an old homestead where the young people have grown up and gone, leaving two old people behind to live alone.

That was the case for a year or two, at our old farm in Maine. Addison was now working with Professor Agassiz at Cambridge, or journeying to various parts of the world making zoological collections. Theodora had finished her course at the Kent's Hill Seminary and gone to teach at an Episcopal mission school for Indian girls in South Dakota, Ellen, into whose young life a great sorrow had come, was sojourning with relatives in another state. Halstead had surprised us all by making a hasty new departure in life and was now immersed in the inevitable consequences. I, myself, the least of the group, had now left school and struck out on my own little first venture in life and was so full of it that I hardly thought of anything else.

So, quite in the natural order of things, it had come about that the Old Squire and grandmother, after having a houseful of young people for years, found themselves alone.

Looking back, it is not easy to understand how we could have been so thoughtless of them, but we had felt all along that we had been a great tax on the old people, coming home as we did for our up-bringing, and that they must feel relieved to have us off their hands and able to care for ourselves. We did not realize how sadly they missed us.

It was Kate Edwards who first set us thinking. Kate had lived at the farm across the fields from the Old Squire's and had grown up with Theodora and Ellen. At seventeen she, too, went from home for a time, but had now returned to the old place to care for her parents.

"Do you know," she wrote in her letter to Theodora, "that Aunt Ruth and Uncle Joseph"—meaning the Old Squire and grandmother—"are terribly lonesome nowadays over at your old place? They don't seem as well as they used to be, either, and you've no idea what a still, solemn, lonesome place it has come to be. I almost dread to go over there, it is such a contrast to the merry household it was when you were all at home. None of you was at home last Thanksgiving, you know. Hadn't you better try to come home, Dora, this next Thanksgiving? I really think you ought to."

Theodora wrote to Addison about it and inclosed Kate's letter; and after a while Addison wrote to me.

"Perhaps we had better try to get down there Thanksgiving time," he said. "Doad writes that grandmother and the Old Squire are mighty lonesome, and that they're not very well. Doad is going to come on East, if she can get away, and 'e has written to Nell to join her at Philadelphia. We had better all try to go, I guess; and, say, you write to Halstead and get him started."

That was in September. We wrote back and forth several times about it; and I got Halstead to promise to go. It would cut a large slice off Theodora's annual wages as teacher to come East, but she decided to do so. We finally planned to arrive all together and surprise them on Thanksgiving Day. We agreed to meet in Portland, go up by train in the forenoon, and drop in upon them just as they were sitting down to dinner; for we knew, or thought we did, that grandmother always had an

abundance of food on Thanksgiving Day.

We met as agreed—a joyous meeting—for we had seen little of each other for two years. We then went up by train together to the home station. There had been an hour and a half to wait in Portland; and as an afterthought, at the last moment, the girls bought a few packages of nuts and sweetmeats to take with us. More thoughtful than Addison and myself, too, Theodora and Ellen had brought many nice little presents for grandmother. It was a fine Indian Summer day. We hired a surrey at the station, six miles from the old farm and, to make our arrival a complete surprise, drove around first to the Edwards place, whence, after putting up our team, we stole across the fields with our packages to the line-wall bars and reconnoitered the home buildings.

Quiet, indeed, the old place looked and, oh, how familiar! But we could not see a soul stirring about the house.

"I guess they've sat down to dinner already," Halstead said.

We went wearily across the west field, got into the wagon-house by the back door, and then went on tiptoe through the wood-house to the kitchen door, which was closed. Stealthily Addison turned the knob, opened it a crack, and we peeped in. The kitchen was warm, but very still, and did not seem at all as on former Thanksgiving Days. The door into the dining room was open; the table, a little one, was set in there; and we could just see Grandmother on one side of it and knew that—out of sight—was the Old Squire on the other. They were eating their lonesome Thanksgiving dinner, or trying to, neither of them saying a word.

The place wore such a saddened, subdued air that we did not have the heart to rush in, uproariously, as we

had first agreed. We stole back to the wagon-house to lay some new plan.

"Let's go to the door, one at a time," Addison said, at last; "and sing or whistle or say something as we used to, so they will hear us first and come out. Halse, you go ahead. You're the best singer among us. Go just outside the kitchen door and sing 'Dixie.' They'll know you by that the moment they hear it."

Halstead's childhood had been passed at New Orleans; and, even after he came north to live with us at the Old Squire's, he always pretended to sympathize with the South.

Halstead tiptoed to the door, while the rest of us kept back out of sight. Instead of singing "Dixie," however, he burst forth with "The Bonnie Blue Flag That Bears the Single Star," and had scarcely caroled the first stanza when the door was pulled open, and we heard the Old Squire crying out, "You dear boy! Why, where in the world did you come from?" By this time, too, grandmother had her arms around his neck. They drew him in, and then on toward the dining room, without a thought that any of the rest of us were out there.

"You go next, Nell," whispered Addison. "What will you sing?"

"Oh, I know my part," said Nell. "I will steal to the kitchen sink and begin to rattle the dishpan. That was always my job."

She shut the door after her, but had not been clattering the tinware many moments when we heard grandmother cry out, "Why, Ellen! When did you come?"

Still they did not suspect there were more of us outside; for Halstead and Ellen said not a word of our presence; and after a while Addison and Theodora sent me to the door, to declaim "Spartacus to the Gladiators," since it was one of the long-standing family jokes on me that I had once—when I had the mumps—been heard declaiming "Spartacus" in my sleep.

I had got no further than "Ye call me chief, and ye do well to call him chief who for —" when out rushed the Old Squire and grabbed me, laughing like a boy, and grandmother was close behind him.

They suspected now that Addison was somewhere around, and rushing forth to the wagon-house, surprised him and Theodora just scudding out of

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

The Warmth Within

This is the time of year the kitchen is cozy.

We find excuse to linger by the stove, Warming our hands, while one whose cheeks are rosy

Lets fragrant clouds of cinnamon and clove,

Like incense, steam from the open oven door.

She turns the pumpkin pies, looks up to jest

That idle men make more dirt on the floor

Than busy ones. We say she looks her best

In a blue apron with flour on her chin . . .

It gets us nothing but a knowing smile! We know it will though, in a little while,

And stomp outside full of warmth within.

—Louis Stoddard,
Esperance, N. Y.

sight through the door into the west barn.

It touched our hearts, our consciences also, to see what joy this home-coming of ours had brought; but when Halstead, rather inconsiderately, cried, "What have you got for Thanksgiving dinner," grandmother's countenance fell suddenly.

"If I had only known you were coming," she lamented, "I would have had a fine one. But with only Joseph and me, I didn't prepare much this year. We don't, either of us, care much for large dinners, so I cooked a little, just for him and me."

"Yes, your grandma and I don't eat many kinds of food, now," the Old Squire explained.

In fact, one small chicken, a plate of cookies, and a little lonesome-looking custard pie were all we saw outspread; the table seemed to be mainly tablecloth! Contrasted with what we remembered, when we were at home and host of company besides, this was indeed a change! Then there was always a goose, a turkey, or two or three chickens, besides a big plum pudding, four kinds of pie with cake, fruit, preserves, maple syrup, cheese, honey, nuts and numerous other dainties. Such a roar of voices and laughter, too, as made the old house shake! But now—till we came—you could have heard a kitten mew up in the attic! That silence, indeed, was the most eloquent contrast of all.

There was plenty in the house, however; honey, cheese, canned fruits, eggs, too, that distressed housewife's ever-ready refuge in times of emergency. With the girls helping, the table was soon lengthened out and set again, making quite a brave show of Thanksgiving cheer.

After dinner, when we had gone out to look the old place over and were at the apple-house in the north orchard, Addison gave the rest of us a queer look and said:

"This never will do, you know. How are we going to fix things here? Which of us can come home and take hold? One of us must. Which?"

It was not an easy duty to face. Theodora was pledged to that mission school for the present. The way Hal-

The Song of the Lazy Farmer

THANKSGIVING DAY will soon be here, and tho the world is full of fear, and some folks, worried by the war, think nothin's to be thankful for, I feel that I must needs express the reasons for my thankfulness. I've got a wife who's cookin' is the best in this here land, gee whiz, she keeps me feelin' young and pert and sews the buttons on my shirt. My hired man ain't very good, don't always work the way he should, but he is always on the job, he don't take time off to hobnob around the store and have his fun when there is milkin' to be done. He don't expect a lot of pay nor kick at mowin' back the hay.

My neighbors, too, are pretty good, they gossip, maybe, when they should be workin', but in time of need, they're mighty helpful folks indeed. There ain't a thing that they won't do to help another neighbor thru. They'll loan their mower or their plow, and stick up

for you in a row, it makes a feller feel right good to live in such a neighborhood. I'm thankful too, for U. S. A., a place where we can have our say and criticize the government, without the fear that we'll be sent to concentration camp or shot for what we say, as like as not. There's lots of things that's out of fix, but I ain't got so many kicks, I'm pretty happy with my lot, and satisfied with what I've got.

stead was situated, too, gave him little chance of escaping his new responsibilities. And the rest of us did not feel like asking Ellen to come. To me, I confess, it appeared to be a great sacrifice; at least I thought so at first, for my plans looked good to me; but to ask Addison to give up such a promising scientific career as had opened before him seemed an endless pity and a loss of great opportunities.

We stood there in the old apple-house and looked at each other in a perplexity that was well-nigh distress; for some minutes we said scarcely a word. Each knew just how the others felt. None of us wanted to do it.

"But it's of no use to haggle over it," Addison said at last. "Think what the Old Squire and grandmother have done for us. Took us in when we were about as good as homeless and orphans. Brought us up. Worked and slaved and planned to have us go to school and make a good start in life. And now we have scattered and haven't so much as looked back, once! Which one of us is going to come home here, take the old farm, and put things through? That's the question we must face, and we had better face it now. Shall we draw lots for it?"

Everything considered, it grew plain to me that I could do it with the least self-sacrifice; and after a long breath, I bade farewell to my plans and said, "I'm the 'chick' for the coop. This, I see, is my job; but y u must all promise to come home once in a while and help make things go."

"Yes, yes, yes," they all said eagerly. "We will come."

"But you shall come every Thanksgiving, and as much oftener as you can," I stipulated, saving what I could from a hard bargain. "You shall not

go off about your own business and forget me and never come near. You shall keep the old place in mind."

They promised faithfully and sincerely.

I have never regretted my decision. One of the pleasurable results of that home-going was the new lease of life and joyousness it gave those dear old people to whom we owed so much. Again there was something for them to live for. With what fresh interest they advised my efforts at farming! What practical points and details they gave me out of their wealth of past experience! They even rose ahead of me to look after the dairy, the bees, the poultry and the garden.

Again the Old Squire read the farm journals for improved methods of cropping and for contending with insect pests in the orchard; and again—one autumn morning—we heard grandmother making the old spinning wheel whirr up in the attic, to produce a stock of wool yarns for winter socks. When the Old Squire heard that familiar sound, he cocked his ear, laughed outright, and clapped me on the shoulder.

But the greatest joy to them, I think, was to see and feel the dear old place, where they had labored so long and hard, was not to relapse, fall into decay, and pass into the hands of strangers, as has happened to so many New England homesteads; but that it was to be kept up, go forward, and remain the home of their descendants.

We all believe that this second home-coming of ours added ten years to their lives; for they lived in good health till long past ninety. What was better than mere years, they kept hopeful and optimistic, and to the end were ready to aid in every good effort.

Personal Problems

Afraid of Steady Company

Dear Lucile: I've been going with a boy for a year, during which time we've separated twice. He treats me very nice but lately has asked me if I wouldn't rather go out with other boys instead of going steady with him. He said that when you go steady you get married and he doesn't want to marry young.

I told him I'd rather go steady with him and asked him if he'd like to see me with other boys. He said that he wouldn't like it, but that maybe there were a few other girls he'd like to take out. I then told him that he could go out with these girls and I'd stay at home but he said that couldn't be done . . . that he couldn't leave me at home, but that I should go with other boys and if I ever got out with a rough one I should call him, charging the call to him, and he'd come after me, no matter where I was.

Isn't this a funny proposition for a boy to make if he really cares for you? Should I agree to this plan or not?—At Liberty.

It is not very usual for a young man

who really cares for a girl to want to break up with her so that she can go with other boys. It seems to me that this young man doesn't want your steady company and is trying to use this as a graceful excuse.

I believe that when he calls on me I would tell him that I have decided that since he does not seem to care for my steady company I will be very glad to release him from any obligations which he may feel, inasmuch as you feel sure you can have good times with other nice young men of your acquaintance.

* * *

Try Again

Dear Lucile: I am 18 years old, have been married a year and have a baby girl. My husband lived with me only a few months and then told me to go. So I took my baby girl and went home to my folks. My husband never wanted me to go anywhere, while he went every night.

I am now in love with another man and he says he loves me, too. Should I get a divorce or should I wait?—Undecided.

Inasmuch as you are very young and no doubt your husband is about your age, can't you put down your misunderstandings to your lack of experience and try again to make a success of your marriage? You should not have left your husband in the first place, perhaps; and for the sake of the baby you now have, it would seem to me that you should try to work out a reconciliation with him and make a very stiff effort at making your marriage successful before you turn your attention to other men and start talking about divorce.

Regardless of whether or not you are able to effect any reconciliation, I believe you will feel better satisfied with yourself if you try.

"By the way, honey, have you heard from your mother lately?"

WARNING to Mothers of Growing Children

WHEN COLDS STRIKE... Relieve Misery the Improved, Home-Tested Vicks Way... Perfected for Children

No matter what you have tried in the past to relieve misery of colds—treat your child the improved Vicks way—with a "VapoRub Massage". Then notice how swiftly it starts to quiet coughing, ease muscular soreness or tightness and bring comfort.

With this MORE THOROUGH treatment (developed by Vicks staff of Doctors) the poultice-and-vapor action of Vicks VapoRub more effectively...

PENETRATES irritated air passages with soothing medicinal vapors, inhaled deeply with every breath.

STIMULATES chest and back like a warming poultice or plaster.

To get a "VapoRub Massage" with all its benefits, here's what you do: Massage VapoRub for 3 minutes on IMPORTANT RIB-AREA OF BACK as well as chest and throat—spread a thick layer of VapoRub on chest and cover with a warmed cloth. BE SURE to use genuine Vicks VapoRub.

When you see the results of this improved Vicks treatment you will wonder how any sensible, thrifty mother could possibly deny her child the comfort and relief it brings from misery of colds.

Save Eye Strain and Money

(Due to Poor Light) Every household is entitled to modern light... especially when beautiful, Aladdin white light actually pays for itself, in economy and added comfort over old-style lamps.

The Aladdin burns 94% air and only 6% oil. 50 hours of room-filling light on a single gallon of kerosene (coal oil). Makes reading, studying, sewing, etc. a pleasure instead of a tiresome task.

You'll be proud of modern Aladdin-light... unsurpassed by electricity for quality and steadiness. Safe to use... a child can operate. No pumping; no noise; no smell or smoke.

\$1 Allowance for Any Old Lamp

Don't Miss It! Take any old lamp to your Aladdin dealer, and he'll make you the liberal allowance of \$1 toward a beautiful new Aladdin. Don't wait. Folder of the new Aladdin Lamps and Shades gladly mailed FREE on request. Mantle Lamp Company, Chicago, Ill.

Personal PHOTO CHRISTMAS CARDS

Handsome personalized Christmas cards made from your favorite snapshot. Send us negative of family, children, home, yourself, winter scene or any subject. We will make beautiful, distinctive cards of highest quality. Choice of Greetings. See your card before you buy. Send us negative and this ad and we will return immediately free Christmas card and illustrated folder. No obligation.

MAIL-N-SAVE, Box 310-7, Quincy, Mass.

"MIDDLE-AGE" WOMEN

(38 to 52 Years Old)

HEED THIS TIMELY WARNING!!

If you're approaching "middle-age" and fear dizzy fainting spells, hot flashes—if you notice yourself getting restless, cranky, moody and NERVOUS lately—these annoying symptoms may be due to female functional disorder—

So be smart! Try Lydia E. Pinkham's Vegetable Compound, famous for over 60 years in helping hundreds of thousands of

weak, rundown, nervous women to go smiling thru this "trying time."

Pinkham's Compound is made especially from nature's own beneficial roots and herbs to help calm overtaxed, sensitive nerves and lessen distress from functional cause. Weak, rundown women should find Lydia E. Pinkham's Compound WORTH TRYING!

With AMERICAN AGRICULTURIST Advertisers

An ingenious device for filling tractor tires with a non-freezing ballast solution of calcium chlorite. Experiments have shown that the partial filling of tractor tires with water will increase traction, but, of course, in winter a solution must be used which will not freeze. In fact, this calcium chlorite solution is quite as satisfactory in warm weather, as a given volume of it is 25 per cent heavier than an equal amount of water. This device for filling is made of an ordinary automobile oil pump, two lengths of garden hose, two 2½" nipples, two 1" couplings, and Shrader fitting No. 8687.

Almost as closely connected as apple pie and cheese are turkeys and cranberry sauce. By sending a label from a can of "Ocean Spray" cranberries and 10c to OCEAN SPRAY, Dept. AG, Hanson, Mass., you can secure a cutter with which you can cut slices of cranberry sauce into the forms of turkeys, thus adding a bit of variety to Thanksgiving dinner.

AMMUNITION

The subject of firearms is a fascinating one to young and old. On a farm there is always a question of controlling woodchucks, and many farmers like to do a bit of hunting in their spare time. Available from the WESTERN CARTRIDGE COMPANY, Dept. J-113-A, East Alton, Ill., are two pamphlets. One is a folder which gives interesting facts about the Super-X Silvertip expanding bullet. The other is a 76-page Western Ammunition Handbook. Either or both are free for the asking.

NEW MEAT CURING BOOK

The 1941 edition of the popular Morton meat curing book is just off the press. It

contains 100 pages, 225 pictures, with charts, diagrams and simple, clear directions covering every step of butchering, trimming and curing pork, beef and lamb. A new feature this year is a section on the preparation of cured smoked turkey. In addition there are many pages devoted to sausage making, canning meat and poultry, and numerous recipes.

The book is recognized as one of the most practical, understandable and complete handbooks on home butchering and meat curing ever prepared. Sold previously at 25c, the price has been reduced this year to only 10c a copy. Send to the MORTON SALT CO., Chicago, Ill.

RESEARCH BRINGS NEW WANTS

Research has developed many new industrial uses for farm products. In 1939 THE DU PONT COMPANY bought farm products for chemical consumption valued at \$14,320,000. Products purchased were: vegetable oil, 41,365,000 lbs.; corn products, 12,855,000 lbs.; wood pulp, 141,000,000 lbs.; turpentine and pine rosin, 8,416,000 lbs.; lintens and purified cotton, 59,400,000 lbs.; and cotton fabrics, yarn, etc., 11,452,000 lbs.

FOR DISINFECTING

This is your chance to get a free sample of B-K powder. This product is used with an ordinary dust gun where hens are affected with respiratory diseases, and it is often added to the drinking water of hens to lessen chances of infection. An easy way to get this is to use the coupon on page 19 of the October 26 issue.

MORE SOYBEANS

In recent years there has been increased interest in the growing of soybeans. The crop is not difficult to grow, but it does have certain definite requirements which must be met. These requirements are outlined in the new booklet "Soybeans for Profit," published by JOHN DEERE, Moline, Illinois. Get one from your John Deere dealer or send directly to the company for it.

COMPETING WITH ELECTRICITY

THE GENERAL ELECTRIC COMPANY at Schenectady, New York, have an interesting piece of experimental equipment in the form of a bicycle hooked up to an electric generator. Professional bicycle riders, peddling at top speed, have been able to generate enough electricity to light two 200-watt lamps for as long as five seconds. The record is .0018 KW of electricity for one minute of riding. This gadget shows in a convincing manner the inefficiency of doing anything with one's muscle that can be done so much cheaper by electric current.

This Jet-o-Matic pump, manufactured by GOULDS PUMPS, Seneca Falls, New York, is a relatively new development in the field and is of unusual interest because it is easily adapted to shallow wells or deep wells. The pump can be placed in a basement or any convenient spot. The motor is lubricated for life and requires no oil at any time. It is so simple that it can be installed, primed, and directly forgotten.

Mrs. Hattie McIntyre (left), of Brimfield, Mass., has "two strings to her bow." She not only raises canaries successfully, but also designs and paints attractive signs for roadside markets. The one shown in the picture was painted by her and brought her orders for many more.

Pin Money from Canaries

By MRS. HATTIE MCINTYRE, Brimfield, Mass.

(First Prize Letter in American Agriculturist's "Pin Money" Contest)

ONE YEAR at Christmas I received a Chopper Canary for a present. He was a wonderful singer, and I decided I would like to try my luck at raising canaries to earn pin money.

Whenever I mentioned this, everyone would say, "It's hard work to raise canaries." Yes, I will admit it is work, but what do we get without work? This would not require me to go out and shovel paths to a hen house or cause me to leave the house as keeping hens does. After canaries are six weeks old, you only have to keep their cages clean, and give fresh water and seeds each morning, which takes very little time compared with other pets.

In January I purchased a female, a two-year-old bird, of stock from a fancy breeder in New Hampshire. I sent to a mail order house for a breeding cage. In due time the birds had mated and were busy building a nest. She laid her clutch of five eggs. In fourteen days every egg hatched, and did those birds thrive! They could be seen to grow from day to day. When these were three weeks old, she again began another nest. This mother bird laid 19 eggs that season, but I find three clutches are all a bird should be allowed to raise as they are not so profitable the following year if they raise too many.

The males sell for five dollars each, the females for one dollar as the female does not sing—just chirps. I raise all my birds in my kitchen, which is a large one, 18 x 12. I put two stout hooks on the wall, four feet from the floor, and hang the wire breeding cage to them. My birds are very tame and do not mind the boys coming in at all times, nor a fox terrier dog barking and romping around.

Canary raising is very interesting work. Three things are necessary to make a success of it—you must have patience, use common sense, and love your little feathered friends. Canaries love to be talked to. Someone must be at home at all times during the first six weeks as the yolk only of a hard-boiled egg, put through a sieve, must be fed every two hours or the mother bird to feed the young. This must be mixed with rolled Uneida biscuits and one drop of olive oil. When they are six weeks old, they can crack the seeds and need only what the old birds get.

At many auctions I have seen cages sell for ten cents or, if you have a handy man around, he can make you a cage for only the cost of the wire. I painted a sign "Canaries for Sale" and put it in my front yard. It did the trick, and I could have sold more. My sign not only sold my canaries, but

brought me customers to paint signs for roadside markets. One woman, who takes summer tourists, serves meals, and lets rooms, came to buy a canary. She asked who made my sign, and on being told I made it she gave me the order then for all her summer signs.

Any woman who desires to try and raise canaries can write direct to me. I will be only too glad to help her with any information she may desire, and I wish her luck.—Mrs. Hattie McIntyre, Brimfield, Mass.

No Fruit Wasted on This Farm

Living in the city before my marriage, I always paid a high price for fruit. After becoming a farmer's wife I soon noticed the great amount of fruit going to waste on farms. This gave me an idea to turn the so-called

Winners in Our Pin Money Contest

"WHAT'S your way of earning extra money at home?" Several weeks ago we asked readers this question, and offered cash prizes for the best answers. We got so many interesting letters with ideas for making extra cash that it was extremely difficult to choose the winners. However, the judges finally selected these 21 prize winners:

First Prize, \$5.00: Mrs. Hattie McIntyre, Brimfield, Mass.

\$1.00 to each of the following:

Mrs. Florence E. Aekler, Richfield Springs, N. Y.
Mrs. Mildred E. Armstrong, R. 3, Concord, N. H.
Miss Eleanor Bookstaver, R. 2, Middletown, N. Y.
Miss Vera L. Burnette, 506 Fifth Ave., Owego, N. Y.
Mrs. A. Calie, R. 2, Sharon Springs, N. Y.
Mrs. Bessie Chase, East Hampstead, N. H.
Mrs. George W. Corwin, Westhampton, Long Island, N. Y.
Mrs. T. C. Deeves, R. 3, Presque Isle, Maine.
Mrs. John B. Fellows, R. 2, Farmington, Maine.
Miss Olive Flood, Milan, Pa.
Mrs. Helen Freeland, 2084 Lake Ave., Rochester, N. Y.
Mrs. Leander B. Glover, Cox's Lane, Cuthogue, Long Island, N. Y.
Mrs. John J. Hurley, Rye Beach, N. H.
Mrs. Winford G. Messier, Raymond, N. H.
Mrs. W. H. Oakley, Clyde, N. Y.
Mrs. Ruby Pease, Laconia, N. H.
Mrs. Jacob Stadlinger, Waterport, N. Y.
Mrs. Elmer R. Stone, Clyde, N. Y.
Miss Edna Wilfert, Jeffersonville, N. Y.
Miss Ruth E. Williams, Gelatt, Pa.

Some of these women have built up a real business out of their hobbies. All of them are getting fun, as well as profit, out of their efforts. The first prize letter, by Mrs. Hattie McIntyre, of Brimfield, Mass., and several others are printed on these pages. Others will appear in future issues of *American Agriculturist*. We plan to print all of the winning letters, as we want to pass along the good ideas they contain to other women who are looking for ways to earn money at home. Be sure to watch for them. They may show you how to put extra cash in your own pocket.

waste into money. I told my city relatives and friends of my plan, and orders for all varieties of canned fruit and jellies came in by mail almost immediately.

I'm happy to say that by careful planning, and after the price of jars, sugar and paraffin is deducted, it can leave a clear profit of two-thirds of the income. For example, one fall I took in \$45.00, of which \$30.00 was clear. At various other times, I was fortunate enough to earn pin money in receiving first and second prizes on my canned goods at our County Fair.—Mrs. Jacob Stadlinger, Waterport, N. Y.

* * *

Novel Idea for Earning Extra Cash

Since last September, I have earned a good number of dollars by cleaning monuments and markers in cemeteries. Living near two large ones, I heard several people inquiring who did such work. One day, I decided to try it, and I find it not only interesting but it gives me ample pin money.—Mrs. John B. Fellows, R. 2, Farmington, Maine.

* * *

Fancy Work Hobby Becomes Profitable

When my husband became ill and unable to work, money was scarce. I had three small children to care for, so it was impossible to work out. As I always liked doing fancy work of all kinds, I got the idea that maybe I could sell some. I have had very good luck with my hand embroidery, crochet, candlewicking, and pieced quilts. I have taken orders for goods for Xmas, birthdays, weddings, and gifts of all kinds. I also make linen handkerchiefs with handmade tatting on the edges.

Last fall and Xmas I sold almost \$48.00 worth of goods, so I think I have a very good hobby, and one that pays well. It is lots of work and needs patience, but it brings its reward once sold.—Mrs. Florence E. Ackler, Richfield Springs, N. Y.

* * *

Finds Beekeeping Interesting

I live in the country and have an average of 20 colonies of bees, from which I sell honey, both extracted and in the comb. I do nearly all of the work myself and have sale for most of the honey at the door. A satisfied customer comes back for more.

There is a pleasure and satisfaction in knowing that I am selling the purest and healthiest sweet. Honey is pre-digested, so is directly absorbed by the blood stream; therefore, does not tax the digestive system as sugar does.

Beekeeping is interesting and takes one out of doors quite a little in the summer. I expect at the word "bees", some will immediately think "But they sting!" To be sure, they do at times; it is their only means of protection. But with the proper outfit one can protect herself quite well.—Miss Ruth E. Williams, Gelatt, Pa.

"Everybody here? Then I HAVE shot a deer!"

Have You Sent in for Your FREE COPY of "Eastman's Chestnuts"

STORIES THAT LIVE

Not the least of Ed Eastman's contributions to the wholesomeness and happiness of rural life have been his bi-weekly "chestnuts" tucked away at the southeast corner of his editorial page in the *American Agriculturist*. I'm glad these scattered waifs are now brought together within the compass of one cover.

The mere business of making a living is apt to become pretty grim at times. There is danger that we shall concentrate upon it to the neglect of happy living — that we shall blindly keep our eyes in the furrow of our business and never note the pleasant nature of the land we plow.

For a person so tempted to take life (and himself, perhaps) too seriously, there could be no better safeguard than a small daily dose of Ed Eastman's chestnuts. The chances are that the treatment will make you a more bearable person for your family to have around. For the only humor in this little book is good humor. There is no caustic wit nor bitter sarcasm — just smiles and grins and sometimes laughter.

What if you have heard some of these things before? Of course you've heard 'em! But remember that only the good, sound stories stand the test of time and survive to be repeated.

—ROMEYN BERRY.

FACTS About the Book

■ ■

For years *American Agriculturist* has published an "Eastman Chestnut" in every issue. 157 of the best ones have been selected and published in book form.

★ ★

The book is handy pocket size—4 1/4 x 6 inches—the print is large, easy to read. You and your friends will enjoy it.

NAME

POST OFFICE

Kernels, Screenings and Chaff

By H. E. BABCOCK

BY THE time this paper is in your hands Election Day will have come and gone.

While personally I have felt more sure of how I should vote this year than I remember having felt on any recent election day, I am not going to let myself be unduly elated or depressed by the outcome, whatever it may be. If my side loses I am going to remember that I have been wrong many times in my life; if it wins, I shall be more sobered than elated by the responsibility I must carry.

A Close Vote

There will be only one election result which I shall regard as disastrous. *It will be for either of the two major parties to win by a one-sided majority.* A Democracy can only be maintained by a series of checks and balances. It heads for trouble the moment there is no substantial opposition to the party in power. So whether it be Roosevelt or Willkie on November 5th, *it is my hope that whoever wins does so by such a narrow margin that he will never forget how close he came to losing.*

* * *

Farm Notes

Several people have written in questioning the fact that I reported quick-freezing only three hundred and eight pounds of meat out of the four hundred thirty-five pound carcass of our spayed heifer. They wondered what became of the 127 pounds of carcass not accounted for. Mrs. Babcock tells me that we ate approximately 20 pounds of roasts and steaks before the meat was frozen. And due to the fact that we got the heifer too fat, a great quantity of tallow had to be trimmed off the cuts before they were frozen, and of course most of the bones were removed. The next time we kill and quick-freeze a beef we will try to keep track of those items.

Winter Quarters

I know that a great many people about this time of year get a lot of satisfaction from a well-stocked and well-arranged cellar. I get the same sort of thrill from barns well filled with livestock, arranged so that everything is comfortable and can be taken care of with a minimum of labor and inconvenience.

Ever since the leaves began to fall I have been planning the winter quarters for our livestock and poultry in the seven big barns which will house them. At last I have gotten my plans down on paper, and unit by unit the birds and animals are being moved in. Chores will soon take on a new meaning; instead of being cold and bleak, the barns will be warm and cozy and full of the sound of singing and cackling birds, gently lowing cattle and the soft neighing of horses. Then my bedtime tour of inspection of the big barn at Sunnygables will once again be the

most pleasant hour of my day. Spring and summer and fall—all are pleasant to remember but their passing leaves no regret to a real lover of livestock.

One Feed a Day

Only hens and dairy cows will be fed more than once a day. As I have studied our problem of chores I am convinced that one of the most wasteful labor practices we have had in past years has been that of feeding animals, like horses or dry cattle, two and three times a day and cleaning stables daily. We have had enough experience with the practice of feeding once a day to know that we can get just as good results with it on most classes of live-

stock as we can by feeding oftener.

Generally speaking, our idea is to feed enough in the afternoon so that stock will just about clean it up by ten or eleven o'clock the next morning.

Dry Beds

Last winter for the first time I began to notice the effect of dry beds for loose livestock. To get good growth and good gain, I believe that dry bedding is just as important in its way as feed, water and salt. Except for the horses, all our loose livestock this winter will be confined within warm barns and only let out a couple of hours each day for exercise. Loose livestock likes to go outdoors, even sleep there, but

I am convinced that it takes too much feed to warm up cold ground and withstand the rigors of outdoor weather.

Spoiled Silage

For two or three years I have been giving advice on this page about how to keep the spoilage of silage down to a minimum. Well, we just opened our largest silo, and I am not a bit proud of what we found. Spoilage on top was not bad, but there is a discouraging lot of it along the sides. I think I know the reason, but until I correct the situation, I am not going to give any more advice, nor am I going to print any more articles by Charlie telling how he tramps silage.

Down Mexico Way

By H. E. BABCOCK, Jr.

October 26, 1940.

THIS PAST week we got the final count and weights of our feeder lambs. We were a little disappointed in the number of lambs, but probably not so disappointed as the rancher who thought he was going to have 3200 lambs instead of the 2875 he delivered. The lambs weighed an average of a little over sixty-two pounds. We cut-back only 128 peewees and wrinkly lambs which weighed in total 7125 pounds. At the same time these lambs were cut-back we cut out over six hundred lambs which were large, in good condition, and generally of the mutton type. It is our plan to finish these off immediately and get them on the market between the Thanksgiving turkey and the Christmas goose.

Next Tuesday and Wednesday will be given over to the job of dipping the feeder lambs and the farm flock, all of which have recently been drenched. In starting off a bunch of feeder lambs, there are always a few lambs which are bashful and slow to start eating. This trait caused the death of a few lambs several days after they had been put into the feed lot. Since we

did not want to accept starvation as the cause of the deaths, and because we wanted to check every possible reason, we had a veterinarian post two of the lambs. In each case he found no direct pathological cause, but many tape worms, which, due to the lambs not having eaten, had worked forward into the stomach and liver. He advised immediate drenching.

I have always been led to believe that worms in range sheep are almost entirely unknown. In mentioning this to the veterinarian, he gave quite a plausible explanation of their presence, at this time, a fact which the ranchers are yet loathe to believe. In explaining his theory, which must be based on scientific fact, he connects the life cycle of the tape worm with the life cycle of the sheep tick. So long as there are ticks there will be tape worms. Years ago, scab was a problem which was being fought by all sheep men and which caused several dippings a year. While controlling the scab they were likewise controlling ticks. As the scab disappeared, dipping stopped. Importations of breeding stock brought in ticks which have been allowed to go on unmolested in their work of providing a host for the completion of the tape worm cycle. It is a problem which is fully as important as the control of

No longer are horses taken to blacksmith shops; they either go unshod or the blacksmith comes to them. Much of our shoeing at Sunnygables is done by A. I. Sherman and his helper (shown above) with their traveling forge. The only thing lacking is the chestnut tree.

scab, but since there is no law providing for the control of ticks, it will be some time before the sheep men recognize the problem.

As we plan out crops for next season we have constantly considered the wishes of the AAA in order to obtain their benefits, in spite of our disapproval of the general AAA plan. Soil conserving and soil depleting crops are weighed and balanced so that we can put in a maximum of our cash crop, cotton. While we were weighing and balancing, it was suddenly brought to our attention that Atlas sorgo, one of the many grain sorghums, is not soil depleting, that is, if we raise it for feeding on the farm. However, if we sell it for silage to be taken off the farm it becomes soil depleting. Although we believe our wheatland maize—which averaged seventy-nine bushels to the acre on one seven-acre piece we have combined—is a superior crop for us to raise, we are now wondering if we shouldn't raise the soil conserving sorgo.

Conducted by H. L. COSLINE

Watch for This One!

"On August 22 a salesman, O. Gibbs, stopped at my place and sold me 15 gal. of roofing cement with the understanding that I was to be the jobber and that he would put a salesman in this territory 3 days a week. He put this in writing but I haven't seen anything of him. I wrote to the Gillcote Coating Company and my letter came back—"moved, left no address." I took his license number, which is Ga. F6-301."—V. S., Mass.

We have a folder of complaints against the Gillcote Coating Company of Philadelphia. Orders given by A. Gihls, Gibbs or Gillman were never received. Letters sent to the company were returned marked, "unknown." We were unable to locate the agent although State Police in several states were cooperating with us. If any of our readers are approached by Mr. Gibbs or Gihls, as he sometimes calls himself, they should report him to their local police.

Alien Registration

A letter from Earl Harrison, Director of the Alien Registration Division of the U. S. Department of Justice, Washington, D. C., calls an important point to the attention of our readers. "Alien registration," says Mr. Harrison, "has progressed satisfactorily, but there are still many aliens that must be registered before December 26."

The law requires that all non-citizens in the country over 14 years of age must be registered and fingerprinted at post offices or at other places officially designated for registration, and that those under 14 years of age must be registered by parents or guardians.

It is estimated that aliens to be registered will total 3,600,000. The law provides several penalties for aliens who neglect to do this. If questions arise as to the exact procedure to follow, information can be secured from Mr. Harrison.

Failed to Fulfill Contract

Several subscribers in the vicinity of Ithaca, New York, have had unsatisfactory dealings with Mohamed Abraham of Elmira. Mr. Abraham canvassed several rural sections, offering to sell and lay linoleum and representing, so our subscribers state, that he was con-

nected with a well-known Elmira firm. This firm, incidentally, states that Mr. Abraham had no connection with them, but merely came in occasionally to buy linoleum.

The unsatisfactory part of the transactions was that Mr. Abraham failed in several cases to complete the job, although, by giving a hard luck story, he succeeded in obtaining full pay for it.

We have been unable to locate Mr. Abraham in Elmira. If anyone knows of his present address, it will be much appreciated.

A Clever Scheme

"We had a very clever scheme pulled on us. A man, offering a poultry tonic from a small town in Pennsylvania, called at our place about a year ago. He said he had canvassed poultrymen in our vicinity, that he had several orders for his product, and that he wanted us to handle it for him. We did this for some time, stocking only enough to meet orders. Then one day he came in and said that he had had orders for 18 packages, so I took them and paid him 65c a package. When I came to check up, I found that the poultrymen he had mentioned had not given any orders, and we still have the product on our shelves. Naturally that was the last time he called."

"I just thought this would be interesting to readers of *American Agriculturist* and perhaps save some of them from a similar experience."—L. T., New York.

Facts Save Money

Knowing all of the facts would bolster the sales resistance of many a subscriber who is approached with a scheme of doubtful merit. It is the aim of the Service Bureau to present as many of these facts as possible in the limited space available.

Now you can get additional information direct from the *American Agriculturist* Service Bureau in the form of booklets published by the National Better Business Bureau. Any one or all of the following booklets will be sent post paid on receipt of 5c each to cover costs:

FACTS YOU SHOULD KNOW ABOUT:

- Savings
- Advertising
- Borrowing
- Schemes
- Oil Royalties
- Life Insurance
- Investment Companies
- Securities
- Legal Problems
- Health Cures.

Check the bulletins you want, inclose 5c for each copy, include full name and address, and mail to *American Agriculturist*, Department B, Box 367, Ithaca, New York.

One of our subscribers, Mrs. Mittie Hazard, Nichols, New York, is interested in getting either bound volumes or individual issues of the *Youth's Companion* for the years 1870, 1873 and 1879. She would like to hear from any reader who may have these available.

We would like to know the present address of Milford Davis, son of Joseph Davis, property holder in the Larone Section of Fairfield, Maine. Last heard from, Mr. Davis was in Glens Falls, New York.

We would appreciate knowing the address of Mr. Lawrence Miller, formerly of Oakfield, New York.

THEIR SON WAS KILLED THE DAY HE GRADUATED FROM CORNELL

Edmeston, N. Y.
October 22, 1940

Mr. E. C. Weatherby
Ithaca, New York

Dear Mr. Weatherby:

I write you a few lines to thank you and your Company, the North American Accident Insurance Company, for the prompt settlement of the claim on the life of our son, Adam.

The draft for \$1,000.00 was so appreciated and a great comfort. His death was so sudden and tragic as to be almost incomprehensible -- on the day of his graduation from the Veterinary College of Cornell at Ithaca.

I feel no person should be without a North American Accident policy. The annual premium is so small. During the last 10 years everyone in our family has carried one.

Very truly yours,

Mr. & Mrs. Richtscheit

Farm Service Bulletins For You

IN ORDER to make available to readers more information which will help increase profits, the editors of *American Agriculturist* have prepared several mimeographed bulletins on timely subjects. These are available to any reader without cost other than 3c each to cover mailing and shipping costs. Bulletins now available are:

- ☐ No. 101—HOW TO RAISE BABY CHICKS.
- ☐ No. 102—PULLORUM DISEASE OF CHICKS.
- ☐ No. 103—HOW TO CONTROL MASTITIS.
- ☐ No. 104—HOW TO BUY A HERD SIRE.
- ☐ No. 105—HOW TO CONTROL WEEDS.
- ☐ No. 106—HOW TO COOL AND PACK EGGS.

Check the ones you want, include mailing cost, and return the coupon to *American Agriculturist*, Box 367-S, Ithaca, New York.

From time to time we plan to make additions to the list available.

How high compression has turned ideas about tractor power **UPSIDE DOWN!**

"Say, Joe, you're sure plowing a lot of acres powerful fast."

"That's right, Bill. This high compression tractor plows more acres faster—and on less gas and oil than any tractor I have ever had."

THERE has been a revolution in farm power. Many an old idea about tractors just isn't so any more. For instance, the idea that tractors had to be big and cumbersome to develop power is obsolete. Modern small and medium-sized tractors with high compression engines can walk away with a gang of plows in a way that would make many a "big" tractor of years ago blush with shame.

There have been plenty of changes, too, in ideas about fuel economy, oil consumption, flexibility, and almost every other phase of tractor operation. Because modern high compression tractors are designed along automotive principles to burn good gasoline, they do their work with no more fuss and

bother than an automobile. They start easily, warm up quickly, idle smoothly without stalling and are economical of fuel and oil.

Since gasoline power is more convenient and can be better adjusted to the load and speed requirements of various farm jobs, farmers tell us that they are getting more use out of their tractors—using them for more jobs, both on the belt and in the field.

If you still have the idea that tractor economy means burning low-grade fuels, talk to your neighbors who have high compression tractors using good regular gasoline. What they'll tell you may turn your ideas upside down... but you'll find that there's just no comparison between modern, high compression

farm power and tractors burning low-grade fuel.

THE FARM PAPER OF THE NORTHEAST

New Orleans

AND THE

By Jared Van Wagenen, Jr.

SUGAR BOWL

pool almost up to the running board. There was nothing to do about it except to have the head of the expedition—or more correctly, the male member—take off his shoes and socks and roll up his pants and wade for it.

New Orleans would be a big city anywhere and it is far and away the largest city of the South. According to the 1940 census, it just missed reaching the half million mark. For more than two hundred years it has set there

beside the great River and taken toll of all who passed. A century ago, when the fabulous age of steam-boating on the Mississippi was just coming into its heyday, the city had more than a hundred thousand population and an overflowing prosperity. By virtue of its strategic position, it can never escape being the metropolis of a vast region. Emphatically it is a city set in a swamp. No point is more than ten feet above sea-level and much of the year the business section lies from four to twelve feet below the yellow, swirling flood of Ol' Man River, with only the broad levee to hold it back. As perhaps almost everyone knows, the water-table lies so near the surface of the ground that graves cannot be dug, so the cemeteries are made up of long avenues of vaults built above the ground.

Perhaps it is true that New Orleans is in many respects behind the times as compared with northern cities of its size, but at least it has a very wonderful hospital. A physician who should know told me that it was the second largest institution of its kind in America. It is of skyscraper construction, story piled on story, so that it looms up as the most prominent structure in the city and dominates the sky-line far and wide.

We were in New Orleans less than two days but managed to crowd a good deal into that brief period. Our daughter Margaret has a friend married to a physician on the staff of the hospital. In the afternoon they came with their car and drove us around the town and through the parks and (Turn to Page 24)

FROM Mobile, Alabama, to New Orleans is about one hundred and fifty-five miles by the Old Spanish Trail. People who have toured very widely tell me that this is probably the most interesting drive to be found anywhere in the South. If we say that its history begins when the first Spanish conquistadors passed this way, then it is the oldest trail in America. The road crosses the narrow panhandle of Mississippi which juts down to meet the Gulf, so that the drive between the two cities gives a glimpse of three states. Some of the way lies far enough inland so that there is no particular sense of the nearness of the sea, but for much of the distance it skirts the salt water. On the way one passes through Biloxi, Miss., renowned for its shrimp canneries. Further west are many miles of road where the south side is the sea-wall and beyond that the Gulf, while the north side is an almost continuous street of homes ranging from very primitive bungalows to ornate mansion-like residences. Some of these homes stand under old live oaks, and the age of the plantings and the mellowness of their landscaping indicate that they have known the hand of the gardener for a great many years.

We lay the night in the state of Mississippi in a town with the beautiful name of Pascagoula. Our lodging was an exceedingly well appointed double cabin standing in an open pine grove with a dry sandy soil, and we parked the car a rod or two away in what proved to have been a slight depression. During the night we had hours of a slashing thunder storm and in the morning the car stood in a

Growing Up in the "Horse and Buggy" Days—See Page 5.

"This is a Wonderful Country!"

By GRIGGORY DOLE.

I'M JUST back from a trip. Not a long trip nor a very exciting one, many would think, but still quite a jaunt for my old car which has already carried me over 120,000 miles and seems to be going strong.

I drove up through the Adirondacks in New York State, and then swung

down through the farm country around Schoharie. I don't think I shall ever tire of the northern mountain region, with its crystal-clear air, its numerous lakes and its varied outlooks that seem to grow more magnificent with each turn of the highway. The lush, green fields and the rolling hills of the Scho-

harie country are equally satisfying to any long-pent-up city dweller.

But on this trip I made a new discovery. I found out what sort of people really make this country worth while.

Near Keene, N. H., there was the black-haired, grimy young chap to whom I gave a lift to the village garage after I came upon him beside his broken-down car. He carried slabs from a saw-mill for a living, and he must have a tough time of it, for when he came to buy the needed coil-box, it

took every penny he had on him.

When his friendly smile tempted me to ask if he were the French-Canadian I took him for, I received a surprise. French-Canadian? No, I should say not. He was of French descent, sure enough, but his ancestors had lived in this country for four generations. He was an *American*—and proud of it!

His answer made me realize that there was another side to the proud claims of my own family about a Dutch ancestry that goes back almost to the *Half Moon* (Henry Hudson's ship). I pictured this young chap's forebears setting up homes in the lonely, blizzard-swept wilderness where few other men would have cared to settle, and holding on to their acres as stoutly as any Netherlander ever clung to his patent along the sunny Hudson. Who could say that his ancestry was not every bit as good as mine? Before we shook hands in parting, both of us agreed that it was a pretty good thing to be an American.

Then, up in the big state sanitarium near Saranac, I found the friend whom I had come all the way north to see. Without saying much about it, both of us knew that the cavity in one of his lungs never would heal, and that he would always be a "chronic case".

When I asked him where he would like to go during the short time he was free, he suggested Fish Creek Pond State Park.

Perhaps you have seen that place. All around the lake people come and set up their camps. Tents and trailers are there by the scores. It was like that when we made our visit. When I asked one sun-bronzed youth how many families were camped there on this particular day, he told us over four hundred and fifty.

As we started around, my friend said something I shall not soon forget. Accustomed as he is to the most confining sort of institutional life, with only three hours of outdoor liberty a day and that restricted to the "san" grounds, he is hardly a person to be envied. Most people would agree that, with his health handicap, he lives only a partial life of sorts. Yet, when he saw all these happy, care-free people enjoying a freedom he would never know, he exclaimed:

"This is a wonderful country!"

The remark struck so deep that I could not answer for a minute.

The Saturday night that I wound up at Schoharie, farmers were driving in, from miles around, to hear the last of the summer concerts by the high school band. The music teacher had stayed on for the better part of the summer to give these people this once-a-week musical treat, but now he wanted to be away for two weeks before school opened again.

His young charges made a stunning spectacle in their blue and white uniforms. They had wide capes that swung regally behind them, and no West Pointers ever wore their caps in more stately fashion.

But I wasn't fooled. I had been brought up in a country town. Among the fathers and mothers looking on, I saw the worn lines, the hard, rough hands and the all-too-plain clothing. I would have been willing to wager that two-thirds of these families had not yet "lifted the mortgage". Taxes must eat deep into their incomes, for schools cost plenty of money to run nowadays.

Yet there they were, proud for all their worries, and rejoicing in the show that their youngsters were putting on for the town's benefit. Their children were in uniform, but there was no motive behind it other than giving pleasure to the community.

When the band finally rose to its feet for the playing of "The Star-Spangled Banner" and all heads were bared, those earnest, hopeful faces around me brought back the words of my friend:

"This is a wonderful country!"

AGAIN CHOICE OF CHAMPION PLOWMEN!

Firestone

GROUND GRIP TIRES

- ★ USED BY AMERICAN CHAMPION AT DAVENPORT
- ★ USED BY ALL THREE CANADIAN CHAMPIONS
- ★ USED BY 13 OUT OF 19 FIRST PRIZE WINNERS AT WHEATLAND, TROY, LILY LAKE AND BIG ROCK

ALL tractor tires give good service when the ground is dry and hard. But what every farmer wants is a tractor tire that will dig in and give super-traction when the ground is soft and the grass is wet and slippery. The question is: "What tire gives greatest traction in all soil conditions?" And the answer is given by America's champion plowmen. For years most of the winners in all the plowing matches have used Firestone Ground Grip Tires. And again this year, Firestone Ground Grip Tires were the choice of champion plowmen.

Whether you are buying a new tractor or putting new tires on your present tractor, be sure you get Firestone Ground Grips, the only tires made with triple-braced traction bars. This patented feature gives them such superior performance that more farm tractors are equipped with Firestone Ground Grip Tires than with any other make.

Listen to the Voice of Firestone with Richard Crooks, Margaret Speaks and the Firestone Symphony Orchestra, under the direction of Alfred Wallenstein, Monday evenings, over N. B. C. Red Network.

Graeme Stewart, using Firestone Ground Grip Tires, took first place among the American plowmen in the International Plowing Match at Davenport, Iowa.

Nelson LeVee, with Firestone Ground Grip Tires on his tractor, took first place in the Prize Winners' Class at Big Rock and also finished first in the Men's Class at Lily Lake.

Clarence Schoger took first place in the Older Boys' Class at Wheatland, first place in the Boys' Class at Lily Lake and first place in the Men's Class at Big Rock on Firestone Ground Grip Tires.

Carl Hagemann, National Champion of 1939, finished first in the Prize Winners' Class at Troy on Firestone Ground Grip Tires.

Alex. Black, using Firestone Ground Grip Tires, won Grand Championship on both sod and stubble at International Plowing Match held at St. Thomas, Canada.

Fred Timbers, runner-up on sod in the Canadian Match, also used Firestone Ground Grip Tires.

George Hawstrawser, runner-up on stubble in the Canadian Contest, won on Firestone Ground Grip Tires.

Ladino Clover

for the NORTHEAST

I am interested in Ladino clover, but cannot seem to find much information about it. I would appreciate any information you can give me on this crop.

—Mrs. M. W. E., Maryland.

LADINO CLOVER appears to be a giant strain or variety of the common white clover which appears in lawns and pastures. The strain which is commonly grown in this country probably originated in Italy. It was brought to the irrigated Northwest many years ago, and was brought into the Northeast about fifteen years ago.

I have been growing it as a pasture plant on my farm in southern Vermont for about fifteen years, and have had opportunity to watch it in all of the states from Delaware north and east. In the light of my experience and observations, I should say that Ladino clover has about the same soil adaptation as red clover, although for highest yields perhaps somewhat more moisture is desirable. A high level of fertility is essential. Cultural methods are exactly the same as for red or alsike clover.

For pasture purposes Ladino clover ordinarily is seeded in mixtures with other clovers or alfalfa and grasses. My own practice has been to sow it

with oats in the spring and either pasture the oats off or cut for hay or silage. Normally, the new seeded Ladino will grow large enough to permit grazing some time in August.

Ladino clover is not a long-lived perennial, although I have succeeded in holding satisfactory stands for three to five seasons.

The seeding mixture which I am using at the present time consists in pounds per acre of the following:

- 2 lbs. Ladino clover
- 6 " Alfalfa
- 5 " Timothy
- 5 " Smooth Broome Grass

That may not be the best seed mixture for all conditions, but it has been very satisfactory under my conditions. I find that where the soil is rather heavy and moist, the Ladino is dominant; but where the soil is lighter and dry, the alfalfa is dominant. After about three years, grasses become dominant; and after about six or eight years, the pasture needs re-seeding.

There is a rather good leaflet on Ladino clover available to Massachusetts residents from the Massachusetts Extension Service at Amherst.—John B. Abbott, Bellows Falls, Vermont.

Apples THAT KEEP

THE LENGTH of time that apples will keep well in storage is affected by a number of things. First, apples should be put in storage as soon as possible after they are picked. Tests at the New York State College of Agriculture, as reported in bulletin No. 440, "The Storage of Apples," by R. M. Smock, show that each day of delay between picking and storage takes approximately a week off the storage life of McIntosh apples held at 32° F.

Second, the temperature at which the apples are held is important. Apples freeze at a temperature between 27° and 28° F., but the most common storage temperature is 32°. Where apples are to be taken from storage by February, they can be kept at from 36° to 40°, but, in general, the higher the

temperature, the shorter the time apples will keep.

Third, because apples are 85 per cent water, any considerable loss of water will cause shriveling. It is, therefore, important to maintain humidity in the apple storage at 80 to 85 per cent. This means that the air in the storage holds from 80 to 85 per cent as much water as it could hold at the storage temperature.

It has been thought that heavy fertilization with nitrogen lowers the keeping quality of apples. Tests have shown that normal applications of nitrogen have no appreciable effect; but, at least with certain varieties, the excessive use of nitrogen may influence the storage period through its effect on scald and bitter pit or through the ef-

RED EARS An old-fashioned Husking Bee on the Newton Cummings Farm, Paris, Maine. Says Harry Packard, who sent us the picture: "Mr. Cummings raised 800 bushels of corn, and had one whole row of red corn. Just before the huskers were ready for the word 'go', the hired man strewed a bushel of this red corn on top of the pile. These red ears helped to make a very gay evening."

Husking Bees are fun, and something that could well be revived in many neighborhoods.

A close-up of seed corn stored in an outdoor crib with wire sides to permit a free flow of air.

SEED CORN

LAST SPRING B. H. Duddlestone of Trumansburg, New York, devised a very practical seed corn drier. Mr. Duddlestone grows a big acreage of double-crossed 29-3 corn. To store it he has built two long, narrow cribs, the sides of which are made from woven wire fencing. The cribs are narrow so the wind can blow through them and dry out the corn.

Late in the spring, corn stored in this way needs no further drying. For early orders, however, briefly here are his arrangements for artificial drying: On the second floor of an old building, used for shelling and bagging corn, he has constructed a drier about 15 feet

by 18 feet and as high as the room in which it is made. The corn is piled on a rack about 1½ feet above the floor. In the room below at one end of the drier is a pipeless furnace. A fanning mill, run by an electric motor, blows air across the top of the furnace pipe, forcing it under the corn and up through it to an outlet at the top of the far end.

Moisture tests early last spring showed the corn as containing about 17 per cent moisture. To bring this down to 14 per cent requires two or three days of drying. After it is dried, a chute takes the corn from the drier to the lower floor where the sheller is located.

fect on fruit size. Large, oversized apples do not keep as well as normal-sized fruits.

While washing to remove spray residue has little effect on keeping quality if done properly, an emulsion, where used, may take off enough natural wax to cause serious wilting. Probably the most serious effect of washing is the bruising and skin-cutting which sometimes occur.

There are three kinds of apple storage: common storage, where fruit is cooled as rapidly as possible by opening the doors and intakes at night and closing them in the day; cold storage, which is more easily regulated and more effective but also more costly; and the recently discovered modified atmosphere storage, where apples are kept at 40° F. in airtight storage where the atmosphere contains about 10 per cent carbon dioxide and 11 per cent oxygen.

Dutch Elm Disease Still With Us

The best help that can be given by the public in controlling Dutch Elm disease is to cut a number of 6" lengths of twigs from trees which have symptoms of the disease and send them to the Dutch Elm Laboratories, U. S. Department of Agriculture, Bloomfield, New Jersey.

Symptoms which might be recognized include wilting of leaves on one or more branches in June or July. When branches which show this wilting as a result of Dutch Elm disease are cut, you will find brownish colored spots in the wood just under the bark. Diseased trees should be destroyed.

In Spite of Handicap

Miss Olive Gleason, Keene, New Hampshire, who will soon be attending the National 4-H Club Congress at Chicago. She will compete for national honors in the 4-H Style Revue. Her success in 4-H Club work is unusual when we consider that at the age of seven years she was stricken with infantile paralysis. In 1938 Olive was a delegate to Camp Vail, at the Eastern States Exposition, and in 1939 was selected as a delegate to the National 4-H Club Camp at Washington.

THE Editorial PAGE

BY E. R. EASTMAN

"He's sick abed on two chairs behind the stove with his feet in the woodbox." (Just grunting!)

—Old Country Saying.

Every Northeast Farm Has a Market of 70 Persons

WHAT I say in the editorial on this page about a farm being a safe retreat or refuge in time of trouble is doubly true for farmers who live in the Northeast, for in many respects in spite of all of our problems here, the Northeast is the best farming section in the world. As the Federal Land Bank of Springfield so well says, "The Northeast is a Good Place to Live."

To prove this statement, the Federal Land Bank has recently looked up some interesting figures about this Northeast farm country of ours which I pass on to you, with the hope that they will encourage you and that you will pass them on to others through your Grange and other farm meetings. We all need encouragement in these times.

In the first place, we as farmers of the Northeast have the best markets in the world. Federal Land Bank District No. 1, comprising New York, New Jersey, and New England, has a population of 25,000,000 people, or 20 per cent of the United States total, but our area here is only 4 per cent of the United States. Out of the 25,000,000 or more people in these 8 northeastern states, only 1,600,000 are on farms. Therefore, every Northeast farm produces for 70 persons, of whom 65 are city dwellers.

The Northeast has 45,000 manufacturing plants, and nearly one-third of the nation's wage earners. These plants are all beginning to hum with renewed activity, so the agricultural outlook for the next two or three years now seems to be excellent. Counting both agriculture and industry, the Northeast owns 22 per cent of the nation's wealth.

Of all the farms in the Northeast, 65 per cent are free and clear of mortgage debt, and most of the other 35 per cent are making some progress in paying off their mortgages. Nearly two-thirds of the Northeast farm homes are on improved highways, one-half have running water, and about one-half have electricity.

Northeast Greatest Dairy Country

Two out of every three Northeast farms receive most of their cash income from cows. We have 2,290,000 dairy cattle in the Northeast. Line them up eight abreast and they would make a solid line from Boston to Buffalo, 475 miles. Quite a herd!

We have 8.9 per cent of the country's total dairy cows, but they are so good that they represent 16 per cent of the total value of such animals, and the average milk production here is 28 per cent above the United States average.

Over one-fourth of the nation's income from dairy products goes to farmers in New England, New York, and New Jersey.

Milk flows through milk plants in the Northeast at the rate of 2,345 gallons every minute of every day. That makes this section the greatest dairy country in the world.

Poultry in the Northeast

The Northeast has 6.8 per cent of all the hens in the United States. These produce 8 per cent of the nation's eggs, 13 per cent of the total value

of eggs, and 21 per cent of the United States total income from poultry.

How Northeast Farming is Diversified

Northeast farmers don't carry their eggs in one basket. Therefore, they are on safe ground. This section produces:

- 11 per cent of the nation's milk supply.
- 8 per cent of the nation's eggs.
- 27 per cent of the nation's Irish potatoes.
- 16 per cent of the nation's apples.
- 44 per cent of the nation's late cabbage.
- 24 per cent of the nation's late onions.
- 19 per cent of the nation's cherries.
- 78 per cent of the nation's cranberries.

Thanks to Aroostook's mammoth output of potatoes, Maine leads the country in that crop, and New York is fourth.

Vermont is first and New York second in maple syrup and maple sugar.

New Jersey's intermediate cabbage crop is first, and her mid-season onion and potato crops are second.

Connecticut leads in tobacco for cigar binders and wrappers.

Massachusetts produces most of the country's cranberries.

THE NORTHEAST IS A GOOD PLACE TO LIVE.

So Many Potato Containers are Absurd

IT IS ALMOST impossible to do any intelligent market reporting on potatoes because there are so many different kinds of containers.

The potato farmer of Maine uses a barrel that contains 165 pounds; in other places, potatoes are sold by the sack, but the weights in the sacks differ, some being 50, some 90 and some 100 lbs. In still others, potatoes are sold and quoted by the bushel.

Certainly one of the minor things growers and their organizations could do to help their marketing situation is to adopt a uniform package.

Your Farm is a Refuge

LAST Sunday a successful manufacturer and business man from New York City came to my home to ask my advice about buying a farm. I said to him:

"Were you raised on a farm?"

"No."

"Did you ever farm?"

"No."

"Do you know anything about farming?"

"No."

"Well, then, what in the world do you want with a farm? It requires just as much training, skill and ability to run a successful farm as it does to run your business. You have been a lifetime learning how to manage your business. How, then, do you expect to make a go of a farm business?"

"I know you are right from a business standpoint," he answered, "but I want a farm as a refuge or a retreat — a sort of cyclone cellar — where I may take my family in case of a great upheaval in this country. I look at Europe and think what has happened there, and I know that it can happen here. We can have a war with other countries, a revolution within our own borders, or an inflation which will wipe out everybody's business. In case such trouble comes, a farm is the best bet."

I am passing this information on to farm folks.

While it may be foolish for a city man, inexperienced in farming, to buy a farm, yet there is truth enough in this man's statement to give every farmer a little more feeling of security because he lives upon the land. If the worst comes, he can hold out longer and better than anyone else.

We All Need Help

THE COMING year of rapid changes and uncertainties in the business of farming is the year when you are going to need all the help that you can get in solving your problems. Don't wait to be reminded to renew your subscription to *American Agriculturist*, and don't put off joining or renewing your membership in your farm cooperatives or organizations. The Farm and Home Bureau membership campaign is now on. Send in your renewal, not so much to help the organization but that they may be better able to help you.

Your Most Interesting Experience—Cash Prize Contest

AFTER having seen some of the early chapters of "Growing Up In the Horse and Buggy Days", by Dr. C. E. Ladd and E. R. Eastman, the staff of *American Agriculturist* are of the unanimous opinion that this is the most interesting serial ever printed in *American Agriculturist*. Don't miss the first chapter, on the opposite page.

The story is full of laughter and tears, because it is written right out of life's actual experiences by men who know and love farms and farm folks. It will take you middle-aged folks right back to your own experiences, and will show you younger people how life was lived and enjoyed in farm neighborhoods before the great changes of the present times.

In order to help you revive your own happy memories of the past and to encourage you to make a record of some of them, *American Agriculturist* is offering \$25 in total prizes for the best letters written after you have finished reading the serial, "Growing Up In the Horse and Buggy Days." Don't write your letter now, of course. Read each instalment of the story as it appears in coming issues of *American Agriculturist*, and then when the story is ended, write us a letter telling some story from your own actual experience on the farm or in a farm neighborhood, either in recent years or back in the horse and buggy days. Your letter should not be over 300 words in length, should cover only one story or experience, and it will be judged on the interest of the story itself and how well it is told.

All contestants must have read the complete serial, and they or their family must be subscribers to *American Agriculturist*.

For the best letter, *American Agriculturist* will pay \$15, for the second best \$5, and \$1 apiece for the next five best. Address letters to *American Agriculturist*, Department M, Savings Bank Building, Ithaca, New York.

Beauty at sixteen is an accident; beauty at sixty is an achievement!

Eastman's Chestnut

THE bridegroom, who was in a horribly nervous condition, appealed to the clergyman in a loud whisper at the close of the ceremony: "Is it kistomary to cuss the bride?" To this the clergyman replied: "Not yet, son, but soon!"

Growing Up in the HORSE AND BUGGY Days

The Time, The Place, The Folks

A Continued Story by

C. E. LADD and E. R. EASTMAN

Before starting to read this story, read the boxed announcement on this page.

CHAPTER I

CENTRAL and western New York in the quarter century from 1880 into the early years of the twentieth century was not yet an established farm region like New England and eastern New York. Nor was it still in the pioneer stage. For this great farm country of western and southern New York, the period which ended the 19th century and began the 20th century was a sort of betwixt and between time, a transition time from the pioneer stage to new times and a new day.

The first babies born in this new land were still alive and were now grandfathers and grandmothers. They still remembered the days of the clearing of the forests, the great fires of the burning log piles, the first breaking of the stump lots, venison as a dependable meat supply, and the starvation year without a summer when it froze in every month. They harked back easily in memory to pioneer schools, pioneer roads and pioneer society. The lustiness, the coarseness, the generous and helpful neighborliness of the pioneers were still echoed in the legends and the language of the old folks.

On the other hand, there was handwriting on the wall of the new days to come. Already the horseless carriage was being exhibited as a curiosity, telephones were about ready to spread into the country, a few crackpots even were advocating rural free delivery. I well remember riding a horse once a week four miles to the village post office to get the mail, which consisted of the Youth's Companion, the local weekly paper, and of course the National Tribune, for Dad was a soldier. In another valley to which we moved later, a stage coach delivered the mail to a post office located in a farm house, just as it had from pioneer times.

Yes, our boyhood was a time of change. We were of a generation straddling over from the pioneer to the

modern age. And what a great time that was for boys to be growing up! With all that opportunity, Partner, it's just too bad that you didn't make a better job of it!

One needs to go back a ways into colonial history to understand the background. It is a startling and little-appreciated fact that the New England

fore settling this fine country? The answer was simple and a matter of international politics. All through the long years of conflict with the French colonies to the north, the Iroquois Indians had been a buffer nation allied with the English-speaking colonists and protecting their frontiers from raids. Strategically they were necessary for our protection. Moreover, the fighting Iroquois had sufficient military strength so that they could not be lightly dispossessed of their attractive agricultural domain.

So for a hundred and fifty years the Six Nations effectively plugged the finest pass through the Allegheny Mountains, occupied the beautiful valley at the headwaters of the

Well, here we are — Carl and Ed, or Ed and Carl — just as we looked soon after we started to grow up in the horse and buggy days. You would never guess which is which, nor would you ever think that two such innocent-looking little boys could grow up into such homely men. Life is surely queer!

But it is also interesting. If you don't believe it, read our story starting on this page on life as it was lived in farm neighborhoods nearly fifty years ago.

States and the Hudson Valley were a century-and-a-half old before most of the first settlements were made west of Utica. At the time of the American Revolution, the settlements in the eastern part of the New York State were already as old as the central part of the State is today in 1940. At the beginning of the Revolution, New England and eastern New York had a congested population with much more dense rural population than now. People were already land hungry, hungry for the fertile valleys, the rolling plains and the high fertile plateaus of western New York.

Why did people hesitate so long be-

Mohawk and held the great agricultural lands of the west in the face of the rapidly rising tide of would-be settlers. One wonders how long it could have lasted if peace had continued. But war came, those master politicians, the Iroquois, guessed wrong and fought with the losing side, Sullivan's raid broke their power, the gap was open, a flood of settlers inundated the territory, and in a short ten years all of central and western New York was divided into farms.

Few people appreciate the rapidity with which settlement took place. Hardly a settlement was made before 1795, settlers were scarce in 1800, but the land was almost entirely divided into farms by 1810.

One reason for this rapid settlement was the stories which Sullivan's sol-

diers took back to the old settlements when they returned from the great march through southern and western New York.

These soldiers were amazed at the beautiful farm country, which contrasted with the stony hillsides of New England. Said one man: "Why, I'll be darned if I could even find a stone to throw at a dog!"

The soldiers told of the Iroquois gardens, the great cornfields, the orchards, which even with the indifferent care of the Indian squaws resulted in yields amazing to the Yankee soldiers. No wonder the friends and neighbors of those returning soldiers rushed to take up farms and homes in the Land of Promise which lay to the west.

It is probable that most of the land now under cultivation was cleared of its first cover and broken to the plow in the first forty years. Millions of acres of hardwood and softwood trees had to be felled, stumps had to be grubbed, stones picked and piled for fences, rails split, knolls leveled, hollows filled, raw land conquered, all by hand work or with oxen and horses. The total expenditure of human energy in literally building farms out of forests is simply beyond our present-day comprehension.

Few people understand the complete break between parents and emigrating young people that occurred in those days. What a world of courage those pioneers must have had when they put their few belongings into a covered wagon or ox-sled, and after bidding their friends goodbye entered the forests on their long journey to the west. They knew full well that the chances were that once the forests closed behind them they would never again in this world see Father, Mother, friends or home. Beside those long trails that led to the West there sleep in unknown graves many who never made the grade.

It is well for Americans frequently to contemplate the toil and sacrifice, the blood and tears, that went into the making of this nation. In my own family line was a young wife who came with her husband from Connecticut to central New York, and who, when the loneliness and homesickness became over-powering, retired to a great rock back of the barn to weep. The rock reminded her of the big stones of Connecticut and therefore seemed like an old friend. But the babies came, and no end of work, so after a while time dulled her sorrow and she learned to build a new life in a new world.

Families leaving New England, New Jersey, or Pennsylvania, traveling with horses or oxen where roads were merely widened trails through the forests, were probably a month or six weeks on the move before reaching their land already acquired from a land company or perhaps a Revolutionary soldier grant.

The hurried planting of a first crop of potatoes, corn, and other seeds brought with them, the building of a

(Continued on Page 23)

Come Along With Us!

FOR YEARS we (Dr. C. E. Ladd, Dean of the

New York State College of Agriculture, and E. R. Eastman, Editor of *American Agriculturist*) have planned to write a book in partnership. At last our plans have taken shape. We have decided to print the book in instalments in *American Agriculturist*, and the first chapter is on this page.

We both have written books and stories before, but this is to be something different and extra special. We are going to tell stories from actual experience of farmers we have known, of kicking horses and hired men, of the corn and potato fields of long ago, husking bees, silo and threshing gangs, what we had to eat and how we lived. In short, stories of fun and pathos, of life itself as seen by two boys growing up in farm neighborhoods in central and southern New York in the horse and buggy days.

Purposely we are not going to tell which one has written any particular part. We shall refer to each other as "Partner", and let you guess which is which. All mistakes by one partner of course will be blamed upon the other! So journey back with us to the farm boyhood days of long ago.

CARL AND ED.

COMFORTABLE ALL DAY

for more days

Winter weather hazards—rain, snow, slush and cold—aren't likely to become health hazards to the many millions who depend upon Ball-Band footwear to keep their feet dry and warm. It's the season's finest protective footwear—designed for day-long comfort; built for more days of hard wear. You'll get more than your money's worth in satisfaction when you buy Ball-Band better footwear.

SYRACUSE - NEW YORK

Half a Million HEIFERS

EVERY year northeastern dairymen discard about a half a million cows and raise or buy an equal number as replacements for the dairy. Because the average productive life of a dairy cow in this area is around five or six years, well toward 20 per cent of the herd must be replaced, and to do this, close to half the heifer calves born must be raised or cows must be purchased from other areas.

The first question for any dairyman to decide is this—"Will I raise my replacements or will I buy them?" There are unquestioned advantages in raising one's own. Such a program allows the development of a real breeding program. It is much simpler to control disease, and the calves can be grown the way the dairyman wants them. Too many heifers are not fed adequately, and as a result they come to producing age without the size and vigor to take full advantage of their inherited capacity to produce milk.

In New York State in recent years fewer cows have been brought in from other areas, and sales to other states, largely New England and New Jersey, just about balance cows purchased in Canada and dairy states in the Central-West. In the Northeast there is a considerable traffic of cows between areas. In general, sections close to markets raise fewer calves and buy more cows than regions on the outer fringe of an area supplying a particular market. While many dairymen in southeastern New York, New England and New Jersey raise no calves but buy all of their replacements, surplus stock is a source of income in other areas.

Health and Production

A good producing dairy cow, with rare exceptions, costs more than can be secured for an old dairy cow sold for beef. Furthermore, the man who buys cows is confronted with two difficulties—buying animals with the ability to maintain or improve the average production of the herd and buying animals that are healthy. The rather steady increase in Dairy Herd Improvement Associations has increased the number of cows with production records; but, while the total figures on cows in Dairy Herd Improvement Associations are rather impressive, cows with records still constitute a relatively small per cent of the total.

Since northeastern states have become modified accredited as practically free from bovine tuberculosis, that disease has ceased to be much of a problem; but contagious abortion and mastitis are still with us. Unless a dairyman knows whether or not contagious abortion is present in his herd, buying cattle is a gamble. If his herd is free of abortion, the introduction of cows with the disease may result in a storm of abortion in his herd. On the other hand, if his herd is badly affect-

ed, the addition of cows free from abortion is almost certain to result in their infection. With this disease, cattle that have been healthy are unusually susceptible to infection.

Mastitis is equally troublesome, but entirely different in the way it spreads. The infection is present in a large percentage of herds, ready to flare up when conditions are favorable; but the purchase of a cow badly affected with mastitis is something every dairyman wants to avoid.

Production Records Help

In general, dairymen buy cows in three ways. They purchase direct from dairymen, either locally or at some distance; they buy from men who deal in cows as a business; or they buy at auctions. Each method has its own problems and its own advantages. The man who believes that he can go into a herd on which production records have not been kept and pick out the best cows is over-optimistic. Based on experience, dairymen who do have records are often willing to allow a buyer to come in and, without looking at the records, pick any cow he wants at a specified price. Certainly buying from a herd whose owner raises all of his replacements, and who at the same time follows a good disease-control program, is one of the best and surest ways to buy healthy cows.

Speaking frankly, a good many dairymen are skeptical of the satisfaction they can expect from buying dairy cows of cattle dealers. As might be expected, there are all kinds of dealers. Many do their best to represent the cows as they are and try to give satisfaction to buyers. Others are less scrupulous. Naturally a dealer handles what a dairyman has to sell—seldom the best cows in the herd.

Auctions are of two kinds—sales by farmers and consignment sales which, in general, are confined to purebreds. In some areas there are also the dealers who bring cows in from other states in carload lots and sell them at auction. In general, these purebred auction sales are well handled, and buyers are well satisfied.

The idea has been expressed that farmers should organize cooperative dairy cow auctions where men who want grade cow replacements could go with confidence that the true conditions of the cow would be presented and where the deal would be made good if purchases turned out to be unsatisfactory.

There are in New York State a number of privately owned auctions with sales once or twice a week. Usually they sell all kinds of livestock and sometimes other things as well. Any person, by paying the required fee, can consign animals to this sale. In most

(Continued on Page 17)

This grand old cow is owned by W. J. Hall of Lockport, N. Y., and his son, Clark. She is Meadowmere Jemima Wayne No. 1346752. This cow was born the 8th of September, 1928, which makes her 12 years old; and up to this March 1, she had produced 131,091 lbs. of milk and 4,328 lbs. of fat. The list of cows in farm herds with a lifetime record like that is not too long.

Jemima has never given birth to a heifer calf. She freshened last on March 23, 1938, and up to last March 1 had produced since that time 30,011 lbs. of milk. She is now in charge of a veterinarian in hopes that she can again be bred.

*"That We and Our Sons May
Be Secure on The Land"*

**That's why the program of the
Metropolitan Producers Bargaining Agency
is a Long-Term Program!**

**"I Want My Boys to
Keep This Farm"**

"I have been producing milk for a long time, and I expect to continue for a few years more. But I want more than that. I want my boys to keep this farm in the family. That is one reason I am so enthusiastic about the good work that has been done by our local producers' cooperative, banded together with the 63 others that make up the Metropolitan Bargaining Agency.

"I have produced milk in good times and bad; have received ruinous prices for milk when the market was disorganized and have seen better prices when the market was stable. Over the years we have made progress, sometimes too slowly, but I have never had confidence in any person or group who promises the millenium overnight. Now, through the Metropolitan Bargaining Agency, we have built a solid foundation for better milk marketing, and on it the younger generation will perfect the milk marketing machinery.

"Let's keep the progress we have made. Let's stick together in one united Bargaining Agency to maintain and improve the gains we have made."

CHESTER POPLASKY,
R. D. 1, Utica

Member of Poland Milk Producers
Cooperative Assn., Inc.

Every dairy farmer knows that his local dairy cooperative and the 63 other cooperatives in the Metropolitan Bargaining Agency, have stood between him and oppression and exploitation . . . have increased his profits . . . and have insured his future. He knows that to abandon these now would be suicidal. Because the Surplus Control Plan and the State and Federal Marketing Orders have brought to every farmer **FOUR VITALLY IMPORTANT SAFEGUARDS:**

- 1 —a steady market**
- 2 —control of surplus**
- 3 —the best possible price considering the circumstances**
- 4 —regular payment for milk delivered**

The vast majority of farmers in this milkshed are solidly for these measures. At the last hearings, they insisted that the protection contained in the Control Plan and the Orders not only be preserved, but be strengthened so far as was practical at the time.

Not all of what every farmer wanted was included in the proposals, but whatever the gains that are granted, they will strengthen the unquestioned benefits already in the Orders. They will make the Orders more valuable to all of us.

Future Gains Must Wait on Future Efforts and Conditions

Under any circumstances, the program of the Bargaining Agency must be a long-term program. The presence of opposition should warn us all. Because there always will be a certain few whose special interests run counter to the interests of the many. We must be ready to continue the fight—now and in the future. We can't foresee conditions. We **certainly** can't foresee the conditions that will confront our sons when they take over. **BUT WE CAN DO THIS.** We can be certain that when those times come, either we or our sons will have the say as to what is going to happen. And we can be certain that—no matter what the conditions that face us, we and our sons will be *secure on the land*.

You Are Cordially Invited!

Join Our Delightful Winter Vacation Tour Starting February 22

DID YOU ever go on an *American Agriculturist* Tour? If you have, then you won't need any urging at all to join us in February when we head Westward for another of those marvelous trips, filled with scenic and historic attractions, with good times in friendly company, and with entire freedom from travel worries.

In the last issue of *American Agriculturist*, we told you some of the things planned for the trip, and this time we are giving a day-by-day description of places we will visit; also, the approximate cost of our "all expense" ticket, which covers *everything* except such personal items as souvenirs and laundry. If you think you can come with us, cut out the box on this page, fill in your name and address, and send it to E. R. Eastman, Editor of *American Agriculturist*, Box 367-T, Ithaca, N. Y. This will bring you an illustrated folder containing a complete itinerary of the trip, and the exact cost of your ticket from the point where you would join our tour party.

American Agriculturist does not hesitate to assure you a three weeks' vacation which will be perfect from every point of view. Our representative, Mr. BeDell, will be right there to look after everything, and he certainly knows how to do it!

The following itinerary, because of lack of space here, does not contain all of the interesting and delightful things planned for the trip:

Saturday, Feb. 22

Enroute aboard the New York Central's "Empire State Express", leaving New York at 9:00 A. M. De luxe coaches provided with individual reclining seats. Lunch and dinner in dining car. Stops will be made between New York and Buffalo to pick up all members of our party, and Mr. BeDell will be there to greet everyone. Overnight at Hotel Cleveland. Room with bath provided here and at all hotels throughout entire trip.

Sunday, February 23

Time to attend church if desired before leaving Cleveland at 11:22 A. M. for Chicago. Lunch in dining car, dinner in Union Station on arrival. At 9 P. M. we will board our Pullmans on the "North Coast Limited."

Monday, Feb. 24 — Tuesday, Feb. 25

Daylight ride on Monday through Minnesota lake region and North Dakota's great farm belt. All day Tuesday enroute through Montana Rockies, spectacular with their snow-capped peaks. All meals in dining car. This has been the favorite train of many other *American Agriculturist* parties, because of Northern Pacific hospitable service, famously good meals, and great scenic interest of its route.

Arrive Spokane, Wash., 8:50 P. M., Tuesday evening. Our Pullmans will be occupied here for the night. Time before going to bed for a stroll around the city.

Wednesday, Feb. 26

Leave Spokane 7:30 A. M. We purposely remained overnight at Spokane in order to cross the Cascades in daylight and to see the rich Yakima and Kittitas

One of the fascinating places our tour party will visit is Santa Catalina Island, that romantic spot out in the blue Pacific where "the mountains meet the sea." This island of old world charm and tropical beauty is different from anything you have ever seen.

valleys. Enroute to Seattle we'll see strikingly beautiful mountain scenery; also the Snoqualmie National Forest. Spring is in the air when we reach the Puget Sound country. Arrive Seattle at 7:15 P. M. and transfer to Hotel Benjamin Franklin.

Thursday, Feb. 27

A high spot of this day will be a trip across Puget Sound to the Olympic Peninsula, where last year the government established the Olympic National Park. This trip affords the finest views of the picturesque Olympic Mountains, and 2½ hours cruising on the Sound itself. Lunch enroute and dinner at Hotel.

Friday, Feb. 28

Breakfast at Hotel. Later leave for 2-hour, 30-mile de luxe tour of Seattle, seeing Volunteer Park, Lake Washington, University of Washington, Beacon Hill and the beautiful residential district. Return to hotel for lunch. That afternoon we will go by train to Portland, Oregon, and on arriving there transfer to Multnomah Hotel for dinner. There will be time after dinner for relaxation or a stroll about the business section before boarding our Southern Pacific Railway Pullmans for San Francisco.

Saturday, March 1

Beautiful Mount Shasta will be seen for hours from our train, enroute southward. Reaching San Francisco at 5:50 P. M., we transfer to Whitcomb Hotel and have dinner there. Evening free.

Sunday, March 2 — Monday, March 3

Sunday morning will be free to attend church or to do as you please. That afternoon, we'll take a 30-mile de luxe sightseeing tour of San Francisco. Sunday evening open. All meals at our hotel.

Monday morning, we will take a motor trip to Oakland, Berkeley and University of California, Piedmont with its beautiful homes, and return over the new San Francisco-Oakland Bay Bridge. Meals at Hotel. Afternoon and evening open.

Tuesday, March 4

De luxe motor tour to beautiful Del Monte, seeing enroute Stanford Univers-

ity, orchards of the Santa Clara country and the Santa Cruz grove of giant redwood trees. Lunch at Santa Cruz, and then we continue along the shore of far-famed Monterey Bay and over the famous 17-mile Drive, reaching the charming Del Monte Hotel about 5:30 P. M. Dinner and lodging at this famous hotel. This Monterey region has been called "the Circle of Enchantment"—and it is just that! It's unique scenery is unlike anything in the entire world.

Wednesday, March 5

After breakfast at our hotel, we will board the Southern Pacific's "Daylight Limited", which follows the very shore line of the blue Pacific. Lunch in dining car. At Santa Barbara, we will leave the train for 4 hours to see more of California's beauty spots, including the old Santa Barbara Mission, one of the few remaining active Missions in California. Leaving Santa Barbara after dinner, a short ride takes us to Los Angeles, where we transfer to the Mayfair Hotel.

Thursday, March 6

Breakfast at hotel. Lunch in Hollywood at one of the favorite dining places of movie stars. Later we tour Hollywood, Beverly Hills and the beaches. Dinner at hotel. Evening free.

Friday, March 7

Breakfast at hotel, and later a motor tour to Pasadena and Huntington Library, seeing enroute ancient Los Angeles, Chinatown, Lincoln Park, alligator and ostrich farms, wild animal zoo, the Avenue of Palms, Millionaires Row, the Rose Bowl and other places of interest. Lunch at hotel. Afternoon and evening free.

Saturday, March 8

Breakfast at Hotel — then off to beautiful Santa Catalina Island! This lovely island is 22 miles off the coast of southern California. A modern steamer will take us there, and when we step ashore at Avalon we will see a part of the world which retains much of the romance and charm of Early California.

After lunch, we'll take the Submarine Garden trip and see life at the bottom of the ocean through glass bottom boats. Weirdly beautiful and fascinating is the ocean's floor as you see it from the sea windows of these boats.

Back to Los Angeles for dinner.

Sunday, March 9

After breakfast, we leave Los Angeles aboard the "Sunset Limited", enroute to El Paso, Texas. We'll pass through thousands of acres of orange groves, through date palm orchards, and through

Imperial Valley, at one time a desert but through irrigation now fertile and famous. Lunch and dinner in dining car.

Monday, March 10

Breakfast in dining car, and then off in large de luxe motor coaches to Carlsbad Caverns, New Mexico, a National Park 750 feet below the earth's surface. These largest and most beautiful caverns in the world contain countless stalactites of unbelievable beauty and scores of other gorgeous formations, some believed to be 60,000,000 years old. Trip is not difficult. There are easy, dry trails throughout the caverns and exit is made by elevator. Back to El Paso in time for dinner, then board our Pullmans for San Antonio, Texas.

Tuesday, March 11

Arrive at historic San Antonio in the afternoon. Our tour of the city starts with a visit to the Alamo, that old fortress which has meant so much in American history. We'll see the Nation's largest army posts, and many other points of interest in and about the city, including the Mexican section. Dinner at one of the finest hotels. Our Pullmans will be ready for us at 9:00 P. M.

Wednesday, March 12

Enroute to New Orleans, arriving there at 5:45 P. M. Transfer to the Roosevelt Hotel for dinner and the night.

Thursday, March 13th

After breakfast, we will tour the old historical section of this fascinating city, rich in early American history. In the afternoon we'll see the modern residential section, including Tulane University. There'll be a tour of the river section, plantation homes and levees, and the field where the battle of New Orleans was fought. Meals and overnight at our hotel. Evening free.

(Be sure to read Jared Van Wagenen's account of his trip to New Orleans, on Page 1 of this issue.)

Friday, March 14 — Saturday, March 15

Enroute from New Orleans to Cleveland, Ohio. Saturday night at Hotel Cleveland.

Sunday, March 16

Back to our starting point. You will find it hard to part with all the good friends you have made on this trip, and perhaps you will do what last year's party did — make plans for a reunion and another trip together!

The approximate cost of this marvelous trip is about \$325.00, depending on where you live. This includes round-trip railroad ticket from city where tour is joined; all Pullman accommodations specified in itinerary; the finest hotel accommodations; all necessary tips; delicious meals; sightseeing motor trips — in fact, everything except personal items such as souvenirs. Plan to come with us. If anything happens to prevent your going at the last moment, we will gladly refund all payments.

Giving a Party?

Brimming with new ideas, games, menus, and recipes is Louise Price Bell's new book, "Successful Parties." Indoor and outdoor parties, parties for grownups and children, parties to be held at home and in community centers, parties for every holiday in the year and for every family occasion, neighborhood parties to raise money — there seems to be no end to Mrs. Bell's ingenuity in finding new and different ways to entertain. If you like to give good parties, you'll enjoy this book. It costs \$1.50 and is published by Fleming H. Revell Co., 158 Fifth Avenue, New York City.

Mr. E. R. Eastman, Editor
American Agriculturist,
Box 367-T, Ithaca, N. Y.

Please send me, without any obligation on my part, your illustrated folder giving full details of your Winter Vacation Tour, including exact cost of your "all expense" ticket. (Please write plainly)

Taber Stresses Three Points at National Grange

Calls for Adequate Defense and a Square Deal for Farmers—Warns of Burden of Taxation and Growing Bureaucracy

SPEAKING of national defense in this annual address at the National Grange at Syracuse on November 13, National Master Taber said:

"The hour has come to face the future with determination and courage. Most of mankind have lost their moorings; hatred is supplanting understanding and goodwill; brute force has crushed the feeble and weak, and the finest flowers of civilization. In the place of the perfume of friendship, Christian character, and a happy existence, rises the stench of bombs, fire, death and destruction. Both the crisis and opportunity that we face are in many respects the greatest in the memory of living men. . . . There must be neither profiteering nor unnecessary delay. All must be willing to go forward with one goal in mind—that of meeting the threat from across the seas with sufficient strength to make America impregnable."

Continuing, Mr. Taber said:

"In our determination to aid Britain in every step short of war, we must be sure that these steps are in accordance with international law."

Farm Problem Not Settled

The present unsatisfactory condition of agriculture was vividly illustrated when Mr. Taber reminded his audience that in the years 1920 to 1930 agricultural income averaged nearly \$12,000,000,000 a year, while for the last ten years the annual income for farms in this country has been about \$8,500,000,000. What is even more important is the ratio of prices received by farmers to prices paid by them for supplies, which was 94 for the first ten years mentioned, and only 78 for the last ten years. This means that during the past ten years it took more farm products to exchange for an equal volume of purchased supplies. Said Mr. Taber:

"We favor a program that helps all to climb—Labor and Business as well as Agriculture—rather than pulling down some groups."

As the basic steps in approaching present farm problems, Mr. Taber devoted a considerable portion of his address to Soil Conservation, Marketing Agreements, the Family-Sized Farm, Farm Security, Forestry and Wild Life, Water Resources and Transportation.

Mr. Taber emphasized the importance of cooperative marketing and outlined its rapid spread in the last generation, put his finger on the weakness of present irrigation and reclamation policies, and declared:

"New areas should be brought into production just as fast, and no faster, than the products can be sold at a price that gives a profit to the producer and does not depress the price elsewhere. Irrigation and reclamation service should be guided by the consumptive needs of the nation and the price structure of Agriculture. For every dollar spent on new projects to bring additional lands under cultivation, an equal amount must be spent to take marginal and sub-marginal lands out of production and put into some type of conservational use."

For More Research

As in former addresses, Mr. Taber urged increased research efforts to discover new uses for agricultural products, as an effective means of avoiding surpluses, without restricting the productive energies of the American farmer. The Incentive Payment idea and the Food Stamp Plan also received his full indorsement.

Words were not minced in discussing the Farm Credit situation.

"We struggled in the last Congress against the transfer of the Farm Credit Administration. The Grange will battle again and again in the coming Congress, or in succeeding Congresses, until we achieve the great need of rural life—that of an independent and sound Farm Credit Administration."

A Billion Dollar Interest Bill

Commenting on the rapid spread of Bureaucracy and the growing burden

of taxation, Mr. Taber said:

"Our national debt approaches the 45 billion mark, and will naturally be greatly increased because of the defense program. The interest on this debt, on the low average of 2.58 per cent, amounts to more than a billion dollars a year. It is interesting to recall that thirty years ago the cost of the Federal government was only 734 million dollars a year. The funded debt of local, State and Federal governments is now nearly 70 billion dollars. These are astronomical figures. It may help to comprehend them if we keep in mind that a man receiving a salary of \$2,500 a year would have to work four hundred thousand years, without a single day of rest, to earn a billion dollars. The time has come when we must frankly face the implication of the cost of government if we save our

free institutions from financial shipwreck."

An Eleven-Point Program

In an eleven-point program, the National Master made definite recommendations which, in his opinion, should be followed. Here is the program:

1. We must continue the development of our present farm program toward greater farm responsibility and control; also the reduction of expenses and overhead. Use of the Food Stamp Plan should be increased.

2. Research must open the door for the utilization of new forces, new crops, and new uses for Agriculture. The Experiment Station is the farmer's laboratory for progress. We can grow paper, starch, sugar, and provide materials for paints,

A Grower's Slant on SELLING APPLES

By FRANK BENEWAY, WAYNE COUNTY, N. Y.

LAST YEAR a large surplus apple crop was moved into consumption through the combined effort of many people and agencies. These included grower committees, newspaper stories, radio talks through the State College at Ithaca, the State Department at Albany, the Surplus Commodities Corporation purchases, and down through the vast distribution system of large and small retail outlets. As a result of this effort during the past several years, apples have once more become stylish and popular; we have put them back on the retail counter where the consumer can see and purchase them. During a recent trip to New York City, it was encouraging to see the word "apple" in many prominent places in hotels and restaurants.

By this time nearly all growers and the trade in general know that the crop is much smaller than a year ago. This fact and better temporary business conditions because of government spending for armament have raised the price of apples.

Sell When Buyers Are Ready

A sense of candor compels me to suggest that the best time to sell apples is when consumers want them. Then, too, when grower committees induce the retail stores to run apple advertisements, the growers should be offering a steady supply for sale. I do not know what the price of apples will be during the later winter months, but I do know that, beginning around early January, the citrus crop will be moving into our markets in volume and that apple export prospects are very doubtful.

In these times, any group such as the apple, cherry or peach growers that does not look ahead collectively and take positive action to defend and develop its business is doomed to fall behind in the race with growers of competing fruit.

In the early part of the century, our fruit industry in the Northeast was comparatively prosperous. In later years, modern transportation has made it possible for competing fruits to capture some of our markets by educating our consumers to use their products. In the last several years, this trend has been partially reversed through the constructive work of the New York-New England Apple Institute and various grower coordinating committees.

Good Apples Sell Readily

Sufficient financial support from growers to continue this merchandising work is the problem ahead of us. Growers themselves must first produce a product which will more nearly meet the consumers' wants. On this point we have very encouraging progress to report. First the New York State Joint Fruit Committee, sponsored by the New York Farm Bureau Federation and the New York Horticultural Society, took under consideration and succeeded in standardizing the apple box for the Northeast.

Second the Cornell Pomology Department developed and the growers adopted practical hormone sprays. These new materials have had a marvelous effect in holding apples on the trees, thus adding color, size and flavor to our already famous northeastern apples.

Finally, the new modified atmosphere storage developed under the guidance of Dr. A. J. Heinicke of Cornell gives promise to put on the store counters

an apple which will stand up for several weeks under high temperature and be available during a much longer season.

Some New Problems

A year ago I helped to record in *American Agriculturist* and in the New York State Horticultural Society yearly report a very favorable trend in "grower-retailer cooperation." The large corporate chains and independent retail outfits sold the farmers' produce by freely making available to them the vast facilities of their extensive distribution systems. The record of last year stands, but our experience this year gives us a new and less favorable angle. We now find that the corporate chain groups are very reluctant to cooperate fully unless we

have a large surplus which they can move at surplus prices. I understand that competition among these super-market outfits helps to lower prices unduly and that they are thus faced by some new problems. Price cutting, if too long continued, will inevitably lead to peasantry for farm people, a situation which, in turn, will be ruinous to super chain corporations.

Build Foundation First

In recent months, one of these large corporations has been proposing to organize grower selling cooperatives in an extensive way. I have read the proposed outline of organization, and as far as theory and structure go, I could find no fault with it. In my opinion, the fallacy of the plan is that it would not be built by growers themselves. No one is going satisfactorily to do for us what we cannot do for ourselves. Successful cooperatives do not just happen overnight. It takes time, just as it requires two years to raise a two-year-old heifer or twenty-one years to raise a boy to legal manhood.

Vegetable Seed for 1941

By PAUL WORK

THERE WILL BE some vegetable seed to plant in the spring of 1941. That much is safe to say. A good deal of the rest is guess work but it is well to give the matter a little thought to safeguard requirements whichever way the puppy jumps. The planting season of 1941 will reveal some definite shortages, some materially increased prices, and more or less advanced costs all along the line. In addition to present unavailability of foreign supplies, there are shortages in some lines that are produced at home.

Paul Work

There are eight important kinds of seed which are brought to us from overseas in considerable quantities as indicated by the following percentages which are based on U.S.D.A. estimates. We know pretty well how much seed is imported but we do not know how much is produced in this country. This is a bit of statistical service which ought to be developed.

Practically all of our cauliflower seed comes from abroad; of beets, 40%; cabbage, 47%; onions, 33%; radishes, 45%; rutabagas, 35%; spinach, 90%; and turnips, 45%.

Cauliflower

Probably cauliflower presents the most critical situation, especially for 1942 if the war continues. For 1941,

there is only a fair amount of seed in sight and the price has already risen greatly. There is little doubt but that cauliflower seed can be grown in this country but it is now pretty late to start for next year's seed crop for 1942 plantings. Perhaps some have already made a beginning. With most of the other seeds, it has been a case of lower cost of production in foreign lands and we could be quite self-sufficient with some kinds after 1941 and for all kinds, after 1942. On the other hand, if the war ends, we are likely to have a flood of cheap seed and the en-

Babson Forecasts Post-War Changes Will Increase Value of Farm Real Estate

AFTER THE WAR—What? Farmers who remember the violent ups and downs that followed the first world war are naturally wondering what may happen when and if the current conflict is concluded.

Pointers for farmers put forward by Roger W. Babson, nationally known economist and business analyst, speaking before the National Association of Commercial Organization Secretaries in Boston recently, are therefore of particular interest.

Farm Real Estate—One of the most striking of Babson predictions is that real estate in the country will be in greater demand while city real estate will fall in value. This will be due both to the dangers from bombing planes in city districts and to the effects of high city taxes. Real estate in large cities will continue to fall in price until bonded debts are "put through the wringer." This trend toward the country will also be a part of future national defense programs which will strongly favor decentralization of population. Factories will be located in rural areas, where they will not only be safer from aerial attack, but will also be nearer to farm-produced food supplies.

Farm Products in Industry—A further major farm development will be toward greater use of farm products in industry. This is particularly timely in view of the work now going on at the Regional Laboratory in Pennsylvania, where extensive experiments are being carried on to develop new uses for northeastern products. Development of individual outlets for farm crops will

terprising producer may find himself holding the bag. Strong effort has been made to get the present year's seed crop through to this country but without avail thus far.

For seed production, beets, cabbage, cauliflower, rutabagas are usually planted one summer, wintered over, and the seed crop harvested the next summer. Various devices such as the use of low temperature and growing the plants in the South at one stage or another are available to shorten the time required for maturing a seed crop. With plants started in the greenhouse and given low temperature treatment, celery seed can be matured from January to September.

Buy Early

This is one of the years when it is particularly important to look after seed supply early. As a matter of fact, this is good policy always. This is also a year when it is especially desirable to have a seed house with whom you have traded regularly and who regards you as its own customer. This, of course, does not mean that one cannot continue to buy special things from special sources as seems best, but some seedsmen when asked about the supply, say, "Well, we have enough to take care of our regular customers."

Another measure is to use seed carefully. People who plant a half a pound of cabbage or cauliflower seed for each acre that they are going to set are usually wasting seed. Such heavy plantings of expensive cauliflower seed are, of course, not so common as with cabbage. Sowing thinly and seeing that seed beds are in first-rate shape and that moisture is available will greatly improve the come-up and the uniformity of stand.

Increased seed prices offer no occasion for panic. The cost of seed per acre of most of our crops is relatively low anyhow. It is very foolish to grasp at anything that is labelled seed. In other words, look out for quality as usual.

be vitally necessary, he believes, because government subsidies to farmers will be much reduced after the war.

Other Babson Points

Schools—Revolutionary changes in methods of teaching in public schools on the theory that such schools are largely responsible for prevailing unemployment. Present useless memory courses will be substituted by courses training students to take care of themselves, to be self-reliant and to realize that the solution of the unemployment problem lies with the unemployed. Chief goal of schools will be to train in discipline, self-denial, self-help and character building.

Jobs—By shift in industrial jobs, and strong demand for trained men every family will need to have one or more members expert mechanics, tradesmen or professional men. These will get employment whatever happens to stocks, bonds and real estate.

After the Storm—"I have just returned from a 7,000 mile trip throughout this country," said Mr. Babson. "I am sorry to say that the temper of the American people today is to follow the easy way as long as it can be travelled and to leave the results to our children. I am not a pessimist; I believe that better conditions will exist after the war for those who are willing to strip, struggle and cheerfully accept the new conditions. Yachtmen are troubled by storms; but seasoned fishermen expect them. They merely tie down the hatches and wait for the storm to pass over. After such storms, they always find fishing better than before."—Walter E. Piper.

"I like the hired man better; he used to give us a squirt once in a while."

THE G.L.F. PATRON

The basis of a sound business cooperative is voluntary use by fully informed patrons

New Dairy Dairying in Susquehanna Valley

Formulas

More of the Low Cost Ingredients are used.

THE G.L.F. FLEXIBLE DAIRY FEED FORMULAS are one of the tools farmers use to keep production costs down.

Intelligent use of the flexible formulas makes it possible to adjust feed mixtures in accordance with the market and with available supplies of ingredients.

For example, new G.L.F. dairy feed formulas in effect November 14 use linseed meal and ground barley to replace some of the higher priced and scarcer ingredients like corn distillers' dried grains, corn gluten feed and soybean oil meal.

Corn and soybeans are both very plentiful but prices are out of line. Linseed meal and barley are also plentiful and they are at present relatively cheap sources of nutrients. Being excellent dairy feeds, they are used in greater amounts in the new formulas.

There are no changes in the Super Feeds.

The Horse Stays Home

A HORSE traveling hard roads needs a heavy, long-wearing shoe. A horse working in the fields needs only something to protect his feet.

Today, autos and trucks do most of

New lightweight shoes are packed a pair to a box.

the road work—the horse stays home.

At the request of many patrons, G.L.F. is now making available lightweight horseshoes—hard enough to stand normal farm wear, soft enough to be bent a little without heat. Packed a pair to a box, sizes 2 (smallest) to 7 (largest).

Cooperative G.L.F. Exchange, Inc.
Ithaca, New York

Wessels Brothers are Good Dairy-men and Good G.L.F. Patrons

ARNOLD WESSELS came to America from Friesland, Germany, about thirty years ago. After farming in North Dakota for a number of years, the Wessels family bought a farm in Bainbridge. Two of Arnold Wessels' nephews, Agge (right) and Ubbo, now run the big dairy and poultry enterprise there.

The farm lies on a hill overlooking Bainbridge and the Susquehanna River. The woods provide lumber that is sawed on the farm. A new two-story laying house has just been completed with lumber sawed on the spot.

The farm consists of about 260 acres. Forty-two milkers, about 20 heifers and calves, and two purebred Holstein bulls

make up the dairy. The herd sire is a grandson of Sir Inka May, purchased from Carnation Farms, Seattle, Wash.

The cows are milked three times a day. In the string of milkers are first- and second-calf heifers milking from 60 to 80 pounds per day.

The excellent condition of the milkers, as shown in the photograph, is due in part to Mr. Wessels' liberal feeding of G.L.F. Fitting Ration to the heifers and dry cows.

With ensilage and good mixed hay for roughage, Mr. Wessels feeds the milkers G.L.F. 20% Exchange Dairy—a flexible formula feed—at the rate of one pound of grain to about 3½ pounds of milk.

Cod Liver Oil Supply to be Conserved

POULTRYMEN DEPEND on cod liver oil or sardine oil (reinforced in most good mashers with an extract of tuna liver oil) to supply Vitamins A and D to their chickens. Vitamin A helps protect against infection; Vitamin D is the so-called "sunshine" vitamin. Both are essential to health and production.

War has made cod liver oil scarce and hard to get. This does not mean, however, that poultrymen are going to suffer from a shortage of Vitamins A and D. G.L.F. is protecting the supply of these two essential vitamins by

doubling the vitamin potency of the cod liver oil used in G.L.F. mashers. Thus the amount of oil per ton of mash can be cut in half.

G.L.F. mills have the precision equipment to distribute such a small amount of oil evenly throughout a ton of mash.

The change will do three things:

1. Maintain exactly the same high level of Vitamin A and D protection in G.L.F. mashers.
2. Conserve the poultryman's sources of Vitamins A and D.
3. Save poultrymen money.

"In the Name of the GREAT JEHOVAH and the CONTINENTAL CONGRESS!"

FORT TICONDEROGA, or Fort Ty as the Colonists called it back in 1775, dominated the water gateway from Canada down through eastern New York State. After the Battle of Lexington, some people said it should be captured; others, urging appeasement, said it should be let alone. But fiery, impetuous Ethan Allen—a Vermont farmer—didn't wait for argument. He called 150 of the Green Mountain boys together and started out. He had no official authority for his act. And he found boats for only 83 men when he reached Lake Champlain. Nevertheless, guided by a local boy, he stole up the slope to the Fort, rushed through the sally port and demanded surrender. "By what authority," gasped the astonished commander. Allen had to think fast for an answer—"In the name of the Great Jehovah and the Continental Congress," he snapped back. Thus fell into American hands a Revolutionary War fort that was equal in importance to West Point in the defense of the Hudson Valley.

Always, in every crisis in the affairs of the men and nations, there have been some who have hung back and argued. And there have been others—hardy souls of fine courage—who went right ahead and acted with swift decision.

That was the case in the early fight for A LIVING PRICE FOR MILK. Said some: "Who has the right to speak for farmers? And who will accept responsibility if the dealers hit back?"

But the farmers of the Dairymen's League answered boldly: "We have the right to speak, because our members have given us that right. And we will take the responsibility. Dealers might try to boycott a few of us; but they won't dare to boycott several thousand of us."

Events soon proved that the Dairymen's League farmers were right. And events proved, also, that organized farmers—if they stick together—have nothing to fear from either the Forts of Privilege or the Armies of Arrogance.

Let Anti-Farm Gang leaders sputter and gasp — "by what authority?" Organized farmers knew they could gain the authority — and they did. The Rogers-Allen law and the State and Federal orders gave them the authority. And today all farmers are marching solidly toward A LIVING PRICE FOR MILK. In the name of the Great Jehovah and the State and Federal Congresses they have gained command of the fort.

Fish Family Came to America 297 YEARS AGO!

"My ancestors landed in America in 1643, just 23 years after the landing of the Pilgrims," says Edward Fish, League member and sub-district delegate of West Rutland, Vt. "They came from England in the last wave of the great religious migration."

"My wife and I have each served a term in the State Legislature. Hamilton Fish, another member of the family, is a Representative in Congress from New York. And there have been ministers, doctors, lawyers, teachers and nurses, as well as farmers in the family."

"Today I raise Holstein cows on a 100-acre farm. My son Marcus, a graduate of the Vermont School of Agriculture, also has a small registered herd here on the farm. My son Vernon cultivates strawberries. And my third son, Gaylord, is foreman of the farm of the Green Mountain Jr. College, from which he graduated."

Published by

THE THOUSANDS OF FARMERS WHO OWN, OPERATE AND CONTROL THE DAIRYMEN'S LEAGUE

Question Box

Rough Floor Wears Linoleum

"I have a kitchen floor that is rough and badly worn in places, so that it soon shows on the linoleum. Do you know of any economical way to level it up, except to lay a new floor, so that the linoleum will give better service?"

Linoleum will not wear well unless the floor under it is smooth and solid. Boards that are cupped and rocking should be nailed down with the nail heads set down out of the way. If a power sander is available, the floor should be sanded down until it is smooth and even. If this cannot be done, go over it with a plane and take off all the high places until straight, then smooth with a block and sandpaper. Any cracks or gouged or scooped out places should be filled in with plastic wood and this allowed to harden before being sanded off level with the rest. Defective boards or knot holes should be cut out and filled in carefully with solid boards or with plywood glued and nailed into place.

The floor is then ready for laying the linoleum according to the manufacturer's directions. A good handbook for Laying Linoleum may be secured from the Armstrong Cork Company, Lancaster, Pa.—I. W. D.

* * *

Nubby Strawberries

This last summer I had an unusual proportion of small, rough, nubby strawberries. To the best of my knowledge there was no frost damage during blossoming time, so I can't figure out what was the cause of this.

Probably these nubby berries resulted from cold, wet weather when the berries were in blossom, which interfered with proper pollination. In order to get a smooth berry, every pistil in the flower must be properly pollinated. Apparently some varieties are less susceptible to bad weather than others—a fact which plant breeders may use to develop varieties that will make a good crop in unfavorable seasons. Fortunately, most varieties have a blooming season sufficiently long so that short, rainy spells do not cause much damage.

* * *

Iodine for Ringworm

What is the cause of ringworm on calves, and how can it be cured?

This particular trouble, which appears most frequently around the head and along the neck, is caused by a fungus growth. This disease spreads from one animal to another, so it is important to correct it quickly and to clean and disinfect stalls thoroughly. Fortunately, ringworm succumbs to treatment fairly easily. Wash the area affected with soap and water. Then

put tincture of iodine on the spots of ringworm.

* * *

Death to Lice

We have treated our calves for lice, but they are still lousy. What can we do?

Probably the most common reason for failure to control lice is to expect one treatment to do the trick. Any one of several commercial louse powders will kill lice, but they do not kill the eggs. Consequently it is important to give a second treatment ten days after the first, and a third treatment if careful examination shows any lice.

* * *

Raising Chicks in Winter

I read a lot about winter rearing of chicks. I am wondering if this is practical.

Some breeders are now hatching eggs every month in the year—in fact, there are some who claim they would rather raise chicks in the winter than in the hottest part of the summer. Of course, it wouldn't be practical for the small poultryman to rear chicks the year around and thus have pullets to

put in the flock each month; but with proper equipment there is no reason why you shouldn't raise your chickens any time you want to.

Use Sawdust-Concrete With Care

Recent tests at Minnesota, Wisconsin and other colleges indicate that sawdust-concrete so widely recommended for barn, hoghouse, and poultry floors is an uncertain material and must be handled very carefully to give satisfactory results. Sawdust from Norway pine, jack pine, spruce, and aspen gave good results; while that from cottonwood, oak, fir, birch, maple, and red cedar was unsatisfactory. Mixing proportions should be about one part of cement to 3 or 3½ parts of sawdust. Richer mixtures are stronger, but lack the desired qualities of lightness and insulating effects; while leaner mixtures lack strength and may wear badly or even go to pieces. No sand should be used in the mixture. The cement and sawdust should be mixed dry to a uniform color, after which only water

enough should be added to make a workable mix, which will permit some cement paste to show under vigorous tamping and troweling. Write to the following for information on cement-sawdust concrete: College of Agriculture, St. Paul, Minn.; College of Agriculture, Durham, N. H.; College of Agriculture, Madison, Wis.—I. W. Dickerson.

A New Book on Leadership

A new book by Dwight Sanderson of Cornell University, "Leadership for Rural Life," covers the subject indicated in an interesting and helpful manner. It belongs on the bookshelf of every farm organization officer, or any person who has any position of local leadership, however small. We predict that it will be particularly helpful to students of vocational agriculture, 4-H Club members, and other young people who, in years to come, must assume the responsibility for better farm conditions.

The book is published by the Association Press, 547 Madison Avenue, New York City, and the price is \$1.25.

FARMALL FARMING MARCHES ON!

You'll be proud to say,
"I OWN A FARMALL!"

A LITTLE more than a year ago we told you about our New FARMALL Family.

Since that time, we have built more than 100,000 FARMALLS—and modern machines for use with them. Yet, the demand for FARMALLS has set such a fast pace that our great tractor factories have been swamped. And it is a fact that all of the new machines announced by Harvester during 1940 have enjoyed the same kind of popularity.

As a Company dedicated to

the service of Agriculture—and as an organization of American men and women—we thank you folks on the farms for your confidence, your patience, and your patronage. We are glad to have had a part in the peaceful mechanization of the nation's farms. We pledge our full energies and resources to the further progress of this vital program.

We are building maximum value into every tractor and machine that carries our nameplate—and we are stepping up pro-

duction wherever this is possible without sacrifice of quality.

Even as we increase our efforts to serve you, you can serve yourself. Talk over your power, equipment, and service needs with the International Harvester dealer. Quick deliveries are possible now—there may be many orders ahead of you if you wait.

The farms of America are arming with FARMALL power. Plan now to make your farm strong in the face of any emergency.

INTERNATIONAL HARVESTER COMPANY
180 North Michigan Avenue, Chicago, Ill.

McCORMICK-DEERING
EXCLUSIVE FARMALL FEATURES

"Culti-Vision"

By L. B. SKEFFINGTON

from SKEFF'S NOTEBOOK

THREE thousand dollars a day averaged among 1,700 farmers is not to be "sneezed at", to use the slang expression, but that approximately is what the milk marketing order has done for dairymen in the Rochester market area.

The order went into effect last Dec. 1, after a period of low prices had affected producers' prices seriously. Properly to celebrate that event, the Rochester Cooperative Milk Producers' Bargaining Agency plans to have an anniversary dinner, tentatively slated for Dec. 2.

"This will be a combination Thanksgiving affair and a testimonial to some of the men who helped make the order a success," according to Ted Richards of Perry, Bargaining Agency president. Lawrence Clough, market administrator; Kenneth F. Fee, director of the milk control division, and E. S. Bird, cooperative specialist of the state agricultural department are to be guests.

The Rev. Fred E. Dean, pastor of Greece Baptist Church and former chaplain of the State Grange, will be toastmaster. Reason for selection of Mr. Dean is interesting. Several years ago when milk strikes were in the air and when it seemed that the different factions of producers could not get together, he originated Milk Sunday. He invited leaders and members of all the rival organizations to worship together, to participate in the service, and to sit around the same dinner table.

"I do not know much about the milk business," Mr. Dean said at the time, "but I know that when men have the will to cooperate they can accomplish what they wish to do. I do not believe your problem is such that you cannot sit down together, talk it over, develop some good program and then work together to make it effective."

Nine Groups Cooperate

At the time the marketing agreement was proposed it was found that producers were scattered among several organizations large and small, and that many of them belonged to no organization. The Rochester Independent Milk Producers' Cooperative Association was organized to represent the latter in the bargaining agency.

During the past year the different groups have found they can work together and at present there is an excellent feeling in the milkshed. Recently the agency petitioned for price increases and won a substantial part of its demands. A year-around price of \$2.90 is now assured for Class 1 milk.

Lord's Acre Plan Studied

Many New York rural church workers already know about the Lord's Acre plan, because 15 or more communities have tried it this year. That interest has been growing is evident from the fact that last year there were only three "Acres". Notable among the projects this year is that of Perry Center Congregational Church, which harvested 40 acres of buckwheat. The plan calls for planting and cultivating a crop, the proceeds to be devoted to church or community work.

Because of growing interest, the Rural Institute for Religious Workers is bringing the Rev. Dumont Clarke for a series of meetings in New York State. During the 10 days he will be

here, beginning Nov. 29, he will appear at two or three meetings daily. It is expected that 20 or more rural churches will be represented at each meeting. Persons interested in the plan are invited to get in touch with Rev. Ralph Williamson, Barnes Hall, Ithaca, who is secretary of the institute.

* * *

The Grange Grows

For the second time in 22 years the National Grange is meeting in New York State. The convention is being held in Syracuse, where it met two days after the World War armistice had been signed. Since that time 11 new Grange states have been admitted, bringing the total to 37. The latest addition is Wyoming, and two years ago Montana was admitted. In several other states there is considerable Grange membership, but the policy has been not to organize a state Grange until there is a strong working organization.

In 1930 when the National Grange met in Rochester all-time records for a Seventh Degree class were shattered, 11,125 members receiving that honor. Franklin D. Roosevelt then was Governor of New York and received the degree. Since that time he has received the Grange's Silver Star, denoting membership of 25 years. He and Mrs. Roosevelt are members of Chapel Corners Grange in Dutchess County.

This year's Seventh Degree Class is the largest since the Grange convention at Hartford, Conn., several years ago, when all of the New England States combined to break the Rochester mark. Claude R. Wickard, secretary of agriculture, heads this year's class. National Master Louis J. Taber says an old tradition is that the secretary of agriculture always shall be a member of the Grange and in possession of its highest degrees.

Asked what effect, if any, the re-

cent national election would have on Grange policies, Taber said: "None. The Grange program is continuous. It does not change with elections. We build our program for Rural America and hew to the line, letting the chips fall where they may. We are united and the Grange transcends the purely personal viewpoint of its members on political matters. The Grange from the first has been the champion of equality for the farmer. There is much to be done."

Preceding the opening of the national convention, the national officers and delegates were guests at a banquet arranged by the State Grange.

Next on the Grange calendar will be the State Grange convention at Kingston for the customary four days of the second week in December.

* * *

"Hort" Society Plans

Questionnaires sent to members are being used as a basis for formulating the programs for the January meetings of the State Horticultural Society. In addition, there is particular interest in the show at Rochester because it will be held in a downtown building, a Main Street former department store, and considerable effort is going to be directed at a fruit show designed to interest the consuming public.

A.A. - Grange Cookie Contest News

State Match Set for Dec. 10

ONE OF THE first events which will take place when State Grange meets at Kingston, N. Y., Dec. 10-13, for its annual session, will be the judging of 53 plates of rolled sugar cookies, entered by the county winners in the final state contest. Three expert judges will be there to determine who will be state champion.

First prize winner will get \$25.00 in cash from *American Agriculturist*, plus a Governor Coal and Wood Range from Kalamazoo Stove Company; 35 pounds of various G.L.F. Products' flours and 12 cans of G.L.F. vegetables; 10 lb. can of meat salt and a butcher knife from the International Salt Company; 2 months' supply of Maca Yeast from Northwestern Yeast Company, and an oven from Perfection Stove Company.

Next nine highest contestants will also receive valuable prizes. Coopera-

Mrs. Albert C. Crook, of Mohawk, N. Y. (Fort Dayton Grange), is one of the 53 county winners who will compete for the title of state champion cookie baker at the Grange's annual meeting at Kingston, Dec. 10-13.

tive G.L.F. Products, Inc., International Salt Co., Northwestern Yeast Co., and Perfection Stove Co. are awarding the same prizes to them as to the first prize winner. In addition, *American Agriculturist* is giving a second prize of \$10.00; third, \$5.00; fourth, \$3.00; fifth, \$2.00; and \$1 each to holders of next 15 highest scores.

Four more Pomonas have reported names of winners to us, leaving now only two to go:

Pomona Winners

COUNTY	GRANGE	WINNER
Herkimer	Fort Dayton	Mrs. Albert C. Crook
Orleans	Knowlesville	Mrs. Beatrice Howes
Seneca	Rose Hill	Mrs. Thelma Deitrich
Ulster	Clintondale	Irene Sickler

Subordinate Winners

Chemung	Big Flats	Mrs. Elvira Schink
Essex	Adirondack	Bessie Halen
Niagara	Hartland	Mrs. Myrtle Brewer
	Lockport	Mrs. James Klock

Complete instructions for the State contest will be sent very soon to all county winners by the *American Agriculturist* Cookie Contest Editor. All county winners who have not yet sent in their recipe and picture are urged to do so at once.

Four-H Delegates to Chicago

From November 30 to December 7, 4-H Club members from all over the country will converge on Chicago to attend the National 4-H Club Congress. New York representatives are:

Leadership — Alyce Nesbitt, Delaware County, and Edward Benson, Oneida County; alternates, Alice Bissell and Henry Bottle, both of Chenango County.

Achievement — Eunice Schroeder, Tompkins County, and David Landers, Chenango County; alternates, Phyllis Kelsey, Jefferson County, Francis Marner, Broome County.

Meat Animal — Edmund Knapp, Erie County; alternate, George Andrey, Yates County.

Rural Electrification — Emory Hicks, Monroe County; alternate, Joyce Neureth, Jefferson County.

Girl's Record — Lillie Pearson, Ulster County; alternate, Mabel Bottle of Broome County.

Dress Revue — Mabel Tremper of Orange County.

Health — Hilda Merritt, Chautauqua County, and Ronald Roff, Broome County; alternates, Emily Briggs, Delaware County, and Edward Benson, Oneida County.

The Schoharie County livestock judging team, composed of Kenneth Tillaugh, Lauren Guernsey, and Sanford Neer, will take part in the non-collegiate judging contest in advance of the Club Congress.

Bringing in the sheaves on the "Lord's Acre". The congregation of the Congregational Church in Perry Center, Wyoming County, this past season worked a 42-acre farm, planting it to buckwheat and allocating the proceeds, some \$300, to the church. At the beginning of the harvest, just as dignitaries break ground with a spade before contractors bring in a steam shovel to complete the excavation, so the Rev. Elwyn D. Merriam, pastor, cut the first row of grain with an old-fashioned cradle before the arrival of a combine. Picture shows Mr. Merriam, right, with two of his parishioners, Harold S. Coe, left, and Ernest W. Slocum, who are tying the grain in bundles.

The Market Barometer

October Milk Prices

N. J. Cladakis, administrator for the New York City market, has announced that the October uniform price for 3.5 milk in the 201-210 mile zone is \$1.92. This is the same price as received for September, but is 35c below the October price a year ago. The price is, of course, subject to the usual freight and butterfat differentials.

EDITOR'S NOTE—The price of \$1.92 for October milk is naturally disappointing to dairymen. Why consumption of milk should be falling off in the cities with all of the increased industrial activity and better employment is hard to understand. One reason for the lower price, of course, is the increase in production of milk. Contrary to the usual trend there were actually nearly one and one half million more pounds of milk in the October pool than in September. October consumption in New York City was 3.37 per cent lower than in September. As a result, the percentage of milk going into Class one in October was slightly less than in September.

Fortunately, owing to the marketing agreement, the milk price is far above the general price level for other farm products. Most of the cash crop farmers are up against it this fall.

Another bright spot in the picture is the fact that November milk prices will be better because the basic price for November already established is better. The Class I price is up 20 cents to \$2.65 and the Class II-A price is also up 15 cents. Also, it is to be hoped that increasing employment will soon affect the demand for milk.

In the Rochester area, Administrator Clough announced a uniform price of \$1.99, which is 11c more than the September price. Checks as received by producers will show an additional increase because the average butterfat test is above last month.

Milk Production Continues Heavy

Milk production in New York State dairies during October was 4.5 per cent higher than in October a year ago, and the highest for the month since 1936. Receipts of milk at plants in this state for the month were 457,000,000 lbs., as compared to 437,000,000 lbs. for October a year ago. For the month of November a year ago, receipts of milk at plants in the state totaled 393,000,000 lbs.

Grain Feeding Heavy—More Dry Cows

On November 1, New York State dairymen were feeding more grain to

In October, New York State farmers averaged to receive for farm products sold 107 per cent of the price received in 1910-14. This shows an advance of 5 points over September, but is still 5 points below October a year ago.

During the month potato prices were reported up slightly and buckwheat down considerably. In New York State, products on which prices are above pre-war (100), include: apples, 123; chickens, 106; dairy cows, 148; veal calves, 113; beef cows, 105; sheep, 121; wool, 157; and milk, for which index is not yet available although price of \$1.92 will make it figure below last year's October index of 141.

cows than on any November 1 since these reports were started in 1931. As reported by the State Department of

Potato Estimate Raised Five Million Bushels in November

By H. E. BRYANT, Aroostook County, Maine.

WITH an already burdensome crop, potato growers were slightly disappointed to find that the November government estimate was raised 5 million bushels over the October estimate. Total production for United States is estimated at 393,931,000 compared with 389,091,000 for October and a final report last season of 360,992,000 bushels.

The estimate for northeastern states was not raised. Maine has had a very consistent report this year, having an estimate this month identical with all previous estimates for the season, namely 45,135,000. Other northeastern states such as New York, New Jersey, Connecticut and Pennsylvania remained at the same figures reported for October. It is well to remember, however, that these estimates, particularly for New Jersey and Long Island are considerably higher than the crop for last season. (Upstate New York crop is below last year.)

Analysis of November report shows major raises in the western states of Idaho, Nebraska, Colorado and North Dakota. Two states reported major decreases, Michigan and Wisconsin. Michigan dropped another 2,500,000 which added to the drop of last month of 3 million bushels brings total production for that State down to a comparatively low level. Wisconsin show-

Agriculture and Markets, dairymen were averaging to pay \$1.63 per hundred pounds of dairy ration on November 1, exactly the same figure as on November 1 a year ago.

In New York State, slightly fewer cows have freshened in recent months than for the same period a year ago, and a somewhat larger percentage of cows are dry than usual for this time of year. This indicates that there will probably be more late fall and early winter freshening than in early years.

The U. S. Department of Agriculture summarizes the situation for the entire country by saying that the general rise in the price of dairy products and the unusually heavy production are the principal developments during October. They indicate that prices of dairy products during the coming winter may average higher than a year ago, some improvement in demand is expected, and industrial production employment payrolls are expected to average higher than they did a year ago. Also, it is predicted that exports of dairy products will be heavier.

For the entire country, milk production on October 1 was 6 per cent above a year ago. The number of dairy cows has been increasing for about three years.

ed a reduction this month of 1,379,000 bushels. Thus, with this report, surplus areas like Maine will be setting their sights for a good distribution into some of the industrial cities of Michigan, particularly Detroit.

We in the potato business do a lot of wishful thinking; we are always looking forward to an improvement regardless of conditions. This year we try to foresee raises in the market as the season progresses because of improved business conditions and a comparatively high general price level. On the other hand, analyzing conditions fairly and frankly, we must recognize that 393 million bushels of potatoes are a lot of spuds even with favorable business conditions. We also must recognize that, regardless of statements of improved business conditions and talk of inflation, the general U. S. price level of wholesale commodities is at 114 compared with 116 for October last year. While defense activities may be reflected later in an increase in the index of wholesale prices, until this increase is actually realized we cannot count on it.

In my opinion the November report does not materially change the outlook for growers in the northeast except in two respects, first the psychological effect that a raise will have on both growers and buyers and secondly the realization that our total production is up approximately 5 million. This raise will off-set some of the effect of the Starch Diversion Program in Maine which program was designed to take off the market a little over 3 million bushels of potatoes.

Current market conditions throughout the country have not changed materially in the past two weeks, although growers have been encouraged somewhat by a slight increase in price in some of the major producing sections. The price in the west has moved up slightly so that Idaho is now selling for 55 to 60c per hundred bulk, which price is equivalent to 75-80c hundred cash track. Long Island is reporting a raise of approximately 5c per hundred with stock being sold in metropolitan New York with a range in price all the way from 80 to \$1.05 a hundred delivered, depending on variety and condition. Maine showed a firmer tendency during the past week due mainly to reluctance on the part of growers to sell at current prices. As a result, offerings out of the State were comparatively light so that the market has been forced from 68c hundred F.O.B. to 73c hundred, F.O.B. The street price in Maine is reported at 80-85c per barrel bulk which is equivalent

to 49c to 52c per hundred bulk. Shipments out of Maine continue light, the total to date being 2,404 cars compared to 4,091 cars to the same date last season.

The Starch Diversion Program in Maine is being continued for another month at 80c barrel bulk to growers. With the improvement in the market, for the first time, Maine growers can receive a little more for potatoes to ship to the terminal markets than can be received for Starch Diversion. However, we must recognize that we will soon be facing the holiday season when the demand for potatoes generally slides off, thus our guess that current prices can be maintained and possibly improved slightly for a week or so with the possibility of a reaction taking place after that time.

In my opinion the outlook during the winter months will be dependent to quite an extent upon the shipment and movement during the fall. Thus, we believe all growers should pay considerable attention to the movement of potatoes when endeavoring to formulate their sales program for the winter and spring.

Apple Imports from Canada Worry Growers

Apple growers throughout the country, and especially in the Northwest, are much concerned over imports of apples from Canada. Last year 142 cars of apples came to this country from Canada, but this amount was about balanced by exports to Canada. This year, up to the last of October, 530 cars of Canadian apples had come in, shipments were continuing at the rate of about 18 cars a day, and it was expected that the final exports might total 1,000 cars. The City of Chicago alone, up to last of October, had received about 100 cars; and prices for Canadian apples were from 10c to 40c a box under apple prices in this country. There is a duty of 12c a box on Canadian apples, but this is about offset by the difference in exchange between U. S. and Canadian money. This, in effect, wipes out the effectiveness of the tariff.

Apple growers have been protesting to Secretary of Agriculture Wickard. They believe that the President has power to take action. Last January an amendment to one section of the Agricultural Adjustment Act was passed, giving the President power to put quotas on agricultural imports whenever he has reason to believe that a certain product is being imported or is practically certain to be imported. Before that time the law allowed these quotas only after the product had been imported; it was a matter of locking the barn after the horse was stolen.

It is reported that U. S. government representatives have gone to Ottawa to discuss the situation. The U. S. Department of Agriculture recently stated that prospective imports of Canadian apples are considerably less than some growers have anticipated.

A Grower's Slant on Selling Apples

(Continued from Page 10)

The Grange League Federation Exchange is evolving the soundest procedure I know of in the grower-cooperative selling field. One of the first principles to consider is market sales outlets for the particular product. Plants and warehouse facilities can be obtained any time. Another important consideration is to find leadership and personnel in any particular community. When this is done, a successful pattern must be built, one that will succeed where it is built, and one that can be used in other communities.

New York State Jersey breeders will hold their annual meeting at the Onondaga Hotel at Syracuse on December 7 starting at 10:00 A. M.

Dean Deering Re-elected to Farm Credit Board

ARTHUR L. DEERING, Dean of the College of Agriculture and director of Extension at the University of Maine, Orono, has been re-elected to the Farm Credit Board of Springfield (Mass.) by 34 Production Credit Associations in New England, New York and New Jersey. This is Deering's second term, since he was elected three years ago to the same post by the same group of rural credit cooperatives. His new term starts January 1, and runs for three years.

Born and reared on a farm in Oxford County, Maine, Mr. Deering is a graduate of the University of Maine. Since 1912 he has been connected with extension teaching in that state, and since 1932 has also acted as Dean of the College of Agriculture. He is considered one of the outstanding agricultural leaders in the Northeast.

The seven-man board of which Mr. Deering continues as a member serves as the board of directors for the production credit corporation of Spring-

field, the Federal land bank, Intermediate credit bank, and the Springfield bank for cooperatives, all units of the Farm Credit Administration. Jointly, they are providing some \$120,000,000 of credit, including mortgage loans and production credit, for 45,000 individual farmers of the Northeast, as well as \$4,300,000 of credit to 88 farmers' agricultural cooperatives with combined memberships of approximately 285,000 farmers.

Other members of the Farm Credit board are J. Ralph Graham of Bosca-wen, N. H., a farmer and president of the Eastern States Farmers' Exchange; Marcus L. Urann, South Hanson, Mass., president of Cranberry Canners, Inc.; David H. Agans, Three Bridges, N. J., master of the New Jersey Grange; Wilfred W. Porter of Syracuse, N. Y., former treasurer of Syracuse University; Carl E. Ladd, Dean of the College of Agriculture at Ithaca, N. Y.; and Edward R. Eastman, editor of *American Agriculturist*.

By J. F. (DOC.) ROBERTS

HIGHER prices on all livestock probably working up more or less gradually, is the livestock picture for the next few years.

We are sure now of a long war, and with the destruction and involvement greater than during the last war, demands for our meat, wool, leather and other livestock products will be keen for a long time. Remember it was ten years after the close of the last war before production overtook demand on most of these products.

We are surely going into a large standing army—probably 800,000 men within 18 months or two years. Also, I believe that the one-year drafting of

war" fever and again plows up "dust bowls" and vacant city lots, it will more surely lead to trouble than it did the last time, because of improved production methods and increased yields.

Livestock has, and is going to have, an increasingly important place in the Northeast for the next ten or fifteen years. All classes of livestock for meat purposes can be increased without raising operating costs, more easily than anything else on the farm. Horses should be one of the first thoughts toward keeping costs of farm operation down. Right now, after a spurt in the early fall, horses are cheaper than I believe I ever saw them. They won't be this cheap long, and here are some interesting figures: Our preparedness program calls for a total of about 50,000 horses, which means the U. S. Army is about to buy some 20,000 more. Incidentally, the German army, reputedly so mechanized, has over 700,000 horses (this seems impossible, but it was so reported on the floor of the House in Washington). They have also been so cheap that the Bureau of

Here are the champion sheep showmen at Farm and Home Week at the New York State College of Agriculture last winter. From left to right: R. F. Hoffman, Brockport, N. Y., with a Southdown; James Whitaker, Penn Yan, N. Y., with a Shropshire; H. E. Hiteman, West Winfield, N. Y., with a Hampshire; and P. T. Joy, Rockville Center, N. Y., with a Dorset.

Hiteman was Champion Showman for all breeds, and Whitaker Reserve Champion. It is a healthy sign for the sheep industry when young men at the college can do an outstanding job of fitting their show animals.

young men will continue over a period of at least five years, and these men must be equipped with wool, leather, etc.

The import and export factor cannot vary a great deal from the last war. Farm products will meet a world demand and I do not believe there is any need for worry about blockades stopping the flow of necessities during the war, or we'll be in it ourselves, opening up those channels. Neither would I worry about the inability of foreign countries, or the people within those countries, to pay for necessities. They always have found some way, even to going into debt and then not paying that debt. All this can only mean one thing—higher prices, with higher taxes and higher operating and labor costs for probably the next ten years or longer, regardless of whether we go into the war or not. These increased costs of operation will demand a great deal of thought, for if agriculture gets into a "food will win the

Federal Meat Inspection reports about 2,000 slaughtered and passed for meat purposes (dog foods, etc.) in the last six months.

Can a Cow "Hold Up Her Milk"?

Always in the herds which I have owned or have worked with there were from one to three or four individual cows who milked so hard that we always tried to get them off on the other milker.

It has always seemed to me that dairymen pay too little attention to the hard or easy milking qualities of a cow when they are buying her. Some breeds are naturally harder milkers than others, but the difficulty is more with individuals than with breeds. There is the cow with the short teats; the one with three good teats and another one that milks particularly hard probably on the back quarter; there is the cow with the teats with such small openings that a milker has to get on to it with all of his strength to get a small thin stream; there is the cow that "holds up her milk."

On this last subject Professor E. S. Savage has an extremely interesting discussion in a recent issue of the *Dairymen's League News*. Savage thinks that a cow does not have any voluntary control on whether she will let down her milk or not. Many dairymen think otherwise. Every dairyman knows, for example, that excitement during milking time or just before influences the flow of milk. But that does not prove that the cow has voluntary control. As a matter of fact, scientists do not yet know just how milk is secreted. Savage thinks that some of the constituents of milk are eventually filtered directly from the

blood into the cells lining the cavities of the udder. Pressure will cause a decrease in the secretion of the milk. When a cow is giving a large amount of milk and it is all secreted between milkings, if the milk is not removed from the udder it will cause a slight pressure and then it will be reabsorbed. This probably, says Savage, does not happen except in cases of very large production, and this accounts for the fact that milking high producing cows more than twice a day will often bring about an increase in production.

—E. R. E.

Half a Million Heifers

(Continued from Page 6)

cases the auction takes no responsibility for adjusting unsatisfactory purchases.

When You Buy Dairy Cows

Here are some suggestions to think over:

1. If conditions do not prevent, why not adopt a policy of raising all replacements?
2. If you feel you must buy, purchase cows with production records or heifers where production records are available on dams, and where possible, on two or three generations back.
3. Know the health situation in your own herd and have the same information on cows you buy. It is difficult to detect mastitis in a dry cow, but a good veterinarian can do it and his fee is good insurance.
4. Demand that any guarantee concerning the cow be put in writing, and be certain that the seller has the financial responsibility to make his guarantee good.
5. Consider the purchase of more young heifers. They will not need replacing so soon and, therefore, will lessen that angle of the problem; and many dairymen feel that the chances of introducing disease are less than where older animals are bought.

A New Book on Judging Dairy Cows

It has been said that one picture is worth a thousand words. That is true and the book "Judging Dairy Cattle," written by E. S. Harrison of the Animal Husbandry Department of the New York State College of Agriculture and containing hundreds of photographs taken by Henry A. Strohmeier Jr. and John T. Carpenter Jr., sets a new high point for books of this type. The pictures, which incidentally required three years to collect, are not pictures only. Each of them illustrates some point which the author considers important.

This book is published by John Wiley & Sons, Inc., 440-4th Avenue, New York City, and sells for \$2.75. We predict that it will be in great demand by high school and college students of agriculture, but it is equally valuable to any dairyman who is trying to breed better cows.

When cows are OFF FEED

the trouble is usually due to sluggish Digestion and Assimilation. Kow-Kare is an Iron-and-Iodine tonic and conditioner, with botanical drugs and minerals that promote vigor and healthy condition of these key functions of MILK-MAKING and CALVING. Build up appetite and high return on your costly feed by adding low-cost Kow-Kare. \$1.25 and 65¢ at feed, drug and general stores or by mail postpaid. Send for FREE Cow Book. Dairy Assn. Co., Inc., Dept. 12, Lyndonville, Vermont.

Where BUSINESS Tells Its Story

Zinc is Essential—"The Zinc Industry" is the title of a 32-page booklet published by the AMERICAN ZINC INSTITUTE, 60 East 42nd St., New York City. The book gives an account of the early

THE INTERNATIONAL HARVESTER COMPANY is now making milk coolers of two-can and three-can sizes. These are designed especially for use on small dairy farms. It is also possible to purchase a dry compartment storage, which provides 3.5 cubic feet of space, for holding meat, butter, eggs, and other perishable foods.

history of zinc, tells its important uses, and gives facts about its production and marketing. It is a fascinating story which is yours for the asking.

Better Light—THE MANTLE LAMP COMPANY has authorized its dealers to give any reader of AMERICAN AGRICULTURIST a \$1.00 allowance on any old lamp with the purchase of a new Aladdin Lamp. A folder showing the new Aladdin Lamps is available on request from The Mantle Lamp Company, Chicago, Ill.

Better Fuels—The trend in tractors, as it has been with cars, is to increase horsepower and decrease weight. Fundamental in this desirable aim are better fuels which make possible the development of high compression engines; but as compression is increased, fuels tend to knock.

Fred Timbers of Stouffville, Ontario, winner of the 1940 National Plowing Contest at Davenport, Iowa. He used a MASSEY HARRIS tractor, equipped with GOOD-YEAR tires. The judging was on the following score card: (1) crown, or opening rounds, 20 possible points; (2) furrow straightness, 15 points; (3) land end alignment, 5 points; (4) conformation of furrows, 25 points; (5) trash coverage, 15 points; (6) uniformity and evenness, 20 points.

This undesirable situation has been overcome by the addition of Ethyl fluid, manufactured by the ETHYL GASOLINE CORPORATION, Chrysler Building, New York City. High compression tractor engines not only give more power, but they give more economical and more flexible power.

Butchering Book—THE INTERNATIONAL SALT COMPANY, Scranton, Pa., offers "The Farmers' Meat Book" which gives complete instructions for butchering, curing and storing meat. Also, in each 10-pound can of Sterling Sugar Curing Meat Salt, there is a coupon which entitles you to a carbon steel butcher knife or a bell scraper for removing bristles at about half the usual retail price.

Heat Comfort—The old wood stove may have had some advantages, yet for comfort there is nothing quite like a central heating plant. UTICA RADIATOR CORPORATION, Department A-6, Utica, New York, offers to have an authorized dealer give an estimate on the cost of installing a Utica heating system. Securing this estimate entails no obligation. It is a service which is gladly rendered.

Cranberry Turkeys—If you act promptly, there is still time to send for the turkey-shaped cranberry sauce cutter offered by "OCEAN SPRAY", Department AG-1, Hanson, Mass. Its use will lend a festive appearance to the Christmas dinner table.

Intestinal Parasites are a continuous drain on the vitality of animals. PARKE DAVIS COMPANY, Detroit, Michigan, Animal Husbandry Department N-72-K, recently published booklet No. 650, which gives facts on worming livestock, dogs and foxes. This can be obtained on request to the above address.

Aids Egg Sales—An interesting plan for aiding producers to sell eggs is offered by PURINA MILLS of St. Louis, Missouri. When the owner of a poultry farm puts his flock on the Purina program, the local Purina dealer will furnish without charge egg cartons covered with the checkerboard pattern. Also available, at cost, are a rubber stamp which can be used to imprint the poultryman's name and address on the crate, and an attractive road sign to attract customers.

Dairy Rations—In recent years it is generally recognized that the proper grain ration for a dairy herd depends on the type of roughage fed. To meet this situation, COOPERATIVE G.L.F. EXCHANGE, Ithaca, N. Y., supplies for its members dairy feeds with different amounts of protein. In addition, they have made available a fitting ration for young stock and dry stock, and two dairy supplements, one with 30 and one with 34 per cent protein, to mix with home-grown grains.

What's Ahead for Poultry?

By J. C. HUTTAR

THE time for planning next year's farming operations will soon be here. We, therefore, have season when state and federal economists get together for the purpose of predicting what is to come. I don't know how well they do with crops that depend heavily on weather conditions for results, but

J. C. Huttar

I will say they do a pretty good job of forecasting poultry production. I'm a confirmed "Outlook" reader, so I ought to know.

The Federal-State report coming from Albany, New York, puts it this way:

Supplies of eggs in the United States for the first half of 1941 are expected to be about 3 or 4 per cent smaller than they were in the first half of 1940, and supplies of chicken meat (including fowl) for the same period may be about 5 per cent smaller than a year earlier. Because of the more favorable feed-egg ratio expected for next spring, 1941 hatching of chicks are expected to be larger than in 1940. As a result, sales of chickens and eggs during the last part of 1941 may be larger than in the last part of 1940. Prices received by farmers for poultry products in 1941 are expected to be higher than in 1940 because of smaller supplies in the first part of the year, smaller supplies of pork, and the expected larger incomes of consumers. Cash income from chickens and eggs may be larger in 1941 than in either 1939 or 1940.

A Good Idea at Any Time

The above statement all looks pretty conservative and sensible. The only missing link is the cost of feed and that's pretty hard to predict at this time. If the war should take a turn in the next six months that would draw heavily on our grain supplies, the whole picture would, of course, be a little less favorable than it is now. This seems unlikely, however, in view of heavy grain supplies and a good crop this year.

Now, to put some kind of an interpretation on all this, I'll give you mine and you be sure to do your own thinking. At best, conditions look only a little brighter than they were this year, which wasn't good. With this in mind I still feel that costs of production must be carefully watched. Every corner that can be safely cut should be cut. *But the biggest economy that most chicken keepers can make is to get better stock.*

Almost as sure as death and taxes is the law of heredity that like begets like. I get around to see hundreds of poultry flocks each year and I feel sure that many, many farmers miff the ball on this matter of stock. Either they don't think that it applies to chickens as it does to corn and cattle or they just can't resist those price bargains in baby chicks when the time comes to buy.

I know I've said all this before, but I promised you at the time that I would repeat it because it is so important. You'll soon be selecting your breeders or ordering your chicks. When you do, just remember that *like begets like.*

You want high producing hens, don't you? Well, just remember that when a baby chick pops out of the shell, if she is a pullet chick, she has inherited a limit in the number of eggs she

can lay. If she's inherited the ability to lay 200 eggs, there's nothing you can do to make her lay 225 eggs. You may not get the 200 eggs out of her if you mismanage her, but you won't exceed that figure.

If, on the other hand, you have a low ceiling of say 100 eggs in the make-up of the chick by inheritance, you can't get 110 eggs out of the bird.

There are both 100-egg birds and 200-egg birds offered for sale each spring. "But", you ask, "how am I going to know, which is which?"

That's a good question. And the answer is that I don't suppose you ever can absolutely, but here are a few helpful hints:

1. In New York, New Jersey and Pennsylvania there are agencies which examine and certify as to the quality of breeding stock on a large number of farms. In New Jersey and Pennsylvania the State Department of Agriculture does it. In New York it's handled by the New York Poultry Improvement Cooperative.

I don't mean to convey the idea that only such State tested flocks are good. I suggest this as only one guide to good production stock. There are a lot of good flocks which are not State tested.

2. No claims of high production are any better than the man who makes them.

3. Results of your neighbors are a very reliable guide.

Now, you'd like to have low mortality in your laying flock and on the rearing range, wouldn't you?

Well, that's inherited too. Of course, you can kill birds by mismanagement. But, no matter how careful you are, you can't raise birds that have inherited short life. In this connection be sure to get Pullorum free, blood-tested stock.

Now the other things that are inherited are *egg size, egg color* and even *egg quality.*

When you look over the list of things that chicks have in their systems when they are hatched, you just about have what makes or breaks a poultry enterprise. You can see why good stock is so important.

Turkey Talk

With a lot of turkeys to be moved out of storage and a tremendous new crop to be sold soon, the Poultry and Egg National Board has started its work on this particular product.

Homer Huntington, its Manager, talked to the American Restaurant Keepers Institute at Chicago recently. There were 150 restaurant owners present and Homer talked turkey.

NEARBY MARKETS for NEARBY POULTRYMEN

A Poultry Woman Looks Back

LOOKING back over the past fifteen
years of work with poultry, I find
I have learned much from poultry pa-
pers and books, and much from experi-
ence. The latter, of course, has proven
the more costly knowledge.

I once started to cull cockerels from
a flock of about three hundred in a 12
by 12 ft. brooder house. As I gathered
up what I could carry away, I saw the
others piling up in the corners, but I
thought they would "unpile" them-
selves after they saw me go out and
close the door. Not so. When I return-
ed for more cockerels, I saw the corn-
ers still piled full. I quickly opened the
door and drove the chicks out, but six-
teen were left behind, dead. Since then,
I leave only a part of the flock inside
when culling.

Another time I was using for a mash
container a tin box, about 10 by 16 in.
and 7 in. deep. One day mash contain-
ers were all empty. The chicks gather-
ed in the tin box to pick up the last
of the food, others crowded in, and I
found the box full of chicks, the ones
on the bottom being smothered. After
that, I used only shallow containers.

Last year I had 300 Barred Rocks
in the brooder house, and they were
so eager to get out mornings that they
would crowd to the door. Alas, one
Sunday morning I slept later than us-
ual, forgetting about the early worms
that the early birds like to catch. When
I went out, I was greeted by the sad
sight of more than a dozen half-grown
chicks smothered close against the
door. After that I let the chicks out
just as early on Sundays as on week
days, even if I went back to bed after-
wards. Sunday is the same as any oth-
er day to chickens.

However, from this incident I did
have a bright idea. I loosened the wire
netting from the bottom of one of the
windows, turned it up a few inches, and
the chicks soon learned to let them-
selves out at the first streak of dawn.

One thing is sure. The lessons we
learn from experience, we know by
heart, and we never have to review
that chapter again. So maybe experi-
ence is not such a bad old girl after all.

My method of preventing cannibal-
ism among chicks is so simple and so
successful that everyone should try it.
Simply darken the brooder house by
hanging dark curtains over the win-
dows. Burlap does not do, as too much
light comes through. I have used old
bathrobes, blankets, or rugs. I first
darken the windows a few days before
the chicks are three weeks old and
keep them up for about five weeks. The
house does not need to be darkened
before 8 A. M., and by 5 P. M. the
shades may be removed. When I think
of the days I used to dart around the
brooder house with a long handled
hook catching forty or more chicks to
smear warm tar on their tails, oh me,
oh my! "Them days is gone forever,"
as the funny papers say.—Mrs. M. A.
S., Ulster County, N. Y.

More Eggs in Northeast

During the year 1939, 6,400,000 cases
of eggs were received in New York
City. Of these, 29 per cent came from
the Northeast. These figures show a
9 per cent increase in eggs shipped to
New York from the Northeast since
1923, and a 4 per cent increase as com-
pared to 1938. Since 1928, receipts
from the Corn Belt, the far West, and
the South have declined.

Latest report on the egg-feed ratio
shows a requirement of 6 doz. eggs to
purchase 100 lbs. of feed. Month ago
figure was 6.2, a year ago 6.4, and two
years ago 4.5. According to the State
Department of Agriculture and Mar-
kets, the average cost of 100 lbs. of
poultry feed was \$1.93 about the first
of November, compared to \$1.88 last
year.

Taber Stresses Three Points at National Grange

(Continued from Page 9)

plastics and other industrial needs. To
make this program succeed, we must add
the new principle of incentive payments
for growing crops.

3. We must prevent accumulated sur-
pluses from causing price collapse.
Through the Red Cross and direct gov-
ernmental assistance, both food and fiber
should be sent to Europe and the Orient
immediately after peace. We can serve
humanity by making our burdensome sur-
pluses bless the world without injuring
the farmer.

THE HOME MARKET

4. The American market must be pre-
served for American Agriculture. The
struggle of the Grange for seventy-four
years for "tariff for all or tariff for
none," and our battle against discrimina-
tion in Reciprocal Trade Treaties, will
have a new meaning in the changing
world ahead. Neither Agriculture nor
Labor must be asked to compete with
coolie or Oriental labor on the one hand,
or the forced labor of the totalitarian
state on the other.

5. We must fight for a fair price that
will give the farmer a decent standard of
living. We must give Agriculture a larger
share of the national income. We must
have parity, equality, and the American
price in our exchange relationship with
Industry and Labor.

6. We must develop cooperative mar-
keting so that the farmer will get a larger
share of what the consumer pays. The
farmer should have a direct interest in
all matters of grading, standardization,
quality, storage, refrigeration and price.
Marketing agreements and commodity
loans must be continued and improved.

7. We must use education in all its
phases to help agriculture. The county
agent, home demonstrator, along with the
club leader and vocational teacher, can

serve agriculture. The agricultural college
must be our outpost in thinking and pro-
gress.

8. Farm production and transportation
cost must be held to a minimum. This
will require that railways, highways, wa-
terways, airways and pipe lines—the Big
Five in moving farm products to the con-
sumer—must be developed on a competi-
tive basis to prevent costs from skyrock-
eting.

REGAIN LAND BANK CONTROL

9. We must have a farmer-owned and
farmer-controlled Rural Credit System for
capital, production, and marketing credit
needs. Interest rates must be reasonable.

10. We must develop a sound, longtime
land policy, and retain soil conservation
payments. We must conserve our forests
and wild life as well as our soil. Most
important of all, we must preserve our
water resources for power, rural electrifi-
cation, and to prevent drought and flood.
Balance irrigation and reclamation with
retirement of marginal and sub-marginal
lands.

11. The right to own and operate a farm
or small business with a minimum of gov-
ernmental regulation is an American
birthright that must be preserved. We
must prevent corporation or large-scale
farming from stifling the family-sized
farm.

Real progress in Grange organization
was reported during the past year.
There have been 405 Granges organiz-
ed—some new and some reorganiza-
tions of old Granges. Three-quarters of
the states in the Union show a net
gain in membership, and there has
been an increase in the membership of
the National Grange. Wyoming has
been added to the list of State Granges,
and delegates from that state were
present at Syracuse.

HELPS PROTECT YOUR FLOCK AGAINST THE SPREAD OF COLDS · ROUP · BRONCHITIS

Lost birds mean so much lost money. Many birds die
from winter respiratory diseases that could be saved
if proper measures were taken in time. Don't wait for
these profit-killing diseases to get hold in YOUR flock.
Start NOW to B-K your birds and equipment to pro-
mote higher sanitation, to help prevent spread of
disease when it starts. When B-K Powder, the wonder-
ful germ-killing agent, is dusted in the air above your
birds, it makes them sneeze and cough, loosening the
mucus, thus helping to relieve the congestion that so
frequently leads to strangulation.

Add B-K to Drinking Water

One sick chick may infect your entire flock. Add B-K
Powder to your birds' drinking water every day to help
prevent spread of disease among flock. The daily use
of B-K in the drinking water is helping to save millions
of chicks and adult birds.

Disinfect coops and brooding houses
by the regular use of B-K Powder, ac-
cording to directions, to aid in pre-
venting transmission of diseases.

Thanksgiving

by

Mrs. Grace
Watkins
Huckett

NO OTHER HOLIDAY in the whole year has quite the farm flavor that Thanksgiving Day has. For city people who must order the makings of their Thanksgiving dinner from Mr. Smith, the grocer, and Mr. Jones, the butcher, the day necessarily becomes only a symbol of gratitude and of that first Thanksgiving Day in 1621. But for farm people it is much more than that. It's a visible sign of work well done and of a harvest reaped in partnership with the Giver of sun and rain.

Besides the special satisfaction of seeing the fruits of one's own labor on the family dinner table, there is also that pleasant feeling that no big store bill will follow the feast. Most farms and farm cellars can provide nearly everything needed for the celebration. To help you plan your "home-grown" dinner, here are several menu suggestions:

MENU No. 1: Tomato juice cocktail; carrot strips and celery; roast turkey, duck or goose with apple stuffing and brown gravy; riced potatoes; buttered rutabaga cubes; mixed pickle relish; hot rolls; fresh (winter) pear salad with hickory nuts and French dressing; pumpkin pie; cheese; coffee for grownups and milk for children.

MENU No. 2: Onion soup with cheese croutons; roast turkey, duck or chicken with dressing; giblet gravy; cabbage relish; baked potatoes; buttered carrots; Waldorf salad with hickory nuts; bread or hot rolls; pumpkin pie topped with whipped cream and Damson plum conserve; coffee; milk.

MENU No. 3: Roast beef with Yorkshire pudding; celery; cranberry sauce; stuffed baked onions; carrots and peas; corn relish; hot rolls; mince pie; coffee; milk.

MENU No. 4: Cream of tomato soup; olives; salted nuts; roast goose or turkey; creamed celery; apple sauce; spinach puree; potatoes au gratin; pepper relish; jellied carrot salad; English plum pudding with hard sauce; coffee; milk.

MENU NO. 5: Cranberry juice cocktail; celery and olives; cucumber pickles; jelly or jam; roast turkey, sausage stuffing; peas; candied sweet potatoes or mashed potatoes; biscuits and butter; slaw; pumpkin pie with whipped cream, or apple pie and cheese; cider; coffee; milk.

ROASTING THE TURKEY

If turkey is to be part of your dinner, be sure to observe these points in roasting it: No searing, no cover, no water (except for tough birds), and a constant low temperature. An old turkey, of course, needs longer roasting than a young one. Should you have to buy yours, see that the breastbone is flexible, as a hard breastbone is the mark of an old bird.

After stuffing and trussing your turkey, lay it on a rack in an open pan and brush skin thoroughly with softened fat. Place in a low or moderate oven, 300° to 350°, and cook uncovered. Brush skin with fat every half hour; or bird may be placed breast side down. Because of breastbone shape, the bird rests on one side. Tip it during the roasting to rest on the other side. Toward the last, turn breast upward to brown. A clean white cloth dipped in fat may be used as a blanket over the bird. Fat is basted or poured over the cloth.

The bird should be weighed undrawn. Use this weight as a basis for total roasting time. 8 lbs. will require 25 min. a lb.; medium (10-16 lbs.) 18 to 20 min.; large (18 to 25 lbs.) 15 to 18 min. per lb. For roasting a chicken that weighs 3 lbs. allow 30 min. per lb. Heavier birds from 4 to 6 lbs. require only from 22 to 25 min. per lb. Goose differs slightly in its method of cooking in that it should be roasted for 15 min. at 500° F., then quickly reduced to 350° for the remainder of the cooking—about 3 hrs. for an 8 lb. goose.

Allow 1 cup dressing per lb. of bird. It is better

to have too much than not enough. A standard dressing for any fowl may be varied in many ways:

STANDARD DRESSING

(for a 12 to 16 lb. bird)

1½ lb. loaf of bread ½ to 1 lb. butter 1 teaspoon salt
½ teaspoon pepper ¼ cup minced onion

Remove crusts, cut bread into 1 inch cubes and drop into a large mixing bowl. Cut butter into dice about ¼ inch. Toss all ingredients together using 2 forks or hands.

Variations:

- 1—Add 2 cups finely chopped celery, raw or partially cooked.
- 2—Add 1 lb. chestnuts. To prepare—place chestnuts in cold water to cover, bring them to boil and boil for 5 min. Drain, peel and skin. If the meats are not tender enough, drop in simmering water and simmer until tender. Chop coarsely.
- 3—Add 2 cups nutmeats—almonds, hazel or hickory nuts, pecans or walnuts. Toasting the nuts in two tablespoons butter gives a wonderful flavor.
- 4—Add ¼ to ½ lb. mushrooms, chopped and cooked slowly in 1 tablespoon butter for about 5 min.
- 5—Add 1 pint or more drained oysters, chopped or left whole if small; add raw or preheated in 2 tablespoons butter.
- 6—Add ½ to 1 lb. sausage, either as meat or as tiny sausages. Break meat into small chunks or brown lightly. These sausages may be browned or par-boiled for about 10 min.

Recipes for some of the less usual dishes are given below:

ONION SOUP

6 onions, sliced 3 tbsps. butter 6 to 8 cups tepid water or onion stock
1 teaspoon caramelized sugar Salt and pepper to taste

Melt butter in frying pan, fry in it onions until rich, dark brown. Scrape all into a larger container, add 1½ tablespoons butter and cover with the water or onion stock. Cover and let cook slowly for about ½ hour, add caramelized sugar, salt and pepper. Just before serving, top with three or four cheese croutons and serve immediately.

YORKSHIRE PUDDING

1 cup flour ½ teaspoon salt 1 cup milk 2 eggs

With a rotary egg beater, beat well the flour, salt, milk and eggs. Pour drippings from the roast to a depth of 1 inch into a shallow pan. Have drippings hot and pour mixture in quickly. Bake for half hour in a hot oven 400°-425°F. Then place under the trivet that holds the roast beef—if there

ON THE FARM

Holidays call for special treats. These delectable little cakes are just the thing to serve when friends drop in. For recipe see "Lemon Molasses Cupcakes with Orange Frosting" in this article.

is one. If not, cut the pudding into squares and lay around the roast in the pan. Serve the pudding with the beef.

With family and friends home for the holidays, a little extra entertaining is indicated. Tea or coffee and cakes are always most acceptable when friends drop in.

LEMON MOLASSES CUPCAKES

2 cups sifted flour ¼ teaspoon salt ½ cup New Orleans molasses
2 tps. baking powder ½ cup butter ½ cup granulated sugar ½ cup milk
½ teaspoon soda 1 egg, well beaten Grated rind of 1 lemon
1½ tps. cinnamon

Sift flour, measure; add baking powder, soda, cinnamon, and salt and sift again. Cream butter; add sugar gradually, and cream together until light and fluffy. Add egg and molasses; then dry ingredients alternately with milk, a small amount at a time. Beat after each addition until smooth. Add lemon rind and beat again. Bake in greased gem pans in moderate oven (350° F.) 25 min. Makes 16.

To make orange frosting take 1 cup sugar, 3 tablespoons cold water, 1 egg white, unbeaten, 2 tablespoons orange juice, and orange rind, grated. Put all ingredients in a double boiler. When water in lower part of boiler is boiling vigorously, set in the upper part, containing the above ingredients. With a rotary egg beater, beat constantly for seven minutes. Remove from fire; stir in a dozen marshmallows cut in small pieces. Spread on the cake. Decorate if desired with orange segments.

Life... by

Life
Is a cycle
Of homely little duties
Revolving
In an orbit
About the ones
We love.

SMART and Thrifty

A WOMAN who is at all clever with her needle can save many a penny, or even dollars, just in accessories alone. When it comes to dresses, jackets and coats, the saving is quite considerable.

Make use of your talents for yourself, your family and friends. For that schoolgirl daughter or that friend in college, why not attempt some of the new hats and scarfs, jerkins, belts, or even gloves if you feel that brave. Wool jersey, in the new luscious shades, suede cloth, moleskin, flannel and narrow-wale corduroy provide a choice to suit any age or size.

JUMPERETTE AND HAT PATTERN No. 2500 is just the thing for lending new life to that not-so-new

dress or for extra warmth on chilly days. Choose the material of becoming color, cut it high, square or round neck. The cap may be made with or without brim. Pattern sizes are 10 to 20. Size 16 requires 3/4 yard of 54-inch fabric for either jumperette; 1/4 yard 35-inch fabric with 1/4 yard 35-inch lining for either cap.

JACKET AND DRESS ENSEMBLE PATTERN No. 3370, cleverly designed for the larger figure, features a becoming neckline, soft bodice, slimming uplift waist and smooth-lying gored skirt. This is the ideal basic dress and together with the jacket makes an invaluable costume. Sizes 16 to 50. Size 36 requires 2 1/4 yards of 54-inch fabric for dress, 1 1/2 yards for jacket.

PLAYTHINGS PATTERN No. 2526 is a timely one for the youngsters on your Christmas list—a fat elephant, a frisky horse and a cocky Scotty are all included in the pattern. For fabric requirements see pattern envelope.

TO ORDER: Write name, address, pattern size and number clearly, and enclose 15c in stamps. Address Pattern Dept., American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y. Many more ideas for Christmas gifts to make yourself are included in our winter Fashion Book. It's just 12c.

Variety and Season Affect Cooking Quality of Potatoes

THE THREE principal forms in which potatoes are served are as boiled, mashed and baked. Relatively fewer are served in the form of French-fried and as potato chips. Cooking tests made at Cornell recently indicate that no one variety or type of potato is best for all purposes. A variety ideal for baking may not be suited for boiling while one well adapted for boiling may not bake well. Most people seem to prefer mealliness and whiteness in cooked potatoes. Some varieties which bake well tend to slough badly when boiled. So, while it is true that varieties differ somewhat in quality, many factors influence the dryness or mealliness of any given lot of potatoes found in the market. For example, potatoes which are fully mature when harvested, and which were grown in light, well aerated soil are more likely to be dry and mealy when cooked than otherwise. This explains why any given variety or any given source of potatoes may not provide the same quality from year to year.

Quality is difficult to define, being so much a matter of personal preference. Some people don't like a mealy, dry potato. Most people do. As to difference in varieties, it appears that Green Mountains and Russet Burbanks generally cook mealy and are ideal for baking. However, both of these are likely to slough when boiled. The Rural varieties generally grown in western New York are less likely to slough and are therefore well suited to boiling. Furthermore, Rurals grown to maturity on good potato soil are excellent when baked. Therefore, the western New York Rural when properly grown and matured is a fine general purpose variety. The same may be said of the Cobbler variety which is an early variety objectionable only because of its deep eyes.

A few newly introduced varieties such as Chippewa, Katahdin, Sebago and Houma all have the advantage of smooth, well-shaped tubers which cook white. But Houma is the only one of these which can be said to cook as mealy and dry as the Green Mountain, Burbank and Rural. These varieties are well adapted for boiling and frying.

In buying potatoes on the basis of cooking quality, the housewife may well learn to recognize potato varieties and choose according to the method she proposes to cook and serve them.

—E. V. Hardenburg.

"My son looks like me, and my daughter is the talkie of her mother."

It takes more than kisses to keep a man happy!

TRY ME!
I NEVER LET YOU DOWN-OR YOUR CAKE EITHER!

Davis' famous double action makes success doubly sure. Double economy, too! You pay less per can—you use less per baking! Try Davis. See for yourself. DOUBLE your money back guaranteed if Davis doesn't make the best cake you ever baked!

RAISIN NUT BREAD

4 cups sifted flour	1/2 cup raisins
4 level teaspoons Davis Baking Powder	(coarsely chopped)
1 teaspoon salt	3/4 to 1 cup sugar
1 1/2 cups walnuts (coarsely chopped)	2 eggs
	1 1/2 cups milk
	2 tablespoons melted butter

Sift together into mixing bowl flour, baking powder, and salt. Add sugar, nuts and raisins and mix well. In another bowl, beat eggs till light and add milk. Mix. Pour into dry ingredients, add melted butter and stir till smooth. Pour into two well greased loaf pans (4 x 8 x 2 inches) lined with Cut-Rite Waxed Paper. Bake in moderate oven (350° F.) for 1 hour. Cool and store 1 day before cutting.

URGENT! message to women suffering functional FEMALE WEAKNESS

Few women today are free from some sign of functional trouble. Maybe you've noticed YOURSELF getting restless, moody, nervous, depressed lately—your work too much for you—

Then why not try Lydia E. Pinkham's Vegetable Compound to help quiet weary, hysterical nerves, relieve monthly pain (cramps, backache, headache) and

weak dizzy spells due to functional disorders.

For over 60 years Pinkham's Compound has helped hundreds of thousands of weak, run-down, nervous "ailing" women and girls to go smiling thru "difficult days." WORTH TRYING!

Lemon Juice Recipe Checks Rheumatic Pain Quickly

If you suffer from rheumatic or neuritis pain, try this simple inexpensive home recipe. Get a package of Ru-Ex Compound, a two week's supply, mix it with a quart of water, add the juice of 4 lemons. Often within 48 hours—sometimes overnight—splendid results are obtained. If the pains do not quickly leave you, return the empty package and Ru-Ex will cost you nothing to try. It is sold under an absolute money-back guarantee. Ru-Ex Compound is for sale by druggists everywhere.

LITTLE BROOKS

by Romeyn Berry

I AM AWARE that many excellent farms have neither the one nor the other and get along adequately without them, but I'm sure I should never care to live on a farm that didn't have a woodlot and a brook—particularly the brook. If you haven't a brook, how are you going to raise watercress, mint, bullfrogs, flag lot, horseradish, cowslip greens, and minnies for live bait? And how can you get along in the country without those things? Without a brook to guide your eye, how are you going to tell in the morning how much rain fell in the night?

No, sir! Without a brook, it's just western farming—a splendid way, no doubt, to raise corn, wheat, hogs and mules in carload lots, but no way at all to raise little boys in small quantities.

Our brook isn't really much of a brook. It's born in a spring on Dr. Parker's farm, the next place above us, and it gets to us before it's had a chance to grow up. Unlike other brooks, it hasn't always been where it is. At one time it ran on the other side of our house, through what is now the garden, and worked down through the meadow to the Johnson Lot. If somebody points out the old course, you can see where it used to go.

It wasn't until Mr. Harrison's grandfather moved onto our farm in 1844 and started to make things more convenient that the course of the brook was changed so as to bring it around in front of the house and down through the barnyard. Mr. Harrison's grandfather must have been the sort of man who is willing to perform prodigies of labor in order to save himself (and those who come after him) a little work. He figured, perhaps, it was easier to move the brook than to move the barn—which gives you a rough idea of how much of a brook it is and a few hints about Mr. Harrison's grandfather.

But it's enough of a brook to water the stock without anybody pumping; enough to make cool, wet noises on hot nights; enough to keep us supplied

with horseradish and minnies for live bait; and for little boys to make mud pies in and to dam up. Indeed, for just short of a century it was enough of a brook for Mr. Harrison's grandfather, Mr. Harrison's father, and Mr. Harrison, himself, to cool their milk in. It wasn't until just a few years ago that the Board of Health and some inspectors decided the brook wouldn't quite do for a milk cooler and that an electrical contraption would, perhaps, give us more satisfactory results.

Candor compels the admission that in recent years our brook gets pretty low sometimes during dry spells, and once or twice there have been occasions when it failed to get all the way down to the barnyard for days at a time. But that sort of thing never lasts long, and the rare deprivations serve only to make us realize how much the little brook means to us.

It's worth a week of worry every two or three years to be waked up at night by the roar of rain on the roof and to have Elmer come stamping in at daylight, dripping like a shad fisherman, to announce, "You could sail a boat across the lower end of the colt pasture, and I've pulled the barnyard pump. We won't need to pump for another couple of years anyway."

There have been times in dry spells when my wife and I, driving around after supper, have rather envied the farms that had bigger brooks—regular creeks large enough for swimming holes, for cows to stand in on hot afternoons, and to have long reaches of deep, still water overhung by willow trees. But averaging up, we decide we'd rather have our kind of little brook. Those big brooks which look so attractive in dry spells can become pretty savage in flood time, and they wouldn't work as well for little boys. In the case of a big brook, somebody might be getting silly ideas every time a little boy didn't show up promptly for supper; whereas, with a little brook, you'd know that the worst would be he was hiding in the barn until his pants dried so no one would

suspect he'd fallen in while trying to catch minnies with the vegetable strainer.

Through the four seasons, the brook goes through as many different phases as the woodlot. Each has its points. Here as the autumn merges imperceptibly into the winter, the brook is running clear and bank-full, giving the comfortable assurance that the water table under our land is up to where it ought to be; that the springs and wells are abundantly supplied before the frost grips us. Later on, when the snow comes, the brook will almost disappear, save where occasional black holes reveal the water boiling down, the only life and movement in an otherwise dead world.

March comes next, and sometimes then our little brook roars down like coffee with cream in it and in sufficient quantities to make the town and the county get out their road crews to take care of it and put it back where it belongs. But that doesn't last long, and the first thing you know it's June once more and the little brook is tame again, babbling along between blue and yellow Iris and reflecting lemon lilies and forget-me-nots.

It is in that last phase that it's most useful and pleasant, because I think a work team can get more rest and refreshment when they stand in the brook and cool their feet while getting their noon-day drink than by just sticking their noses in a trough. And without the brook, we wouldn't have the June night orchestra concerts with the peepers taking the soprano, the bullfrogs the bass, and all kinds of little animals and small bugs that few people know the names of filling in between for the altos and tenors.

Western farming has its unquestioned advantages. It must be wonderful to plow a furrow miles long and to move one's crops to market in trainload lots, instead of tied on the rear bumper of the family car. But what can little boys do on that kind of a farm? There are compensations, I suppose, but none that quite takes the place of mint and watercress, of mud pies and little dams—or remotely approaches the adventure of catching minnies for live bait in the kitchen strainer.

Today in Aunt Janet's Garden

Keep Cold in or Out—Which?

TO KEEP FROZEN or to prevent from freezing—that is the question! Since we are told to wait until the ground is frozen before applying protection to plants, it is safe to assume that our object is to keep it frozen. It is the alternate freezing and thawing which works havoc with roots, especially if they happen to be newly planted ones. Many perennials are not harmed by being frozen, provided they are not subjected to the constant change of temperature.

Our object in mulching, then, is to keep the plant in cold storage. Another object is to keep the plant in healthy condition without undue rotting of parts which would allow disease to creep in. This means that whatever protection is placed over the plant should be as nearly disease free as possible. For this reason don't use tops from peonies, phlox, delphiniums or other plants which are apt to be affected by mildew, black spot and rust. The spores from the diseased parts are harbored over winter, ready to attack new growth as soon as it appears in the spring.

It is better to get fresh, new material or use the types that do not harbor disease. Salt hay, pine needles, pine boughs, leaves, peatmoss, excelsior and glass wool are some of the ma-

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

An American Thanksgiving

Our thanks, dear Lord, for fields of corn,

Unconfiscated gold;
Our thanks for beechnut clusters and
The tasty meats they hold;
Our thanks for trees of evergreen
That lift their branches high;
Our thanks for leaves of maple flame
Against a turquoise sky.
We thank Thee for our loved ones true,
For new friends we have gained;
We thank Thee for Thy temples, Lord,
By war still unprofaned.
Our thanks for good fruits of the land,
For apples crunchy-crisp;
Our thanks for little children and
The lessons that they list.
Each year when lithe November dons
Her sober dress of brown,
May she wear our glad Thanksgiving
As a jewel for her gown.

—Edna Wilfert,
Jeffersonville, N. Y.

terials in use. Some of these are almost ruled out because of expense—glass wool and peatmoss for instance.

Pine needles, so abundant in many sections, are useful to protect bulb borders, lilies particularly, and to fill containers protecting canes of roses, hydrangeas, and similar shrubby plants. Leaves, oak and maple, serve practically the same purpose as pine needles. Oak leaves being alkaline in their reaction are better if used over plants requiring sweet soil; maple leaves for those requiring acid soil. Maple leaves tend to mat down and need stirring by the end of the winter; otherwise they will exclude air.

For plants with crowns—foxgloves, columbines and madonna lilies—pine boughs are excellent. They allow circulation and the stiff branches uphold the weight of snow.

My old standby has been strawy manure which serves two purposes—winter protection and extra humus. In the Spring, the parts which are too coarse are raked off the borders. The rest is scratched into the soil. The growth of plants during the last summer seemed to indicate that this treatment has been beneficial.

AUNT JANET'S Favorite Recipe

FRIED APPLES seem to be long with bacon or sausage. Here is a slightly different way of preparing them which lends extra interest:

Southern Fried Apples

6 large apples	2 1/2 cup sugar
5 tablespoons butter	1 teaspoon cinnamon
or other fat	1/8 teaspoon salt

Core but do not peel tart cooking apples. Slice 1/2 inch thick to make perfect rings. Heat butter in heavy skillet until light brown, place apples in it, and cover with half of the mixed sugar, cinnamon and salt. After five minutes turn the slices with the pancake turner to avoid breaking. Cover with remaining sugar mixture. Saute over low heat until almost transparent. Serve hot.

The Song of the Lazy Farmer

SOME FOLKS don't like to see it freeze, the winter with its cough and sneeze don't suit them and it's with regret they bid good-bye to autumn, yet as for myself, I give a shout, when winter puts the flies to rout. They're so pestiferous in fall, they line the windows and the wall, they like to get in where it's warm and be protected from the storm. Before I've got the paper read, them flies are dining on my head, they gather where the hair is thin, then give the signal and begin to scratch and bite, I squirm and swat, but they come back as like as not, with all their fam'ly, left and right they swarm in for another bite.

They drive me crazy, them there flies, they say they've got a thousand eyes, but they can't see a thing to eat except my head, with their six feet they hang to me, and with their bill they bore right in and eat their fill. Mirandy swats them flies until you'd think there wasn't no more to kill, then all their

friends and neighbors come to see the funeral, by gum. Then after that they have a hunch they'd like a tasty bit of lunch, they pass the pantry by, instead, they all alight upon my head. Of all the pests that Nature made and that against us are arrayed, them flies are ten times worst of all, that's why I am so glad in fall when they are frozen stiff and cold and cease their depredations bold, for when those depredations cease, then I can sit and read in peace.

Growing Up in the Horse and Buggy Days

(Continued from Page 5)

brush shelter until time could be taken to erect the smallest, crudest sort of log cabin, the protection of stock against wolves and crops against deer—all these struggles for survival left little time to think of the people in the far-distant homeland. Oftentimes my great-grandfather got out the ox team and the small boys to help in hauling stones to fill the holes around the log barn where the wolves tried to dig under to get the sheep the night before. Then the old long flint-lock gun came off the hooks on the wall to shoot a deer, preferably a young tender fawn, so that the family could have meat.

One morning my great-grandfather looked out the window before starting for a pail of water at daybreak and saw a panther stretched along a limb of a tree just over the path, ready to drop on the back of anyone walking underneath. But with daylight, the panther slipped back into the forest.

Aunt Clara was small and comparatively frail for a pioneer woman, yet when she found a black bear just entering the pen that held their only pig, she took off her apron, waved it wildly and shouted frantically until the bear was scared away. But Uncle Pat was a great giant of a Scotch-Irishman and when he met a bear down in the creek bottom, he stoned him to death. It was probably a small bear, and certainly a big Irishman, but the story traveled through all the neighborhood and came down through the generations as a family legend.

The struggle for existence was all-absorbing, mails were hardly established, travel was difficult, and so we find an almost complete break between the pioneers and their folks in the old home. Very few letters are in existence that passed from the old colony to the new settlements, and few are the stories of visits made between the two. The pioneers almost completely cut all their lines of communication, and the next generation knew nothing of their cousins in the old colony.

So the time of which we write is the day when the pioneer babies have become reminiscent "granthers", the third generation is wrestling with these same farms, and you and I, Partner, are growing up. To middle-age, the time of youth may seem a golden age, but this particular time, 1880 to about 1905, was not a golden age to our parents. Scarcely yet were filled the gaps in the ranks made by the Civil War. Parents still mourned the twelve children lost from one school district in an epidemic of diphtheria. The panic of 1873 had ruined tens of thousands, a long period of ruinous agricultural prices in the eighties and nineties brought agriculture to its knees and placed thousands of mortgages on farms heretofore free.

But crops grew, stock fattened, and babies were born. The biological process continued as always on farms without much relation to the economic changes.

This, then, is the background of the stories to be told here in *American Agriculturist* in coming issues this winter. They will be stories of the farm neighbors of central New York in the eighties and nineties, spilling over a little into this twentieth century, stories of hard times and the people who survived them; stories of old folks who had been pioneers and young folks looking forward confidently to a rosy future; folks who were poor in money but rich in happiness, hurt but not licked, generous, hearty, humorous and hopeful; in short, stories of an America still young and of two farm boys growing up in a Land of Opportunity. One of us was born in the high plateau lands of northeastern Tompkins County, just a few weeks before the blizzard

FORTY

By Julia Lounsbury Wallace.

I do the things a decent matron should: Walk quietly when dancing fits my mood;

Give sage advisement to my daughter's beaux;

And think about my age when buying clothes.

And yet a thousand birds sing in my heart!

Beating bright wings they never will depart—

Although my mirror's face gives back to me

The placid woman I'm supposed to be.

of '88, and the other had already been squalling and laughing more or less for three years in the hills of old Tioga. Modern uplifters and city sociologists would say that we were underprivileged and must have had a narrow, socially starved childhood. It makes us laugh. We remember the days

as happy ones, dotted with the small tragedies of childhood, but with a family solidarity, a neighborhood of helpfulness and friendliness, evenings full of popcorn, apples, maple sugar, singing schools, spelling bees, square dances, and stories, some unprintable, but all with the smell and tang of the farm strong upon them.

Grandfathers and grandmothers, uncles and aunts, lived nearby and delighted to talk of pioneer days. Civil war veterans were still active farmers, merchants, postmasters, and great story tellers. The modern age was on the horizon. But we, the authors, straddled the generations and absorbed much from each. I survived to lead a normal life, but you, my fellow author and partner, I honestly think were a little "teched in the head". Only the succeeding stories will reveal which of us is a "little queer" and wholly foolish. Good Lord above, I just realized that our readers may conclude that one of us is as bad as the other, and that will be hard on both!

(To Be Continued)

Personal Problems

She Can't Say "Mother"

Dear Lucile: This sounds like a trivial thing, but it's making me unhappy.

I'm a young bride and am finding it very hard to call my mother-in-law "Mother". To me, it seems like disloyalty to my own mother. I speak of her to my husband as "your mother" . . . and so far I've addressed her as "Mrs. Brown." I simply choke when I try to call her "Mother". My husband insists that I should do so. Is he right?—*Unhappy Bride*.

I am afraid he is right. What else could you call her, unless you were like the son-in-law who said the first year he called his mother-in-law "Hey, you" . . . and after that "Grandma." Up until she reaches that happy estate, "Mother" is what she'll have to be to you, unless you insist on sticking to the cold, formal "Mrs. Brown" . . . and I don't think you will, after you're well acquainted and have learned to love her.

You wouldn't want your husband to refuse the same courtesy to your own mother, would you? And, I wouldn't entertain thoughts of it being disloyal to your own mother. It isn't.

* * *

Keep Your Own Counsel

Dear Lucile: My mother and I have always been very close and I've confided almost everything to her. Now I am married, living close to home and we see each other every day. She still thinks I should tell her everything. I don't think I should, but she acts hurt if I act like I don't want to talk about certain things or answer questions she asks me about our business affairs, etc. Should I continue to tell her everything?—*Mary*.

Not if you want to keep your husband. He isn't going to enjoy know-

ing that everything he says and does is going to be repeated to Mother, or that his private business affairs are being paraded for her approval or disapproval. I advise you to be firm with your mother right at the start. Evade her questions as tactfully as you can, but if she brings things right to a showdown and accuses you of not talking to her as freely as you used to, tell her frankly that you feel it is only fair to your husband that you keep some matters to yourself; that he asks you to do so and that you want to do as he requests.

Assure your mother that you think no less of her and that you value her opinion and advice, but remind her of how she probably felt when she first established a home and shared the secrets and plans of her husband. She would likely not have wanted to relate them all to a third person; remind her that you don't, either.

* * *

He's Only Fooling

Dear Lucile: I've known a boy for two years and a half and went with him steady when we first met. Later we seemed to drift apart and we both went with others. But I don't like anybody like I do him. He has said he loves me and I certainly do love him.

But he acts very funny . . . if we're at a dance he won't even speak to me unless I speak to him and he never dances with me. He never comes to see me . . . yet when I question him, he still insists that he cares for me, and takes it very hard when I tell him I don't believe it.

Do you think he loves me and will I ever win him back?—*Uncertain*.

I think your own good common sense will tell you that this boy is not sincere and that he certainly is not acting as a boy truly in love with a girl would act. I should proceed to forget all about him.

"Hello, Gracie, would you like to be my bridesmaid again? Same place, same time!"

WELCOME relief from stuffy misery of HEAD COLDS

3-PURPOSE MEDICINE

Are swollen membranes and clogging mucus caused by a stuffy head cold making life miserable for you? Then relieve discomforts with a few drops of Vicks Va-tro-nol up each nostril.

Va-tro-nol is so effective because it does three important things—(1) shrinks swollen membranes—(2) soothes irritation—(3) helps flush nasal passages, clearing clogging mucus. . . . And remember, when used in time, Va-tro-nol helps prevent many colds from developing.

For Quick Cough Relief, Mix This Remedy at Home

No Cooking. No Work. Real Saving.

Here's an old home remedy your mother probably used, but, for real results, it is still one of the most effective and dependable for coughs due to colds. Once tried, you'll swear by it.

It's no trouble. Make a syrup by stirring 2 cups granulated sugar and one cup water for a few moments, until dissolved. No cooking needed—a child could do it.

Now put 2½ ounces of Pinex into a pint bottle, and add your syrup. This makes a full pint of truly splendid cough medicine, and gives you about four times as much for your money. It keeps perfectly, tastes fine, and lasts a family a long time.

And you'll say it's really amazing for quick action. You can feel it take hold promptly. It loosens the phlegm, soothes the irritated membranes, and helps clear the air passages. Thus it makes breathing easy and lets you get restful sleep.

Pinex is a compound containing Norway Pine and palatable guaiacol, in concentrated form, well-known for its prompt action on throat and bronchial membranes. Money refunded if not pleased in every way.

If Ruptured Try This Out

Modern Protection Provides Great Comfort and Holding Security

Without Tortuous Truss Wearing

An "eye-opening" revelation in sensible and comfortable reducible rupture protection may be yours for the asking without cost or obligation. Simply send name and address to William S. Rice, Inc., Dept. 71-P, Adams, N. Y., and full details of the new and different Rice Method will be sent you Free. Without hard flesh-gouging pads or tormenting pressure, here's a Support that has brought joy and comfort to thousands—by releasing them from Trusses with springs and straps, that bind and cut. Designed to securely hold a rupture up and in where it belongs and yet give freedom of body and genuine comfort. For full information—write today!

NEW ORLEANS

and the SUGAR BOWL

(Continued from Page 1)

out to the big Lake Pontchartrain, a body of water some forty miles long and twenty-five miles wide. Then the next morning I went around to the Chamber of Commerce and engaged the services of a lady guide who spent some hours with us in going over the official tourist sights.

The Main Street of New Orleans is Canal, and it is commonly reputed to be the "widest street in America." Possibly this statement overlooks the main street in Long Meadow, Massachusetts, but, nonetheless, Canal street is wide enough to be noteworthy. Down the middle run four parallel trolley tracks and on each side of these is a good width city street. The business end of the street is at the levee which holds back the river. At the wharfs we saw a banana steamer in from Central America discharging a cargo of ninety thousand bunches of bananas. The bananas came pouring out of her hold on a conveyor belt in endless procession almost as fast as one could count, and a man standing by the belt graded each bunch with a word or sign while a gang of big, black, sweating roustabouts saw to it that each grade was routed to its proper destination. Incidentally, our guide signaled a foreman that she had a tourist party and he, as a friendly gesture, handed me a liberal sample of three or four dozen bananas. We certainly consumed bananas for the next two or three days. Lacking a guide we would hardly have dared to walk out on the pier. As it was we saw the thick of the business.

The Old French Quarter

On one side of Canal street is modern New Orleans with tall buildings and swank hotels and roaring traffic, not greatly different from Buffalo or Boston or a score of other cities that might be mentioned. But just across the street an earlier era still survives. Turn your back on Canal street and a step takes you into the Old French Quarter—the *Vieux Carre*, which I understand means *Old Square*. It is the old eighteenth century French city originally surrounded by a palisade, which accounts for the crowding and the very narrow streets. This is the famous district which every visitor to New Orleans is expected to see. It comprises an area about twelve blocks long and eight wide. All the streets are so narrow that only one way traffic is possible. The buildings are typically not more than three stories tall and there are sections of the Quarter which have not greatly changed since Old Hickory whipped the British here in the War of 1812.

As might be expected, the Old French Quarter is tourist-infested beyond measure. I did not suppose that any city in America has as many antique shops as are found in solid ranks on Royal Street. Now and again our guide took us through doorways opening on the street but leading into patios—roofless courts with pools and shrubs and flowers and summer-houses, a delightful development which speaks of a climate where for the large part of the year it is possible to live out of doors.

In the late afternoon we said goodbye, and crossing the very long, toll-free bridge over the Mississippi set a course for the Sugar Bowl and the Evangeline country, which lies southwest. On the west bank of the river we followed the levee for a good many miles. At this point it is very high and suggests a railroad embankment with a gentle grassy slope. Between the levee and the river at this point is a wide no-man's-land of flood plain, at this date not covered by water. The levee built,

of the richest of river mud was carrying a good growth of grass and many cattle were grazing it. It seems that the principles underlying the fence laws of many of the southern states are the direct opposite of our New York law. With us it is the duty of a man to confine or securely fence in his live stock. In the south you must fence stock **OUT** of your land. In Alabama, Mississippi and Louisiana we constantly came on official highway signs "Drive with care—Livestock at large." It seems to be freely acknowledged that old Bossy and the razor-back, and not the motorist, have the right of way.

This region is perfectly level and cut up by deep, sluggish and sometimes navigable watercourses known as bayous. Cotton is a crop that may be handled by the small tenant farmer and it is often found in small irregular patches, but I saw no small fields of sugar cane. Some fields must have had literally hundreds of acres stretching as far as we could see. There were plenty of tractors and big truck loads of commercial fertilizers, and it is evident that the industry requires large capital to carry on.

In Louisiana, it is the usual practice to grow three crops of cane before breaking up the ground. The first crop is known as "seed cane", the "seed" being lengths of last year's cane carried through the winter by lightly covering with earth or other protective material. This "seed" is laid end to end in the bottom of a furrow and covered, and the sprouts come up from the joints. The next year, sprouts come up from the stubble and it is expected that two profitable crops of "stubble cane" will be secured. In some parts of the world, stubble cane is cut for eight or ten years, but this is not done in Louisiana. We were there just before mid-April and the sprouts from the stubble were a foot to eighteen inches tall, but the planters called it a late spring. I was told that cane made twenty, thirty and even forty tons per acre. This is about twice as much as a good field of ensilage corn and to me seems a rather tall story. Of recent years the price has been about \$3.50 per ton, but back in the days of the sugar famine, which fell about the close of the World War, the price ran up to \$18.00 per ton.

Cane Still Cut By Hand

This limited area of the state has between one and two hundred cane crushing mills, so that no grower is very far from his market. Machine harvesting of the cane has been tried with some success but I was told that most

cane was still cut by hand, using not our familiar corn-knife but a heavy cutlass-like blade. Every plantation seemed to be supplied with a derrick and boom, so that the cane in slings can be swung from the gathering wagons to the trucks for transportation to the crushing plant. It would seem that sugar production is typically big scale farming. In the Sugar Bowl, cane seems entirely to displace cotton. A grower told me he did not know of an acre of cotton within thirty miles.

In the Sugar Bowl we turned off the main road and made a side trip of three or four miles to visit "Oak Lawn", a famous estate and mansion of the old days. Like many homes of its class, it lies far back and out of sight from the highway and is reached by driving down a long avenue, over-arched by live oaks hung with gray Spanish moss. According to the custom of that time, the house fronts not toward the road but on the nearby Bayou, and just while we were there a stern-wheeler steamboat went churning up the stream. We folk of the Milk Shed know farming to be a business in which by hard work and economy it is possible to make a modest living and perhaps a little more. A remote lonely country home such as Oak Lawn makes us understand that there was a day and a type of agriculture when out of the soil men reared great white pillared mansions which are still stately and beautiful—perhaps wonderful—after a hundred years. Among the furnishings of this home is a bathtub—supposedly one of the earliest in America—carved from a solid block of marble. In size and general outline it does not greatly differ from the tub of today. At the time it was carved there were no plumbing arrangements of any kind, nor on the other hand was there any lack of trained black house-servants to heat the water and carry it upstairs when needed.

Where the Snowy Heron Nests

At New Iberia we turned south from the Old Spanish Trail and made a side trip to see the semi-tropical gardens and bird sanctuary at Avery Island. I had heard of Avery Island and naturally, expected it to be an island somewhere along the Gulf coast. The fact is that the "Island" is just a very decided mound or hummock standing up a hundred or two feet above the general level of this interminable flat country. There are several of these natural monuments and I have heard no explanation of the freak of geology that formed them. The astonishing fact is that the core of Avery Island is a mass of rock salt so pure that it needs only crushing and sifting for high grade salt. This salt mine was known and worked even before the Civil War. Here at Avery Island are raised the peppers and here in a small factory is made all the Tobasco sauce for this country. I find this statement easy to believe because a very little Tobasco goes a great ways.

Most people who go to Avery Island do so to see the very extensive gardens in which can be found almost every tree, shrub and flower that will grow in the Gulf Coast climate. Perhaps many find it equally interesting as a bird-sanctuary. All bird and animal life is vigorously protected and a vast number of birds have taken advantage of this assured safety. Not many years ago, the commercial plume hunters in their relentless pursuit of the snowy heron, the bearer of egret plumes, had almost exterminated that lovely bird.

At present, by actual count, more than ten thousand pairs of heron nest at Avery Island. We were very fortunate in happening there just when myriads of the snowy birds were forming a veritable white cloud above their rookeries.

Here in southwestern Louisiana is the real Creole country, the region to which the Arcadians were exiled from Nova Scotia. We turned aside to go to

Prayer

By CLARA MACK.

I would not have the sun
Shine constantly,
Or flowers always bloom
Along the road.
I do not ask a mind
From care set free,
Or to be favored with
A weightless load.

Some nights must have
No dream, no ecstasy.
Some days must have
Interminable length.
So give me not
Less burdens, Lord,
I pray. But added strength.

St. Martinsville, a little village in the Evangeline Country. It is like French Canada in that after nearly two hundred years French is still spoken. I was told that some of the negroes, descendants of the slaves of these Creole families, speak the same tongue.

Fifty years ago, when I was still a school-boy, people read and greatly admired Longfellow's poem "Evangeline". I have just been refreshing my memory of that rather pathetic narrative. Historically it is true that the Arcadians were forcibly removed from their old home in Nova Scotia, and that after many tribulations, and wanderings some of them reestablished themselves in this pleasant Louisiana country. According to Longfellow's tale, Evangeline and Gabriel were lovers on the very eve of their marriage when the exile took place. Somehow or other in the confusion, they lost track of each other and while she waited for him and while he sought her diligently through many years, they were never able to find each other. Always some invidious twist of chance prevented their reunion until she as a Sister of Mercy came on him in a hospital—but too late, for he died in her arms.

Doubtless it is a tale that does not at all appeal to present day youth, but it was once tremendously in favor. Of course, legend will always be busy with a story like that. At St. Martinsville is a big Catholic church—a Cathedral I believe—and just a few feet behind it the Bayou goes wandering. On its bank stands Evangeline cast in bronze—as sweet and appealing a maiden as any man might desire, while close at hand is a great spreading live oak known as the "Evangeline Oak." It was beneath its shade one sultry noon that Evangeline slept, while her lover in quest of her passed down the placid waterway in his canoe so close that very quietly they might have greeted each other—so near that almost they might have stretched out their arms and clasped each other. But Fate ruled otherwise, and because of this Evangeline remains young and heroic and lovely forever.

Good Books to Read

THE GHOSTLAND, Fred Rothermell. This is the story of the drouth victims in the Ozarks. The Fultons, on relief in Brooklyn, had the chance to move to the Ozarks to the farm where the father had been born. But the hills were too dry and barren to yield a living for the family, neighbors were starving, credit was exhausted. The story is carried to a climax in the sit-down demand of the farmers for help and the ensuing riot.—J. B. Lippincott Co., Philadelphia, Pa. 2.50.

Good Movies to See

THE GREAT McGINTY. Lively and entertaining. Brian Donlevy, Muriel Angelus, Akim Tamiroff.

"Put down that rifle, son! It may not be the school teacher."

A Box or Two of Beautiful *Christmas Cards* for An Hour or Two of Pleasant Work

YOU are nearing that happy time of year when you will send Christmas greetings to your friends --- so we folks at the office are happy to offer friends of the paper an opportunity to get a box of very beautiful Thomas Terry Christmas cards, pictured above, with envelopes to match --- in return for doing a little work for American Agriculturist.

You will say these are the most beautiful Christmas cards you've ever seen, more beautiful than ever before, each with a cheery, friendly verse or well known quotation.

They are all exclusive creations, and are far superior to cards usually found in box assortments

Christmas is only a few weeks off and you will need your Christmas cards soon. So cut out and mail the coupon below and we will write telling you how to get your cards by spending a few hours at pleasant work. You don't have to pay a cent --- your work pays for the cards.

Mr. Weatherby:

Please write me telling me how I can get a box or two of Christmas cards.

Kernels, Screenings and Chaff

By H. E. BABCOCK

WELL, the Election has come and gone! The decision on the basis of the popular vote was reasonably close. I believe that this is a good state of affairs. *It is evidence that a very considerable body of our citizens is determined to keep the party in power from running away with the country.* It takes strong opposition to any political party to bring out the best in its leaders.

Some Cocky

The only disturbing result of the election I have noticed is that certain individuals on the public pay-rolls have now become a bit cocky. *Sure of their jobs for at least four years more, they are beginning to show their authority.* Most individuals who are doing this are, of course, small caliber anyway. Their actions, however, illustrate the real danger in a dictatorship. It isn't so much the big dictator whose actions common people have to fear *as it is the attitude and actions of the thousands of little dictators he has to set up to carry out his will.*

No Emergency Corn

Secretary of Agriculture Wickard has expressed himself so forcibly on the matter to Governor Lehman that I don't think there's now the slightest chance in the world of getting the government to store some of its surplus corn east of Buffalo as a protection of the feed supply of Northeastern poultrymen and dairy-men against congested freight lines, a shortage of trucks, and even bombing damage. I don't easily give up on causes which I believe are just, but I see no point in continuing to holler down an empty well. I am simply going to let my warning stand. *No one hopes more sincerely than I do that there will never be any reason for it.*

* * *

BARN FLOORS

Barn floors interest me. For one thing, they can be very expensive; for another, they can save a lot of work and wastage.

Except for one small cow stable, which has the standard concrete floor, all of our livestock runs loose in large pens. We have found a satisfactory floor for these pens can be made cheaply as follows: First, lay down around six inches of field stones; then fill in the chinks between these stones with cinders or reasonably coarse gravel. Top off with an inch or two of creek-run gravel from which the larger stones have been picked.

For floors above the ground level, we have found nothing so satisfactory as two inches of concrete laid on top of wire-reinforced paper. To do this job right, the paper should be pulled very

tight over the joists with a pair of tackles and the cement slab all laid the same day. By turning the paper up around the edges around the wall, it can be plastered with a couple of inches of cement and forms in this way an excellent guard against rats.

A floor laid as above on joists which are not over two feet apart is remarkably strong. We have one floor thirty-six by ninety on which we have stabled everything from hens to cattle, and there is not a crack in it after several years of use.

For horse stalls and alleys in which shod horses must be moved about, we use elm planks, sawed from our own trees.

* * *

ONE PER CENT

In his "Down Mexico Way" notes, Howard reports that he has lost twenty-eight of his feeder lambs, which is one per cent of his flock. At Sunnygables, we have lost ONE of our one hundred feeder lambs, so we're running even. We certainly will look bad at Sunnygables, however, if we lose another lamb.

* * *

SILAGE FOR HENS

Two or three winters ago, we discovered that our hens are crazy for grass silage. We haven't the slightest idea whether it's good for them or not, but it does serve to stir them up and get them singing and scratching. So, Jake is beginning to give them a little each day.

Speaking of silage, I am afraid I was a little unfair to Charlie in blaming him for the spoiled silage in the top of the silo we opened first. The next one we opened showed very little spoilage. What appears to have happened is that the staves of the first silo, which we filled last summer for

the twentieth time, have become so porous that a lot of moisture evaporates through them. Next summer I believe we can correct this situation by lining the top half of this silo with moisture-proof paper and Charlie can take pains to sprinkle thoroughly, in fact, even wet down the silage around the walls for at least two weeks after we finish filling the tub.

So far, the grass silage we made with wheat in the milk stage is coming out fine—it is palatable, and has very little odor.

* * *

Down Mexico Way

By H. E. BABCOCK, Jr.

November 10, 1940.

WE THOUGHT that our troubles were behind us with the drenching of our feeder lambs completed, and we were about to rest on our laurels when we noticed that an increasing number of lambs were going down hill. Every morning we found one or two dead.

We posted these lambs and found that they had large deposits of salt in their stomachs. Checking back we found that in the first two weeks the lambs were in the feed lots they had eaten enough salt to run them over two months normally.

Our immediate decision was to remove all salt. The sick lambs were then picked out and we put them on our oat field, which was beginning to green up. The two moves served to check the trouble immediately, although several lambs died in the oat field, being too far gone to be picked up and flushed by the young oats.

Our lamb losses to date total twenty-eight, which is only one per cent of the total number of lambs. This figure isn't bad, but it does leave us with very little margin to carry through the rest of the feeding season without an abnormal death loss. All is not lost

with the death of these lambs, however, since we can get a small amount for the pelts and the carcasses are fed to the hogs.

Since the first of April our hog operation has brought us in about one hundred dollars a month. Yesterday we took eight hogs, weighing an average of two hundred and four pounds, to the local packing plant. We left ten in the pens, ready to go in thirty days, and about 40 coming along at various stages of growth. In the maternity ward are two sows ready to farrow in the next 24 hours. At pasture are 19 sows which will farrow along over the next six weeks.

To date, Pete has picked a little over 100 bales of cotton. All of the cotton here this year has poor quality of color due to angular leaf spot. However, we have sold over 80 bales at a premium because of the strength and length of the fiber. Although it isn't wise to believe everything the other fellow tells you when making a deal, the fact that we were able to get a premium over our neighbors and over the market seems to show that we have a better cotton. If we have licked the problem of producing strong fiber—and we believe we have—we now have the added problem and objective of conquering the effects of leaf spot in order to improve the color.

The past two days have kept our farming activities confined to the feed lot. A fine misty rain, which in all added very little moisture, prevented our combining wheatland maize. So, all hands turned to and filled the self-feeders to be ready for a good run the first of the week.

As yet we have had no killing frost, although several light frosts have touched off the more tender plants and leaves. The cottonwood trees have shown the effects of these frosts as much as any, while the Chinese elms are still green. Except for occasional windy days, by ten o'clock everyone is in shirtsleeves.

There are several points of interest in the above picture. Note the tires on the mowing machine: they are knobby treads, 6.00 x 16's, and last winter did duty on the rear wheels of our family car. They will be put back on it again as soon as snow and mud conditions warrant. Note also the Dunlop rubber pillow under Jake. It's lots softer than a bunch of hay or an old feed sack. The picture was taken in mid-September at Sunnygables and shows a pair

of sorrel four-year-old geldings which give promise of growing out into a very serviceable farm team. At present they weigh seventeen hundred forty pounds apiece. The regular mowing machine pole had to be lengthened a foot for them. We hope they will grow out to make a thirty-eight hundred team. With its draft cut in half by the inflated rubber tires, these colts **make very light work** of cutting even heavy hay.

Fraud Order Hits Health Ads

Service Bureau Reports Action By Postal Authorities

By H. L. COSLINE.

POSTAL authorities recently issued fraud orders against two concerns. The first is The Executive Sales Corporation of Chicago, who advertised a so-called "Director Belt," later renamed "The Executive," supposed to reduce the waistline. Expert medical testimony indicated that it could not and did not do what the company claimed. The second fraud order was issued against the Doctor Shrader Ear Pump, Lincoln, Nebraska, claimed to improve the hearing of deaf persons and overcome and correct head noises. Again medical testimony indicated not only that it was useless, but that it might be harmful.

Old Receipt

"On July 22, 1940, a man came to our house and told my mother that he was working in a contest and if she would pay a dollar for postage, he would enter her subscription for 'Mother's Home Life' and 'The Household Guest'—48 issues. He would also give her a plant. She has not received any magazines nor any reply from the company. Will you please see what you can do about it?"

The company issuing the receipt given our subscriber is out of business. The fact that the receipt was dated 193— should have indicated caution. Apparently this agent was a swindler who had picked up these old receipts somewhere and collected money without any intention of delivering anything of value.

Incidentally the agent signed his last name only and in an exceptionally illegible manner.

While similar complaints have been numerous in recent months, you need have no hesitation in paying money to a salesman representative of *American Agriculturist*. He will be more than glad to show you his credentials if you ask for them.

Property Assessment

The primary responsibility for assessment in towns in New York rests with the town assessors, and indirectly on the persons who have elected or appointed them to office. Most towns have three elected assessors. Some town boards, however, have taken advantage of optional provisions of law which allow them, subject to permissive referendum, to appoint three assessors or to appoint a single assessor.

The job of assessor is usually a difficult and thankless one. These officials in some towns do a good job. In others very great inaccuracies and inequities exist.

Where it is felt that unfair situations exist, the logical place to object first is to the town assessors themselves. Sometimes it is helpful to bring the matter also to the attention of the town board. Nevertheless, it must be admitted that in many instances neither of these methods achieves the desired result.

Although the county board of assessors usually fixes the equalization rates for the different towns, the board

has no power to correct most of the discrepancies which now exist in the work of the town assessors. Under extreme circumstances the State Tax Commission may take steps in an attempt to require reassessment of the property in a tax district, but under most circumstances this is not a promising method of correcting the difficulty.

Actually there is usually no satisfactory method of obtaining correction of poor assessment work. A number of proposals for some type of adequate county review of individual assessments have been under consideration by the state legislature. Such proposals, of course, provide no relief at the present time. It seems that the only steps that can be taken now are those outlined above, and it is recognized that these are likely not to be effective. Nevertheless, it may be worth while to take the matter up with the local assessors, with the town board, and, if it is felt that a real grievance continues to exist, nothing is lost and something may be gained by writing to the State Tax Commission at Albany, New York.—M. P. Catherwood.

Verbal Promises

"An agent selling groceries came to my place. His proposition was that if we traded a certain amount each week we would get a blanket. I told him I wanted to talk it over with my husband. The next week a different agent came and said he didn't know anything about it. I wrote the agent and he said I would have to write to the company. He asked me to sign my name which I did after he assured me he would take back this blanket if I changed my mind and didn't want to trade with them."

Any verbal promise which an agent makes is not legally binding on the company if it does not agree with the contract. If any agent makes promises not written into the agreement, either refuse to sign or insist that he write any changes or promises on the contract. Even so, you had better read the contract to see if it says that changes written in will not be recognized by the company.

Is It Worth the Cost?

"Can you tell me anything about the Avon House of 1107 Broadway, New York City? They have told me that they want to include one of my poems in a book of poetry which they are publishing. I have not yet sent them a poem but I am considering doing so."

The Avon House publishes books of poetry provided the authors of the poems agree to purchase copies of the finished books. It is my understanding that the price of the books is \$3.00 per copy. We would like to point out that many an author could get his work published by paying the price for doing it. Most authors wish to sell their writings rather than pay money for having them published. In cases of this sort it is purely a question of whether seeing your poetry in print is worth what it will cost you.

Sight Unseen

Buying dogs by mail sight unseen raises some problems. The most common difficulty arises when the buyer keeps the dog longer than the trial period and then ships him back. The perennial complaint from men who sell dogs during the hunting season is that a man will order a dog, use him a few days and then return him, the assumption being that he never did intend to buy him. The point we wish to stress is this:—If you buy a dog on trial and do not like him, he must be returned within the trial period and not after. There is no way to compel a dealer in dogs to refund the money unless this is done. Of course there is a chance if you deal with unreliable concerns that once the dog is returned the seller has both the dog and the money. That is why it is important to deal with firms advertising in papers which, like *American Agriculturist*, guarantee their advertising.

CAR DEMOLISHED IN COLLISION WITH NATIONAL GUARD TRUCK

Three young people were killed in this shocking accident One of them—Donald Barrows, carried our policy.

DONALD BARROWS, deceased
Essex Junction, Vermont

Donald's brother sent us the pictures with permission to publish them as a reminder to our policyholders that it pays to carry our low-cost travel accident policy and keep the policy renewed.

We quote from Kenneth Barrow's letter in which he thanks the Company for the \$1000 check.

"In behalf of my mother and brother and myself, I wish to thank the North American for their prompt and efficient services in regard to the loss of our son and brother. It shows that we never know what will happen to us on the highway. Your insurance is a great help."

DEATH STALKS *the Highways*

CHILDREN by the hundreds are being murdered on our modern death highways every year. We get all excited about war, we read of the bombing of non-combatants in English cities, but if you consider casualties, deaths and injuries, war has nothing on American highways.

So used are we to reading or hearing about adults and children being killed or hurt that we seem to have grown indifferent. *It is time to wake up.* The saddest part of it all is the death and injury of so many little children going to and from schools or school buses.

In a recent issue we published a letter emphasizing this grave danger to school children on the highways. At the same time we asked what mothers thought of the problem. We found out! The two letters published below showing what country parents are up against are representative of the many received:

Three Trips a Day

Being the mother of two small daughters who are of school age, I too believe that the problem of safety for our rural school children is one of great importance. We mothers are the ones who have the worry and care of getting our little ones safely to and from school.

For six years I have made three trips a day. Many days in the winter the roads have been very icy, making it dangerous driving, but not so dangerous as having the children walk on highways where there are no side paths or even a good road shoulder on which to step from the concrete when the motoring public and truck drivers whiz past with no thought whatsoever of the little child.

I also think that some of the hundreds of dollars that are being spent on supposed-to-be beautifying the highways might be used for a much better cause—that of protecting the lives of our little folks by providing side paths for them to walk back and forth to school.

—Mrs. R. S.

Worry and Hurry

Our daughter started school this fall. Of course, we take her and get her. I found out that one mother has to make three trips a day to that school. I do not see how she has time to do any work, do you? You see, the

Hundreds of Children Killed Going to School

younger grades are excused an hour earlier than the older grades. I have relieved this mother of one trip by bringing her daughter home with mine.

That sounds like a good solution to the problem of transportation, but it isn't. You

home. The school was on a bend, and also was on one of four corners of a road intersection. A speeding car, whose driver didn't see a small boy walking across the road, hit him and tossed his body into the ditch. It didn't kill him, but he will always carry the scars. A passing car carried him to the nearby hospital, so his mother and the rest of us did not know whether he was dead or alive until his mother had ridden ten miles to that hospital and found out. It was a ghastly experience.

Do you wonder that we mothers had rather give our time to walk or take our children, rather than live in dread all day as to whether they will come back dead or alive?—Mrs. F. S.

The question is, what can be done about this slaughter? It is suggested that side paths be constructed, much the same as were the old bicycle paths years ago. The trouble with that is that it will be a long time, if ever, before the powers-that-be can be convinced of the necessity of saving the lives of children by

—EWING GALLOWAY, N. Y.

Sudden death may lurk around that slippery wintry curve.

see, I have two younger children at home. When they are sick and my husband isn't home, I have to lock them in the house alone, while I go to the school. It only takes me from twenty to thirty minutes, but a lot could happen in that time. I just live in dread from the minute I leave the house until I rush home to see that they are all right.

Some people boast of the miles they walked to school, and there are still many children who do walk, but it isn't safe. My sister let her little boy walk to school the first year. The next year he started to walk, too. He was crossing the road to face traffic on his way

giving them a safe place to walk. Another and possibly a more practical solution is to build the highways a little wider, marking off a walking safety zone. Motorists could then be prosecuted for crossing that line. Let none of us forget, either, that we are car drivers as well as parents. "We are careful", we say, but we must be more than careful, always anticipating a possible lapse of (Turn to Page 13)

THE G.L.F. PATRON

The basis of a sound business cooperative is voluntary use by fully informed patrons

From One Patron to ANOTHER...

DRAW YOUR CHAIR up to this table. Sit down and partake of good things to eat... wholesome foods grown by your patron-neighbors, and then processed, packaged and distributed cooperatively by your G.L.F. Family Foods Service.

The cooperative selling program now being developed by your cooperative aims to do two things: (1) Give the patron who uses G.L.F. Family Foods the most practical quality at a saving, and (2) make the best possible return to the patron who grows these foods.

Whenever you sit down to a meal which includes G.L.F. Family Foods you are helping to put this cooperative Good Neighbor policy into effect.

For Holiday and Everyday... G.L.F. FAMILY FOODS

FOR ALL OCCASIONS, G.L.F. Family Foods are especially well suited. Their quality and wholesomeness contribute to the most festive dinners, and their economy means that you save by using these Family Foods day in and day out, as thousands of farm families have discovered.

The canned goods are completely processed in G.L.F.'s new canning Plant at Waterloo, N. Y., and distributed by G.L.F. through both your Retail Service Agency and many independent food dealers. Canned goods cost less when you purchase them in case-lots.

In the months ahead, the American people may be called upon to use more and more cereal products as a measure of national economy. G.L.F. Flours and Cereals are old favorites with nearly every patron-family. G.L.F. intends to keep this Family Foods service complete, reliable, and economical.

38 Family Foods Now Ready For You...

Here are your Family Foods for your convenience: **G.L.F. Canned Goods**—Tender Sweet Peas, Large Tender Sweet Peas, Cherries in Syrup, Cherries in Water, Cut Wax Beans, Cut Green Beans, Tomatoes, Tomato Juice, Cream-Style Golden Corn, Whole Kernel Golden Corn, Beans with Pork in Tomato Sauce, Red Kidney Beans, Table Molasses and Cooking Molasses. **G.L.F. Flours**—Quality Patent, Bread Maker, Quality Pastry, Old York Pastry, Graham, Whole Wheat, Medium Rye, Pure Buckwheat. **G.L.F. Self-Rising Flours**—Patrons' Pancake, Golden Blend, and Self-Rising Pastry. **G.L.F. Hot Cereals**—Golden Corn Meal, 50-50 Rolled Wheat and Oats, Rolled Wheat, Rolled Oats, Quick Cooking Rolled Oats, Milkweato, and Milkoato. **G.L.F. Cold Cereals**—Whole Wheat Shreds, Corn Flakes, and Wheat Flakes. **G.L.F. Choice Table Beans**—Jumbo Marrows, Pea Beans, and Red Kidney Beans. **Cooperative G.L.F. Exchange, Inc., Ithaca, N.Y.**

TWO HOLIDAY SPECIALS

BOTH assortments are put up in sturdy, ever-useful 12-qt. baskets and offered at attractive prices by G.L.F. Retail Service Agencies. One assortment includes Patrons' Pancake Flour, Self-Rising Pastry Flour, Wheat Shreds, Corn Flakes and 50-50 Cereal. The other basket contains cans of Tomatoes, Tomato Juice, Peas, Green Beans, Cherries, Molasses, and Beans with Pork.

D. T. Mitchell Wins POTATO HONORS

*How He Grew 539 Bushels of
"Spuds" on One Acre*

By H. L. BAILEY.

DEAN T. MITCHELL of Greensboro, Vermont, is this year's president of the Vermont 400 Bushel Potato Club. This honor did not come to him through electoral or other votes, but because he raised more potatoes to an acre than any other grower in the state this year, so far as there are records to show. His yield, as computed by Orleans County Agent Roger Whitcomb, was 539 bushels of Green Mountains on a selected acre in one of his certified fields. This was 43 bushels more than the figure for his nearest competitor.

Now 539 bushels is a lot of spuds to grow on an acre any year. For a year like 1940, when planting got off to a late start and growing conditions generally were not so good, it is a thumping big lot, and Mr. Mitchell is entitled to all the public and private grand honors of the potato fraternity.

In this North Country where Jack Frost is likely to be peeping over the hill at sunset most any night through digging time, and fall rains have a mean habit of turning into fall snows, there is scarcely time to weigh-in each bushel from any one acre; but computations are made on what has proved to be a pretty accurate basis. The grower selects, as he is entitled to do, what he considers his best acre, and this just naturally is bound to have a fairly even stand. The county agent or a state inspector picks out a total of 500 row feet broken into sections so as to hit different parts of the field. The weight of the potatoes dug from this 500 feet is considered as the weight for every other 500 row feet in the acre. But so far as that is concerned, anyone who happened around Mr. Mitchell's fields at digging time could see right away that storage space for his crop was going to need a lot of expansion if it had been figured on ordinary yields.

Long Time Seed Potato Grower

Mr. Mitchell is one of the group of

potato growers in Greensboro who began raising potatoes for seed certification when certification was new and who have kept pretty consistently at it ever since. Sometime previous to 1920, he started with a small lot at the suggestion, he told me, of his neighbor Charles Lapierre. I mention this because Mr. Lapierre is a man who most certainly has practiced what he preached. This season made his 26th consecutive year in growing potatoes for certification.

"I didn't", says Mr. Mitchell, "know much about it at the start"—and neither, it may be added, did anyone else. This writer was an inspector then. But Mr. Mitchell and, we hope, the rest of us have learned a lot since those days.

After the ups and downs inevitable to the seed game, Mr. Mitchell discarded entirely the seed lines of Green Mountains and Irish Cobblers with which he had been working and made a fresh start with a new line of Green Mountains, from which during the past two or three seasons he has sold much foundation stock to other seed growers in the state. Ten to fourteen acres is now his usual planting.

The Greensboro Area

But an account of Mr. Mitchell's potato operations would not make a full picture without a word concerning the section in which he lives and farms, the section which has come to be spoken of as the Greensboro area. This region, located in the Northeastern quarter of the state, embraces the southern end of Orleans County and adjoining sections of Caledonia and Lamoille counties. It is the largest potato growing area in the state from a commercial and seed standpoint, with the towns of Greensboro, Craftsbury and Hardwick having the largest number of growers. Perhaps because some of its farmers were the earliest in getting into the certified seed enterprise, or perhaps be-

cause its railroad station at the "Bend" is the shipping point for a large part of the growers, Greensboro seems to have been given precedence as the designating name. Furthermore, two big warehouses have been built through community enterprise at Greensboro station on the St. Johnsbury and Lake Champlain Railroad. About 73,000 bushels have been put into these houses this fall by some 20 or 25 growers, including Mr. Mitchell. A large part of this stock is from fields certified for seed. Several causes have combined to boost potato growing in the area. One undoubtedly lies in the fact that most of its soil is especially adapted to potatoes. Its dark loam is classified as the Calais type of soil and a sub gradation in the soil classification map recognizes "Greensboro loam". The Calais type of soil is derived almost entirely from limestone. In this respect, as well as in typography, the section more nearly approximates Aroostook

County, Maine, than any other part of Vermont. The land is rolling rather than mountainous, with wide stretches of comparatively level land interspersed with spruce knolls and low ridges bearing maple sugar bushes. The general altitude is high and the short, cool summers are favorable, particularly for seed. When one says cold weather in Greensboro, he means cold weather.

But unlike the big Maine potato county, few farmers in this region, as in Vermont as a whole, make spud growing their whole business. With the exception of two or three lots running to 45 or 50 acres, 10 to 15 acres of potatoes to the farm would probably be the average. Dairying bulks large as a companion enterprise with potatoes.

Mitchell Farm Typical

Mr. Mitchell's farming operations may be taken as a fairly typical example. He has about 40 head of cattle
(Continued on Page 8)

To MARKET, To MARKET

By ED. MITCHELL
Hudson Valley Fruit Grower

*To market, to market, to buy a fat pig,
Home again, home again, jiggety jig.*

WE FRUIT growers are just childish enough to warrant our sticking to nursery rhymes, just as we stick to our obsolete marketing practices. Being one myself, or at least posing as a fruit grower, I feel at liberty to make fun of our gang.

This is the first year for a long time that the crop has been short enough and the price of cider apples high enough to make throwing away cull apples a pain that can be borne. Have we done it? No.

That "Home Again" line came to me when the truck came back from market with all of the load intact. No sales. Mine was not the only load of apples that was not acceptable to the buyers, and many other trucks go home every day with a good part of the load unsold. Just how many times a fruit grower will ride an apple back and forth to market before he is convinced that the buyer is right, and it should have gone to the cider mill, I do not know; but it is an expensive way to entertain an apple.

All joking aside, we can get the market report every day, and it usually tells the same story—poor apples 50c, good apples \$1.25 to \$1.50; movement

slow. Taking out cost of trucking, package and packing that fruit at 50c shows less net profit than if it were originally dropped in thinning or put in the cider mill. Selling it acts as a brake on the movement of our good fruit. It should not be allowed to reach

the market unless it is expressly packed, handled and sold to a poorer trade than would ever take good apples. There are such markets, and we should make a definite effort to develop them, but—and here is the main point—we should not try to force bad and good

apples on the same market or the same set of buyers.

Every year that the crop is short, or growers think it is short, they save every apple that has skin and core enough to hold it together and try to force it on the market or put it in storage. Storage holdings are nearly always higher in years of a short crop, and movement to market is always slower. That usually results in a bad market after the first of the year, and an average price for the season less than if apples had been moved earlier.

The best time to move apples is in the fall and early winter when people naturally feel like eating an apple and apples are at their best in flavor and quality. The kind of apples to move are those that make the consumer pleased and anxious for more. If we insist on the consumer eating our poor apples, let's try and postpone that forced feeding 'till the good apples have persuaded him that he likes apples, and the best part of our crop is changed from apples into legal tender.

If each grower will do his little bit, we will all be better off.

Let me add this little reminder: Mice and borers do not take a winter vacation. They will live on and in your trees unless you get them out now.

This orchard typifies an error made by some of our grandfathers; namely, planting apple trees too close together. Note how the trees have reached for the light and how the owner has helped them grow tall by trimming off the lower branches. This would be a better orchard if years ago someone had taken out just half of the trees. The height to which they have grown increases cost of spraying, trimming and picking; and it is very doubtful that the total average crop could equal that obtained from fewer trees given more room.

THE *Editorial* PAGE

BY E. R. EASTMAN

Address all mail for Editorial or Advertising departments to American Agriculturist, Savings Bank Building, Ithaca, New York

An apple a day keeps the doctor away.
An onion a day keeps everybody away.
—Old Country Saying.

Everybody Pays Taxes

BECAUSE they do not own real estate or pay any income tax, too many people in this country think they are tax free. *American Agriculturist* is opposed to any more taxes of any kind, but if more are levied, we favor a poll tax on every voter and a sales tax, both of which would help to make the voters mad about taxes, and help them to remember that you cannot receive from the government without paying all ways more than you get.

Critical Farm Labor Situation

WHAT ARE farmers going to do about the farm labor situation? For years it has been difficult to get good help, and now it is doubly so because of the draft, enlistments, and increased labor demand of war industries.

Men past middle life, charged with the responsibility of operating large farms and unable to work the way they did once, are almost desperate. The only solution that I can see is to study your farm business, to cut in every way possible those enterprises that require man labor, and to arrange to do everything possible by machinery.

Fall and Winter is Chore Time

ONE TIME when I was a boy on the farm, tired and sick of the daily monotonous round of doing chores, I measured the distance I had to travel in doing my share of the farm chores for a day. Then, when I had multiplied this by all the days of the year, I didn't wonder that I was tired of doing chores! To get the chores done for a year I discovered that I walked hundreds of miles.

A lot of that walking can be saved by short cuts. Thousands of farmers still carry hay farther than is necessary to get it from the mow to the cattle or horses; some even carry hay much of the winter time from one barn to the other, a forkful at a time. A handy gate or trapdoor or a small car and a track for moving feed and manure, chutes from the haymow and feed bins to the feed alley, some hoisting devices to save lifting, are just a few suggestions for shortening steps.

Cut in an extra window or two, keep the windows clean so that the light and sunshine can get in, fix an alley or passageway where you don't have to break your back by bending or bump your head every time you pass because it is too low. The barn is where you have to spend much of your time in the winter. Why not make it a pleasant place for man and beast?

Crops That Paid the Best

MANY farmers will be surprised to know that over a long term of years alfalfa has paid better than any other farm crop. For many years the Farm Management or Economics Departments of the Colleges of Agriculture have been taking cost accounts on farms where the farmers have kept records in cooperation with the Colleges. These farms are usually larger and more productive than the average or typical farm.

According to Dr. Paul Williamson of the Department of Agricultural Economics at Cornell, the returns from alfalfa averaged 68 cents an

hour for labor for a period of 25 years on cost account farms. Apples were second, bringing over a period of 20 years 62 cents an hour for labor. Potatoes ran a close third with a labor return of 58 cents an hour. Cabbage paid New York farmers a labor return of 44 cents an hour (that certainly wasn't this year!) Dairying brought 27 cents an hour, hay other than alfalfa 33 cents, wheat 24 cents, dry beans 13 cents, oats and barley lost 11 and 9 cents an hour respectively for the farmer's work.

Hens brought a labor return of 44 cents over a 24-year average, hogs averaged a labor return of 15 cents over a 17-year period, canning factory tomatoes 34 cents, canning factory peas 23 cents.

Those farms on which cost accounts have been kept averaged a labor income of \$705 a year for the 25-year period. Putting it another way, those farmers made about \$58 a month for their work and management, and they had in addition the use of a house and farm products such as milk and wheat and interest on their investment.

Farm real estate jumped from \$84 an acre in 1914 to \$120 in 1929, but now has slipped back to about \$102 on these better cost account farms.

What about the length of a farmer's day? On most account farms the records show that farmers averaged about 9½ hours for every day except Sunday, and that that average has not varied much over 25 years.

It is interesting to keep farm records, and it pays.

A Prayer for Everyone

THE REVEREND John Holland tells in the *Prairie Farmer* a beautiful little story of Saint Francis of Assisi which I'd like to repeat for readers of *American Agriculturist*. Says Dr. Holland:

"Near the statue of St. Francis in the window in New York is a copy of St. Francis' Prayer. One day a man stopped before the Prayer and was copying it down that he might memorize it. Along came a policeman, and thinking that he might be blocking the traffic, the man apologized for standing there so long and explained that he was copying the Prayer. The policeman said:

"I come past here each day, and I'm learnin' it so's I can repeat it as my own."

"Next to The Lord's Prayer I doubt if any person has ever put into so few words so beautiful a prayer. It ought to be memorized by everyone. It is so full of deep and abiding thought that it will add a touch of eternity to our thought, our love, and our actions. Here it is:

"Lord, make me an instrument of Thy peace. Where there is hatred, let me sow love; where there is injury, pardon; where there is doubt, faith; where there is sickness, joy. O Divine Master, grant that I may not seek so much to be consoled, as to console; to be understood, as to understand; to be loved, as to love; for it is in giving that we receive; it is in pardoning that we are pardoned; and it is in dying that we are born into eternal life."

Farm Naming Contest

MISS HAZEL B. WILSON of New Boston, New Hampshire, wrote *American Agriculturist* to help her find a good name for her farm. We are passing the request on to our readers and will pay \$5.00 to the one who submits the farm name that is finally chosen for Miss Wilson's farm.

In describing this farm, Miss Wilson writes:

"Our home is in the country, three miles from the nearest village on a winding country road. It nestles low among trees—maple, elm, oak, and pine.

"If there is one lesson taught by history, it is that the permanent greatness of any state must ultimately depend more upon the character of its country population than upon anything else. No growth of cities, no growth of wealth, can make up for loss in either the number or the character of the farming population."
—Theodore Roosevelt.

The house is cosy and sunny, with four upstairs rooms and four down, and a screened-in porch. At the back there is a double-decked henhouse 100 feet long and a 70 foot brooder house, where we keep 800 Barred Rock layers. At the west, among the pines, is a summer house. Stepping stones lead from the front door to the road. The buildings are all painted cream with golden brown trim. The location is peaceful and quiet."

Send in only one name as your best suggestion as a name for this farm. Letters should be addressed to *American Agriculturist*, Department W, Savings Bank Building, Ithaca, New York, and should be received by December 31, 1940.

In case two persons make the same suggestion which is finally accepted, *American Agriculturist* will pay \$5 to each.

Horse and Buggy Days Scrapbook

"By the way, Mr. Eastman, I am saving your story, *Growing up in the Horse and Buggy Days*, for my scrap book. I know it is going to be good."

—H. B. W., N. H.

LETTERS like the above are already pouring in, which double Carl's and my determination to make this story interesting. The second dose is on the opposite page.

Crowded Dairy Cows

WHILE riding through a dairy section the other day, a friend who knew each farm we passed spoke of the large number of cows that were kept in comparatively small barns. In many barns the cows are so crowded that they have scarcely room to lie down. There doesn't seem to be much help for this crowded condition without reducing the dairy or enlarging the barn.

But there is one thing a dairyman can do that will prevent disease, injury to udders, and decreased milk production, and that is to use more bedding than is used on many dairy farms. A cow sleeping on a bare concrete and, usually, wet floor is just asking for trouble. Concrete is all right, sanitary and durable, but it needs bedding and plenty of it.

Eastman's Chestnut

TELL this one on your pastor some time: There was an old Scottish pagan in a small village who could by no means be persuaded to attend church. One day the minister met him and began:

"Hoo is it, John, ye are sae persistent in yer absence from the kirk?"

"Weel, it's like this—the sermons are ower lang fer me."

"John! John!" wrathfully cried the minister, "ye'll dee and ye'll gang tae a place whaur ye'll hear no sermon, lang or short!"

"Ah, weel, maybe that will be", replied the phlegmatic John, "but I'm sure it'll no' be fer want o' meenisters."

Growing Up in the HORSE AND BUGGY Days

A Continued Story by
C. E. LADD and E. R. EASTMAN

CHAPTER II Early Adventures

ONE DAY last summer, Partner, I turned off a county highway over the southern New York hills, and took a rutted, grass-grown dirt road back to Yesterday. With difficulty I got the car up the steep, little-used private road, opened a gate, and came out on a high plateau to the farm where I was born.

Near me as I paused to look around was a little cabin crumbling into ruins where had lived our only neighbors, kindly old Scotch Andy Stevens and his wife. I could still see old Andy sitting in a hard chair in his corner by the kitchen stove, smoking his little clay pipe, black and strong from long use, saying nothing, but dreaming perchance of high adventure long since past on southern battlefields. And I could still taste those great slices of home-made bread and butter sprinkled liberally with sugar with which the good old lady won the heart of a small boy.

I laughed to myself as I recalled the consternation of my folks when they saw me one day, a boy of five, come reeling up the road from Stevens' drunker than a little lord. All I remember of that interesting episode is that I saw old Andy draw a glass of cider out of the barrel in the cellar and drink it with much smacking of the lips. So I watched my chance, sneaked down the outside hatchway and tried out that cider, apparently, so say the folks, with real results.

I drove on by the deserted Stevens' cabin and came shortly to what the old Vermonters call "my burning ground." Gone were all the buildings, but water still flowed in the spring in the basement where the big barn had been. Springs are eternal. Great masses of weeds and brush covered the scar that was the cellar hole of the house, long since burned down, but out of that brush there still grew Mother's lilac bush, testimony to the love of beauty which springs eternal in a woman's heart. Some lines in the late Bob Adams' piece, "Lilacs", came to my mind:

"O here and there, on poorer lands,
An old deserted homestead stands,
In patient sadness to deplore
The guests who come again no more.
For many feet that used to go
Across its threshold to and fro,
Far roads and trails have learned to know,
And those who built it long of old
Have mingled with the churchyard mold.
The human brood has swarmed and gone,
But lilacs in the yard bloom on,
And ever, as the old house grieves,
Are pressing upward toward its eaves
The tender green hearts of their leaves.
The mother's hands were rough with toil
Who set that lilac in the soil.
Thanks be to God who gave the wife
One touch of beauty in her life."

As I stood there looking at the place where our home once had been, it came to me that Time and Change will destroy material things, but that while the living have green memories, the spirit of the home and the neighborhoods where our folks once lived, worked, adventured and loved can never die.

I opened Memory's Chest and recall-

ed the story of how Father and Mother came to that lonesome hill farm with my two older brothers, shortly after the Civil War, before I was born. It was almost a pioneer farm. The "dark woods" stretched away to the east, blackberries grew in the great slashings only recently cleared. At night the whippoorwill called and the foxes barked.

That hill farm, with its monotonous round of farm duties and its meagre income, must indeed have been a lonesome and dull place for Father, only recently returned from wild, tumultuous adventures under Sheridan and Custer.

My own memories of that farm begin with what the family claim was my runaway. Now, I didn't run away at all. Neither did I get lost. I knew what I was doing every minute! It all started in that long ago hayfield when I was maybe four or five years old and one day rode with Mother on the one-horse rake. Going back to the house across the pasture field, over the brook that seemed like a river, and up the long hill, we saw red raspberries along the fences and Mother said that she

wished she had some for supper. So when we got back to the house, I took a little pail and slipped away back to what to me was nearly the end of the world, to get the berries. What with the long distance and the hard job of finding the berries, time passed quickly. Supper time came, but the small boy didn't! The family got excited and set up a search, which ended only when I trudged back up the road in the dusk of a late summer evening, tired but proud of the dozen or so berries that I had in the bottom of my pail, to show Mother what a smart boy I was.

That little adventure was back in the misty years when the mind and memory of a child begin to cross the line from the Land of Nowhere into reality. When does a child's memory begin anyway? I claim that I can remember the blizzard of 1888, when I was three years of age, but when I make this claim my polite friends raise their eyebrows, and my more impolite ones called me just a plain darn liar. But that's my story and I'm going to stick to it, for I can remember that winter morning when the drifts were higher than the house, and when to get to the barn it was necessary for the men to shovel a tunnel under the snow. That tunnel

was made on the morning following the blizzard of 1888.

It was about that time or a little later when my lifetime association with cows and milking began. I thought I was doing a big job holding the cow's tail so she couldn't switch while Mother milked. Not being able to switch her tail, the cow switched her leg, and a small boy landed right in the middle of the drop. Whereupon farm operations ceased for a time!

I couldn't find a trace of the old fence around the deserted farmyard, Partner, but I have good reason to remember it. There were steps which led up one side of the fence and down the other, over which the folks carried

the milk—usually a brimming pailful in each hand—from the dairy barn to the farmhouse cellar, where the milk was set in pans to raise the cream. Tagging along behind the hired girl one night, I reached out and grabbed her foot as she went up the stile. Down she went in a bad mess of milk and mad woman on the other side. I still remember the licking and the long evening in bed without any supper. I guess the excitement was worth it, but once was enough.

I could not see even the hole where the big farmhouse cellar had been, but dairying memories of long ago bring back that cellar, lined all the way around the walls with racks on which were set round tin pans filled with milk from the thirty-cow dairy. Mother helped to do the milking, raised the cream, churned the butter, with the help of the old dog, took care of her family of boys, and it was only occasionally that she was able to have a hired girl. When the butter was made and packed in big firkins or tubs it was loaded in the back end of the big democrat wagon, and Mother drove three miles down the great hill to sell it.

In those early days the railroad station agent was also the local representative of the big butter company. I can

still see him take the long metal rod, and, after removing the covers from the tubs of butter, run this rod down through the butter to the bottom. When he pulled it out it was coated with a film of butter, samples of each layer and each churning that had been packed in the tub. Then, holding it horizontally, he licked the rod in various places and smacked his lips to determine the quality of the butter. Using an old rag to wipe off the film, he plunged the rod into the next tub. Germs! They didn't worry about such little things in those days.

To the North of me where I sat in the summer sunshine dreaming of the long ago, the farm reared itself on a steep hillside. As I looked at it I remembered again the story of the broken wagon. It took skill to pilot a wagon across that sidehill without tipping the load off, and the cattle had to have legs longer on one side than on the other to negotiate the pastures!

Driving a load down that mountainous sidehill took the courage of battle. I can still see Father and Brother sitting on the hillside in the middle of haying one day, looking ruefully at the ruin of one of the wheels of the old wagon, and wondering where in the world the next one was coming from. But they managed to get one, and I'm telling you that no new automobile ever meant more to any family than that brand-new, brightly painted lumber wagon meant to us when Brother came driving up the road with it the first time. Boy, it was a crackerjack! How careful Brother was of it. One time when I was with him he allowed me as a special privilege to drive the team from the big spring seat on top of the double box while he was standing or sitting down in the back of the wagon. I had orders to avoid the mudholes. How mad he was, then, when in turning around to say something to him I drove the horses and that bright new wagon right through the middle of a big mudhole. He twits me about it to this day—says I always did shoot off my mouth too much.

That same wagon itself grew old, and later came to grief. Brother loaned it to a neighbor who was threshing grain from the field. Brother warned him to be careful about overloading when drawing grain off the hill and always to chain the wheel. Later, when the hired man came home from changing

(Continued on Page 13)

AT ITS 74th Annual convention in Syracuse the National Grange reaffirmed its faith "in a policy of national abundance, rather than scarcity." Making equality for agriculture its theme, it declared "we do not believe parity, or equality for agriculture, can be secured through any single remedy, economic expedient, or experimental device."

By adoption of the report of its Committee on Agriculture, headed by Walter F. Kirk of Ohio, it declared for a sound and progressive soil conservation and land-use policy; for encouragement to both public and private research, and for incentive payments for the purpose of introducing new farm crops which may be of use both to producers and consumers.

It urged additional encouragement for the family-sized farm, and for farmer-owned and farmer-controlled cooperatives to provide advantages of volume purchasing and marketing. It would expand the crop insurance plan to meet requirements of additional crops. It urged economy in transportation, credit and government.

The Grange policy of the American market for the American farmer was reiterated. It declared the results of reciprocal trade agreements have been unfavorable to the farmer and asked Congress to terminate such agreements now in force or pending.

For Farmer Control

Transfer of the Forest Service from the Department of Agriculture was opposed, and it was insisted that farm credit be administered by a bi-partisan board in order to avoid political control and insure a reasonable continuity of policy. It favored administration of the AAA by a committee of farmers elected by producers. The practice of chain or independent stores in using

HIGHLIGHTS from the National Grange

By L. B. SKEFFINGTON.

farm products as loss-leaders was condemned as depressing farm prices.

Resolutions from practically every state indicated that the most important consideration in the minds of delegates, aside from national defense, was the low level of prices being received by farmers for their products.

By adoption of the report of its special fair-price committee the Grange indorsed the principle of a two-price system which, in effect, would give producers of certain commodities the right to set up marketing machinery somewhat along the lines of milk marketing agreements. The special committee named a year ago was headed by Ervin E. King of Washington and included W. J. Neal of New Hampshire and Harry B. Caldwell of North Carolina. The committee's report received unanimous approval of the agricultural committee and the convention after more than a week had been spent in hearings and in rewriting the report.

The principle indorsed is that machinery be set up by which producers of a given commodity might vote to adopt a quota system of marketing through which they might control prices on the domestic market. The plan would be entirely voluntary, as in the case of milk marketing programs, and if and when it is adopted it is presumed that it will be tried on one or two basic commodities.

The rural electrification program was declared to be one of the sound-

est steps ever taken by the federal government. The convention adopted a resolution urging allocation of sufficient funds to continue the work as rapidly as possible, and "with due regard for the principle of sound investment."

Urges Federal Support for Education

The Grange pointed out that farmers educate 31 per cent of young people and receive less than 11 per cent of the national income, urging that a portion of federal income be returned to states for rural education. Block-booking of motion pictures was condemned.

The constantly rising burden of taxation was declared to be the greatest menace to the future of American institutions. Greatest possible economy was urged in all government, national, state and local.

A graduated land tax was favored, to discourage excessive land holdings and encourage the family-sized farm.

But while asking for economy, the Grange also declared that "no expense or effort should be spared in preparing for the protection and preservation of America and her ideals."

The attitude of the Grange as voted was that "we must be prepared to defend America in any emergency, including our obligations for America under the Monroe doctrine, and it must be done promptly or it may be too late. We desire peace and favor support of every worthwhile effort to bring it about. Every material aid short of active participation in war should be extended to England and her allies. We are willing to sacrifice our lives and our fortunes to defend America, but unwilling that one American life be sacrificed on foreign soil."

Passes Strong Resolution on Amendment of Labor Relation Act

The Grange voted to ask Congress to amend the National Labor Relations Act, as embodied in the bill of Congressman Howard Smith of Virginia, to define agricultural labor and "give the farmer the exemption to which he is justly entitled."

The resolution was introduced by Kenzie S. Bagshaw, master of the Pennsylvania State Grange, and was adopted unanimously. It says: "Many of the conditions brought to light by the special House committee investigating the National Labor Relations Board demand speedy correction. The board in various instances has presumed to meddle in matters pertaining to agriculture, contrary to the letter and spirit of the Labor Relations Act. The usurpation of power of which this board has been guilty threatens the very existence of our system of private enterprise.

"Therefore be it Resolved that the National Grange advocate the enactment of the bill in connection introduced by Congressman Howard Smith at this session of Congress.

"The Smith bill clearly defines the term 'Agricultural Labor' and unequivocally gives the farmer the exemption to which he is justly entitled under the act. Under present conditions 'the board acts as prosecutor, judge and jury in cases coming before it. The Smith bill would separate the administrative and judicial functions of the board and effect a much needed reform in its methods of procedure."

After Albert S. Goss had told the convention that "most Congressmen mean to do the right thing but lack correct information, it was the senti-

ment of the delegates that a non-partisan fact-finding agency should be set up in Washington. The following resolution was adopted:

"Resolved, That we recommend that the executive committee of the National Grange take prompt steps to investigate feasibility of financing and establishing, either alone or in cooperation with other farm organizations, a service organization adequately equipped to conduct legislative research, with services available to sponsoring organizations and to members of Congress."

Secretary Wickard Talks

A distinguished visitor to the Grange was Claude R. Wickard, recently appointed Secretary of Agriculture. Wickard, a long-time Grange member in his home state of Indiana, received the sixth and seventh degrees of the order in Syracuse. He met with committees and addressed the delegates, with the opinion expressed by Mr. Taber and other Grange leaders that he made a very favorable impression.

In conference Wickard discussed farm problems somewhat freely, admitting he did not know all the answers, and said he was hopeful that in his position he could be helpful to agriculture. Questioned about the farm program, he said it already was set up for the next year and he knew of no major changes. Asked about transfer of the Farm Credit Administration to his department, he said it was there when he came; "that we will do the best we can, with it and for the farmer, and if Congress does not want it in our department it has the right to transfer it."

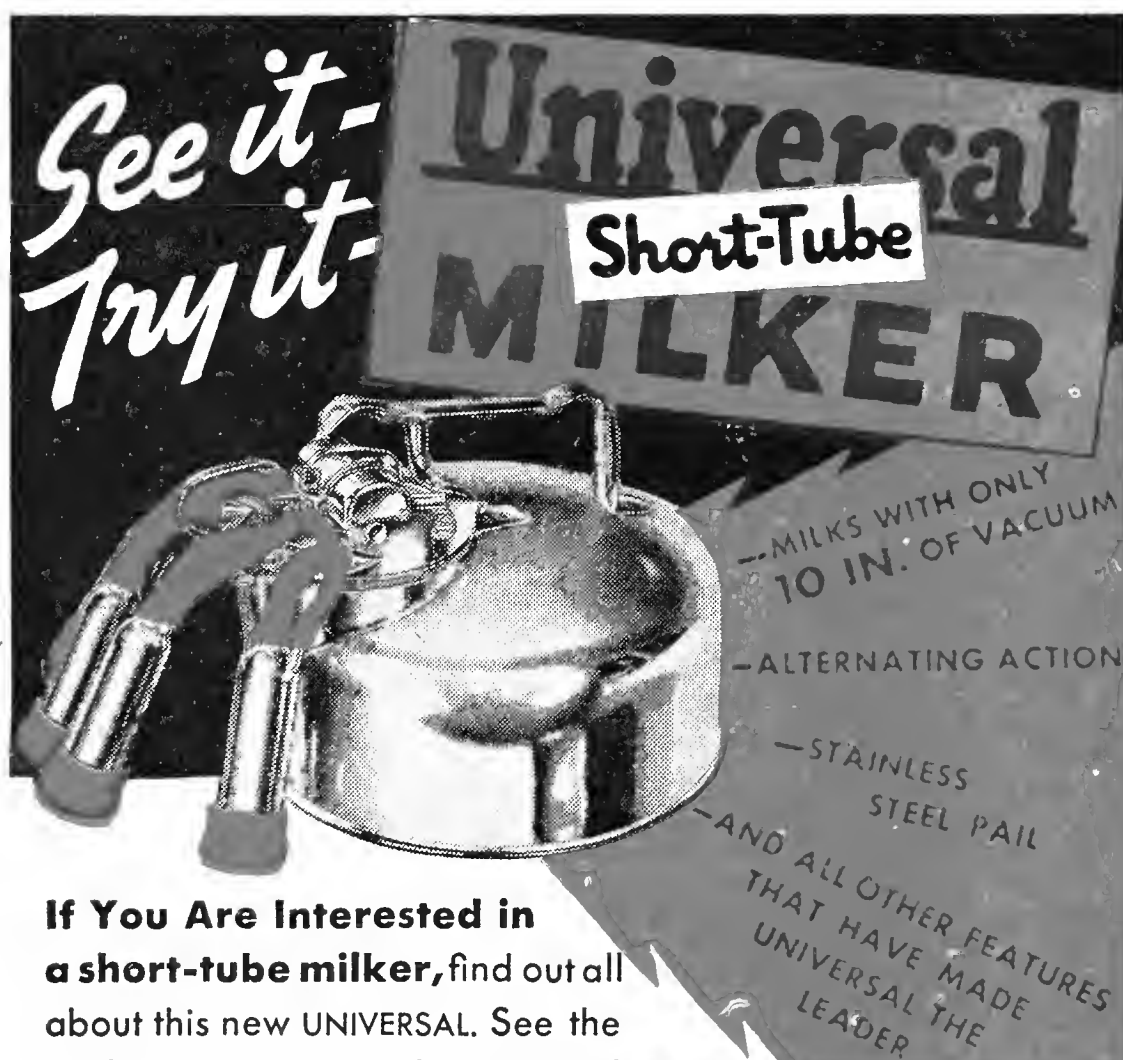

Mistakes Offset Gains

The farm problem is no nearer solution than it was 20 years ago, Albert S. Goss, former Land Bank commissioner, told the convention. He admitted that "many things have been done that have been very helpful, but many offsetting things also have been done so that if it were not for subsidies we would be no better off than we were eight years ago."

Trying to solve the farm problem by subsidies to reduce production has been ineffective, he said, and has defeated its own purpose. He cited cotton as an example. He said when it was decided to reduce cotton acreage by 25 per cent the grower with 40 acres planted 30, took his bonus and bought fertilizer, with the result that he grew more than he did on 40 acres.

Continuing the example with cotton, which he said applied more or less to other crops, he said that when it was found the adjustment plan did not work a commodity loan system was set up. "We gave it the high-sounding name of Ever-Normal Granary, but we made two mistakes. We made loans at rates which pegged prices. Then we had the theory that Europe would want our cotton so badly that it would pay our prices. But that did not work out.

"Tell the captain I just discovered why we can't submerge!"

LES, I'M READY FOR BETTER TIMES

MAYBE this message is too intimate for my column, but I've recently had a birthday. My seventieth birthday. One thing is sure, I don't feel seventy. But the calendar tells me I'm actually seventy years old.

And I think of a lot of tired, bored, old men of fifty and sixty. Those poor fellows declare that fifty and sixty are the times for slowing down, for going into low gear, and stopping two or three times on the hills to rest.

Nonsense.

Many, many years ago I read an article by Dr. Woods Hutchinson entitled: "The Pace That Kills Is the Crawl." That helped me pass my fifties, my sixties, and now as I face the seventies, I find that high gear is the only speed for me. High gear and over the hills with a swish to see what lies on the other side.

That's what I did exactly on the day of my seventieth birthday. Swish and away. Driving and flying. And look what I'd have missed if I'd stayed at home, sitting gloomily by the fire, counting my years, and thinking of the past instead of the exciting present.

My birthday started at the camp of The American Youth Foundation where I go each summer. This camp is on the shores of Lake Michigan and hundreds and hundreds of fine, picked boys and girls come there each summer for training in Christian leadership.

Just before camp broke up, my birthday was anticipated and I was surprised with a huge cake all covered with candles.

Then away I went on a Sky-Sleeper out to the West Coast.

Spokane, Seattle, Victoria in British Columbia. Back to Portland, San Francisco, Salt Lake.

On to Pocatello, Idaho, where in the presence of the mayor and president of the Chamber of Commerce and other prominent citizens, I turned over the first spadeful of earth for our new Purina Mill.

That day I spoke at the Pocatello High School to 2300 boys and girls. My subject was "From Seventy to Seventeen."

And when I finished! Here came a lovely sixteen-year-old girl with another birthday cake while 2300 voices all sang "Happy Birthday to You."

Stay at home and sit by the fire when I can be enjoying such adventures? Not me. Maybe when I'm an old, old man. But not while I'm still going strong at seventy.

That same day a delegation of Shoshone Indians from a reservation nearby came into Pocatello and Chief Peter Jim presented me, on behalf of the tribe, with a war bonnet. He said: "We welcome you. We are glad you build mill here. It will be good for both Indians and white people. You are seventy years old. We give you a War Bonnet and hope you live long and be happy."

Late in the afternoon I drove over 100 miles to Ogden, Utah, where I visited some of my good friends. They gave me a feast and—guess what? A birthday cake!

That night as I left on a Sky-Sleeper I kept asking myself if God ever gave any humble servant of His any more glorious birthday.

But suppose I'd stayed at home and talked about getting old and about retiring from business, from living?

Just see what fun and fine friendship I should have missed.

I haven't time to be talking and worrying about getting old. There are too many jobs to be done. Too much fun in the grand adventure of living.

And, besides, I must be wondering a little about my eightieth birthday.

Boy, that is going to be a birthday!

My eightieth.

Aren't you thinking a little bit about growth also as you celebrate your birthdays?

WM. H. DANFORTH

EXECUTIVE OFFICES

898 Checkerboard Square, St. Louis, Mo.

GENERAL business and employment are expected to be better than at any time since 1929 — *perhaps better than ever in the history of this country!* When business is good, people buy more milk and butter.

The Army and Navy demand lots more milk for new training camps all over the country.

Dairy business in Europe has virtually ended. We are supplying condensed milk to England and will be one of the few sources of supply for dairy products and cows for all of Europe when War is over.

Many dairymen are meeting this opportunity with a real PLAN for more milk — the Purina Dairy Program. Here it is:

1. *Your Milking Herd.* Put them on a well-balanced, high-quality feed that will get lots of milk *without* forcing. Beware of too much protein; rather take a well-balanced ration and *protect* the cows now in the herd. Feed each cow according to her

production—the heavy milkers need more feed than the poor ones. Purina Cow Chow will do this job.

2. *Your Dry Cows* should be reconditioned to build them up for good production ahead. Feed Purina Dry and Freshening Chow to dry cows, according to the Purina Plan. This helps keep down calving troubles as well as conditioning for extra milk after calving.

3. *Raise Your Own Good Heifers.* Follow a sound plan like the Purina Calf and Heifer Growing Plan that will bring big, rugged dairy heifers into your herd. You can start heifer calves easily and cheaply by feeding Calf Startena in a trough. It costs much less than milk.

Indications are that the Defense Program is here for years to come. Which means dairying offers good profits for many dairymen for several years ahead. The above three point Program can help you take full advantage of this opportunity.

Why not see your Purina dealer and get started right away?

WEIGH - Don't Guess

Weigh your milk and SEE FOR YOURSELF how much milk the Purina Dairy Program will make. Your Purina dealer will gladly furnish milk record cards FREE and milk scales at a special LOW PRICE. Ask him about them.

There's a Cow Chow To Fit YOUR Needs

16% or 20% for *straight* feeding
24% or 34% to balance your grain

PURINA MILLS

Buffalo, N. Y.

St. Louis, Mo.

Here's how
America gets the *power*
to go ahead!

WHAT do you see here? Just a lot of railroad coal cars? Listen—

You're looking at the greatest source of energy in America.

Coal is the No. 1 source of power in the nation's factories.

Coal is the No. 1 source of warmth in the nation's homes.

Coal gives us iron and steel. Coal generates most of the electricity used in this country. And just a handful of coal contains enough energy to pull a ton of freight a mile on America's railroads.

Did you know that it takes more than a million tons a day to supply the nation's demands for light and heat and power?

Did you know that the annual value of the bituminous and anthracite coal mined in the United States *exceeds that of all other minerals combined?*

But without adequate transportation from mines to the rest of the country these coals would have little value. Few people could enjoy their warmth and comfort—most manufacturing plants would have to be located near the mines.

It is only because railroads provide quick, dependable, cheap transportation to every corner of the land that people can use this inexpensive fuel, and that manufacturing and power plants, producing for our daily needs and for national defense, can be located long distances from the coal fields and still be sure of a steady flow of fuel.

To meet the nation's needs, railroads every day are called upon to haul enough coal to make a train 150 miles long.

No other form of transportation could come close to handling so great a job so smoothly or economically. All by itself the movement of the nation's No. 1 fuel from mine to consumer would be a notable accomplishment. But at the same time, the food you eat, the clothes you wear, most of the things you use every day—and most of the supplies for the nation's factories—flow with the same smoothness—by rail.

No wonder thoughtful people recognize the railroads as the nation's No. 1 transportation system—not only in the volume they handle, but in the skill with which the job is done.

Question Box

Buckwheat — Sell or Feed?

Farmers in this vicinity grow a considerable acreage of buckwheat. This year the yield per acre is below the average, but the price is 30 cents below last year's price, which was \$1.25 a hundred. The men who buy this crop tell us the foreign demand is lost due to war and also that buckwheat is being shipped in here from Canada. Could you give me any advice on this matter?

While the buckwheat in some areas in New York did get caught by a freeze, the total New York State crop is estimated as about the same as last year, while the U. S. crop is larger. In the past, a considerable amount of buckwheat has been exported, both from the United States and from Canada, and this market has been cut off. That and the larger crop are the chief reasons why buckwheat is selling below last year's price.

Feeding buckwheat rather than selling it is worth considering. At present prices, it is worth considerably more to feed to cows or hens than it will bring if sold. In fact, it has been estimated that buckwheat to feed is worth up to \$1.50 a hundred at present feed prices. Buckwheat, of course, is low in protein; but high protein feeds to balance it are reasonable in price. We do not advise the use of buckwheat as the only scratch grain for hens. It is not too palatable and a little high in fibre, but it can be worked into the scratch grains in appreciable amounts.

* * *

Vermin in Sawdust Insulation

"Is sawdust used for insulation in the wall spaces of a building likely to harbor bedbugs, fleas, lice, mice, etc?"

There is always the possibility, in insulating wall spaces with sawdust, mill shavings, ground cobs or corn stalks, chopped hay, or any fill insulation, that it will become infested with some of the vermin mentioned. The simplest way to prevent this is to spread the material out and sprinkle it generously with creosote or other effective repellent, and then mix it well by turning with a shovel. This also helps to preserve the material against rotting.

In a dwelling, where some people might object to the creosote, dry lime is often sprinkled over the material as it is packed into place, but this is not so effective as the creosote. Commercial insulations are usually factory treated against vermin.—I. W. D.

* * *

Preventing Hoof Rot

My barnyard is inclined to be muddy and I have had some trouble with hoof rot in my dairy. Is there any way this can be prevented?

If it can be done a few tile drains in the yard will help to keep it dry or it may be feasible to draw in stone and gravel to keep at least the approach to the barn dry. Some dairymen also construct a shallow box in the doorway through which the cows come and keep this filled with air-slaked lime.

* * *

Life of Tractor Tires

Are there any figures available on the length of life of pneumatic tractor tires?

So far as we know, there are no exact figures because the use of pneumatic tires on tractors is so new that very few sets of tires have ever been worn out. However, the Iowa College of Agriculture interviewed 199 farmers who have used them. Based on the experience they have had, the average estimate of these was that a rubber

tire on a tractor should last 7 years, and that it should go for 6,765 hours of use. The estimates varied all the way from 3 years to 15.

The same men gave an estimate of the fuel saved by rubber tires. Their estimates varied from 0 to 50 per cent, with an average estimated saving of 22 per cent on fuel. Ten of the men had figures to back their estimates, and these figures showed an average fuel saving of 24.5 per cent.

Abortion Cause

Will cows abort from causes other than Bang disease?

Yes, but Bang disease should always be suspected as possible cause.

* * *

Handling Sick Calves

How can we prevent or cure common scours in calves?

The first step is to watch your feeding. If you overfeed your calves, give them warm milk one time and cold milk the next, feed from dirty pails, or feed sour milk one time and sweet the next, the chances are good that your calves will have scours. After a calf has this disease, the feed should be reduced at least half until it is well; and each calf should be given from 2 to 3 ounces of castor oil. Because there may be an infection of bacteria, it is wise to isolate calves with scours, keep them away from other calves, and clean and disinfect the pen thoroughly before another calf is put in.

D. T. Mitchell Wins Potato Honors

(Continued from Page 3)

—Jerseys—and is milking 24 this fall. His farm contains 280 acres, 75 of which are tilled. Pasture and woodland make up the rest. His home, with closely clustered buildings, overlooking a wide sweep of country, is a good example of a well-fitted country home. It has always been his home, and I don't think he would like to live anywhere else.

But what does he do to raise a 500 bushel to the acre crop of potatoes? Well, the main factors as he outlines them run pretty close to standard recommendations: Good seed, half a ton to the acre of double strength fertilizer—8-16-16 to be exact—6 to 8 sprayings during the season. He has up-to-date machinery and his work is all done by tractor power rather than horses. He does plenty of fitting the soil before planting and plenty of cultivating, and then there is plenty of something else we don't get in formulas: plenty of hard work, profiting by experience, and doing the right thing at the right time. Mr. Mitchell knows that all these together won't always bring 539 bushels to the acre, but you don't even make the 400 Bushel Club without them.

"What'll you charge to translate some Latin sentences?"

NO Skyrocketing OF FERTILIZER PRICES

By T. E. MILLIMAN.

FARMERS in this country occupy an improved position in two major respects over the situation that they found themselves in on fertilizers in the preceding World War. Then, too, we have a minor improvement, which I shall also mention.

The first big improvement in our situation has to do with nitrogen. In the first World War, this country found itself woefully short of nitrogen. At that time, the supply for our national needs was limited almost entirely to by-product sulphate of ammonia, nitrogen from coke ovens and gas producers on the one hand and Chilean nitrate on the other. This severe limitation caused such a stringent market situation that the prices of both Chilean nitrate of soda and sulphate of ammonia rose to more than \$200 a ton.

More Nitrogen Available

At the present time, there is more sulphate of ammonia being produced in this country than at any time during the last World War. This is due primarily to our enlarged productive capacity on steel. The road to Chile by means of the Panama Canal remains open and unmolested, and Chilean nitrate imports are now up from any recent year. Reassuring as these two factors may be, they are not as important as the improved situation which has come to us from the development of synthetic nitrogen production in this country.

The second largest synthetic nitrogen fixation plant in the world is owned by the Allied Chemical and Dye Corporation at Hopewell, Virginia. The largest is in Germany. In the U. S. A. probably the second largest synthetic nitrogen fixation plant is owned by Du Pont at Belle, West Virginia. In both cases, the electric energy needed to fix nitrogen in these plants is supplied by the nearby West Virginia coal fields. The Hopewell Plant is on deep water, but the Belle, West Virginia, plant is in the mountains. The third plant serving American agriculture is the American Cyanamid Company Plant located just outside this country in Niagara Falls, Ontario. No restrictions have as yet been placed upon shipment of cyanamid nitrogen from Canada to the U. S. A.

In addition to these three major plants now principally serving agriculture, the U. S. Government has authorized the establishment of two plants for the production of synthetic nitrogen for munitions. These two plants will be located in the Middle West, although one of them is to be on the border of the upper South.

Little Price Advance Expected

In the meantime, the productive capacity of the three plants referred to, when added to the nitrogen secured from by-product sulphate of ammonia and Chilean nitrate, is sufficient for the needs of American preparedness and agriculture. The price to farmers on nitrogen used in mixed fertilizer, or used separately as such, will be up in spring of 1941 less than 5 per cent from spring of 1940. It is expected that the price to farmers on Chilean nitrate, sulphate of ammonia, and cyanamid will be not more than \$1.00 up from the preceding year.

Also, in addition to the above nitrogen plants, I must tell you of the government's allocation of six and a half million dollars for the establishment at Muscle Shoals of facilities for the production of synthetic nitrogen there.

Some of the old buildings erected in the first World War will be utilized. Power here, as in the case of the Cyanamid Plant at Niagara Falls, will come from hydro-electric energy.

We Are Producing Potash

The official price record on potash in the first World War was \$483 a ton for 48 per cent muriate. Actually, sales were made for chemical purposes at higher figures. Except for a little potash from Spain, and still less from surface deposits in California and the Dakotas, this country was without potash after war was declared upon Germany. Today the production capacity of the three potash mines near Carlsbad, New Mexico, and the potash brine refinery at Searles Lake, California, is equal to American needs in the spring of 1941, when fortified with the European potash, principally French, that was on hand here, or on water before the collapse of France. By spring, 1942, the production capacity of the American potash companies will equal American needs. The price of potash to American farmers in the spring of 1941 will be essentially the same as it was a year earlier. Any upward swing will be the result of increased costs on transportation, bags and handling. The price to fertilizer manufacturers remains the same.

The phosphorus or superphosphate situation is more favorable than it was in the first World War, and it was not unfavorable then. There was at that time plenty of productive capacity of the phosphate rock from Florida and Tennessee, and for acidulating the rock into superphosphate at northern ports. There then came, however, scarcity of ship bottoms to move the rock from Florida and of railroad cars to move it from Tennessee. Sulphuric acid, of which each ton of superphosphate contains about 900 lbs., was also in considerably more limited supply than it is now.

Superphosphate Plentiful

There is still another favorable factor, having to do with the perfection of the flotation process for the removal of impurities in the phosphate rock. A ship carrying rock from Florida can deliver now more tons of phosphorus to northern ports than the same ship could do in the first World War when carrying the same tonnage. The flotation process now removes much more of the silica and other inert material. America possesses around three-quarters of all of the known phosphorus in the world. Florida alone has enough phosphate rock to last this country, at the present rate of consumption, approximately 2,000 years. It is unlikely that the enormous deposits in and near the American and Canadian Rockies will ever be seriously worked in our time. Superphosphate is certain to remain relatively cheap in this country.

The price of superphosphate next spring may be a half dollar to one dollar per ton higher for 20 per cent than it was a year earlier to compensate for increased labor and bag costs.

The commodity indexes, whether those at Cornell or any others, when taken as a guide, usually show that fertilizers are the lowest priced commodities that a farmer can buy. I see no reason for an early change in this situation. The consumption of fertilizer is increasing nationally and in the Northeast. Farmers are getting good value and unquestionably are recognizing it, as shown by their response.

Farm Bureau Federation Measures Gains—Makes Plans

SOME SURPRISE was expressed that slippery roads kept so few away from the annual meetings of the Farm Bureau, Home Bureau and 4-H Federations at Syracuse last week. Dean Carl Ladd's explanation was that most of those attending were old enough so that they were quite willing to use both hands on the wheel.

Much of the work of the State Farm Bureau Federation is done by commodity committees. Reports of the year's activities were made by the chairmen.

WARREN HAWLEY of Batavia, Chairman of the Marketing Committee, stressed the need for improving conditions to relieve congestion at the New York City Terminal Market.

JOHN RICE of Trumansburg, Chairman of the Poultry Committee, asked that the Farm Bureau work for a state appropriation of \$100,000 to construct a poultry research plant.

H. L. CREAL of Homer, Chairman of the Dairy Committee, recommended continuance of the present Milk Marketing Plan under the Federal-State Order.

J. D. AMEELE of Williamson, Chairman of the Vegetable Committee, advocated the direct purchase of surplus vegetables for relief as opposed to the use of food stamps.

GEORGE MORSE of Williamson, Chairman of the Fruit Committee, commended agricultural conservation payments for the removal of old apple trees, and proposed working for payments for removal of unprofitable vineyards.

Myers Urges Conservation Optimism

W. I. MYERS, head of the Department of Agricultural Economics and Farm Management at the State College, believes there is a good chance that prices for things farmers sell will rise.

Rather than expanding the farm business greatly, Dr. Myers urges that farmers repair buildings and equipment and retire debts if and when prices of farm products go up.

H. V. NOYES, State Commissioner of Agriculture, expressed satisfaction at the results obtained from the Federal-State Milk Marketing Order. He warned, however, that increased production, to the point where surplus milk going into manufacture becomes burdensome, is the greatest danger which may interfere with the efficient operation of the plan.

Commissioner Noyes had two suggestions—first, a more diversified New York State agriculture with some less dependence on fluid milk and more dependence on other products; and, second, some workable plan whereby milk production might be controlled.

HERBERT P. KING of Trumansburg, in his annual address as President of the Farm Bureau Federation, made a strong plea for the use of marketing agreements to raise farm income. Mr. King said that without government payments, agriculture is little better off than it was at the start of the depression and that any increase in agricultural income we have had is due to the increase in the general price level.

"I favor marketing agreements," said he, "because I see no immediate prospect of getting anything better to take their place in raising farm income."

CHARLES POLETTI, Lieutenant-Governor of the State of New York, stressed the importance of mutual understanding between farmers and government, and pointed out that it is es-

sential that government understand farm problems and cooperate in their solutions, but it is equally important that farmers, in fact all citizens, give thought to the principles back of government.

Officers Elected

Chester C. Du Mond, a Master Farmer of Ulster County, New York, was elected as President of the Farm Bureau Federation to succeed Herbert King who has been President for the past two years. Mr. King was elected as Director for three years and named a voting delegate to the annual meeting of the American Farm Bureau Federation in Baltimore on December 9 to 12. Warren W. Hawley, Jr., Batavia, N. Y., was named First Vice-President; Earl B. Clark of Norwich, N. Y., Second Vice-President, and B. L. Johnson, Evans Mills, Treasurer.

Resolutions

The convention considered a number of resolutions, foremost of which dealt with the problem of farm labor. The situation was described as becoming "increasingly difficult." The resolution went on to state that "prices received by farmers for farm products are such that the farmer cannot pay a competitive wage with defense industry for farm labor. Shorter working hours in industry are also drawing man power from agriculture." The resolution went on to urge that farm machinery be placed on a preferred list as far as materials are concerned in order that farmers may rely on machinery to meet the labor shortage.

Another resolution urged greater storage of grain for livestock and poultry in the east. Still another urged restoration of the Farm Credit Administration as an "independent farmer controlled farm loan agency."

Other resolutions favored state and federal secondary roads for rural areas; asked for amendment of the Agricultural Marketing Agreement Act,

The Buffalo Junior Chamber of Commerce this year is sponsoring the Eighth Annual 4-H Club Livestock Show and Sale at the Buffalo Stockyards on December 18. Picture shows Alex G. Hoefler, Jr., chairman of the Junior Livestock Show Committee of the Buffalo Chamber of Commerce, and Miss Thelma Knapp of West Falls, an Erie County 4-H Club member, who will exhibit some of her lambs.

so that marketing agreements similar to that for milk may be formed for other crops. Also asked for legislation requiring more informative labeling on fertilizer containers and on seed potato containers; urged reduction in license cost for light trucks; asked for a \$10,000 state appropriation for corn borer research; asked for further poultry research; recommended federal aid in cooperative marketing research and reaffirmed opposition to Daylight Saving.

Four-H Health Champions

During the year two 4-H Club members, one boy and one girl, were designated as State 4-H health champions. They are Ronald Roff of Broome County and Hilda Merritt of Chautauque County. Miss Merritt was unable to attend the banquet, but Mrs. H. M.

Wagenblass, President of the Home Bureau Federation, announced the award. Ronald Roff was present, and his award was made by Herbert King, President of the Farm Bureau Federation.

John Rioch, Jr., of Pine Island was elected president of the 4-H Federation to succeed Carl Wooster of Union Hill.

New York Boys at Kansas City

When the Future Farmers of America held their 13th Annual Convention at Kansas City, November 9 to 16, fourteen New York State boys were present. As officers of the New York State Association, Robert Fisk, Unadilla Central School, President; Gerald Cady, Corning Northside High School, Secretary; and Arthur Clemons, Holland Patent Central School, Reporter, were official delegates to the meeting.

Other Future Farmers attending were: David Anna, Boonville; Philip Ostrander, Wallkill; Stanley Hague, Hammond; Leo Lindsey, Sandy Creek; Harry Underwood and Harris Dayton, Homer; George Tesnow, Akron; Edwin Canhen, Barker; Eugene Alday, Sherman; Jack Near, Sinclairville; and Grant Stout, Pike.

Leonard Palmer, teacher of agriculture at Corning, and W. J. Weaver of the State Education Department, accompanied the boys.

In the dairy cattle judging contest the New York team made the highest score in Guernseys. The team was made up of Arthur Clemons, Philip Ostrander and Leo Lindsey.

Conservation Program Includes Apple Tree Removal

There are on New York State fruit farms thousands of dead apple trees or trees so old and damaged that they are a liability rather than an asset. They are a liability to the owner because they occupy land and bring no return, and they are a liability to other fruit growers because they serve as breeding places for insects and disease.

That is why the 1941 Agricultural Conservation Program includes a practice by which apple growers can earn payments for removing some of these old trees. The maximum amount a fruit grower can earn is \$15.00 an acre. Trees removed under this Program must be 5" or more in diameter, and the exact amount of payment depends on the size of the tree.

Homemakers Hold 21st Annual Convention

RECENT annual meeting of New York State Home Bureau Federation, held in Syracuse, Nov. 26-28, marked the coming of age of this great organization of homemakers, born just 21 years ago. The New York group was the first of its kind in the country.

Delegates and members flocked to the meeting from all parts of the State, and continued to come in numbers even on the second day after a snow storm had made slippery going on the highways.

Mrs. H. M. Wagenblass, of Warsaw, State President of the Federation, opened the meeting and sounded the convention's keynote, "Facing the Future."

"Not in many years," she declared, "have we faced as great opportunities or as decided challenges as there are now before us. As homemakers, we are vitally concerned with every public question that affects our homes and our loved ones. May we be guided by the added knowledge that the years have brought, and go forward facing the future with earnestness, with faith and with courage."

Other prominent speakers heard at the meeting were the Hon. Lithgow Osborne, State Commissioner of Conservation; Dr. Ruby Green Smith, State Leader of Home Demonstration Agents; Ralph W. Gwinn, author, lecturer, lawyer and farmer; Mrs. Henry Ahart of California, Nat'l. President of Associated Women of A.F.B.F.; and Fred Sexauer, President of Dairywomen's

League Cooperative Association.

Dr. Ruby Greene Smith, speaking of the growth of Home Bureau membership during the past 21 years, said that today it would take a thousand dollars worth of postage stamps merely to send one letter to each home bureau member in the state. She predicted that the 35,000 mark will soon be passed.

Dr. Smith gave great credit to the more than 13,000 Home Bureau members who are serving as volunteer teachers in their counties. These county leaders, she pointed out, pass on to others the knowledge they have gained and are a valuable, unpaid branch of College, extension work.

An important part of the convention's program was the reports from each county covering a great variety of projects, from refinishing furniture to family recreation. Several interesting exhibits also drew considerable attention. These included homemade games, home weaving, a fascinating collection of books from the State's loan library, and an elaborate exhibit showing the importance of milk and other protective foods in the diet.

Mrs. H. M. Wagenblass, Warsaw, was reelected as President of the Home Bureau Federation. Mrs. Henry White of Massena was elected as director to succeed Mrs. W. I. Thomson of Holland Patent. Mrs. H. C. Ostertab of Attica was elected director to succeed Mrs. Mott Whittleton of East Rochester.

Orderly Movement Needed in POTATO MARKET

By H. E. BRYANT, Aroostook County, Maine.

FOR THE past two months we have been endeavoring to analyze trends in the potato market this season. We have been indicating that it would not appear possible to have material price improvement before January first. We are now only a little over a month away from that date, so let's try to extend our trend line into January. In doing so it is my opinion that we must give serious consideration to another factor that has been mentioned briefly in other issues, namely, the factor of movement of our present supplies.

In former years, New Jersey usually has had its crop completely sold sometime prior to November. Ordinarily at this date Long Island has moved a considerable portion of their crop. This year we find that, although New Jersey has not a great many potatoes left, as yet they are not cleaned up. We also find that Long Island has moved only a small portion of its crop so we may expect it to be a very definite factor in the potato market until February at least, with the possibility of it having stock available up to March.

In Maine we find that approximately 3,360 cars have been shipped out of the state up to November 23, compared with 5,376 cars last year and 11,095 cars in 1937-38, in which year we had conditions quite similar to the present season. Of course, in figuring Maine shipments, we must take into consideration the Starch Diversion Program that is increasing the movement of potatoes to the starch factories. So far this season, 3,115 cars of potatoes have moved to the starch factory, compared to a total for last season of 4,498 cars. Roughly, it has been estimated that approximately 1,230 cars had been moved to the starch factory up to this date last year. This figure added to our last year's shipment up to November 23 would equal approximately 6,600 cars of potatoes used. For this season, with 3,363 cars moving to the trade and 3,115 cars moving to the factory, we have a total figure of 6,478 cars having been used, compared to approximately 6,600 last year. Thus our movement is not materially behind the movement last year.

On the other hand, as has been pointed out previously, it is our opinion that with nearly 7 million bushel more potatoes in Maine this season and over 20 million bushel more potatoes for the country as a whole, Maine in common with other areas must of necessity move stock to the markets faster this season than was done last year.

As a further consideration, we find that the combined track holdings in the 16 leading cities are ranging between 530 odd cars to 850 cars per day. Some of the old timers in the potato business state that we never have a real potato market unless the combined track holdings range between 800 and 1200 cars per day.

Reports come to us from all over the country that growers are not particularly interested in selling at present prices, and therefore are holding back very definitely. With prices at the present low level, we cannot blame any grower individually for holding his stock for more money. On the other hand we must recognize that if everyone holds back on the movement of potatoes, we may pile up a large amount of stock that will have to be moved very rapidly at a later date if it is to go into consumption. This would have a tendency to cause a serious break in the market.

One of the most capable growers in

Maine occasionally points out that in years of large production, growers as a whole should market the first 30-40% of their crop in an orderly manner as rapidly as the market will absorb the potatoes for whatever price they will bring, in an endeavor to obtain a reasonable price for the balance of that crop. In the figures quoted above, we must recognize that we are not marketing this crop orderly so far this season, and that the crop as a whole is being held back with the possibility of detrimental effects later.

In view of the strong attitude being taken by growers throughout the country we are inclined to believe that the market may be comparatively steady during December with the possibility of a slight downward trend in January if the movement is not speeded up between now and then. On the other hand, taking the season as a whole we believe this market has at least one "kick" to it, but we cannot see how it is possible to get any material improvement in prices until we have gone through a period of comparatively heavy shipments. We must reduce the potential supply of potatoes hanging over the market if we are to realize improvement in prices.

Milk Price Situation Better

Some predictions are being made that the uniform price for the month of November will not be less than \$2.12 and may be as much as \$2.17. There are several reasons for the prediction. First, the Class 1 price for the month of November is \$2.65, 20c more than for October. Second, the butter market is on the up-trend and may go even higher. This will affect the price received in lower classifications. Butter consumption has been increasing since November 1, and butter is being taken out of storage at a rather heavy rate. Administrator Cladakis has already announced that the December price of milk for fluid cream will be \$2.10, which is 15c above November.

Third, production seems to have slumped considerably. It is being predicted that the total milk production in the New York City milk shed for November will be from 2 to 5 per cent lower than it was for November a year ago. This is far different than the October picture, when production was about 9 per cent above October a year ago.

Lighter Supply—Higher Prices Forecast for Hogs

Slaughter supplies of hogs in the 1940-41 hog marketing year which began October 1 will be substantially smaller than the large supply marketed during the 1939-40 season. According to the outlook report of U. S. Bureau of Agricultural Economics on the basis of past relationships between changes in the size of the pig crop and hog slaughter, the number of hogs slaughtered, under Federal inspection during the 1940-41 hog-marketing year is expected to total about 43,000,000 head. This would be a decrease of about 10 per cent from the 47,600,000 head slaughtered in the 1939-40 season. Except for last year, however, it will be considerably larger than in any other year since 1933-34.

With prospects for a substantial reduction in hog supplies in the present year and further improvement in domestic consumer demand for meats, present indications are that the level of hog prices in 1940-41 will be materially higher than in 1939-40.

DE LAVAL MAGNETIC SPEEDWAY MILKER

The De Laval Magnetic Speedway Milker can be purchased on such easy terms that it will pay for itself while in use.

THE DE LAVAL Magnetic Speedway Milker is far and away the first choice of dairymen because it is indisputably first in every phase of milking performance; first in best, fastest, cleanest milking—first in time and labor saving—first in highest quality milk production—first in simplicity and dependability. These are just a few of the all-important reasons why the wonderful De Laval Magnetic Speedway gets first consideration from dairymen who have decided that their purchase of a milker must be a profitable investment in year after year better milking.

When you think of better milking, think first of the De Laval Magnetic Speedway Milker. The only way to judge and really understand its unequaled milking performance is to try it on your own cows. Your local De Laval Dealer will gladly arrange such a free trial with absolutely no obligation to you.

DE LAVAL CREAM SEPARATORS

De Laval World's Standard Series unmatched for performance, quality, convenience and beauty. De Laval Junior Series offers De Laval quality and performance in smaller capacity machines which can now be furnished with electric motor drive.

JAMES MONROE, AUTHOR OF AMERICA'S FIRST NATIONAL DEFENSE PROGRAM . . .

Back in August, 1814, the American nation was panic stricken. The national Capital was in flames. The President was fleeing. And 30 years of military unpreparedness had left the country soft and helpless. "Give us a man to head up defense policies," the people cried—"a general in the field can't do it all." So James Monroe was appointed America's first Secretary of War—a soldier who had charged an enemy battery in the streets of Trenton during the Revolution. A diplomat who had been ambassador to France and Britain during turbulent times. He knew what to do and he did it. America won the war. Later, as President of the United States, James Monroe gave the country the Monroe Doctrine—the first long-term foreign policy we ever had . . . a coldly calculated program of planned defense to keep European aggressors from American shores.

Today, as in 1814, Americans are concerned about national defense. But Americans know that "a general in the field can't do it all." They know that the very heart of national defense is food. For food has always been the first line of defense of every nation, as well as the last line of defense.

We dairy farmers know that we must produce efficiently and market our wares efficiently if we are going to be prepared to do our most for national defense. Efficient production methods will release man power from farms—if need be—and still maintain production. We know that efficient marketing will give our families the income that assures the "will" for defense.

For years the members of the Dairymen's League have sought ways and means to increase the efficiency on their dairy farms. For years the Dairymen's League have battled for sounder marketing principles, knowing that in this manner we could build happier farm homes.

These aims of the members of the League have not been selfish. They are constructive aims underwriting both national unity and national strength. And they are aims which join with the Constitution in upholding the common right to "life, liberty and the pursuit of happiness."

Efficient Production for Defense

It is the American Way for farmers to use the most efficient and best methods for producing quality products. For years dairymen have searched for superior proven sires to head their herds. Only a few such sires have been available, so their use has been very limited. Today,

through artificial insemination, the service of these great sires is being multiplied many fold.

An organization has been set up in New York State with headquarters near Syracuse to carry on this work. A dozen outstanding bulls have been purchased and can be seen at the organization's "Bull Farm" near Syracuse.

The president of the group is Harold L. Creal, Homer, and the secretary is J. L. Sears, Baldwinsville, both members of the Dairymen's League.

"Since June," says President Creal, "eleven groups have been set up and 8,100 cows listed. Our bulls are the finest animals obtainable."

This means efficient production. For by this method our members can produce the same amount of milk from a fewer number of cows. This means less feed to raise and buy . . . less labor needed on the farm—and every farmer knows that this is becoming an acute problem.

"Producing exceptional animals is only part of the story," says Secretary Sears. "After we grow quality cows, we must market the milk produced. President Creal and I are members of the Dairymen's League. We know that marketing must be carried on efficiently if we are to receive fair returns for our milk. With efficient production methods and a stabilized marketing program, we are on our way to receive a Living Price for Milk."

All dairy farmers will receive a substantial increase for November milk under the milk marketing order. For on the first of November the price on Class 1 and Class 2 milk was automatically increased. We also know that the larger check all dairy farmers will receive this month will be ONLY because of the work done by the Dairymen's League and their associated cooperatives in the Metropolitan Milk Producers Bargaining Agency. Stable markets—control of the surplus—long-time policies of the organization have brought this benefit.

THE THOUSANDS OF FARMERS WHO OWN, OPERATE AND CONTROL THE DAIRYMEN'S LEAGUE

Death Stalks the Highways

(Continued from Page 1)

caution on the part of some child.

Nothing, however, will ever take the place of training the child to take care of himself. *He must learn and learn early that if he wants to live in this dangerous age he has got to play safe.* Therefore, safety rules must be hammered into children at every opportunity. As soon as they can toddle they should be taught never to cross the road without looking, never to cross against a red light, to watch curves. Many accidents happen through motorists coming suddenly around a curve. Children should be taught to be especially careful about getting out of buses and cars and running around them into the highway. *All pedestrians should always face the oncoming cars.* Pedestrians will be wise, even if they have the right of way, to give all the road to the motorist. All of us have seen pedestrians who deliberately stuck in the road when two cars were trying to pass.

It does you no good to be right if you are dead!

Growing Up in the Horse and Buggy Days

(Continued from Page 5)

work with this neighbor, he told Brother what happened.

"Old man Smith", he said, "put on too big a load, climbed on it without chaining the wheel, the horses couldn't hold it, and everything went down that hill like a bat out of hell, crashing into the stone wall while trying to steer through the gate at the bottom."

"Good!" said Brother. "Serves the darned old fool right. I've warned him a dozen times about chaining his wheel before starting down that hill."

"Yes", said the hired man. "But you've forgotten that it was *your* wagon!"

Sitting there on that deserted farm road where a home once had been, I thought of the songs that Mother used to sing. Father and the older brothers would be milking in the barn, supper would be warming in the big kitchen on the back part of the stove. Then, while the wind howled around the corners of the house in the beginnings of a long winter evening, Mother would take my younger brother on her lap, and I would sit at her knee on a stool, while she sang the songs that will go with me while I live.

As we said in our first chapter, Partner, our generation straddled the generations between the old and the new. We knew people whose memories reach-

ed back into pioneer days in central and western New York, so it was natural for our mothers still to sing pioneer songs. Those songs were mostly sad, for pioneer life was stern and serious. Death came often, and it came to the young. If you don't believe it, visit any of the old cemeteries. How I used to weep when Mother pulled out all the stops on songs like "Young Charlotte", the story of the young girl who froze to death!

But there were cheerful pioneer songs too. I like to think of the folks gathered around the thousands of evening fires on the western trails and in the pioneer cabins roaring out "Oh

THIS SERIAL WILL REVIVE YOUR MEMORIES

Here is the second instalment of our story, "Growing Up In the Horse and Buggy Days." The first appeared in the November 23 issue. Go back and read it, then begin getting your own confessions lined up. At the end of the series *American Agriculturist* will pay \$25 in prizes for the best letters written on your own experiences and memories of the Horse and Buggy days. See announcement on editorial page, last issue.

In the next instalment, laugh with us about hired men we have known.

Susanna", whose rollicking nonsense defied sadness and homesickness:

"I came from Alabama wid my banjo on my knee
I'm gwyne to Louisiana my true love for to see
It rained all night the day I left
The weather it was dry
The sun so hot I froze to death,
Susanna, don't you cry!"

One of Mother's favorites was that grand old love ballad, "Annie Laurie". But of all the heart songs there was none more beloved by our mothers than Thomas Moore's beautiful old "Believe Me, If All These Endearing Young Charms", the song of love and loyalty that grow stronger with the marching years.

The group of songs that Mother loved best and sang most often were those that came out of the conflict between the states. That was natural, because her husband, her father and brother had all been soldiers, in the Civil War. Greatest of these war songs is the finest battle song ever written, "The Battle Hymn of the Republic."

Then, of course, all of our mothers sang Stephen Foster's great folk songs. They were written after the War, but

they carried the same spirit and atmosphere. Among those I liked best were "Old Folks at Home, "Old Black Joe," and "My Old Kentucky Home."

There is another piece, not Mother's but Father's, which memory's music box plays for me. It is called "Garry Owen." Probably few know this rollicking old tune now, but "Garry Owen" was George Custer's marching theme piece, and Custer was Dad's cavalry officer under Phil Sheridan.

It was a fall night when Jubal Early led his army by forced march over the mountains, and fell like a thunderbolt in the early dawn on the Union camp in the Shenandoah. The Federals left that camp, stopping not on the order of their going, and for a time they fought a losing fight. But at last they rallied and drove the Confederates back across Cedar Creek. Evening came. Tired, hungry and worn-out by the long night march and all day fighting, and thinking that the battles of the day were over, the Confederates stopped, built their campfires, and started to get supper. Then up came the Union cavalry on the other side, led by George Custer. Dad was there, and I'll never forget his description of the great long lines of flickering campfires of the Boys in Grey on the other side of that creek. There was a pause, and then Custer the brave, the dramatic, raised his hat on his sword, the bands struck up "Garry Owen", and, with a great shout, across the creek and into the camp they rode, routing the tired and worn-out Confederate troops and turning the defeat of early morning into final victory.

After the war, Custer went West to fight the Indians, while Father returned to the Tioga hills to fight the rocks and stones of the farm.

One Memorial Day when I was a small boy I went with Brother to the back end of the farm, where we could look down the hill and see a great parade marching up the valley to Berkshire Cemetery. At the head on a prancing horse rode Father, in the blue suit and wide-brimmed hat of the Grand Army of the Republic.

They ride no more in the flesh, but some warm summer night, old friend, I am going to take my flute and go over to the Berkshire burial ground, and when the deep of night comes, when the speeding cars have stopped, and the quiet of the centuries has come to that place of memory, I am going to play "Garry Owen". I know as those gay stirring strains come to life again, Dad will be there too, riding his horse as he did at the head of Memorial Day parades when I was a little boy, and as he had earlier when he followed Sheridan and Custer into a hundred fights like that at Cedar Creek.

(To be continued)

Good Books to Read

STARS ON THE SEA, F. Van Wyck Mason. The gripping and authentic story of how the colonists dared to flaunt their thirteen stripes and thirteen stars on the sea in the face of an all-powerful foe. A pageant of history, a version of the War of Independence as seen in a northern colony, a southern colony, and a tropical island colony—Rhode Island, South Carolina and the Bahamas. The characters are vividly drawn—the reader will never forget Desire Harmony Bennett of Newport, Sam Higsby, the Pennsylvania rifleman, or scholarly Nat Coffin of Nan-tucket.—J. B. Lippincott Co., Philadelphia, Pa. \$2.75.

Good Movies to See

THE THIEF OF BAGDAD. Sabu, star of the Elephant Boy, as the daring Thief of Bagdad, living, fighting, adventuring, in a magic world. A triumph of motion picture magic, in technicolor.

Meats cured with confidence are served with the sauce of pride

MAKE SURE that every pound of meat you cure will have the same delicious flavor. You do this when you use Sterling Sugar Curing Meat Salt. It is a "one-operation" meat curing salt that gives uniform results.

For generations, correct grades of salt produced by International have been most dependable for every meat curing process. International processes and products are relied upon by a large proportion of leading commercial meat packers.

That same experience, the same research so valuable to industry, assure the dependability of Sterling Sugar Curing Meat Salt. Make certain that your winter supply of meat is safely cured with the least possible effort—ask for Sterling Sugar Curing Meat Salt by name.

FARM ANIMALS NEED SALT

Make sure your livestock will winter well—by a proper feeding of salt. Write for a copy of the International book, "White Gold For The Farmer's Profit." It will tell you how salt can produce more profit for the money invested than anything else on the farm.

HELPFUL PREMIUMS

You can get a fine, carbon steel butcher knife, a blued-steel bell scraper for removing hog bristles—or both—as premiums with Sterling Sugar Curing Meat Salt. In each 10 lb. can is a coupon which entitles you to these fine tools at about half the usual retail price. Get them before your next butchering.

STERLING SEASONING

For making delicious sausage, is also popular for poultry dressings, flavoring roasts, meat loaf and other foods. It is sold in 3 oz., 10 oz., and 7 lb. 8 oz. cans.

INTERNATIONAL SALT COMPANY, Inc.
Scranton, Pa.

FREE MEAT BOOK

"The Farmers' Meat Book," with pictures and detailed directions for butchering hogs and curing meat, will be sent free on request. Order both books today.

WATCH THE SCALES.—While most poultry buyers are honest, a number of subscribers have reported short weights during the past summer. A little mental arithmetic as to the number of hens and the approximate weight per hen will avoid serious short weighing. Any obvious attempt to "chisel" on weights should be reported immediately to the State Troopers.

Northeast Markets for Northeast Producers

for professor or parties coming to Ithaca for educational advantages. A break in health forces owner to give up active operation, so is offered at an attractive price.

R. P. HOPPER, 108 Westfield Drive, ITHACA, N. Y.

When writing advertisers be sure to say that you saw it in THE AMERICAN AGRICULTURIST.

By J. F. (DOC.) ROBERTS

THE DATE October 14, 1940, will go down in livestock history as the victorious day in which the 30-year battle for "Truth-in-Fabrics" was won. Beginning July 15, 1941, all manufacturers must label their fabrics to show their wool content, and whether reprocessed wool or reused wool. Also, this label must show the content of any non-fibrous loading or filling in the cloth; also the weight of any other fiber, such as rayon or cotton, if it contains over 5% of anything but wool. It would seem that a bill, simply for more honesty, would not have met such powerful opposition for over 30 years. The wool grower and the general public have won a real fight at last.

* * *

The little western range lambs, to go on feed in western New York State, are about all here. In general, they are better, lighter, a little cheaper, and a greater number of them than a year ago, with a very much better prospect ahead. Wool is in a very strong position, and in spite of the fact that the Government will allow imported wool put into army uniforms, the market has not weakened. In fact, packers have advanced the price of wool pelts to around \$2.60, figured on a basis of 100

lbs. of live lamb (in July and August, they were bringing very little over \$1 on the same basis). Of course, there has been widespread propaganda that imported wool for army purposes would break our domestic wool market, but it has not and most likely will not. The world market is not burdened with wool; we still have our tariff and there is and will continue to be a world of demand for wool.

The feed for these lambs is cheaper than a year ago; the domestic demand for meat is sure to be better and the supply of them is not enough larger to off-set any one of these situations. It will now be largely a question of good marketing. Death losses will probably continue to run around 3%. This is considered normal. If a man has less than this, he is probably lucky or a real caretaker. If over, he is either unlucky or a poor caretaker.

More cows for meat purposes have been sold off Northeast farms in the past 30 days than in any other period this year. This has been reflected in a lower cow market, but it may also reflect a sound operation. Personally, I believe that cow herds should be culled out deeply; replacement heifers are considerably cheaper, and a place must be made for the over-supply of dairy heifers on farms or trouble is surely ahead in spite of a probable higher price level.

* * *

Are you watching your feed costs? Some men are feeding as high as 25% oil meal in their small-grain rations with excellent success. This protein supplement is not often this cheap. Take advantage of it while you can.

Highlights from the National Grange

(Continued from Page 6)

Europe and Brazil and other countries plowed up land and planted cotton, with the result that we lost our market. We have piled up surpluses. The cotton dealer knows that if he tries to raise prices the surplus will come tumbling down on him."

Goss resigned from Farm Credit by request when he opposed transfer of the Farm Credit Administration to bureau status in the Department of Agriculture. He said he opposed the Wheeler-Jones bill after Secretary Wallace indorsed it. The bill, he said, would give one man complete political control of farm credit. This is still a potentiality, Goss said, urging the Grange to keep up the fight for return of control of farm credit to farmers.

"Few people in the United States realize that the world is going to be totally unlike the world of the past in which we have adjusted ourselves so comfortably," Chester C. Davis, agriculture's representative in the National Defense Advisory Commission, told the delegates. "International rules of living have changed viciously. We know no nation is safe if it possesses

resources which the dictators covet, unless it has organized those resources for prompt and effective military action. No nation, which stands between dictators and their world dreams is safe unless their military strength is respected."

Davis said this nation has the resources and the manpower to make itself impregnable in this hemisphere, "but let us not delude ourselves that we can accomplish this end and at the same time preserve untouched for classes and individuals all of the privileges and prejudices that are imbedded in American democracy." He said farmers will have their own very serious adjustments to make. "Cooperation with Latin-America may require farmers to re-examine some of their traditional patterns and prejudices."

Industrial employment near their homes was offered as a help for "the too many people trying to grow cotton, tobacco and wheat," Davis suggested that wherever possible new factories being built for defense purposes be located away from areas of industrial concentration and near sources of material and labor.

* * *

One of the pleasant experiences of the delegates was a bus trip to Ithaca. They had a chance to see the Cornell campus, dined in the new GLF School of Cooperative Administration, and afterward participated in a forum. Policies of the farm cooperative were explained by Ed. Babcock and Jim McConnell, and Dean Carl E. Ladd reviewed briefly agricultural research and education in the state.

On Sunday the delegates participated in religious service at Trinity Methodist Church, Auburn, conducted by the Rev. Robert Root, chaplain of the New York State Grange. They were entertained at a dinner by the Syracuse Chamber of Commerce, at which Jerome D. Barnum presided and which was attended by officers of all the major farm organizations.

"The 'ready-to-lay' pullets you ordered from the ad in American Agriculturist are here."

A new fertilizer distributor developed by the INTERNATIONAL HARVESTER COMPANY. By using a conveniently located lever, the application of fertilizer can be quickly changed to any point between 20 and 2,350 pounds per acre. Force feed gives positive and uniform distribution, even where damp weather has made fertilizer sticky. It is especially suited for top dressing pastures, meadows and orchards.

Where BUSINESS Tells Its Story

For Cooks—Thirty-two pages full of new recipes—that's "Maca Made," a new booklet available from the NORTHWESTERN YEAST COMPANY, 1740 N. Ashland Ave., Chicago, Illinois. It gives simple directions for several kinds of bread, as well as recipes for cakes, doughnuts, waffles, and griddle cakes. This will be sent to any subscriber who mails a request direct to the company and encloses three Maca yeast wrappers.

Milking Machine—The modern milking machine has increased the number of cows for which one man can care. Regardless of how good a machine is, manufacturers are constantly striving to improve it. A relatively new idea in milkers is a portable machine, powered either with an electric motor or a small gasoline engine. There is no fuss or bother of installation. You can wheel in the machine and start milking inside of five minutes. THE UNIVERSAL MILKING MACHINE COMPANY, Department AA, Syracuse, N. Y., is offering, without obli-

gation, to allow any dairyman to try one of these new machines. Get in touch with your nearest dealer; or if you don't know his name, write to the address given above.

Ford Camp—Back in 1938 Henry Ford originated the idea of a farm camp where boys could make some money. This was called Camp Legion, and is located at the edge of Dearborn, Michigan. It is for boys between the ages of 17 and 19 years who are sons of disabled war veterans. The enrollment is limited to 65.

This camp was so successful that the following year another camp, called Willow Run, was set up at Ypsilanti, Michigan. Recently the 130 boys enrolled harvested the crops, and it was estimated that approximately \$18,000 would be split in equal shares among the boys. The boys in camp, most of them from city homes, average to gain 13 lbs. during the summer.

Concrete in Winter—On most farms plans are laid to complete concrete work before freezing weather sets in, but that is not always possible. Contractors work right through the winter, and by using proper precautions, a farmer can do likewise. These precautions are outlined in a little folder published by SOLVAY SALES CORPORATION, 40 Rector St., New York City. The pamphlet is called "Nine Advantages in Winter Concreting."

Winter Comfort—A Christmas offer of \$5.00 reduction on any stove or furnace costing more than \$50.00 is made by KALAMAZOO STOVE & FURNACE COMPANY, 801 Rochester Ave., Kalamazoo, Michigan. You can take advantage of the offer at any one of the factory stores listed on the back cover of the November 23 issue of *American Agriculturist*. Just locate the store nearest to you.

Learn to Fly—Many farm boys are interested in aviation, but are unable to learn to fly because of lack of finances. For those who want such an opportunity, it is possible to enlist for training as a United States Army Flying Cadet. Naturally not all who apply can be accepted, but applications can be made to: The Commanding General, First Corps Area, Boston, Mass.; or to The Commanding General, Second Corps Area, Governor's Island, New York.

Meat Curing Wrinkle—One of the newer wrinkles for curing meat is a small hand pump which puts the "pickle" right next to the bone in hams and shoulders and right where the meat is most difficult to cure. Its use is described in a folder called "The Morton Way" and offered to you without cost by the MORTON SALT COMPANY, Chicago, Illinois.

The man with the smile is Irvin Bauman of Eureka, Illinois, who has just been given his trophy and check for winning the recent National Corn Husking Contest on the Henry Keppy farm near Davenport, Iowa. This contest has come to be one of the largest national farm sporting events and is attended by thousands of people.

The contest among 21 state winners and runners-up ran eighty minutes, and several contestants beat the previous national record of 41½ bushels. A MASSEY HARRIS tractor, equipped with FIRESTONE ground-grip tires, drew the wagon into which the winner threw the husked corn.

BABY CHICKS

HOME OF HEAVY LAYERS

The Kerr breeding farm of 240 acres near Frenchtown is too big to get more than a small part of it in this picture. Here the foundation work is done in breeding the prize-winning Kerr strain of Lively Chicks. Visitors are always welcome. The laboratory at our Frenchtown plant tests the blood of 120,000 breeders every year—for the protection of your flock. Established 1908. Be sure to get the greater profits awaiting you in Kerr's Lively Chicks. Write for free descriptive literature and Advance Order Discount Offer.

NEARBY MARKETS for NEARBY POULTRYMEN

The Festive Board

By J. C. HUTTAR

A FELLOW like me has to watch out that he doesn't become too egg-minded. I mean that chicken farmers raise something else besides eggs to sell. The mere fact that you and I put so little time and thought on it, is probably the reason selling chickens is so badly handled. I've talked about marketing chicken meat before as the second biggest leak in poultry profits—second only to mortality, which Hugh Cosline covered so well in the *American Agriculturist* of October 26.

It would be more interesting to take you on a word and picture tour around the Northeast, show you how V. C. McGregor and his three sons dress chickens and hens every week in the year and sell them in Binghamton, Endicott and Johnson City; how Mr. Johnson of Webster, N. Y., has built himself a quick freezing and holding box to supply his roadside stand and other town and city trade with fresh and frozen chickens the year round; how an enterprising Pennsylvania poultryman started cutting up his chickens and selling folks breasts, backs or drumsticks, according to their tastes, and pocket books.

Mr. Johnson's business has grown so large that he now sells tons of chickens each week through his own stores or concessions in other stores, especially "Super-Markets", in quite a few cities. Or, we might go into central Jersey to see how Abe Coan has marketed about 18,000 broilers a year, selling part of them dressed to butchers, hotels and house to house trade and the balance alive on the Flemington Cooperative Auction Market. Or, even, how a grape grower, Mr. Roy Bronson of Bath, N. Y., who only keeps about 500 hens, with the good help of Mrs. Roy, has canned a good share of his broilers and cull hens and has more trade than he can supply.

I'm going to try to tell you some of the lessons I learned from all of these folks. I'll try to get them all into this short article and if I don't finish I'll devote another column to them some other time.

The one important lesson is that all of these folks have plugged up a big leak in their poultry profits which has been a big help.

Broilers

Taking the common sizes and kinds of poultry meat that poultry farmers have to sell one at a time, let's start with the smallest, the broiler.

The broiler question must be treated in two parts—commercial broiler industry and the sale of cockerels that come along with the pullets when we buy baby chicks.

Along the eastern shore of Maryland may be found a concentration of commercial broiler farms which really go in for it in a big way. Over a hundred of these were closely studied between July 1934 and July 1936 as to costs and results and here's what the study shows:

A little over 60% of these folks made a profit and the other 40% didn't. The average profit of all the farms was just under 6 cents per bird on 8,500 broilers.

A little over half the total cost of raising a broiler was paid out for feed. Those who marketed their broilers at

less than 2½ pounds (Plymouth Rocks and Cross-Breds) showed the poorest returns. Those who sold over 3 pounds made the most.

Good breeding of their stock proved more important than cost per chick in making profits.

The most profitable farms kept their losses below 15%. Those that had more than 25% loss made no money.

Crowding didn't pay. The most profitable farms kept about 1½ birds on each square foot of house floor space.

Good sanitation paid out.

Much more could be said about commercial broilers, but that's a good start and gives you something to think about.

Now, for the more troublesome broilers—those which come along with the pullets in our baby chicks.

I don't have any patent formula to make these pay, but here are a few ideas that might help:

Broiler prices are best in the first 5 months of the year.

With January or February Leghorn chicks, it's probably best to get sexed pullets unless you have a special market for broilers. Broilers of the heavy breeds can probably be sold at a profit up to Decoration Day, even on a wholesale market.

With late hatched chicks, either Leghorns or Heavies, because of low fuel costs and the chance to cut feed costs with a good grass range, some money can be made.

It is usually best to carry them over two pounds for Leghorns and over 2½ pounds for Heavies. The best market month after the Fourth of July is September.

Hens

The next most important chicken to most farmers is the hen. Selling hens, or fowls as the market calls them, is closely tied up with culling. Here are a few ideas on that:

When a hen quits laying and starts to molt, she not only drops feathers but her intestines and other internal organs shrink quite a bit in size and weight. And, if the molt is quick, she loses flesh from all parts of the body.

This means that good marketing of cull hens has to be done right along, throughout the year. It means watching the birds and catching them as soon as they go out of production and not two weeks later. The best way to spot these hens is to watch the roosts in the daytime and look for the birds whose combs are beginning to shrink down. Also look at the back of the beak. When a bird quits laying, yellow color begins to come in back there in the corner of her mouth.

The best market months are the first 5 months of the year and the month of September.

Turkeys

Turkeys are a gamble. Most folks raise them only for Thanksgiving and Christmas. They figure to raise them

"Hello, Mabel. I hope you didn't give Fido that meat yet. I'm bringing George home for dinner!"

just as big as possible. Turkeys, more than any other bird, are associated with the American Festive Board.

Some turkey growers are working toward more nearly year 'round markets. This means several hatches and several breeds of turkeys.

I learned something while attending the annual meeting of the Pennsylvania State Poultry Association early this month. It was held at Pennsylvania State College, which is located in the scenic Nittany mountain range in the town of State College.

I learned that the Poultry Department there, under the able leadership of Professor "Pete" Kandel, had developed a new breed which they call the Nittany. It's really a Pennsylvania wild turkey. It is designed to take care of the average family which doesn't eat turkey more often because it's too big and too expensive.

They tell me that they can grow hens to a nice compact build when they weigh 9 pounds and toms when they weigh 14 pounds.

According to some feeding tests conducted at the college, they have produced the Nittany turkey on 5.7 pounds of feed per pound of gain and toms on 4.4 pounds per pound of gain.

I think they have something along the line of increasing turkey markets.

How I Clean and Pack Eggs

A Handy Scrubber

OUR eggs, laid by nearly four thousand hens, are gathered twice daily. Before cleaning them, I place three empty crates on a platform at the right height to be handy when sitting on a low chair. I sort a pail of freshly gathered eggs, putting the eggs that are too dirty to scrub into a pail and scrubbing the others. When clean, I weigh them and pack point down in the crates according to weight — large, medium, pullets.

My scrubber to clean the eggs is made from a small block of wood, one-half inch in thickness, two inches wide, and four inches long. First, cover the block with a piece of sheep wool, (I used a piece from the lining of a coat), and then put a piece of number two emery cloth over that. If an egg breaks on the scrubber, a new emery cloth must be put on.

I wash the dirty eggs, putting a level tablespoon of washing powder into six quarts of warm (not hot) water. After placing the dirty eggs carefully into the water, I wash them with a soft cloth. Then I put them on a wire tray, points down, to dry off for a few minutes while I scrub a few eggs; wipe dry, weigh, and pack into the crates. The washing powder takes off most of the stains, although I have to scour a few with scouring powder.

—Mrs. C. B., New York.

* * *

Steel Wool

My son keeps a large flock of hens. I clean the eggs. I take a bunch of steel wool and a soft cloth with one corner wet. I rub the coarse dirt off with the wool. Then, if stained, rub with the damp corner and dry. In the evening my son candles and packs.

—Mrs. A. E. M., New York.

* * *

Vinegar for Stains

To clean eggs that are stained, I dip a cloth in vinegar and rub it on the spot I want to clean. Then I take a damp cloth to wipe the egg, and it is clean enough to pack. In packing eggs for store trade, I use pasteboard cartons that hold one dozen, putting the large eggs in one box and the small

eggs in another, with the small ends down. It is best not to put large and small eggs in the same box.

The vinegar I use is good, old apple vinegar about three years old. Your readers will find this a quick, easy way to clean eggs.—Mrs. G. W. S., New Jersey.

* * *

Early Cleaning

We find the easiest and quickest way to clean eggs is to do it immediately upon their delivery to the egg room. We dip a cloth in a cup of vinegar to remove stains. Eggs are much easier and quicker to clean if done immediately upon their arrival at the egg house, and should be graded and crated at once to keep them clean. We keep

California's most romantic spot, Monterey Bay, will be visited by our party on March 4. Its great natural beauty, its extraordinarily mild climate, and its fascinating history since its discovery by Spain in 1602 have given this region the name of "The Circle of Enchantment."

GIVE YOURSELF This Grand VACATION

We'll Visit the Pacific Northwest—Sunny California—Santa Catalina Island—Famed Monterey—Historic San Antonio—Carlsbad Caverns—New Orleans

ON FEBRUARY 22, American Agriculturist will take another fine party of Northeast folks out to the West Coast for the kind of a vacation that money alone cannot buy. This trip, like other American Agriculturist tours, will live forever in the memory of those who go on it, not only because of the historic places and beautiful scenery that we will see, but also because of the friendly company, the fun which will make the three weeks go far too quickly, and the joy of care-free traveling with our genial Mr. Be-Dell there to manage everything.

We'll be leaving for our trip just at the time of year when winter's ice and snow seem determined to hang on forever, and when the prospect of being transported to a land of sunshine and flowers is particularly alluring. Before we know it, we will be enjoying the bracing air of the Pacific Northwest, with Spring on hand to welcome us.

One of our first thrills will be a trip to the new Olympic National Park. After ferrying across Puget Sound from the city of Seattle, special motor cars will take us over the famous Hood Canal Drive, through scenes of unsurpassed beauty which have been liken-

ed to the Fjords of Norway. One writer speaks of this newest of all National Parks, long called "America's Last West," as a land of unparalleled loveliness, where one sees snowcapped peaks flanked by mighty glaciers, flowered mountains, gaunt alpine forests, glistening waterfalls and hidden lakes.

—E. F. H., Pennsylvania.

* * *

Gather Often

First, I look over the nests and put dry oat straw in nests that need it. That helps to keep eggs clean. I gather eggs three times a day in an open basket. I wipe soiled eggs with a damp cloth the same day, and quite often as soon as I bring them from the hen house. I leave them in open baskets for a day or two. Then I pack them in crates or cartons with the small end down. I find this method the best for me, and eggs cool quickly.—Mrs. R. H., New York.

Be On Your Guard

AGAINST THE SPREAD OF

COLDS-ROUP-BRONCHITIS

When these winter respiratory diseases strike, they spread fast. One sick bird can endanger the health of your entire flock. Don't wait for trouble to come. B-K your birds frequently with B-K Powder, the wonderful germ-killing agent. Use with ordinary dust-gun. Makes birds sneeze and cough, loosening the mucus from the breathing passages.

Poultry experts prefer B-K Powder because the dry dusting method is easier, makes mass application simple, and avoids the too-much-dampness risk that may result from use of liquid sprays in cold weather.

ADD B-K TO DRINKING WATER

Be sure to add a little B-K Powder to your flock's drinking water every day, for one sick bird can endanger the health of your entire flock. Disinfect coops and brooding houses by the regular use of B-K Powder according to directions, to aid in preventing transmission of diseases.

*Christmas again with its gifts and its giving,
Christmas again with its gladness and cheer,
Christmas again with its gay carols ringing,
Speeding us on to another new year;
Another new year flying swiftly, and then—
In the twink' of an eye 'twill be Christmas again!*
—M. Lucille Ford.

CHRISTMAS calls for special little cookies, particularly those which carry out Christmas motifs. If you haven't a collection of cutters, a light cardboard pattern and a sharp knife will go far towards making bells, stars, turkeys, stockings, Christmas trees, and even Santa Claus or gingerbread men.

Here is a variety of recipes for cookies and candies which are sure to add to your Christmas cheer:

Santa Claus Cookies

1 cup fat 1 teaspoon salt
2 cups sugar 3½ cups cake flour
2 eggs 4 teaspoons baking powder
2 teaspoons vanilla

Cream fat and sugar together. Add eggs and vanilla. Beat well, then mix in sifted, dry ingredients. Roll the dough, cut into shapes and bake at 350° F. When baked, decorate the cookies with red and white confectioner's sugar frosting, following the regular Santa Claus uniform—with white for the fur trimming and beard; and red for the rest of the uniform and buttons.

This dough may be cut into animals of every description, and into Christmas trees, stars, wreaths and little men and women. Decorate with colored sugar, bright colored candy and different colored icings. Currants or raisins make eyes and buttons on the cookie men and women. A bit of melted chocolate often adds the final touch.

Wreaths may be cut out with a doughnut cutter, or better still with a large scalloped cutter and the center cut out with a smaller scalloped cutter. Use red decorator's sugar shot for berries, and green candied cherries for leaves. Lacking these, substitute for them bits of candied apple cooked in red and green syrups. Let wreaths cool on the pan before removing. This prevents breakage.

Gingerbread Men

2¾ cups flour ¼ teaspoon cloves
3 teaspoons baking powder ¾ cup New Orleans molasses
½ teaspoon salt ½ cup brown sugar
1 teaspoon ginger 1 egg beaten
1 teaspoon cinnamon ½ cup melted shortening

Sift together the flour, baking powder, salt and spices. Mix molasses with brown sugar, egg and shortening, and add dry ingredients to make a soft dough. Chill 1 hour. Roll on floured board and cut with floured cutters. **For eyes, nose, mouth, and buttons,**

by Mrs. Grace Watkins Hockett

use small raisins. Bake on greased cookie sheet in moderately hot oven (375° F.) about 12 minutes. Makes 18 gingerbread men, 4 inches high. If no cutters are available, flour hands well and shape dough into balls for heads and bodies and little rolls for arms and legs. Then flatten balls and rolls and join by pressing edges of dough together.

Coconut Kisses

(1½ doz. 2-inch cookies)

2 egg whites ¾ cup sugar
¼ teaspoon salt 3 tablespoons cocoa
½ teaspoon vanilla 2 cups coconut

Add salt and flavoring to the egg whites and beat to a stiff foam. Add half of the sugar in 1 tablespoon portions, beating after each addition. Mix coconut and cocoa with remaining

sugar, then blend with the meringue. Drop by teaspoonfuls on well greased baking pan and bake in slow oven (300° F.) until delicately browned and slightly dry on the surface—about 30 min.

Popcorn Balls

1½ cups sugar 3 tablespoons butter
½ cup molasses ½ teaspoon salt
½ cup corn syrup 5 quarts of popcorn, popped
½ cup boiling water

Mix first four ingredients in order given. Stir over a low flame until sugar is dissolved—about 5 minutes. Cover the mixture and let it steam to dissolve any crystals on the side of the pan—about 5 min. Uncover the mixture and let boil to the hard crack stage (290° F.) about 8 min., stirring occasionally. Remove from fire, add two tablespoons butter and the salt. Pour this over the corn, mixing well with a large spoon. Grease fingers with remaining butter and shape corn into balls.

Honeyed Fruit Strips

Peel from 3 oranges 1 teaspoon salt
¾ to 1 cup honey Water

Remove peel, cut in strips. Cover with salted water. Boil 30 minutes. Drain, cover with fresh water, boil until peel is tender. Drain, add honey enough to cover. Let simmer very slowly until peel is clear (about 45 min.) Lay on wax paper and let stand 2 to 3 days before using.

Variations: Grapefruit and lemon peel may be prepared similarly. Fruit strips

wide spatula until white and creamy. Next, knead it until the mixture is smooth and no lumps remain.

Put the fondant in a covered crock or glass bowl and allow it to ripen for 2 to 3 days. It may be used to stuff dates or coat cherries. It may be shaped and coated with chocolate or chopped nuts may be worked into it. Or it may merely be shaped and decorated on top with a nut or a cherry. The batch may be divided and each portion tinted a different color with a speck of vegetable coloring kneaded in thoroughly. If different flavors are desired, omit the vanilla and to the kneaded mixture add drops of oil of wintergreen, cloves, cinnamon or peppermint, dropped from a toothpick. These oils are highly concentrated. A little goes a long way.

Honey Lollipops

¼ cup dried prunes ½ cup dates
¼ " " apricots ½ " honey
¼ " " figs ¼ " raisins
¼ teaspoon salt

Let dried prunes and apricots stand in boiling water for 5 min. Drain. Grind fruit in food chopper, using the medium coarse knife. Add honey and salt. Mold into balls. Roll in chopped nuts, coconut or dip in melted fondant or chocolate. May be put on sticks for lollipops. Wrap in cellophane or waxed paper.

GAMES FOR THE HOLIDAYS

Often families like to play simple games after eating a big Christmas

For tree decoration, for wrapping in cellophane or waxed paper for the gift box or for just fun on the cookie plate, gingerbread men do their part to make Christmas jolly. See recipe on this page.

may be rolled in granulated sugar, coconut or nuts; or peel may be covered with confectioner's chocolate; or peel may be chopped and used in cookies, nut bread or muffin mixtures.

Butter Fondant

2 cups sugar 1 tablespoon corn syrup
¾ cup milk 1 tablespoon butter
1 teaspoon vanilla

Cook sugar, milk and corn syrup together to the soft ball stage—238° F. Stir mixture occasionally to prevent from sticking. When the syrup is removed from the fire, add butter and vanilla and pour it at once onto a cold, wet platter. Cool mixture to lukewarm (110° F.), then beat it with a

dinner. It helps the digestion if one has partaken a little too freely of all the good things on the table! Here are some amusing games by Louise Price Bell, author of "Successful Parties":

Sugar Plum Hunt (for children)

Hide small red and green cambric bags, filled with hard candies, about the room. Tell the children that they have 5 minutes in which to find them. The child finding the most receives a small prize, as well as being able

(Continued on Page 21)

A Liberal Check —When It's Needed Most

When misfortune comes—and it is generally unexpected—the wife must plan to “carry on” alone and care for the children without her husband's income.

To meet the problems of this trying time, we have devised a simple, practical “Clean-Up and Income Continuation” plan that should interest everyone. It brings a liberal check to meet immediate heavy expenses and assures an additional monthly income through the period of readjustment.

Write us today for a complete outline of this plan at your age. Give birth date and year.

Women Will Cheer This Glorious News!

SWITCHING TO
MACA ENDED
MY WINTER
YEAST WORRIES

HAVE you ever unwittingly used yeast that has been frozen and thawed out and found yourself with a baking failure? Have you ever been ready to bake but found yourself with useless frozen yeast? And how many times have you had to put off baking because you had no yeast on hand and the weather was so cold and blustery that you couldn't make a trip to the store?

Housewives had these common yeast worries year after year—but now a new yeast ends these troubles. The new Maca yeast does not require refrigeration—keeps on your pantry shelf! Hence freezing risks are eliminated. And because Maca yeast keeps for weeks you can always keep a supply handy! Maca is a fast acting yeast too. Just stir in lukewarm water and it's ready to go to work!

Maca yeast makes a real “hit” with menfolks because of the glorious texture and rich, old-fashioned flavor it gives to bakings. You'll notice this the first time you use it. And you should try Maca soon. You can get it at your grocer's. Or mail the coupon for a full-size package FREE!

Put Personality Into GIFTS

THESE PATTERN numbers are all ideal for Christmas gifts.

NEW HAT PATTERN No. 2535 includes two chic turbans and a flattering face-framing beret. Wool jersey, velveteen, the beautiful new soft corduroys or even transparent velvet would work up into stunning headgear, and not too difficult a job either. Pattern comes in one size, adaptable to any headsize. Material requirements are on pattern envelope.

PATRIOTIC APRONS No. 2540 give a grand gay effect when worn in the kitchen. Red and white striped percale for skirt, with blue for bib or yoke and white stars for trim carry out the patriotic colors. Sizes small, medium and large. Medium size requires 1 1/4 yards of 39-inch fabric, 3/4 yard contrasting, 2 1/4 yards binding, for apron with star yoke; 1 1/4 yards 39-inch fabric, 1 1/4 yards contrasting, 1 yard binding for bib apron.

CHILD'S DRESS PATTERN No. 3352 is as stylish as can be with its roomy skirt and pretty yoke. Sizes 1, 2 and 3 years. Size 2 requires 1 1/4 yards of 39-inch fabric, 1 1/4 yards lace edging, for dress with short sleeves and collar; 1 3/4 yards fabric, 1 1/2 yards 2-inch ribbon, for collarless dress with sleeve caps and panties; 3/4 yard fabric for separate panties.

TO ORDER: Write name, address, pattern size and number clearly and enclose 15c in stamps. Address Pattern Dept., American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our Winter fashion book which also has many original Christmas gift suggestions.

"What a Clever Idea!"

That's what your friends will say when you bring on a plate of these cranberry turkeys to serve with roast turkey or chicken. They're easy to make with this special turkey cutter—the only one of its kind—made of sturdy red plastic, just the right size to cut one turkey from each slice of Ocean Spray Cranberry Sauce.

To get your turkey cutter, just write your name on the back of an Ocean Spray label and send it with 10 cents to

"OCEAN SPRAY"

Dept. AG2, Hanson, Mass.

This Home-Mixed Cough Remedy is Most Effective

Easily Mixed. Needs No Cooking.

Cough medicines usually contain a large quantity of sugar syrup—a good ingredient, but one which you can easily make at home. Take 2 cups of granulated sugar and 1 cup of water, and stir a few moments until dissolved. No cooking! No trouble at all.

Then get from your druggist 2 1/2 ounces of Pinex, pour it into a pint bottle, and add your syrup. This gives you a full pint of truly wonderful medicine for coughs due to colds. It makes a real saving for you, because it gives you about four times as much for your money. It lasts a long time, never spoils, and children love it.

This is actually a surprisingly effective, quick-acting cough remedy. Promptly, you feel it taking hold. It loosens the phlegm, soothes the irritated membranes and makes breathing easy. You've never seen anything better for prompt and pleasing results.

Pinex is a compound containing Norway Pine and palatable guaiacol, in concentrated form, a most reliable, soothing agent for throat and bronchial membranes. Money refunded if it doesn't please you in every way.

ADDISON'S CHRISTMAS MISADVENTURE

PART I.

IN SECRET Addison, Thomas and a number of the other boys had for some time been planning a joke on the young people of an adjoining school district, four miles to the eastward of us, known as Baghdad. The school districts of Maine towns are numbered 1, 2, 3, 4, etc.; but locally they sometimes bear whimsical nicknames; "Baghdad" was one of these.

The boys over in Baghdad had, for a number of winters, been exercising their wits at our expense, so much so that Addison and Thomas thought it necessary to square accounts with them and restore the honors. Preparations were made quietly, and on the following night, shortly after eleven o'clock, we set off, privately, with "Old Sol" harnessed to a pung, for an incursion into Baghdad.

The cargo of that pung was remarkable and, if overhauled by strangers, would have been difficult of explanation. It consisted of a bushel basket, containing not less than twenty old socks and stockings, such as pertain to the wearing apparel of both sexes, many of them much darned, but clean and stuffed with candies, rolls of lozenges, maple sugar and raisins.

In another basket were ten or a dozen old boots, shocking ones, and in some of these were pigs' tails, or ears, a brimstone roll, carrots, turnips, red ears of corn, fragments of old greenish brass, caricatures on paper, variously inscribed in painful rhyme, old hats, a ball of stout twine, etc. There was also a long, crook-neck squash.

The bells had been removed from the shafts of the pung, and the outfit proceeded very quietly along the snowy road, by a roundabout route, for a distance of nearly or quite five miles, till we entered a piece of hemlock woods on the farther border of which stood the Baghdad schoolhouse.

About a hundred yards on the hither side of the schoolhouse, a lumber road diverged from the highway where hemlock logs had recently been drawn out to a neighboring saw-mill. Here we turned in and, after proceeding ten or twelve rods into the woods, hitched our horse and carefully blanketed him, for the night was frosty and sharp.

This done we took our baskets on our shoulders, walked back to the road and, after listening and glancing up and down the highway, entered the schoolhouse. No one could have made us out, at least by starlight. In addition to great coats, fur caps pulled down over our ears and knit comforters to keep us warm on our ride, Addison had what looked to be a long white beard—it was the tail of a white horse—hanging far down in front of his coat.

We knew most of the boys in "Baghdad." They outnumbered us in the Old Squire's district and were inclined to be unfriendly, but the girls were pleasant acquaintances. Addison and Thomas had hung Maybaskets to a number of them, the previous spring—and been hotly chased home by a strong party of the boys who threatened unpleasant proceedings if they caught us. Hence the sedulous caution in our movements.

Not one country schoolhouse in a dozen in that county was then locked at night. We entered without difficulty. A faint sense of warmth still lingered about the stove, and opening it we raked forward a few bright coals and warmed our fingers.

Addison then lighted the lantern which we had brought; and we proceed-

ed to decorate "Baghdad." The seats were benches with long desks behind the backs of each and shelves underneath for the books. Addison had observed, during his call, where all the older boys and girls sat. Beneath the shelves of their respective seats plump stockings of confectionery were hung to many of the girls, with befitting notes attached. Addison was a good hand at such efforts; I still remember some of them:

"Tried to get down your chimney and couldn't, Amy Eastman. Fire was

By C. A. STEPHENS

too hot. Had to come to the schoolhouse. Should never keep a fire Christmas night. St. Nick."

"Please burn down your chimney, Myra Edes. All full of soot. Couldn't get down, at all!"

"Pray do build a bigger chimney at your house, Minnie Wilkins. I'm getting too stout to crawl down such a narrow one. Your affectionate St. Nick."

The old boots were for the boys; and the accompanying notes were not complimentary.

"Tickle your nose with this little pig's tail, Rufus Eastman. That's all you will get from me, this year. They say you were saucy to the schoolmaster, last winter. Try and behave yourself better next year. St. Nick."

"Quit off tobacco, Tim Jackson, and take a bite off this turnip once in a while. It will sweeten up your breath."

The crook-neck squash was for a tall lathy youth, named Cephas Morton, and had pinned to it this bit of personal advice. "Look at this squash, Cephas, and pull that crook out of your spine."

The roll of brimstone was for a somewhat profane youth, named America Robbins. It was wrapped in a piece of paper on which was written,

The Song of the Lazy Farmer

and friendliness is what, possesses us as like as not, the Christmas spirit in our heart makes each of us the counterpart of Santa Claus when Christmas nears, and so, on Christmas, it appears, there ain't just one old Santa Claus, but millions of them chaps, because we're each a Santa for a while, and free from envy or from guile, we spread a smile thruout the earth, and pass on happiness and mirth.

"Better skip those hard words, Merrick. I've been harking to you for some time. Remember, Merrick, that there's a land where the candy is all hard and yellow. Here's a stick of it for you. Take a sniff at it now and then."

If we had confined our efforts that night to the Baghdad schoolhouse we might have gotten away scot-free. But there were three girls, sisters, named Thomas—Myrtle, Edith and Leola—very attractive, living about a quarter of a mile from the schoolhouse, in a large, low, one-story farmhouse, flanked by two barns and a number of sheds and other outbuildings.

Nothing less would answer for Addison, Tom and Willis Murch than the bold scheme of hanging three of the best filled stockings down the chimney at the Thomas place. The plan was to approach cautiously, mount a shed in the rear, from the roof of which it would be easy to pass to the house roof. By means of twine Addison deemed it feasible to let down the stockings into the fire-place of the farmhouse sitting-room, here they would be discovered on kindling a fire the following morning.

Accordingly, leaving our two bushel baskets at the schoolhouse, we went along the road to the Thomas place. It was near two o'clock by this time. No one was astir. The house was dark. We gained the shed roof, climbed on the ell and went softly along the ell roof to the house. Willis, Thomas and I went no further, and passed up the stockings and lines to Addison who had mounted to the roof of the house.

He had scarcely begun to lower the first stocking down chimney, however, when we heard sleigh bells and saw—for the stars shone brightly—a team coming along the road, from the direction of the schoolhouse. In the sleigh, as we learned afterwards, were Tim Jackson and another boy, named Roscoe Parmenter, on their way home from a young folks' party, a few miles distant.

Willis and I lay low on the ell roof and easily escaped observation. Addison, too, sheltered himself behind the big chimney top and was not seen till after they had passed, when one of them happened to look back and espied "St. Nick" standing beside the chim-

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Pencil of the Moon

Tonight I saw the moon
Tracing patterns
On the earth
With a silver pencil;
Etching the trees
Against the sky,
Rippling the cool water
Of the pool,
Writing the beauty
Of night
Upon the pages
Of Eternity.

—Pearl Lange Schuler,
Kansas City, Mo.

ney! If they had hailed us, or called out, we might possibly have escaped, but they said nothing and we supposed that they had not seen us. In fact, they knew not what to think of the circumstance, at first; but as they drove on, they mistrusted that some prank was on foot. At the next two houses, where the Eastman and Robbins families lived, on opposite sides of the road, they stopped and, waking the people, announced that there were suspicious characters about the Thomas place.

Rufus, Luke and Charley Eastman, with Ben and Merrick Robbins, at once turned out; and as Addison was making fast the last of the strings to a brick on the chimney top, the whole party suddenly appeared up the road, and shouted vigorously!

Our plight for escape could hardly have been worse. Earlier in the season we might have run away across the fields and gained the woods. But with a foot and a half of snow on the ground, the road was our only avenue for flight.

"Put for the pung," whispered Willis; and we three on the ell roof dropped off into a drift of snow in front of it and ran. Addison as hastily descended off the house roof to the ell and, remembering certain things better than we did, called after us in a low tone, but thinking there was no time to lose and that he had best be running, himself, we fled down the road at our handsomest paces. Addison, however, on gaining the ground, darted into a wood-house and hastily took refuge on top of several tiers of stove-wood there.

The pursuing party saw us as we emerged upon the road, and chased us for some distance. We then heard Merrick Robbins say, "Here ain't all of 'em!" whereupon he and two of the others turned back to look about the Thomas premises.

The Thomases, too, were now appearing at doors and windows. But Rufus Eastman and the three others still pursued us. In fact, they were not more than two hundred yards in our rear; but Willis, Thomas and I knowing that everything depended on speed, exerted ourselves to distance them and widened the interval a little by the time we reached the schoolhouse. We dared not stop here to get the baskets, but dashed around a bend of the road, into the woods. It was not so light in the shadows of the hemlock trees; we passed out of sight of our pursuers and, turning in at the logging-road,

Today in Aunt Janet's Garden

Get Greens from Dooryard

IT IS QUITE possible to collect Christmas greens ahead of time and keep them fresh enough for use. The main idea is to store them where they will not dry out and crumble; this means a cool, moist spot for storage. I have found our unheated garage quite satisfactory. A little protection may be given if there is danger of freezing berries. Incidentally, florists and nurserymen have a wax spray which might be purchased for keeping plant materials fresh for a long time.

We can look nearer home than the woods for our Christmas greens and berries; the shrubbery in our own yards should yield us generous amounts. The bright red of the hollyberries, the beautiful berries from some of the cotoneasters, the bright fruits from some of the hawthorns, and materials collected before frost such as Japanese lanterns, bittersweet and rose hips would be worth real money if one had to go out and buy them. All these, remember, require suitable storage conditions or they will become dry and brittle.

Plant materials of more subdued hues which serve to emphasize the brightness of the reds are found in dried artemesia, dried baby's breath, berries from Virginia creeper, snow-

AUNT JANET'S Favorite Recipe

A GOOD substitute for mince pie is cranberry pie. It is not so rich and therefore may be more digestible than the time-honored mincemeat:

Cranberry Pie

2 tbsps. corn starch	1/4 teaspoon salt
1 1/4 cups hot water	1 cup seedless raisins
1 cup sugar	2 cups cranberries
	1 tablespoon butter

Blend cornstarch with sugar and salt, gradually adding the hot water and cook in double boiler until mixture thickens, stirring all the time. Add raisins, butter and cranberries and cook 5 minutes. Line pie pan with pastry and brush with melted butter. Add filling and cover top with 1/2 inch strips of pastry. Bake in hot oven (450° F.) for 10 min. and at moderate heat (350°) for 20 minutes longer.

berries, ivy or privet and dried straw flowers. Of course the dried material has to be collected when in prime condition and kept in a suitable place, probably in the cellar, garage or barn.

For greens, the arbor-vitae, cypress, yew, spruce or other ornamental evergreens will give us all we need for our own use and probably a little extra to send to that city friend who pays dearly for all such decorations.

Personal Problems

Perhaps You Try Too Hard

Dear Lucile: I'm not clever, but am good looking, have a good disposition and am not a "Dumb Dora." Yet I have no luck with boys. My sister doesn't have to try to interest boys—they just fall for her at sight, it seems, while I use all the tricks I can, but it's no use. When they see my sister, they no longer see me which makes me "see greener", for she's no prettier than I. What can I do?—Alice.

I believe the secret of your trouble lies in your statement about your sister: "She doesn't have to try to interest boys; they fall for her on sight while I try all the tricks I can." Perhaps it is the fact that you do so obviously try to attract the boys that serves to make you so unpopular, while your sister just remains her own natural self and receives their attention and interest without great effort on her part.

The most popular people I know are those who are completely natural and just themselves at all times. By that I do not mean, of course, that you should not put yourself out to be pleasant and friendly and sociable at all times and with all crowds, but I do mean that the putting on of airs, the

cultivating of false graces which you may not actually possess, the trying to create a front or an impression that does not actually exist will certainly work toward your unpopularity. If you have been guilty of this kind of scheming I believe that if you will cultivate an air of naturalness and of just being yourself you will find that the attitudes of other people will change toward you.

Above all, do not let jealousy of your sister make you sour and bitter. This will certainly reflect in your everyday actions and cause you to be even more unattractive to other people. Keep a happy disposition at all times for it will do more toward making you happy and attractive to others than anything else.

* * *

Dear Lucile: I am 20 years of age and am in love with a married man. He and his wife have no companionship together; he thinks she married him for his money, she did not want to live on a farm and all told, they have made a miserable mess of their five years together. Yet she will not release him and accuses me of breaking up her home. Perhaps this is true . . . I only know that I did not want it to happen, but I could not help myself.

I wonder if I would be happy with him, if he did leave her. He drinks some, but I believe she has led him into it. Also, he seems to have a weakness for noticing women, but he says that with me he could overcome this and I believe him. What do you think I should do?—Polly.

I think you should be sensible and drop this man like you would a hot potato. At 20 you're a mere infant and somewhere there is a nice young man who would come to you free and heart-whole; you could marry him and live happily ever after. Don't waste yourself on a man who has already made a mess of things.

The blindness of love leads you to believe he would conquer his woman-chasing if married to you, but chances are that he wouldn't. It has become a fixed habit with him and he may be incapable of sticking steadfastly to any one woman without his eye roving longingly toward another. Even if

that is as far as it goes, such a condition is humiliating to a wife . . . and would be especially alarming to you, for you would always be burdened with the thought that if he left one wife for you would he not, maybe, leave you for somebody else.

Addison's Christmas Misadventure

(Continued from opposite page)

had the satisfaction of hearing them run past.

Meantime Merrick and the others, with the Thomases, were searching the sheds and barns. Early in the hubbub, however, Myrtle Thomas discovered the stockings in the fire-place; and both she and the others immediately guessed that their nocturnal visitors were not very dangerous. The alarm terminated in much laughter, but they continued searching; and Addison, lying flat on top of the wood-pile, heard a great many comical remarks. Once they came into the wood-house with a lantern, and one of the boys threw several billets of wood on top of the tiers, where Ad lay; but he did not stir.

At length the boys departed and the Thomases went indoors. As soon as Addison deemed it safe, he made his escape and hurried down the road. It was his impression that the whole party had turned back from chasing Willis, Thomas and me, to hunt him. Hence he supposed that we had escaped to the pung and were waiting for him in the woods. On reaching the schoolhouse, he went in to see if we had taken the baskets, and was a little surprised to find that we had not done so. He set them together and was on the point of coming out at the door with them, when he heard voices and caught sight of Rufus and the others, now just returning along the road from their chase after us;—for they had run on past us for half a mile or more, and being much out of breath by that time, had rested and were returning slowly. Willis, Thomas and I, wrapped up in the pung, heard them pass.

(To be continued)

Christmas Games and Goodies

(Continued from Page 18)

to keep the bags of "sugar-plums" he has found. The bags should be hidden in difficult places. More than one room may be used in which to hide them, if desired.

Weight-Guessing Contest

This is fun to play after Christmas dinner or after evening refreshments at a holiday party. It can be started by the hostess saying: "Now we'll see who really enjoyed the Christmas dinner (or

FIRST CHRISTMAS

By Emily Estey.

We other mothers needs must know
What that first Christmas meant.
Her Baby nestled by her side,
Lay Mary, weak and spent.
The anguish of the passing hours
Had turned to deep content.

The night was warm. The low hung stars
Reflected in the eyes

Of her whose love had cherished Him
And stilled His new born cries.
At nearing sound of camel bells
Unknowingly she sighs.

For though she did not understand,
Her mother's heart had known
The world would come to claim Him
Who had been hers alone.
That first completely happy hour
Was all she'd ever own.

She clutched her Baby to her heart
With sudden sense of loss.
The light that made His halo
Held the shadow of His cross.

refreshments) enough to put on some weight."

Use bathroom scales if you have them, weighing each person after everyone has guessed his or her weight. If you haven't scales, let each person guess, and then the person whose weight is being judged can tell who is the nearest right. The one who guesses nearest correct weight may be given a small prize.

Noah's Ark

Two people act as Noah and his wife. They sit on either side of a doorway between two rooms. Each player is given a sheet of paper upon which has been written the name of some animal. Use two slips for each animal and give one of these to a boy, the other to a girl.

The players pair off according to the slips that they hold and stand two by two in front of Noah, attempting to depict the animals they represent. As soon as Noah and his wife can tell what animals are being imitated, they allow the animals to enter the ark (the other room). But Noah mustn't be too quick to guess, because the more the players gesticulate and make animal noises, the more fun everyone has. After all of the animals are in the ark, they are told that in order to get out, each one (or couple) must put on some sort of skit.

Christmas Spell-Down

Have sides chosen and then announce that the spell-down will deal with words associated with Christmas BUT every word given must be spelled backwards. Allow a short time for each person and use such words as Santa Claus, plum-pudding, holly, mistletoe, turkey, creche, etc.

When a Cold "takes hold"

it pays to know—

HOW TO RELIEVE DISTRESS FAST THIS IMPROVED VICKS WAY

Now you can relieve misery and discomfort of your children's colds . . . with a "VapoRub Massage."

It's one successful way to ease bronchial irritation and coughing, relieve muscular soreness and tightness, help clear clogging mucus and make breathing easier.

Results are so good with this MORE THOROUGH treatment (perfected by Vicks staff of Doctors) because the poultice-and-vapor action of Vicks VapoRub more effectively . . .

Penetrates irritated air passages with soothing medicinal vapors, inhaled deeply with every breath.

Stimulates chest and back like an old-fashioned warming poultice or plaster.

To get a "VapoRub Massage" with all its benefits—massage VapoRub for 3 full minutes on IMPORTANT RIB-AREA OF THE BACK as well as on the chest and throat—then spread a thick layer of VapoRub on the chest and cover with a warmed cloth. And always remember—to use genuine time-tested VICKS VAPORUB.

"Darling, it must feel terrible leaving your parents after so MANY, MANY years together!"

Kernels, Screenings and Chaff

By H. E. BABCOCK

QUITE without so planning it, the reports on this page reflect our growing interest in the use of grass for growing and fattening livestock and poultry.

Up here in the Northeast, I feel we have consistently overlooked the importance of grass. Grass gives us pasturage, hay, and silage. It is as important to us as is the corn crop in the Midwest.

Because the Government has a policy of keeping the price of corn artificially high, that is, of supporting the market during big crop years and letting it run its course when crops are short, *we farmers who live in the Northeast have no choice but to buy less and less midwest grain if we are to stay in business.*

I believe we can stay in business and that we can use more and more grass to replace purchased grain. If we do this, the day may come when the midwest farmer will sincerely regret permitting the Government to manipulate his market, particularly when such manipulation works out to lose him a large percentage of his sales to northeastern poultrymen and dairymen.

* * *

Hereford Calves

The picture at the foot of the page shows part of a bunch of Hereford heifer calves we purchased last May. These were fall calves averaging around six months of age when we got them. They were quite thin. Their average weight, as I recall it, was slightly under three hundred pounds.

This past summer our pastures were excellent up to early August and not much after that. Under these condi-

tions, the calves did fairly well. They both grew and put on some flesh. On better pasture, particularly if good fall pasture had been available, I am sure they would have done much better.

We have purchased about four hundred Hereford heifer calves in the past two years. In general, our experience with them has been quite satisfactory. Out of four hundred head we have had only two die from natural causes.

We are going into the winter with eighty-two of the yearlings shown in the picture and sixty-four calves which are just about six months old. Since we know nothing about handling beef cattle, we are feeling our way as we go.

In general here are some of the things we have learned and the practices we are trying out. Experience to date shows that on good Class V land we can keep a calf to the acre for eight months. In order to do this we have to clip the pasture in early June, put the clippings up for hay, and use them for supplementary feeding during dry spells and the months of November and December.

We feel that a barn with a basement which can be darkened should be available to each pasture. Salt should always be accessible to the cattle in this basement and it is fine if there is running water in it also. Even if the calves start out wild they soon learn to seek salt in the barn and to use it as a refuge from flies. As soon as they do this it is easy to catch and handle them.

Beyond being sure that our good pastures will give us eight months support for calves at the rate of one to the acre, we don't know much about how to handle the beef cattle the rest of the year. To find out some things here is what we are doing this winter:

(1) We have taken two yearlings like those in the picture into the barn and put them on full grain feed for

sixty days. This means that we will have in them the price of the calf, six months pasture, and two months barn feed of which about 1,000 pounds will be grain.

(2) We are putting twenty-five head by themselves in a barn and feeding them all the grass silage and good hay they will eat until May 1st. We will then turn them out possibly to sell them off pasture in July. In this bunch we will have the price of the calf, six months pasture, six months barn feed of grass silage and hay and finally two months pasture next spring. In other words they will get nothing but grass and hay grown on the farm.

(3) Fifty-five head we shall feed all the grass silage and hay they will eat and about one thousand pounds of grain apiece during the winter. The grain will be one-third home grown barley, two-thirds ground screenings, and all the molasses the mixture will take. This feed cost us about eighteen dollars a ton.

(4) Sixty-four six months old calves we will feed hay and grass silage and about six hundred pounds of home grown grain apiece. We did this with a bunch last year and they did very well.

Our six months old heifer calves, by the way, we like very much. They only averaged 272 pounds and sixty-five of them came up from Texas in one car. They all contracted shipping

fever but fought it off well, only one dying. Last winter we learned that 14x32 ft. of grass silage will furnish all the roughage 50 calves require in six months.

* * *

Feeder Lambs

For several years acquaintances have been urging us to try our hands at feeding lambs. This fall Professor Willman of the New York State College of Agriculture called up and asked us if we would like to join him in the purchase of a carload of such lambs. We said sure.

In due time the shipment arrived. There were 368 lambs in the car of which we took 100. In many ways this shipment of lambs reminded me of the title of this page. There were about fifteen per cent screenings in it. There were little lambs weighing, on arrival here, only about thirty pounds apiece. One of these died just as we got him home and three others soon followed him. We therefore started out our lamb feeding experience with an immediate loss of 4% of the number of lambs we bought.

For those who may be interested here are the figures with which we started to get our experience:

Av. weight of lamb shipped.....	47.85 lbs.
Av. weight of lamb delivered.....	40.43 lbs.
Shipping shrink per lamb.....	7.42 lbs.
Per cent shrink.....	15.5
Cost per cwt. Ithaca.....	\$10.58
Add 4% death loss on arrival....	\$11.00

Down Mexico Way

By H. E. BABCOCK, Jr.

November 26, 1940.

I AM WRITING this in Buffalo on my way back to New Mexico after having spent Thanksgiving with the folks at Sunnysables. I am now hoping to get back to Roswell in time to spend the traditional Thanksgiving Day with my wife and son.

The seven months since I left Ithaca have seen a good many changes at Sunnysables and Larchmont. It was inspiring to see how rapidly Dad's all-grass policy is taking a definite shape and how all of the farming operations fit together. Yet at any time the whole Sunnysables-Larchmont combination can be divided into separate self-supporting units. It is, of course, an entirely different operation from that which I am carrying out in New Mexico. As a result, it was hard for me to grasp, but it is a plan which continually brings to the fore its advantages. Larchmont, which I left in March, presented an entirely new picture with the removal of most of the brush rows.

I have been in the dark for a week and a half concerning the developments at South Springs Ranch. However, our work is always planned far enough

in advance so that I can visualize just where our farming operation stands.

The two brood sows for which I had forecasted a farrowing date last issue had turned the tables on me so that only one had farrowed by the time I left. Due to the inconsistency of their schedules, I am not going to try to guess how many have farrowed since I left.

I can report with a reasonable degree of accuracy however the advance of our combining. On the Sunday I left, we had about three days to go on the eighty acre field of wheatland maize. This would bring us up to Thanksgiving Day which may or may not have been observed. In spite of this we had only to move to another field where the job is probably still under way.

In the cotton field, Pete will now be well established on his second pick-over. Soon after I left he would have finished the first pick on our number one field. From this he will have saved our cotton seed for the next year. At about the same time, we will be saving some selected wheatland maize for seed. So when I return we will be fairly well through this season's work.

Crook Swindles Aged Couple

Don't "Take a Chance" Says Service Bureau

By H. L. COSLINE.

HERE IS a letter that proves again that no matter how old the story, it can bear repeating. It is a swindle that the Service Bureau has warned against for years. The letter proves we must keep repeating the warning. The swindle works on unsuspecting folks and that is why crooks keep working it. Read the letter and then make a resolve never to forget the story. We are going to keep repeating it as long as folks fall for smooth talk.

"An agent representing the National Advertising Company, affiliated with the Success Portrait Company of Chattanooga, Tenn., came to my home last February. He had some beautiful samples of portraits to show me. I told him that we were not able to have any work done like that as we're 75 years old and living on Old Age Assistance. I thought he would leave then but he didn't. Instead, he took some envelopes from his pocket and insisted upon my taking a chance. He told me I had a lucky number and insisted that I look up some favorite photos. I did and he took two, saying that he would come back in a month and I could then select frames. He told me that he forgot to mention that he had to have \$4.00 in advance and \$17.00 when they were framed—a total of \$21.00. He never came back and I thought he was so honest. I can't afford to lose money like that. I wrote him and the letter came back."

The receipt given our subscriber is dated 193 —. This old date on the receipt is enough to indicate caution but if a salesman is clever enough, he can sometimes get the customer to sign practically anything. We have no hope of getting this money back for our subscriber, but we publish this as a warning to our readers and to emphasize the fact that the most satisfactory way to get a photo enlarged is to take it to a good local photographer.

* * *

"There's Many a Slip —"

Judging from letters received a certain proportion of our subscribers believe that it is a simple matter to get a civil service job. The figures do not justify any such idea. For example, during the past ten years 52,000 people took the civil service examination for mail carrier; about 25,000 passed but only 4,551 were appointed—about 10% of those who took the examination.

Here are some other figures—3.3% of those who took the exams for Customs Inspector actually got jobs and in other classifications the figures were 3.1%, 2.8%, 2.6%, 6.4% and 1.1%.

The important thing for young people to remember is that the passing of the examination in no sense guarantees a job. In one classification 632 passed the examination and only 64 were appointed and in another, out of 1,555 only 489 were appointed.

* * *

Who Was Negligent?

"Our son was injured in gym class in school. He and another boy got into a friendly scuffle and our boy's leg was broken. I was talking with the school authorities but they do not want to pay the doctor's bills. Are they supposed to do so?"

A school district is not responsible for accidents on school property unless negligence can be shown on the part of some of the school authorities. For example, such negligence might be the failure to repair faulty equipment. In fact even if negligence can be shown on the part of the school authorities, it is also necessary to show that the student was not negligent also. In some cases school districts carry insurance as a protection against suits for damages but even here it would be necessary to show some negligence on the part of the school authorities in order to collect from the insurance company.

No Cost

An occasional letter from a subscriber intimates a belief that the Service Bureau guarantees to collect any claim sent in. A moment's thought will show that neither the Service Bureau nor any other agency could honestly make any such promise. Every effort is made to collect claims of the type that we can handle but if all attempts are unsuccessful there are two things to do. Either write off the debt as a loss or sue to collect. Legal action does not insure payment, for it may succeed in getting a judgment but if the debtor has no property you may be unable to collect on it. The Service Bureau of course does not handle law suits.

An important point which should not be overlooked is that the best efforts of the Service Bureau are available to the subscriber without cost.

* * *

Our \$25 Reward

"I understand that the Service Bureau offers a reward of \$25.00 for a sentence of 30 days for the arrest of anyone that defrauds a subscriber."

Our subscriber is correct except that he has not stated the situation completely. The mere fact that the subscriber has been defrauded and the man arrested does not necessarily entitle the subscriber to a reward. The question that must be answered first is *who gave the information that lead to the arrest?* If some other person gave this information, he, and not the subscriber, gets the reward. Also an A. A. Service Bureau sign must have been posted on the farm when the fraud was attempted.

The idea back of the reward offer by the Service Bureau is to encourage subscribers to make the complaint and give all possible information in order that crooks may feel it wise to steer clear of farms where the Service Bureau sign is posted.

If we find that this subscriber gave the information that lead to the arrest and conviction he will get the \$25.00.

ARE THESE YOUR KEYS?

A set of keys has been found in Utica, New York, carrying one of the old Orange Judd Service Bureau number tags, No. 307940. We will be very glad to return these keys to the owner if he will write us.

Near Batavia, N. Y., this terrible accident happened. Charles S. Woeller died with fractured skull and broken vertebrae. Flossie K. Atchison lost her right eye. Madge Woeller was laid up for a long time with fracture of jaw and right femur.

MADGE WOELLER WRITES

"I am writing this letter to express my thankfulness and appreciation to your company for the \$1,000.00 check for the death of my husband and the \$500.00 check for the loss of my mother's right eye and also my own check for total disability of \$130.00.

"We were very fortunate in having these policies. I nearly neglected to renew them. In fact my husband's policy was only in effect 23 days before he was killed. I realize now what it would have meant if I hadn't sent it in. My advice to anyone is to keep your policy in force, or if you haven't one, get one.

"You may use this letter in any way that might help others to think of the danger that they run in travel, and how costly an accident can be."

Now... "I Can Figure Ahead with Assurance ..."

"I like to figure ahead. I want to feel that my land is a little more fertile than it was last year, that my breeding plans are improving my herd, and that my buildings look a little neater as time goes on. I can do that when milk prices are steady and reasonably satisfactory.

"Last fall when the Federal-State Order was reinstated, I hoped for steady prices; but I had such hopes before, only to see an uncontrolled surplus smash the milk market until I was more concerned with keeping one

jump ahead of my creditors than I was in planning for the future.

"Now the Milk Order has been effective for a full year and more, and it is working (as it did in October) in spite of a larger production and lower consumption—things over which the Bargaining Agency has no control. My cooperative and the others making up the Bargaining Agency have supported the Order, and, as time goes on, will make it work even better. Again I can figure ahead with assurance that some of my plans will work out."

AL. SEYMOUR, Malone, N. Y.

Member of Malone Milk Producers Cooperative, Inc.

Mr. Seymour combines dairy farming with potato raising. He plants 50 acres of certified seed potatoes. "I like diversified farming," he says. "Of course, there's a certain amount of risk to it. But with the substantial part of it made secure—as the milk business has been made secure by the Bargaining Agency and the Federal and State Marketing Orders—I can increase the scope of my potato raising."

The Bargaining Agency Gives Us:

A Better Living Today...Plus the Means and the Confidence to Plan for a Better Future!

OTHER FARMERS—the same as Al. Seymour—know the practical value of "figuring ahead" coupled with long, hard work. They know you can't build a fertile farm, or a high-production herd in a season. They know you must improve even good seed, through careful selection and rotation, if you want crops that give you the most return for your money.

And they are quick to realize that you can't build a sound, practical cooperative program among farmers without similar efforts... without planning and work... without give and take... without keeping the best that you have and striving season after season to grow something better out of it.

That's the thought behind the long-term program of the Metropolitan Milk Producers Bargaining Agency, Inc. The 46,000 dairymen united in the 64 local Cooperatives that make up this agency, realize that no one man and no one cooperative can supply A QUICK ANSWER to all of their prob-

lems. They realize that this answer must come slowly and by hard work.

At the same time, every farmer recognizes that the Bargaining Agency—just as it is—assures us of MORE OF THE GOOD and LESS OF THE BAD than we would otherwise get. No one of us will deny that we lived better during the last year; and no one will deny that we are better prepared to face the future with hope and confidence... better able to plan our lives as we should like them to be... and better able to take advantage of opportunities as they present themselves. We shall continue in this brighter outlook so long as we realize that ours is a long-term job in which we shall continue to improve our condition as time goes on. But we must follow the natural course... we must till our soil, plant our seed and give our crop time to grow... and then, we will reap our harvest.

If you are shipping milk to the New York market and do not belong to a cooperative milk marketing organization why not call a meeting of your neighbors and form one?

THE FARM PAPER OF THE NORTHEAST

The LAND OF Make-Believe

“A LONG, LONG ways off, Bobby, way up in the north country, in the land of ice and snow, there lives a good man called ‘Santa Claus.’ All through the long year Santa Claus works hard to make the dolls, the teddy bears, the ‘barrow wheels,’ the sleds and the ever-so-many other nice things that little boys like you love.

“And on the night before Christmas, Bobby, Santy puts all his toys in a big sled, hitches his great reindeer to the sled, and comes riding down the wind to bring to you and to all the other good boys and girls a MERRY CHRISTMAS.”

As we tell the familiar, age-old story to three-year-old Bobby and watch the round eyes grow bigger and bigger with interest, we almost envy him his dwelling place in the wonderful land of make-believe, and we feel

BOBBY'S CHRISTMAS “EDITORIAL”

I N 1922, just eighteen years ago, Bobby, I wrote for *American Agriculturist* and for you the little piece that appears on this page. For weeks after it was published you asked to have the piece read to you over and over again and proudly called it “Bobby’s Editorial”. Then you were three, and lived in the Land of Make-Believe. Now you are grown to man’s estate and live in the Land of Stern Reality.

At this Christmas time, 1940, I am repeating the editorial, with the hope that even though much of the world seems to be crashing about our ears, you and all of your generation will be able to keep the Faith on which you and those who follow you may build a better world.

Your Dad

like traveling back with him to that land of imagination where

The gingham dog and the calico cat,
Side by side on the table sat;

to that land so close to the unknown country from which Bobby came and to which we all are promised we may some time go if we become “as little children.”

It is too bad, Bobby, that as the years advance they will bring the stern realities which will crowd the land of make-believe further and further away into the past; it is too bad, Bobby, that the years may discover to you that the doll is but a rag, that the dear Teddy is filled only with sawdust, and that even the grown-ups too often are but idols of clay.

But while the make-believe land will go with the years, and while some of childhood’s happy illusions will pass with knowledge, yet, Bobby, we grown-ups can at this Christmas time make for you and all your generation no better wish than that you may keep through life at least part of the unquestioning faith of the land of make-believe.—E. R. E.

ATTENTION, DAIRYMEN—SEE PAGE 3.

The LAST OF THE Old-Time Grist Mills

WHEN OUR forefathers settled in New England, waterpower was essential. Mute evidence of this is given by the hundreds of sites where once grist mills stood. Most of them are gone, but at West Paris, Maine, under the competent direction of Percy Mayhew, stands a survivor which is running full blast every day.

The mill was built in 1855. So says the date cut into one of the stones in the foundation. The mill stones, although called French burr stones, came from Italy. These were harder than any grinding stones known at that time, and doubtless served as ballast in one of the famous old Clipper Ships which traveled from Portland, Maine, to Italy. In those days ships left these shores fully laden, but often failed to get a profitable return cargo. Therefore, they gladly brought anything of value rather than to use sand which must be shoveled out and thrown away on arrival home.

The fact that these mill stones have

By HARRY A. PACKARD.

been in constant use since long before Civil War days is conclusive evidence of their wear-resisting qualities. Once a year they are taken out to be sharpened, as Mr. Mayhew is doing in the picture. This is a slow, time-consuming process, sometimes requiring several days of striking the stones with a steel hammer to chip them and make them rough.

The upper mill stone is 16" thick, weighs 2 tons, and when grinding makes about 125 revolutions per minute, while the bottom stone remains stationary. Incidentally, these mill stones originally came in pieces, and were cemented together by a process which seems to have been forgotten. As shown in the picture, the stone is held together by a steel tire or frame about 60" in diameter.

Much has been said in song and story of the dusty old miller whose mill by

Percy Mayhew sharpening the stone in the old grist mill at West Paris, Maine.

the winding old creek was picturesque. Well, the owner of this quaint old mill grind the farmer's corn just as it was done 85 years ago—even to taking his lives up to the part. He is a typical pay from a portion of the corn which down east Yankee who is content to he is to grind into golden meal.

▼ Mary Alieia Bedford, left, and Jane E. Strong, both 17 year-old Niagara County 4-H Club girls of Loekport, represented New York State at the National Dairy Show held recently in Harrisburg, Pa. They demonstrated the many tasty dishes for the menu that can be made from cheese.

▲ There is no better way to prevent losses of farm manure than to haul it out and spread it on the ground every day. Farm manure is relatively low in phosphorus. Therefore sprinkling superphosphate in the gutters, at the rate of a pound for each cow, not only keeps down odors and prevents slipping, but it adds needed plant food and increases the value of each ton of manure far beyond the cost.

▼ Thomas Davis of Woodstown, N. J., operates over 300 acres of land. He has a large dairy herd and grows cash crops. In the picture Mr. Davis is running lima beans through the viner, which are then rushed to the Deerfield Packing Corporation which packs frozen foods for Birdseye. The vines are stored in the silo for use for cow feed. Mr. Davis was recently elected to represent New Jersey on the Board of Directors of the Grange League Federation Exchange.

Attention, Dairymen!

Department of Agriculture Decides Against Farmers' Proposals

THE UNITED STATES Department of Agriculture has turned down the request of dairymen made at the October milk hearings for amendments which would raise the price of milk to farmers during the coming year.

In place of the amendments proposed by the dairymen, Department of Agriculture officials have substituted and are recommending their own amendments, some of which in the opinion of dairy leaders throughout the milk shed are detrimental to the interests of dairymen. Before the new amendments can become effective they must be approved by two-thirds of the dairymen voting either in cooperative groups or as individuals. Ballots for the voting are now being mailed to dairymen by N. J. Cladakis, Milk Administrator for the New York milk shed. In the past few days, hundreds of dairy meetings have been held where the dairymen's leaders have explained the government's proposed amendments in order that dairymen might have the facts before voting.

On Friday, December 13 (Black Friday), after the Department of Agriculture had released its proposed amendments, a spokesman for Department said that if the dairymen of the New York milk shed voted against the Department's proposals, the milk marketing agreement itself would be discontinued. We could not believe that any official in a democratic country would violate the fundamental principles of democracy by such intimidation, so we wired the Honorable Claude R. Wickard, Secretary of Agriculture, the telegram which is printed in the box on this page. To date we have received no reply to this wire.

Thus we have a situation right here in America where the voter is threatened by the government with drastic action unless he votes the way the government dictates. No dictator could be more drastic than that. You have the privilege to vote, but you must vote right or else—!

American Agriculturist originally urged dairymen to work for and to vote for these milk marketing agreements. We have enthusiastically continued to support them, because

they have brought millions of dollars of additional money to dairymen, and because they have gone a long way toward stabilizing the milk market. However, there always was the danger, which we have pointed out time and again to dairy leaders, that the milk marketing agreements might be used by government to dominate the industry. On the other hand, we felt that strong cooperative organizations working together in the bargaining agencies could offset this danger.

Early last summer the dairymen's organizations, led by the Metropolitan Bargaining Agency, realiz-

the amendments were:

1. The increased cost of production due to New York City Board of Health regulations. (These new Board of Health regulations were forced on to the farmers by Mayor LaGuardia).
2. Increased cost of production due to heavy frost damage.
3. Higher farm labor cost.
4. Certainty of higher taxes because of national defense program.

At the Syracuse hearing, L. C. Cunningham, of the New York State College of Agriculture, testified from accurate records that labor costs are second only to food costs

able supplies of feed, the price of feeds, and other economic conditions which affect the supply of and demand for such milk."

How do you producers like that?

The proposed amendments by the Department of Agriculture would make drastic reduction in the fees paid to all cooperatives. These reductions, incidentally, were suggested by the dealers at the hearings, and if carried out will lessen the ability of organized farmers to stand up against milk dealers and bureaucratic control.

The amendments proposed by the Department of Agriculture would fix the price of Class I milk exactly the same as it is in the present marketing Agreement, with the exception that it is stated that the Class I price for April 1941 shall not be less than \$2.45. This is 37 cents a hundred less than for April this year.

However, the Department's proposals do include some minor adjustments upwards in some of the lower classes for milk, which may help to raise milk prices a little. But dairy leaders throughout the milk shed with whom we have talked by telephone are emphatic that there is no possibility of the amendments as proposed by the Department of Agriculture raising milk prices to the extent which is claimed for them by Department publicity releases, and probably not even up to what they were this year. For example, Class I prices for this year were \$2.82 for January, February, March and April, \$2.45 for May, June, July, August, September and October, and \$2.65 for November and December.

Prices under the present Agreement and under the one proposed by the Department of Agriculture are both based on the price for butter. The price for butter at the present time is relatively high, therefore milk prices for the next two or three months at least may be fairly good under either the present Agreement or the one proposed by Department officials. But dairy leaders state that the proposed amendments may result in ruinously low prices next spring.

It is hard indeed to understand why the Department of Agriculture officials have paid no heed to the
(Continued on Page 12)

A TELEGRAM TO SECRETARY WICKARD

Claude R. Wickard, Secretary

December 13, 1940.

Department of Agriculture, Washington, D. C.

A large majority of the dairymen of the New York milk shed are enthusiastically in favor of the milk marketing agreements. From the beginning, AMERICAN AGRICULTURIST has supported these agreements and helped to arouse support for them. There is no doubt that dairymen want the present Order continued, but I am sure that there will be and should be a heavy vote against amendments proposed by your Department.

A rumor is being circulated that should dairymen vote unfavorably on these proposals, your Department will remove the entire Order. I do not believe that the Department would take this un-American way to enforce compliance with its proposals. However, to set rumor at rest, I would greatly appreciate a definite statement on this point.

Hope I can have a personal visit with you before long on northeastern farm problems.—E. R. EASTMAN, President and Editor,
AMERICAN AGRICULTURIST.

Up to Monday noon, December 16, when our presses started rolling, no answer had been received to this wire—See article on this page.

ed that rising costs of milk production made it very necessary that prices under the milk agreements should be increased. An appeal was made to Washington for hearings at which evidence could be presented to prove the need of higher milk prices. These hearings were held in New York City, Syracuse, and Albany on October 7, 9 and 11. More than sixty cooperative associations, members of the Metropolitan Bargaining Agency, asked for several amendments to the Marketing Agreement, especially including one requesting that the minimum Class I price be set at \$2.82 for every month of the year, the price to become effective at the earliest possible moment.

The reasons offered for requesting

in producing milk, and that in the past 75 years the amount of milk required to pay a month's wages on a New York farm has almost doubled. Wages of hired men last July were 7 per cent higher than a year ago, and for the first seven months of this year were 26 per cent above pre-war average. "Furthermore," said Mr. Cunningham, "it is becoming harder and harder to get farm help."

Similar evidence on this and on the other rising costs of milk production was presented time and time again at the hearings.

In the face of this evidence, the Department of Agriculture, after taking weeks to reply, states that the prices asked by producers are "not reasonable in view of the avail-

Horsebarn Philosophy

ON MORNINGS like these when we arise before the sun should get up, but doesn't—instead snuggles down under a heavy cloud blanket to nap all day long; on mornings like these when we rush shivering from bed into ice-cold clothes and steam our way across the cold, gray yard into the barn; on mornings like these, we say, it's a pleasure to enter the horsestables with their warmth and their pleasant smell, the nickered greeting of old Bill and the noisy stamping of heavy-footed Pat, the hungriest horse in four counties. There is a certain sense of security to be found there, a sense of detachment from the troubles of the world compounded of the warmth and the quietness of animal noises. From here reverberations of war are turned aside. Bill collectors and salesmen never seek us here. Cares and troubles of the outside world seem less important before the urgent needs of feeding Pat and Bill and bringing out the shine in their slick brown coats, preparatory to the day of work ahead.

Visiting our folks who live in the barn is no less pleasant just at twilight on an evening in May when the barn doors are open, allowing the first warming Chinook wind to swirl gently through the building. Evenings then are quiet. The only sound is the crunch-crunch of Pat's teeth munching his straw bedding, until perhaps the silence is broken by the inquiring chirps of the Cricket-in-the-West-Corner, and then becomes unbroken again when he goes into his ceaseless song.

Again on an evening in early July at the end of a long, perspiring day in the hayfield, we pause in the stable doorway. There, if anywhere, is the nearest thing to a cooling breeze on the whole farm. We sniff the odor of the new-mown hay on the four-acre lot back of the barn, and at the same time watch the last red rays of the sun impart a rosy glow to a horizon edge line of cloud—a promise of fair weather for the morrow's work.

When we get away from our troubles long enough to stand and think for a few minutes in the quiet warmth and security of the horsebarn, we think perhaps we can feel why the Lord ordained that Mary should bring forth her first-born Son in the safety of a stable.

"And wrapped Him in swaddling clothes, and laid Him in a manger . . ."

In such peace and simplicity, was it not appropriate that the Christmas Ideal should originate?—Robert Eastman.

Labor Strikes and National Defense

"It would be interesting to know what the parents of boys now being inducted into the army think of the labor organizations that bring about strikes in industries engaged in the manufacture of armament supplies."—*Editorial from the Chenango (N. Y.) American.*

THAT is right! Agriculture, as well as every other business in the United States, except the labor organizations, is being carefully regulated and even regimented by government. Boys are being drafted into the Army; manufacturers of defense supplies are under rigid control, with the threat constantly hanging over them that the government may take them over entirely; and retail prices are being carefully watched by the government to prevent inflation or profiteering.

But labor organizations, many of which have become a national racket, are receiving no gov-

*A Merry Christmas and a
Happy New Year
From All of Us to All of You!*

ernment control whatever. In fact, they have been government encouraged, both by law and regulations, and nothing is done to prevent strikes which are constantly occurring in defense industries; and which are holding up the manufacture of defense materials sorely needed both by the United States and Great Britain.

Constructive labor unions have done much good in the past. They still are needed to protect the interests of the working man. But labor unions will defeat their own good purposes if their leaders persist in exercising a monopoly which is worse than any capitalistic monopoly which they have opposed, and if government continues to let labor organizations run hog-wild while regulating everything else.

Too Many Potato Containers

"I was interested in your comments in the last issue criticizing so many packages and varying weights being used in potato marketing. We have even more of a problem in this respect than you may realize. In addition to the various units brought out in your editorial, we have to contend with two bushels, pecks, ten pound packages, ten peck, and occasionally five pound containers. Since I have started working in potato marketing, we have seen the number of different type containers being used increase greatly. As a result, we have to spend a good portion of our time figuring orders and sales in an endeavor to convert them from one unit to another."—H. E. Bryant, Presque Isle, Me.

THIS letter speaks for itself. I maintain that so many packages for potatoes make it difficult to give growers any comparable, intelligent market reports, and in general they are a minor but real factor affecting prices to growers.

Minor Brokaw

*"Far from the madding crowd's ignoble strife
Their sober wishes never learned to stray,
Along the cool, sequestered vale of life
They kept the noiseless tenor of their way."*

THERE are great men whose fame has spread to all the world; there are many more just as great known only to a highly privileged few. Such a one was Minor Brokaw, who passed on last week in his farm home at Interlaken, New York.

I first knew Minor nearly thirty years ago, when I was a green teacher of agriculture and

Minor was one of the best farmers in the community. His boys came to school to me, and I always felt that their father was better prepared to train them in the science and, especially, in the practice of agriculture than I was.

Of all the Master Farmers whom I have been privileged to know, no other came closer to attaining the high ideals and standards than did Minor. Not only was he a skilled and proficient farmer and fruit grower, but he was also one of the finest fathers and citizens I have ever known.

Where Have the "Punkins" Gone?

EVERY year on the home farm we used to raise lots of pumpkins (we called them "punkins"). These were collected in great yellow piles at harvest time, and then carted into the pasture and broken up for the cows to eat.

Walter Lloyd, Editor of the Ohio Farmer, raises the question, where have the pumpkins gone and why don't farmers raise them any more.

I have wondered about this and also about why the old-fashioned yellow turnips (not rutabagas) are not grown the way they once were. I asked both of these questions of Professor E. S. Savage, Department of Animal Husbandry at the New York State College of Agriculture, and he says farmers don't grow either yellow turnips or pumpkins now because they have learned that they are so low in feed value. Pumpkins have less than half the digestible nutrients of good silage, and the feed value of turnips is low.

Possibly another reason why pumpkins are not grown is that the vines are a nuisance at harvest time.

Farmers Entitled to First Choice

"In a recent issue you suggest that the farmer should eat at the first table. My answer is that he cannot because he has to sell the first quality and eat what is left."—B., Vt.

THE WRITER of this letter has a point, but I still don't agree because I can't see any sense in selling good food off the farm at a low wholesale price, then turning around and buying food for the family back at a high retail price. If more attention were paid to growing and using the products of the farm first—that is, in making the farm more self-sufficient—the family not only would live better but there would not be so much need for cash.

Along the same line is the practice followed on our farm when I was a boy of always taking the apples that had started to rot from the barrel first. As a result, we always ate partly rotten apples, because by the time we got to the good ones they had started to spoil also.

The farm family is certainly entitled to first choice, and I still believe that it would be farther ahead in the long run if it took it.

Eastman's Chestnut

WHEN the colored couple were being married by the clergyman, and the words "love, honor and obey" were spoken, the bridegroom interrupted:

"Read that again, suh! Read it once moah, so's de lady kin ketch de full solemnity ob de meanin'. I'se been married befoah."

Growing Up in the "HORSE AND BUGGY" Days

A Continued Story by

C. E. LADD and E. R. EASTMAN

SYNOPSIS—In the first chapter of the continued story which they are writing together, "Growing Up in the Horse and Buggy Days," Carl and Ed set the stage with the time, the place, and the folks. In our last issue, the story continued with the adventures of one of them as a small boy on a big dairy farm a half century ago, when life was simpler and less complicated than it is now.

Look up the back issues and read the first two chapters. Incidentally, part of the fun is to see if you can guess who is writing which chapter—Carl or Ed. They won't tell, and it's anyone's guess. After you have read chapter 3 on this page, begin getting your own confessions ready for our big contest. At the end of the series, AMERICAN AGRICULTURIST will pay \$25.00 in prizes for the best letters telling of your own actual experience on the farm or in a farm neighborhood, either in recent years or back in the horse and buggy days.

Chapter III.

OLD RAM AND THE HIRED MAN

AS I LOOK back, Partner, to boyhood days in the old farm neighborhood, I still chuckle at memories of hired men I have known. How they could eat and drink and work, and what fun they were to a farm boy with their dry speech and their shrewd wit. How some of them could brag about their experiences that lost nothing in the telling. And boy, oh boy! how they could swear.

The American farm hired man is not and never was a member of the servant class. In fact, he had no established class or level in society. He was rather on the first step of the ladder towards farm ownership. Studies of the lives of successful farmers commonly show that these men passed through two distinct periods before farm ownership. First they were hired men, perhaps on their father's farm, a relative's, or a neighbor's farm, or on just any farm. After accumulating a little capital, but much more of reputation and thereby credit, they became share renters. Then a few more years of successful experience and a farm was purchased. This is the common story of farmer progress in America.

But there were exceptions—many of them. There was the man who didn't marry—and few men can farm without a wife; the happy-go-lucky type, generous with money, prodigal with bodily energy; and the skilled dependable worker who just had to go on a spree several times a year. Some were wanderers, and some spent all their life in one neighborhood. It is this group of more permanent hired men around whom many of the stories of the countryside centered.

In telling some of these hired men stories you and I of course have no intention of belittling the hired man of yesterday, for both of us have been hired men by the hour, by the day, and by the month, both have dug potatoes with fork and hook, and cut corn by hand. One still takes a secret pride in the fact that he can hoe equally well right or left handed. One is proud of his skill as a milker; one is ashamed of his lack of skill as an axeman; both feel a sense of inferiority and envy today when they shake hands with a man who still has real callouses.

Bill Tracey was a hired man of the old school—the product of an orphanage and "bound out" at an early age to a farmer who worked him hard and long. The inhibitions, bitterness, and starved spirit which should have resulted were just one hundred per cent absent in this pure extrovert who took

the world as it came and squeezed every bit of possible gaiety and happiness out of a hard and arduous life. If you had told him he was unfortunate, he would have laughed at you and would soon had you laughing with him. Bill was built like a football lineman, low, powerful, and quick.

We were all a little cocky that cool day in October because the potato digging was going well, the yield was high, and that makes a farmer rejoice even if the price isn't good. One after another we took the bushel crates from the wagon, carried them down the cellar steps and dumped them in the bin. Gene said, "Why go so often?" and ostentatiously placed one sixty pound crate on top of another, raised them against his belly, staggered a minute to get his balance, and started down the steps with the double load. I was the runt and admitted defeat sorrowfully, but John shook down a crate, placed the next on top and repeated Gene's feat. Bill came next and we all watched, for he was never one simply to take a dare. He called you and raised you one, if you get what I mean.

Bill took a fresh bite from his Ajax plug, disdaining to cut the chew with a knife, placed one crate on the ground, put another carefully on top, and then with a scornful, "Let me show you boys what a man can do," put the third sixty-pound crate on top. With a grunt, the whole load was lifted against his front, but the top crate was above his eyes. Staggering and with wide-placed feet he started for the hatchway. Shuffling and scuffling he found the first step—down one, down two, the crates wobbling but still riding. Dad and the men watched, I also with my mouth wide open. Would Bill get under the low-hanging sill above the bottom step?

Down the third step and the next one, then a little forward bend and stoop to get under the sill, all was going fine. Then, was the step slippery, did those big arms weaken a little, did the crates unbalance or was Bill just overconfident—anyway, crash went the crates—not the top one—but all three like a tree falling in the forest—onto the hard earth floor, and Bill sticking to his load took the fall, too. Flat on his stomach across crates, potatoes, and floor went Bill in a dive

that took him across the cellar and bang against the potato bin.

We all roared. Bill jumped up looking a little ashamed but soon was swaggering out to the field with the rest of us, minus a little hide here and there but ready for the next adventure.

Bill was digging potatoes by hand with a five-tine fork. Judge expertly the margin of hill so as not to spear a potato, shove the fork its full length in the mellow ground with a hard push with your foot, bend it over your knee to spade out the nest of potatoes, and give it a deft little throw to place the potatoes on the surface close together, handy for picking. Bill and Orlando were digging neck and neck, or rather rump and rump, working backwards, two rows at a time across the field. Orlando was big, fat, strong, quick as a cat and lazy, but a skilled workman when he willed. He was a great talker and always teasing someone. As they worked, Bill told of his exploits as a wrestler; he was good and he knew it, but he didn't know how good Orlando was. Orlando egged him on but in various ways belittled each exploit until Bill was more and more irked by the slighting remarks. Finally Bill said, "I'd like damn well to take hold of you right here in the potato field and show you how it feels to bump a potato hill with your back." Digging rapidly and smoothly, Orlando only remarked that he didn't wrestle with boys or little men. Immediately Bill bristled, the

while, the potatoes were coming off Orlando's fork smoothly, exactly and rapidly, while Bill was spreading his all over the ground. Then another burst from Bill, and Orlando, judging the time to be ripe, in a cool, irritating voice, "Well, you can't dig potatoes and wrestle, too. I hate to take time off but if you must have your lesson you can't start any earlier."

Bill stuck his fork in the ground, brushed his hands on his overalls, pushed off his hat and said, "Put down your fork for here I come, you big lump of mutton tallow." Bill had been in plenty of scuffles, as we called them, when it was just a hot contest with no one really mad, and his method was a quick rush, both tremendous arms around the other's hips, a quick upward swing into the air, and slam the victim onto the ground on his back. Orlando was heavy but Bill was strong, and given his hold would throw Orlando like a sack of bran.

I was all excitement and danced until I stubbed my bare toe against the corner of the crate and hurt it, so that I calmed down a little. Dad was amused, interested, and expectant.

Bill paused a moment, got set and then with an oath and a roar bent almost double and rushed. Now what Dad knew, but Bill and I were ignorant of, was that big and fat as Orlando was, he had an unusual coordination of muscle and eye that gave him a perfect timing for all his actions. As Bill rushed, Orlando waited on tiptoe, then quick as a cat sidestepped, reached under Bill's belly and with a beautiful, quick, powerful heave, threw Bill over his shoulder and in a heap on the ground.

I expected the scrap to go on, but Orlando quickly picked up his fork and started digging. Bill scrambled up, rushed over and yelled, "Put down that fork and try it again." Orlando dug along methodically and only said, "I can't fool with boys when there's potatoes to be dug." Bill almost frothed at the mouth in his frustration. But Dad with a grin at me yelled in a rough voice, "What the hell do you think we're doing—digging potatoes or scuffling all day? Dinner'll be ready in a few minutes and we've got to finish this row."

Bill was really too good natured to push a fight, so after a little growling the potatoes forks were moving fast as ever, but Orlando didn't tease Bill any more. Evidently he had had his fun and was willing to call it a day.

Orlando was a character worth knowing but not respecting.

Lazy, good-for-nothing, fat

and jolly, he added mirth to the neighborhood, for we all knew him and didn't expect perfection of character. We just took him as he was with no regrets and no expectation of change. His feats of strength, his quickness and agility, in spite of lack of exercise, were unexplainable. I have seen him squat on his haunches beside a bumblebees' nest and carefully poke it with his finger. A bee would emerge, Orlando would spat him between his two hands, deftly killing him without a sting. Carefully he would stir them until all had emerged and been killed. If for a moment they came too thickly, Orlando made a strategic retreat for a few moments until quiet settled on the nest, and then resumed the process. Of course, the objective was to get that one little comb full of exquisitely rich and sweet honey in each nest.

Did you ever get butted by an ugly
(Continued on Page 17)

fork moved faster, potatoes sprayed all over the lot and Bill in a loud and confident voice stated with vehemence and unprintable words what he could do to Orlando if he had a chance.

Hearing the loud talk, I paused where I was picking up potatoes with Dad nearby. "Will they fight, Dad?" "No, Orlando is just plaguing him to have some fun. Neither one is mad. If they scuffle, Bill may get a surprise for he doesn't know how quick Orlando is."

I got excited and missed the crate more and more often when I tossed the potatoes. Dad picked skillfully and rapidly as ever, but with a bright expectant look in his eyes. He didn't even swear when he had to pick up some of my potatoes that overshot the crate.

I could hear Bill's, "I'll ram your damned old shoulders into the ground clear up to your ears," and Orlando's "Just hear the little boy talk." Mean-

A Travel Adventure

A Letter Inspired by the Horse and Buggy Days Story

I HAVE BEEN very much interested in the story you have written with Dr. Ladd for *American Agriculturist*, especially the account in the first chapter of the people from New England leaving their homes to settle in western New York a little more than 100 years ago, and the fact that they realized they would never be able to return to see their relatives after taking such a trip of a month or six weeks. (EDITOR'S NOTE: See Page 5.)

I was led to compare their travel conditions with those of my own recent experiences. Instead of being called on for a trip across New York State, I was awakened last summer in the middle of the night by the ringing of the telephone. Upon answering I heard the soft drawl of the Tennessee native who lives next door to my parents on the Mexican border. He advised me to come as soon as possible if I wanted to see my mother alive.

I took time to collect the necessary cash, packed a suitcase, and drove to the airport about 200 miles away. Not having made reservations ahead, I had to take my chances at catching what planes I could going more or less in the desired direction. But at exactly midnight I stepped off the plane at the Mexican border and found waiting for me the same man who had called me up from a distance of over 2200 miles, direct route, 24 hours before.

After several days, Mother rallied somewhat, and wanted above everything else to get back to her native home in the Catskills and see her grandchildren. I consulted the attending physician, who told me she was too weak to have any chance to live for long; so I might as well try taking her back.

On Saturday forenoon I sent a telegram to my wife asking her to find a good nurse and bring her down with our Nash car and the standard bed equipment. She found the nurse, made arrangements for the care of our two

children, attended to the business necessary before leaving a farm carrying over 100 head of cattle, had the car serviced, and covered the 2240 miles, reaching the sick bed in less than three days from the time of my sending the telegram.

The return trip, made with two cars, and with every consideration for the comfort of the patient, took five days.

But good medical attention, good New York State climate, and the contentment of knowing she was home again with her loved ones, combined to restore good health again. Mother was so much better that she has again returned, by train this time, to her border home and friends, where Father will join her, traveling by truck with 14 head of purebred heifer calves and a nurse cow. Purely as a matter of economy, the calves are to be raised there and returned, by train, shortly before their second freshening. They will be accompanied by Texas born Jerseys, to do their share toward supplying the New York City milk market.

Nor will they or Mr. Babcock's Hereford heifers be the first cows to make the trip from Texas to New York. Having spent Christmas in that country two years ago, I noticed that the milch cows there were enduring more cold and exposure during the winter than our own northeastern cattle which are pampered and enclosed in warm stables in basement barns. So each spring I have purchased from Texas Jerseys bred for early fall freshening, and shipped them on their five-day journey to New York, without a single case of sickness or mishap en route.

As for my parents, why shouldn't they, at seventy years of age, travel over 2200 miles away if they wish, knowing that within 24 hours they can comfortably and safely arrive back where their Scotch-Irish ancestors were traveling 100 miles per month just a few generations ago? — J. K. Keith, Oneonta, N. Y.

Old Times on West Durham Mountain

I HAVE READ with a great deal of interest the stories by you and Dr. Ladd, "Horse and Buggy Days." (EDITOR'S NOTE: See Page 5). I am only thirty years old and haven't had much of a glimpse into the past. My father is 74, and was born and brought up on what is known as the "West Durham Mountain," in the northwest corner of Greene County, adjoining Schoharie County.

Just recently a boyhood chum of my father's died, and Father has been reminiscing a great deal about old times. It certainly is a far cry from today. Old man Hubbard, father of the man who just died, was considered a pretty prosperous farmer. He had the first mower on the mountain, a Mauncy mower. It had a heavy white oak cutter bar. In the barn, until a few years ago at least, stood a Baruche or covered-fendered, two-seated surrey that cost over \$250. He had a handmade light double harness made by Frank Steachman of Windham. Boy, when he drove down through town with that he cut quite a swath!

Along with the pleasant memories, come tales of hardship after the Civil War. Their incomes were very meager. There were no creameries up there. The butter was packed in firkins to ship in the late summer. They would take a few boarders at \$6 per week and maybe sell a few eggs. Father tells of "Old Man Richards" who lived beyond them, probably 8 miles or

more from the village, who used to draw cord wood — 4' wood for \$3 and \$4. He would draw a load up to the top and leave it there to top out with so he could haul a cord to the village. On the way home one night in the winter the roads were drifted — as they usually were, I guess. He had to pull in the lot, and apparently while wandering around to find his bearings, became exhausted. He was found next day sitting against a tree frozen stiff.

Most everyone got a keg of salt mackerel in the fall. Potatoes and

Membership in Bargaining Agency
Not an Expense, but...

AN INSURANCE POLICY

says Cortland Farmer:

HAROLD C. GRISWOLD OF R. D., CORTLAND, N. Y., is known to hundreds of farmers... as a successful operator of a 396-acre farm with 107 dairy cattle... as a Supervisor of his Township... as a Past Master of the Grange... and as an active member of the Gracie Dairy Cooperative Association, Inc. His views on the INSURANCE and INVESTMENT VALUE of membership in the Bargaining Agency bear the weight of first-hand experience in varied fields. For Mr. Griswold is both a dairy and vegetable farmer. He raises 5,000 bushels of potatoes and 25 acres of beans—produce which is sold WITHOUT the price insurance of cooperative bargaining.

The Bargaining Agency Pays 400 Times Its Costs

"My membership in the Bargaining Agency costs me four cents for every thousand pounds of milk I produce," writes Mr. Griswold. "That is mighty cheap insurance because during the past year my milk has brought at least forty cents a hundred more than I would have received had there been no Federal-State Milk Marketing Order."

"I believe in insurance. I hope my barn never burns; but if it does, it is protected. I hope I never have an automobile accident; but if I have one tomorrow, my insurance company will settle it."

Bargaining Agency Insures Best Possible Price

"I might get a satisfactory price for my milk without belonging to the Gracie Dairy Cooperative Association, Inc., which is affil-

iated with the Bargaining Agency; but that membership is an insurance policy which gives me the best possible price for my milk considering prices for other farm products, the amount of milk we produce, and the demand for it."

"The cost of membership is not an expense—it is insurance AND IT IS MORE THAN THAT. It is an investment that has brought me worthwhile returns."

—Harold C. Griswold.

If you are shipping milk to the New York market and do not belong to a cooperative milk marketing organization, why not call a meeting of your neighbors and form one?

The Metropolitan Milk Producers Bargaining Agency

Roads and Fences—This is a view on the new Pennsylvania Turnpike. In every sense this is a superhighway, having a minimum of curves and grades with overhead crossings. At the left in the picture is shown a section of a **PITTSBURGH STEEL** Fence along the road. The material for 330 miles of this fence is said to be the largest single fence order ever placed. Used in construction were about 995 tons of wire fabric and top strand wire, and 705 tons of steel posts, gates and fittings.

Where BUSINESS Tells Its Story

Cow Feed—**TIOGA MILLS**, Waverly, New York, has just announced the presentation of Tioga's new Barn Feeding Program to the Dairy Industry. They draw attention to the fact that most dairymen undervalue their roughage for milk production purposes. During the past few years, many have been following definite fertilization and soil building programs for the improvement of hay and silage crops, but have failed to take full advantage of the improved feeding value of their roughage as a result of this improvement program.

This new program tells the Dairy Farmer at one glance exactly how many pounds of milk his roughage is capable of producing.

Thousands of calculations were neces-

sary to shape up the new Chart, but it is now boiled down to such simple terms that a child can almost do the necessary checking. Tioga Mills in describing the chart has this to say: "Our first interest is the Dairyman's success. When he profits, we all succeed."

The new Barn Feeding Charts have already been distributed to Tioga Dealers everywhere. Interested dairymen can also obtain a free copy of the Chart by writing directly to Tioga Mills Inc., Dept. AA, Waverly, N. Y.

Electricity—For the past two years the **WESTINGHOUSE ELECTRIC AND MANUFACTURING COMPANY** has conducted a cooperative test on the Peet Farm in western New York. The chief aim of the test was to find profitable uses for electricity on an average farm. The electric bill for the farm ran between \$25 and \$30 a month. At first thought, this might seem high, but the savings were larger than the cost. For example, the oil stove formerly used was junked, it was unnecessary to buy ice, it took less labor to do the milking, and so on, covering many of the usual farm operations.

Repairs—The **INTERNATIONAL HARVESTER COMPANY** of Chicago points out that winter is the right time to go over farm machinery and to order any new parts that may be needed. In this way, cost of delays will be avoided when spring work starts. We also remind our readers that International Harvester dealers maintain up-to-the-minute service departments, and that they will be glad to help in locating needed repairs and ordering the parts.

Horseshoes—The old-time blacksmith shop is on the way out. An occasional enterprising blacksmith has furnished a traveling shop to go from farm to farm, but many farmers shoe their own horses and some let them go barefoot. THE **COOPERATIVE G.L.F. EXCHANGE** is making available to its members some light-weight horseshoes which are hard enough to stand normal wear but soft enough to be bent without heat.

Railroads—THE **ASSOCIATION OF AMERICAN RAILROADS** tells us that Class I roads had a net operating income of \$527,102,152 for the first ten months of this year. This is a distinct improvement over last year's figures of \$457,433,164 for the same period. This year's income for the first ten months gave an annual return of 2.38 per cent on the investment.

Apples—Robert Rymph of Lagrangeville and William Barrett of Poughkeepsie, Dutchess County, inspecting some apples in an A & P Super Market in the Bronx. On November 19 they visited New York City markets with a group of growers from Ulster and Dutchess counties to study display and handling methods of apples and to find out more about the effectiveness of various types of containers in reducing loss.

Robert Anderson, Store Supervisor for the A & P food chain, told of the work that chain stores are doing to help dispose of the 10,000,000 bushels of apples which, under normal conditions, would be exported to Europe. Three producer-consumer campaigns are planned for this year's apple crop.

CHARLES M. GARDNER

Editor of the National Grange
Monthly and High Priest of De-
meter of the National Grange

AMONG ITS OTHER pronouncements at the Syracuse session, the National Grange decided on a point in present day trends which is highly significant. Among other declarations relative to insurance, the issue was raised of the possibility of Federal interference with life insurance companies. Looking toward possible government control, the session voted in this concise language: "We favor the present status of state and local control and oppose any attempt to make changes in the present status of life insurance companies." The National Grange believes the necessary safeguards for insurance companies as private institutions have already been provided by the several states and that any attempt to bring the administration of such companies under Federal control is moving in a decidedly dangerous direction.

Special timeliness is attached to this National Grange declaration because, in several states, definite steps toward Grange life insurance company formation have been taken and several such companies are already functioning successfully.

MAYFLOWER Pomona Grange in Massachusetts has successfully conducted garden club activities during the past season, combining a Grange and 4-H group program and widespread interest was awakened among the youngsters in the jurisdiction. The contest which came to an exciting finish comprised competing children from 13 towns, who had 19 gardens all together. This was two more towns and four more gardens than the previous year and a decided increase of interest over any previous competition.

AN INTERESTING moment at the Syracuse session of the National Grange was the introduction of a vet-

eran Empire State Patron, Leonard L. Allen of Watertown. For 62 years Mr. Allen has been continuously a member of the Grange, and for a long period served the New York State organization as Grange historian. It happened that the day of Mr. Allen's visit to the Syracuse session was his 80th birthday and recognition was taken of the fact by the hearty singing of "Happy Birthday," following Mr. Allen's timely reminiscent talk.

MUCH CREDIT for Juvenile Grange organization belongs to the Rhode Island State superintendent, Mrs. Margaret F. Johnston, to whose credit the past year are recorded three new Juvenile organizations and three reorganized units. The largest one is at Exeter and an interesting fact there appears in connection with the officers' personnel of the new unit. The young lad who was elected master is the son of this year's Exeter Grange master and the Juvenile overseer elected is the son of the subordinate overseer. This looks like a pretty strong working Grange.

ANOTHER FORMER voting member of the National Grange has been removed, in the death of Mrs. S. H. Messick of Delaware, which has just occurred. Mrs. Messick and her husband served as voting delegates in the National Grange on two different occasions, Mr. Messick having been master in two different periods of the Delaware State Grange. He served the National Grange a number of years as a member of its executive committee. His death occurred about 20 years ago.

ALL THE 165,000 Grange members in the New England area are enthusiastic over the decision of the National Grange to hold its Diamond Jubilee session of November 1941 at some city within the New England group of states. Final decision as to location is in the hands of the National executive committee and a meeting will be held at Boston during the month of January, when cities desiring to entertain the big event will be given an opportunity to present their claims and final decision will probably be made at that time. It is believed that a class of approximately 15,000 candidates for the Seventh Degree will be found in waiting when the Diamond Jubilee session convenes.

DON'T MISS THIS MARVELOUS TRIP!

A. A. Winter Tour, February 22-March 16

One of the beautiful West Coast cities which will be visited by our *American Agriculturist* Winter Tour party is Seattle, world port and gateway to the Orient. In the background (above) is majestic, snow-capped Mt. Rainier, as seen from Queen Anne Hill.

If you can possibly take a vacation this winter, and would enjoy the fun of being with a congenial party of Northeast folks, come with us on Feb. 22. We will be gone 3 weeks and will

visit such fascinating places as the Carlsbad Caverns, Santa Catalina Island, the Alamo in historic San Antonio, old New Orleans, and famed Monterey. The list is too long to give here, but our printed itinerary describes the trip in full and gives the exact cost of our "all-expense ticket". Send for the itinerary today. Just address a postcard to E. R. Eastman, Editor, *American Agriculturist*, Box 367-T, Ithaca, N. Y.

Mrs. Beatrice Howes Wins Grange-A.A. Cookie Contest

HOW WOULD you like to bake a batch of rolled sugar cookies, and have them win for you a check for \$25.00 from *American Agriculturist*, a gleaming white kitchen range from the Kalamazoo Stove Co., a beautiful oven from the Perfection Stove Co., 35 pounds of G.L.F. choice flours and 12 assorted cans of G.L.F. vegetables, a 10 pound can of meat salt and a sturdy butcher knife from International Salt Co., and an attractive aluminum baking set and a two months' supply of Maca Yeast from Northwestern Yeast Co.?

Well, that is what happened last week to Mrs. Beatrice Howes, of Knowlesville Grange, Orleans County, who turned out to be the lucky winner in the big finals of the New York State Grange Sugar Cookie Contest, which took place at Kingston, N. Y., on

Mrs. Beatrice Howes, Knowlesville Grange, Orleans County, winner of the first prize in the Grange-A. A. State-wide Cookie Contest.

December 10, during State Grange Annual Session. This was the 8th annual baking contest which New York State Grange and *American Agriculturist* have sponsored jointly since 1933.

Competing with Mrs. Howes were 52 other county champions, who had all worked their way to the top through

Subordinate and Pomona cookie contests, in which more than 3,500 Grangers took part.

Several Grange brothers and sisters who came into the room where the cookies were being judged on Tuesday, December 10, remarked that they all looked like winners! And they certainly did, for we have never seen a prettier exhibit of cookies than those 53 plates of golden rounds of goodness. It took hard, conscientious work on the part of the judges to pick the winners.

Serving as judges were Miss Clarissa Smith, of the Kingston High School Home Economics Dept.; Miss Bertha Snyder of Mount Marion, N. Y., a Home Bureau leader in Ulster County; and Mr. Joseph Forgues, Chef of the Governor Clinton Hotel at Kingston. To all three, *American Agriculturist* extends its sincere thanks for the splendid job they did in scoring the cookies.

During the judging, each plate of cookies was identified only by a number marked on a sealed envelop containing the name of the contestant entering those cookies. Even after the judging was all over, names of winners were not revealed, until the following morning, when H. L. Cosline, Associate Editor of *American Agriculturist*, announced them from the platform to the assembled delegates.

Not only Mrs. Howes, but also 19 others among the 53 contestants received prizes. The second, third and fourth winners were awarded the same merchandise prizes as the first prize winner, with the exception of the Kalamazoo kitchen range. The next six (winners No. 5 to No. 10) received all except the stove and the Perfection Oven. In addition, *American Agriculturist* awarded 20 cash prizes, as follows:

First, \$25.00; 2nd, \$10.00; 3rd, \$5.00; 4th, \$3.00; 5th, \$2.00; and \$1.00 each to the next 15 highest winners.

Mrs. Katherine Dillenbeck, retiring chairman of State Service and Hospitality Committee, had charge of the contest for the Grange, and Mrs. Mabel Hebel, Ass't. Editor of *American Agriculturist*, acted as Cookie Contest Editor.

To all who helped to make the contest a success go the thanks of this publication, including the companies who generously donated State and County prizes; all Subordinate and Pomona chairmen of Service and Hospitality committees, who handled the

The judges at work, from left to right: Miss Clarissa Smith, Miss Bertha Snyder and Mr. Joseph Forgues.

local and county cookie contests; Mrs. Isaac Graham, Ulster Co., Chairman, who assisted with the arrangements for the State contest; and Mrs. Ray Taylor, of Lockport, Niagara Co., who so ably supervised the contest finals at Kingston. Mrs. Taylor is a member of the State Service and Hospitality Committee, and succeeds Mrs. Dillenbeck as chairman for the coming year.

We are already getting suggestions for next year's Grange baking contest. If you have any, send them to Mrs. Hebel, *American Agriculturist*, Box 367, Ithaca, New York. We'll be glad to hear from Grangers on this subject.

Oldest Farm Organization to Meet

On January 22, 1941, the New York State Agricultural Society, the oldest farm organization in New York and probably in America, will hold its annual meeting. This is one of the biggest events of the year. Prominent speakers, including the Governor of the State, are scheduled for both the afternoon meeting and the banquet in the evening. This gathering always makes a notable as well as a profitable time. Plan your trip to Albany to include the meeting of this grand old organization.

Miss Annabell Gebel, North Java Grange, Wyoming County, winner of second prize.

Mrs. Allen A. Hayner, Brunswick Grange, Rensselaer County, winner of third prize.

Grange--A.A. Sugar Cookie Contest Winners

No.	Name	Grange	County
1	Mrs. Beatrice Howes	Knowlesville	Orleans
2	Miss Annabell Gebel	North Java	Wyoming
3	Mrs. Allen A. Hayner	Brunswick	Rensselaer
4	Mrs. Emma Blanchard	Natural Bridge	Jefferson
5	Mrs. Ethel Finch	Akron	Erie
6	Mrs. Arthur Colvin	Pulaski	Oswego
7	Mrs. Leon Leonard	Farmersville	Cattaraugus
8	Mrs. Henry C. Peck	Bacon Hill	Saratoga
9	Mrs. V. M. Webster	Springfield	Otsego
10	Mrs. Josie Hinks	Burke	Franklin
11	Mrs. Irving Heidenreich	Newark	Wayne
12	Mrs. John Baker	Weedport	Cayuga
13	Miss Clara E. Tuthill	Southold	Suffolk
14	Mrs. Louis C. Archer	Lowville	Lewis
15	Mrs. Clinton Stevenson	Waterburg	Tompkins
16	Mrs. William E. Furbeck	Gifford	Schenectady
17	Mrs. Philip Gokey	Mooers	Clinton
18	Mrs. Amanda Glassbrook	Stony Creek	Warren
19	Mrs. Edna M. Reed	Wawaka	Delaware
20	Mrs. Lois DeMond	Texas Valley	Cortland

Mrs. Emma Blanchard, Natural Bridge Grange, Jefferson County, fourth prize.

Mrs. Ethel Finch, Akron Grange, Erie County, fifth prize.

By L. B. SKEFFINGTON

from SKEFF'S NOTEBOOK

State Grange Session Outlines Year's Program

APLEA to make the Grange stronger, to build up the membership and to develop action programs in every county and subordinate Grange was voiced by State Master Rich in his annual address. It was the first session for him as master, although he served for a number of years as overseer and in other stations. When Past Master Raymond Cooper mounted the rostrum to give his observations from the side lines, he said he was impressed by the fact that "Brother Rich is not only sticking to schedule, but makes you do your work and finish each session a few minutes ahead of time."

Agriculture is ready and willing, as it always has been, to do its part in any program of national defense, Rich said, but he emphasized "we must insist that agriculture be placed on a parity with industry and labor." From the days when the pioneer took his gun with him into the fields, prepared to defend his home, his family and the nation, farmers never have shirked their duty. All that we ask is equality for agriculture."

Study Auto Insurance

Rich expressed the thought that "some form of compulsory automobile insurance may come, and we would do well to study it. I recommend that every Grange make it a point to discuss the subject and to be prepared to act upon it."

Unity and harmony which prevail among state farm organizations was noted by the state master, who said a large amount of the credit for this could be given to the Conference Board of farm organizations. The board is composed of three representatives from each organization, and no resolution or program ever is adopted except by unanimous vote.

Both Rich and State Secretary Harold M. Stanley urged the Grange to change its annual meeting time from December to October. Reporting on the State Grange Revolving Scholarship Fund, Stanley said \$11,556 had been paid in during the year, which with a balance of \$1,204 made total receipts for the year of \$12,761. Since the fund was started in 1928 receipts have totaled more than \$77,000 and loans have been made to more than 1,200 boys and girls to assist them in obtaining an education.

Research Value Stressed

As a result of research at the Geneva Experiment Station a market may be found for 25,000 tons of corn sugar annually, Dr. P. J. Parrott, station director said in his report to the Grange. He said that ice cream sweetening is now made from sugar cane not grown in this country. Experiments have shown that suitable sweetening can be made from corn, and he estimated that it might replace one-fourth of the 100,000 tons of imported sugars now used for this purpose.

Project by project, Director Parrott touched upon many of the outstanding jobs being tackled by members of his staff. Mentioning the serious seed situation caused by stoppage of imports of seeds, he said the station is doing

a lot of work to protect seed supplies. During the past years tests were made of 18,000 seed samples.

Larry F. Livingston, agricultural extension manager for the DuPont Company, said agriculture is not spending half enough for research. As proof he said that his company had prospered every year through the depression and the recession because it had a solid background of research behind it. "Forty per cent of our total sales volume is represented by new things we have created during the past 20 years, and many of these in the last few years," he said. At present his company is using 275 million pounds of farm products every year and converting them into commercial products. He suggested that industrial demand constitutes one of the most promising outlets for farm products as research constantly finds more new uses.

Prayer for Taber

A dramatic moment came after conferring of the Sixth Degree when David H. Agans, overseer of the National

Grange and master of the New Jersey State Grange, called for a moment of silent prayer to the Great Creator "to quickly restore the health of our great national leader, Brother Taber."

Taber had been scheduled to address the Grange, but illness prevented him from coming.

"I know you have had eminent men on this program, but I want to talk to you about something you can all do," said Agans. "I want to point out to you the necessity and desirability of making an inventory. At this time of year it is a good time to do it, in our personal affairs and in our Granges. At this time of the year almost every business makes an inventory to list its assets and liabilities. I think we should do the same in the Grange."

"In every Grange we ought to look things over and decide whether we are making the best use of the assets and talents we have. One of our great difficulties today is holding the interest of younger members. Why not put them to work? The job of elected officers of every Grange is not merely to fill their stations, but to lead. We want the Grange to go forward during the new year. This calls for leadership and one of the jobs of leadership is to lead. In order to get anywhere we have just got to have this inventory. Let us decide what we are going to do, and then do it."

A distinguished visitor was Fred J. Freestone, former state master and now chairman of the executive committee of the National Grange. Speaking at the deputy master's dinner, Fred said it was the 16th consecutive year he had attended such an event. He took time out from the regular meetings to preside at an insurance conference in which emphasis was placed on fire prevention to conserve property and lower costs.

Resolutions Discussed at State Grange

IN WHAT State Master W. J. Rich declared was "a most harmonious and useful meeting," the New York State Grange recommended an embargo on supplies to all aggressor nations and that every effort be made to work out a plan to feed innocent victims of war.

It voted approval to the program for "Better Living on the Farm" being launched by the state extension service as part of national defense. Purpose of the program is to encourage production and use on the farms of foods which will contribute to the health of families. All Pomona and Subordinate Granges were urged to "lend their support and offer their facilities of leadership" to further the program.

Opposition was voiced to any amendments to the cooperative marketing law or to the Nunan-Allen law, which provides for milk marketing agreements, except with the approval of the Conference Board of New York State Farm Organizations. Continuance of the state milk publicity campaign was approved and a campaign to emphasize the health value of butter urged.

Resolutions opposing development of the St. Lawrence seaway-power project and a managed currency as a means of establishing a fair price level were tabled. This means that the Grange continues its policy of several years standing in advocating development of the power project and in urging monetary reform.

Support was voted for the Dies committee, daylight saving was opposed, observance of Thanksgiving on its traditional date favored, and a Constitutional amendment favored to limit the President to two four-year terms. Sabotage in key industries concerned with national defense was termed "a matter of serious concern." We recommend that it be made illegal to call a strike in such industries until three months after the beginning of a controversy.

In the only election of the convention, David C. Kidd of Dansville was

reelected a member of the executive committee.

The Grange expressed belief in Constitutional government, with functions divided between legislative, judicial and executive departments. It so declared by resolution. On top of that it adopted another resolution asking the President to sign the Logan-Walter bill and notified him by telegram. The Logan-Walter bill subjects the rules and regulations of bureaus and departments to judicial review.

The Grange said the bill, which has passed both houses of Congress, "is designed to correct a tendency to disregard the rights of citizens to appeal to the courts."

A resolution asking the Legislature to enact a "Little Hatch Act" was disapproved. It would have barred all state, county and other public employees from engaging in political activity, as the Hatch Act bars federal employees. Some delegates said such a law in this state might prove too sweeping, preventing many persons from taking proper interest in local affairs.

Compulsory automobile insurance was opposed, but the Grange recommended "improvements or amendments to the financial responsibility law." A committee report said a compulsory insurance law, according to available data, would not reduce accidents and might work the other way. In the meantime further study is to be given to the matter.

Although State Master Rich and State Secretary Stanley urged that the meeting time of the State Grange be changed from December to October, approval for the change failed to receive the necessary two-thirds approval. Many delegates feared farmers might be too busy in October.

Congress was asked to restore the Farm Credit Administration to independent status, with administration by a bi-partisan board, with terms of members so staggered as to provide continuity of policy.

The Governor and Secretary of Agri-

NOVEMBER MILK PRICE

Administrator N. J. Cladakis has just announced that the uniform price under the Federal-State Milk Marketing Order is \$2.17 for the month of November. This is an increase of 25 cents as compared with the October price.

The November price is 11 cents under the November price a year ago, but is 7 cents more than the price for November in 1938.

The announced price is for 3.5 milk in the 201-210 mile zone, and price received by dairymen in the New York City Milk Shed will vary according to freight and butterfat differentials.

culture were asked to use their influence in having supplies of livestock feed stored in the Northeast. Most of the supplies are now stored in the Midwest.

The Legislature was urged to adopt a long-time program of secondary road improvement, with the idea of eventually serving all areas that are to remain in permanent agriculture. "Transportation represents one of the important costs of distribution and motor vehicles have opened vast opportunities in distribution of farm products and supplies," the resolution said. It urged that counties be relieved of cost of highway rights of way and snow removal in connection with the state highway system. A larger share of gasoline tax revenues for highway use was asked.

Citing that centralization of power in the State Education Department is a matter of widespread concern, another resolution opposed application of civil service to education and also opposed life tenure for district school superintendents. Consolidation of rural schools was opposed, except with consent of the districts.

Other resolutions adopted recommended:

That voting on rural zoning laws be confined to areas affected rather than to entire county.

Repeal of law providing bus service for pupils in non-public schools.

State aid to study control of Japanese beetle and oriental peach moth, and \$10,000 for corn-borer research at Geneva and Cornell.

That it be a misdemeanor to hunt on private property whether or not posted.

That traffic laws and speed limits be made uniform.

That all Grangers cooperate with state and county land-use planning committees, which provide a new and useful means for farmers to help formulate policies and bring about greater cooperation in administering various programs for benefit of agriculture.

That further restrictions be placed in issuance of liquor licenses and that beer and liquor advertising be prohibited on the highways as a matter of scenic and moral aids to national defense.

Invitations for next year's meeting were received from Buffalo, Rochester, Syracuse, Lake Placid and Amsterdam. They were referred to the executive committee.

Phillip McMahon, Canton, won first prize in the speaking contest for students at the six state schools of agriculture. Harry Prosono, Delhi, was second, and Richard McGuire, Morrisville, third.

National Grange certificates of recognition were awarded to county deputies as follows: Harry Booth, Washington; Joseph Turner, Schenectady; Ethan Coon, Dutchess; Clarence Smith, Cattaraugus; S. C. Bradley, Cayuga; Herman Porter, Tioga, and M. B. Van Schaack, Greene.

Awards of juvenile deputies included: Mrs. F. K. Ellsworth, Warren; Mrs. C. W. Filkins, Rensselaer; Mrs. Herman Porter, Tioga; Mrs. L. E. Harvey, Cortland; Mrs. Anna Hull, Delaware; Mrs. Joseph Turner, Schenectady; Mrs. Clarence Smith, Cattaraugus, and Mrs. William Whittaker, Sullivan.

Bottoms Up!

By ED W. MITCHELL

WE PULLED out some old trees today that we have been nursing along for years in a vain attempt to get them to bear enough to show a profit for their keep. Each tree on my place has to pay at least a dollar a year for overhead and maintenance plus something more for operating costs and profit, or else it does not pay its way. These trees have not been doing that in spite of forced feeding and extra care, so out they come.

We have been familiar with the top-side of these trees for years; it was a distinct surprise to see what the bottom side was like. They had no roots. Not a single one of them had a tap root, and only a few had big husky roots that penetrated deep enough to make them pull hard. They all came out too easy. Those fine, feeding roots that make a tree hold hard, and bring up a lot of sod and soil were lacking; there were only a few short feeders near the end of the main stems.

These old timers put up a good front. They used all the food to look promis-

ing and coax one to keep on feeding them, but they lacked any feeding roots with which to work and repay that care. It was evidently impossible for them to produce a good crop with such a poor system of roots, but we never would have guessed it if we had not pulled them out.

It may be carrying research too far, and you can't change your mind and put a tree back; but if pulling out a few trees is the only way to find out whether their root system warrants keeping them or not, then enough must come bottom side up to prove the case. On that finding the rest of the orchard must stand or go. The first few trees pulled have proved to me beyond a doubt that a lot of others nearby, and about like them, are no longer worth keeping.

Dairymen keep weeding out boarder cows. Poultrymen trap-nest and use various means to transfer loafing hens from the pen to the pot; so let's turn some more trees bottom side up and get rid of apple boarders.

time, there comes a winter which will kill a large percentage of them. As a matter of fact, in the past 25 years commercial fruit growing areas have tended to contract. Orchards, once profitable, on the edge of these commercial areas, have been abandoned, and only orchards on the most favorable soils are continuing to show profits.

If you are planting fruit trees with any idea that they will provide a living in your old age, dispose of the place you now have and get one located in an area that is growing fruit on a commercial basis.

RAISING HEIFERS

I am considering the use of a shed where the heifers can run this coming winter. Has this plan been successful where it has been tried?

Yes. There are a number of advantages to the plan. One dairyman has tried this arrangement for two or three years and is very enthusiastic about it. There is a water trough in one corner of the pen and along one side there are stanchions through which

the heifers stick their heads to eat hay or grain which is fed to them. This man uses shavings for bedding and cleans the building only occasionally. The droppings get tramped down quite solidly and if plenty of bedding is used this works out satisfactorily. In other cases I have seen a feed rack in the middle of the pen in which the hay or grain is put. This system cuts down on labor and the heifers seem to grow better.

GOATS FOR HOME MILK

I am interested in goats. Are they practical as a home supply for milk and where can I get more information about them?

There has been a rather steady and fairly rapid increase in the number of goats in the northeast. A good goat will produce 2 or 3 quarts of milk a day and I doubt that most people could distinguish with certainty between cows milk and goats milk. Farmer's Bulletin No. 920 on milk goats has a lot of excellent information. You can get this by sending 5c to the Superintendent of Documents, Government Printing Office, Washington, D. C.

How to Trap Skunks

By CLAYTON G. GATES.

SKUNK TRAPPING offers farmland trappers, especially, a golden opportunity to reap profitable returns. Skunks are numerous in most Northeastern states, and their pelts are always in demand. In fact the skunk is next to the muskrat in its distribution and range in North America. The most difficult or disagreeable feature connected with skunk trapping is the offensive odor thrown when the animal is trapped and becomes excited by unnecessary annoyance by the trapper.

Skunks are usually found denned up along rocky hills, old hedges now growing up, old out buildings, hay stacks, fodder stacks, debris drifts, and old log piles. Carefully look over all such territory, and you'll find a number of active skunk dens.

All the dens you locate, however, won't be skunk dens. They may be dens of other animals, but visited at intervals by skunks. Even so, it is still a good set for a trap.

The way to determine skunk dens is to reach your hand well into the entrance and withdraw a handful of

dirt from the floorway. If it is an active skunk den there will be long black and white hairs among the dirt.

Skunks should be trapped in blind sets throughout farming sections where there is danger of domestic animals and pets getting into your traps. A bait that lures skunks is apt to attract your neighbor's cat or dog. But a blind set doesn't arouse the curiosity of domestic animals, and by utilizing the best and most likely places where skunks travel you should get your fair share of pelts.

Locate the den, active or occasional, and select a No. 1½ under-spring trap from your outfit. Place this just inside the entrance, not on the outside, as you would in trapping in deep woods. Traps placed outside may pick up an occasional fox, raccoon, or mink. Whereas one placed just on the inside will take only the skunk, you will avoid catching domestic animals by having the trap inside. And during bad weather the inside trap remains in good order.

Every hollow log about the woods should be guarded well from within. Here skunks frequently live, but even if they don't den there, they often go there in quest of food, and may be taken by surprise.

Old logs spanning streams or marshy stretches are ideal locations for trap sets. Give each such discovery a chance to do its bit.

Skunk traps should be fastened to the end of a long pole, say ten feet long. If water is nearby you may take the other end and lead the trapped animal to water. If care is used you can do this without causing alarm. When you reach the water, take the pole and with one sudden stroke plunge the trapped skunk beneath the water. Skunks drown easily, and will seldom throw scent when handled in this manner. Never remove animal from water or allow it to reach the surface until drowned. Once it takes a second breath it throws its scent.

Take pelts off, cased, and stretch fur side out after the greenness has been allowed to dry several hours. In skinning a drowned skunk, never squeeze the animal, as it is filled with water, and a sudden squeeze will throw the fluid you have thus far avoided.

If you live in good skunk territory, try many skunk sets this winter, and cash in on the profitable opportunities awaiting all good skunk trappers.

Question Box

FEEDING FROSTED BEANS

We have some red kidney beans which are badly frosted. How valuable are these beans for feed?

Professor E. S. Savage says that you need not hesitate to feed frozen beans. If badly damaged, vines and pods can be run through an ensilage cutter and fed as high protein roughage. Beans that have been threshed and picked out from marketable stock make good feed for sheep. They can also be used for hogs, but should be cooked in water to which salt has been added. Also, if there are no stones, or foreign matter, they can be ground and fed to dairy cows; although cows do not find them too palatable and object to a grain ration containing more than 15 or 20 per cent of beans.

FROST ON STORM WINDOWS

Can you tell me what to do to prevent windows with or without storm windows from frosting and steaming up?

If both the inside windows and storm sash are reasonably airtight, neither will steam or frost over. If the inside window frosts over, the storm sash is not airtight. Strip felt should be tacked along the inside face of the storm sash so it will press against the window frame and make an airtight joint. Three pairs of buttons often are needed to hold the storm sash down closely. If the storm sash frosts over, the air is leaking through the inside window. Sometimes tightening the catch will stop this, but usually it is necessary to put weather stripping around both window sashes.

The only way to keep bare windows from frosting is to keep the humidity low enough so it will not be condensed when the air strikes the cold glass, which usually is too dry for health. In fact, you should try to have bare windows frost over.—I. W. D.

FEW APPLES EXPORTED

Just how much have exports of apples from this country declined during the last two years?

In the past, most of the exports of United States apples have been to

Europe. For the year July 1, 1938, to July 1, 1939, total exports of apples were 12,071,000 bushels; while from July 1, 1939, to July 1, 1940, exports dropped to 3,216,000 bushels. The chances are that the figures for the year ending next July 1 will be even smaller.

WRONG CLIMATE FOR FRUIT

I live on a small place in the southern part of Erie County, New York. I have a job which keeps me busy, but I am planning to set out fruit trees on this land with the hope that they will come into bearing and support me when I retire. Do you think my plan is sound?

So far as we can see, there is just one thing wrong, and that is your location. If you will inquire of some of the older farmers in the neighborhood, you will find that 30 or 40 years ago that area had quite a lot of fruit trees. You will also find, on investigation, that most of them are gone. That is not a fruit area, and it never will be. To be sure, fruit trees will grow; but occasionally, once or twice in a life-

MEAT-STAND SELLS HIS HOGS.—L. J. Harris, of Schodack Landing in Rensselaer County, sold 76 hogs last year at this stand on the Albany Post Road. This year he has 42. He also sells marmalade, jelly, honey, chili sauce and relish which Mrs. Harris puts up in attractive jars. When we took this picture on November 2, Harris was getting 22c lb. for ham, 16c for shoulder, 22c for sausage. He is especially proud of the trade he has with local customers, and figures he makes good wages for doing his own butchering and retailing. He even grows his own corn for the hogs.

FREE BOOK Send for handsomely illustrated 32-page Cow treatise. Written by an eminent veterinarian. Chapters on all common troubles, with home-treatment hints.

Watch for Cow BREAKDOWNS

Cows have as many health troubles as people. Sometimes more. They never complain... but your milk pail shouts a warning when troubles brew. Fortunately most cow breakdowns come from one source... sluggishness of the DIGESTION and ASSIMILATION. Even the more serious ailments usually begin here and, if neglected, cause major losses.

Here is where KOW-KARE comes in. This famous medicinal formula of Iron, Iodine and open-formula drugs provides the hard-pressed organs with properties that are Tonic, Stomachic, Carminative, Laxative, Diuretic, Alterative, Stimulant and Mineral Replacement. The medicinal aid to digestion and assimilation helps fortify cows against unnatural strains of rich winter diet... helps the animal to get the MOST from her costly feed.

Wise feeders do not wait for troubles to occur; they give KOW-KARE with the feed for its tonic and conditioning effect... and find it pays. The cost is slight, only about a penny a day. In treating specific ailments see guide in FREE BOOK, "Home Help for Dairy Cows." Ask for your copy today.

KOW-KARE is sold by feed dealers, general stores, druggists. If ordered by mail, \$1.25 postpaid for large size; 65¢ for medium size.

MORE MONEY from VEAL CALVES

MANY dairymen sell bob calves as quickly as possible for what they will bring, yet in the Northeast a million calves a year bring from \$3,000,000 to \$5,000,000. It could be more! How do you handle your veal calves?

Tom McKeary of Marilla, Erie County, New York, says: "I believe if all dairymen would keep the calves they sell until they are four weeks old, thereby keeping that much milk off the market, that dairy income would not be lessened and that the market would be stabilized both for good veal and for milk. I keep my veal calves until they are four weeks old. I believe that calves for veal should not be slaughtered at a younger age. I know that at times the milk would bring more than the calves, but in the long run I get just as good returns and am better satisfied. Sometimes I sell veal calves direct to retailers, and at other times I send them to the East Buffalo Live Stock Yards."

Another modest western New York dairyman, to whom we will refer as F. J., says: "I keep four cows and raise veal calves the year around. A calf weighing from 140 to 150 lbs., if finished, will bring top prices. Marketing them at that age pays better than feeding larger calves that take a lot more milk. I like to start with Holstein or Guernsey calves, preferably Holsteins, that weigh from 80 to 100 lbs. I would rather keep a calf three weeks before sending it to market than sell at a younger age."

"Doc" Roberts, whose items you will find in each issue of *American Agriculturist* under the head "Down the Alley," says: "I think the question of raising veal calves is very important, both from the milk and the veal standpoints. If all dairymen would keep their calves until they weigh from 140 to 210 lbs., it is my honest belief that the income from milk would be increased by thousands of dollars every year."

"Other men differ, one saying that he has to furnish a certain amount of milk on contract, while another says it ruins his cows. There is another argument worth considering. Some people say that keeping calves longer and throwing so much more veal on the market would break the market. I believe, on the other hand, that real veal, from good, fat, milk-fed calves, would increase the demand more than enough to offset the increase in weight."

Methods of handling and disposing of veal calves differ by areas and by breeds. In general, specialized dairy farms, particularly in areas close to market, sell these calves as quickly as possible, some going so far as to kill them and sell the hides. On the other hand, an occasional man with a few cows, who either has no satisfactory market for his milk or whose barn equipment will not pass inspection, will buy day-old calves, feed them for several weeks, and sell them.

Many dairymen believe that keeping more calves until they are three or four weeks old can go a long way toward solving the surplus milk problem, and that a steady supply of such calves on the market would do much to increase veal consumption.

In New York State, up to July 1, 1933, anyone who killed and sold for meat a veal calf under 3 weeks old broke the law. The law was changed in 1933, specifying that veal calves less than 3 weeks old, butchered and sold for meat, must be plainly tagged as "baby veal," that retail stores selling such veal also have it marked,

and that restaurants serving it do likewise.

The dairyman who wants to sell calves as soon as he can after they are born has several outlets. In the first place, he can sell them either alive or dressed. They can be sold either to the man who wants to fatten them, or can be shipped to Buffalo or Jersey City. Some years ago, these two markets handled about fifty per cent of the veal calves sold on New York farms, but in recent years this figure has declined about eight per

Attention, Dairymen!

(Continued from Page 3)

evidence furnished by dairymen and their organizations, evidence clearly proving that dairymen are entitled to better prices for their milk. We are moved to ask if the fine hand of Mayor LaGuardia is not mixed up in this decision. Is he trying to tell dairymen of this milk shed, on one hand, that he wants them to have a living price for milk, and on the other hand is he bringing his influence to bear in Washington to get milk prices down so that he can tell consumers what a fine Mayor he is? Is it a case of the right hand not knowing what the left hand doeth?

It is strange also that so many of the proposals in the amendments proposed by the Department of Agriculture, particularly those which reduce the support for cooperatives, should be in line with proposals made by milk dealers at the milk hearings.

There has been a sincere desire on the part of northeastern dairymen to cooperate with the Department of Agriculture officials both in Washington and in Albany. Dairymen have and continue to get splendid cooperation from Commissioner Noyes of New York State Department of Agriculture and Markets, and his whole Department, in helping to stabilize milk markets, and until recently cooperation from the Washington men also has been good. It seems to us now, however, that Washington officials are making a very grave mistake in taking steps which if persisted in will surely nullify the good relationships which have been gradually established between dairymen and officials of the Department of Agriculture.

In this statement we are simply trying to put the facts before you. The decision as to how you will vote on these amendments must, of course, be yours. We will state our opinion, which has been checked with many cooperative leaders, but you must take it simply as an opinion. It is this:

We feel that dairymen are much better off under the present marketing Agreement, if it is continued in operation, than they would be if the Department's amendments are accepted. But if the Department carries out its threat to remove the Agreement entirely unless dairymen vote the way the Department tells

cent, the largest decline occurring in Jersey City. The fact that young calves, commonly called "bob" veal, shrink heavily when shipped alive has encouraged the practice of dressing them in the country.

New York City health requirements demand that certain requirements be met, including the leaving of certain vital organs for inspection purposes. These country dressed veal calves usually have the hides on with the heads off. Calves which come into the New York City market must be inspected either by New York City officials or by officials of the State Department of Agriculture. All cattle that cross state lines must be inspected by federal inspectors, except those dressed and shipped by farmers, in which case they are inspected by city inspectors.

them to, they may be worse off at least temporarily.

American Agriculturist has always felt that too much leaning on government leads to trouble. If dairymen would unite even more completely than they have, and through their cooperative organizations work together on a long-time permanent basis, they would be much better off than they ever can be with too much government help. There is the possibility, therefore, that this government threat may unite the dairy farmers, strengthen their courage, and enable their cooperatives to do their own milk marketing. However, even if this is possible, there probably would be a bad temporary period of adjustment. And so again we say, the decision must be yours.

When you receive the ballots for voting on the amendments, it is your privilege to do one of three things:

1. You can vote YES.
2. You can vote NO.
3. You can return the ballot either with or without voting and express your emphatic disapproval of the way the Department of Agriculture has handled this matter. But, in any case, express yourself and return your ballot.

Farm Inventory Week, January 6-11

Here are five good reasons for taking a farm inventory:

1. To find your net worth.
2. To find which way you are going financially and how fast.
3. To provide a list of property for use in case of fire.
4. To enable you to make out a credit statement.
5. To put your farm on a business basis.

The New York State College of Agriculture has recently published a new farm inventory and credit statement book called "Farm Inventory for Five Years." This book contains simple directions for taking a farm inventory and space for recording inventories for five years, as well as copies of the new farm credit statement prepared by the Agricultural Committee of the New York State Bankers Association and the Federal Reserve Bank of New York. Copies of "Farm Inventories for Five Years" are sold at the actual cost of printing, which is 10c per copy. They are available at the office of county agricultural agents, and the College of Agriculture, Ithaca, N. Y.

THE LEAGUE STANDS FOR THE AMERICAN WAY

"AMERICA IS THE LAND OF OPPORTUNITY"

CLOSE by the old Iroquois trails which marauding Indians used to descend upon the Wyoming Valley — and which General Sullivan's converging soldiers used to make their first attack on the Indian Country — lives Anthony Stempeck, League member of Blossburg, Pa.

"I came to America, the land of opportunity, 43 years ago," says Mr. Stempeck. "I worked in the coal mines, and 14 years ago I bought a farm. It has been hard work at times, but I do not want to go back to Austria."

"My seven daughters and four sons have all been well educated in American schools. They would not have been able to secure such an education in the old country. And I would not have had the help of such an organization as the Dairy-men's League. America is truly a land of opportunity."

THE HALF-BREED TIGER WOMAN OF THE WYOMING VALLEY

THE second anniversary of Independence Day was the most dismal Fourth of July America ever lived through. Down in Wyoming Valley in Pennsylvania, settlers were quarreling among themselves, forgetting their common danger. Suddenly, on the night of July 3, 1778, warwhoops filled the air, blazing torches flamed in log cabins, and tomahawks struck murderously. One hundred fleeing women and children died of exhaustion in a swamp. Queen Esther, an Onondaga halfbreed, supposed to be the granddaughter of the great Frontenac, screamed a death-song: "Yankee blood to avenge the blood of my son," she cried. And dancing gloatingly around a circle of sixteen captives, she chopped them down one at a time. The nation shuddered in horror. General Washington ordered General Sullivan to crush once and for all time the Indians and Niagara Tories—a mission of ruthless severity, said to be second only to Saratoga and Yorktown in Revolutionary War importance.

The history of the world is filled with instances where disunity has brought disaster to people. And not always by the torch or sword either. The farmers of the metropolitan milk shed were practically enslaved to economic masters because for a long time, these farmers quarreled among themselves, instead of uniting to crush their oppressors.

And for more than two decades, leaders and members of the Dairy-men's League—inspired by the same practical wisdom that caused General Washington to order the advance on the Indian country—urged their fellow farmers to unite against the common foe.

The advice was heeded at last when the Rogers-Allen law and the Federal and State Marketing Orders made it possible for all farmers to unite in a great and powerful Bargaining Agency . . . an Agency capable of demanding

its rights and of enforcing the bargaining privileges granted to it, because it has the combined strength of all farmers behind it.

And because of this strength—because of the work done by the Dairy-men's League and their associated cooperatives in the Metropolitan Milk Producers Bargaining Agency, dairy farmers are today enjoying stable markets, guaranteed payments and are moving toward "a living price" for their milk.

As a result of this cooperative effort and the State and Federal Orders, all dairy farmers have received an increased price for their November milk.

These benefits are definite proof that the long term policies of the Dairy-men's League—particularly control of the surplus — are producing measurable worthwhile results.

New England Turns to BARBECUED CHICKEN

By G. T. KLEIN,
Massachusetts College of Agriculture.

BARBECUED chicken has been given a place of prominence in New England. Along with the clam bake, the boiled dinner and Boston baked beans, it has been accepted as a favorite on the bill of fare. The firemen at their annual picnic, the Masons, the Farm Bureau and the poultry associations have put an "okey" on it and along New England highways the number of barbecue signs makes one think that he might be driving through Dixie.

My first introduction to it was as a small boy when a relative returned from Texas filled with enthusiasm for this Southern delicacy. At a family picnic, I learned something of the art. With me it made such a hit that since that time I have praised its merits to my friends. There has never been a regret, for everywhere it has been accepted with enthusiasm and praise.

For the family picnic there are charcoal broilers available that quickly barbecue the chicken on the two sides at the same time. It is less than a 20 minute job and three halves are cooked at one time in the large grill that is a part of this equipment. Salt is sprinkled on the chicken when the barbecuing starts and it improves the flavor to add more just before the cooking is complete.

For the larger group, a barbecuing pit is better suited for the job. This pit is about three feet wide and it varies in length according to the number of chickens that are to be cooked. The depth of the pit depends upon the kind of fuel used for the fire. If coals from the burning of wood are to be used, the pit should be about 15 inches deep. For charcoal, it is about the same.

After the pit has been dug and the fire started, the chickens are barbecued on poultry netting. The best wire is the 16 gauge, 1½ inch mesh hex wire that commonly sells under the name of "fox wire". The weight is carried on iron pipes laid across the pit and it is kept tight with iron stakes driven in the ground on the two ends and the sides of the wire. The wires should be adjustable in height from the fire because it is very difficult to gauge the amount of heat and it is important to be able to raise or lower the wire to get the right amount of cooking. This can usually be done by putting stones under the pipes.

When wood is used for the heat, the fire must be started several hours before hand. It is not safe to start broiling until there are at least four inches of coals. If a supply of charcoal is at

hand, part wood and part charcoal makes a good combination. The charcoal should not be added until one is ready to start the broiling for it burns up quickly. Charcoal may be used entirely and started with paper, kindling and kerosene.

A chicken that weighs about 2½ pounds is the best weight for barbecuing. It is split by removing the back bone and breast bone and of course the neck, making both pieces exactly the same size. The broiler is split by cutting along the back on either side of

Broilers halved and ready for barbecuing.

the bone. The neck, crop, lungs and complete intestines may be removed after the carcass has been laid open. By making a cut on either side of the breast bone near the front of it, this also can be completely removed. The bird is then cut in two pieces exactly the same size by cutting through the breast meat.

There are many foods that can be served with barbecued chicken. As most of our picnics are held during vegetable season, we use tomatoes, slaw, corn and usually potato chips, rolls, butter and ice cream and coffee.

The barbecue has commercial possibilities. They are getting to be regular events on Sundays at some of the poultry farms during the summer. Those who specialize in them are frequently hired by groups to put on barbecues. The promotion of them is another way of increasing the consumption of poultry meat to the betterment of the poultry industry.

NEARBY MARKETS for NEARBY POULTRYMEN

Mr. Perry, as you can see, is handy with tools and when it comes to building a chicken house he does his own work.

New Hampshire Poultryman Builds New Henhouse

TWELVE years ago A. B. Perry of West Swanzey, New Hampshire, started in the chicken business with 250 hens. Gradually the business has been expanded until he has 1800 laying hens. This past summer he and his son built an addition to the original henhouse, planning to winter 2400 layers. A three story brooder house will hold 3000 chickens. Coal burning brooders will be used on the first floor and electric hovers in the others. His breeding flock is Rhode Island Reds but he grows some cross-breds for capons.

The farm area is 100 acres and in addition to his hens, he grows about 300 bushels of potatoes a year and keeps a few cows. To take care of this work he keeps two men all the time with some occasional extra help.

Mr. Perry sends about 10 cases of eggs a week to a chain store in Fitchburg and ships the balance of his production to Boston.

How I Retail Eggs

Selling eggs at retail to local customers in a nearby town has been generally satisfactory. I furnish clean eggs and clean containers. I know I shouldn't care to have a box of eggs set on my table that perhaps was a trash container in someone else's home. Anyone who handles eggs must know that to place the small ends down gives a much better appearance. Boxes fill-

"Well, I guess she doesn't want any soap after all."

ed with eggs of uniform color and size are more attractive than mixed ones.

If you want new customers, just mention the fact to your regular customers. Choosing the better homes in town when starting in results in customers whose first concern is fresh eggs and second the price. Generally they have the cash or just as good. We always retail at top price.

Another important thing is to be as regular as possible in delivering—the same hour as well as the same day. Clean out all eggs frequently. Restaurants and eating houses can generally handle what eggs are left after finishing the route.—Mrs. Frank Barrett, Ballston Spa, N. Y.

New England Poultry Notes

VERMONT

Continued interest by poultrymen and other farm groups in establishment of a poultry department at University of Vermont and State Agricultural College seems likely to result in request coming again before General Assembly. It was one of proposals for legislative action endorsed by State

Homer Huntington, former Executive Manager of the New England Fresh Egg Institute, who now heads the work of the recently organized National Poultry and Egg Board. His job will be to publicize eggs in every possible way and thereby increase their consumption. Northeastern poultrymen should be proud that a man from this area was chosen for this important work.

Farm Bureau in recent annual meeting. Though bill providing for such a department was lost at last session, growing importance of poultry business in Vermont, together with almost total lack of facilities for poultry program in college curriculum, should make strong case for new proposal.—Harold L. Bailey.

NEW HAMPSHIRE

Poultry School—Pretty nearly the whole range of poultry problems was taken up by some 200 growers at Manchester at the Eighth Annual Poultry Breeders School, staged by the N. H. Poultry Growers Ass'n, in cooperation with the N. H. Extension Service. Andrew Christie of Kingston, First Vice-President of the recently formed Poultry and Egg National Board, hit upon a popular thought when he urged the growers to "recover a little corner in the human stomach that in days gone by used to be reserved for eggs." Organized attention should turn from production of eggs to their marketing, he said.

Hatching eggs to be used for the broiler business was encouraged, however, by Harry H. Rieck of Maryland,

Here is a step-saver on the Chamberlain Poultry Farm of West Brattleboro, Vermont. This carrier runs on a track which goes the entire length of the poultry house. The platform will carry buckets of feed which can be weighed with handy scales, and on the return trip can be loaded with buckets of eggs.

one of the first in the Maryland broiler business to use the New Hampshire crossed with the Barred Rock. The broiler business is on the increase, he indicated, and the growers of New Hampshire should profit accordingly.

—Alfred L. French.

MASSACHUSETTS

Egg Show Prizes—Classes for eggs at Massachusetts Egg Show at Union Agricultural Meeting in Worcester, January 8, 9, 10, will be divided into the following groups: (1) Producers; (2) Cooperative Egg Auctions; (3) Vocational Agricultural and 4-H Clubs; (4) Commercial; (5) Worcester Retail Stores; (6) Worcester Window and Counter Displays; (7) Consumers.

Prizes for single dozen entries are: first, \$3.00; second, \$2.00; third, fourth, and fifth, \$1.00 each. Prizes in cooperative and commercial classes for entries in 6-dozen units are: first, \$5.00; second, \$3.00; third, \$2.00. Awards for food store displays: first, \$15.00; second, \$10.00; third, \$5.00; and the same for counter exhibits. Full details on the show may be had from J. Kroeck, Mass. Department of Agriculture, State House, Boston.

—W. E. Piper.

Old Times on West Durham Mountain

(Continued from Page 6)

salt mackerel—salt mackerel and potatoes—old fat back salt pork. Not quite as varied a diet as we have today.

I have heard my father tell many times of picking up walnuts in the fall and selling them for 50c a bushel to get enough money to buy a pair of leather boots.

It amazes me to think of the changes that have come about in my short span of life. This fall I did some spot-checking or re-checking on the conservation program in nine counties west and north of here. It gave me an opportunity to think, and perhaps dream a little. What a wonderful country this is! I forgot to mention that the West Durham section I spoke of is probably Class 1 or 2 land, and is rapidly going out of agriculture, and rightly so I believe.

May I say that I enjoy the Agriculturist all the way through. It is devoted to the Northeast, which I've decided, after having been in about 35 states, is a pretty good place.—E. A. Newell, New York.

Wanted! Young Men

to become experts in the interesting profession of caring for shade trees

Rapid expansion of the world's largest tree servicing organization is creating openings for permanent positions and opportunities for advancement on merit to men who qualify. Selections now being made. Only sturdy, clean-cut Americans, not afraid of strenuous work need apply. Must be single, between 18 and 26 years of age, free to travel, with good practical education. Must furnish references and pass a rigid physical examination. Write for qualification blank to serve in place of personal interview. Davey Tree Expert Company, 134 City Bank Building, Kent, Ohio

Learn at the leading popular chick sexing school in the East, and Canada. Successful graduates throughout the East and Canada. Names on request. Circular.

Chester Pilch, Feeding Hills, Mass.

Don't wait for colds, roup, and bronchitis to kill YOUR birds and profits. Start NOW to dust your birds with B-K Powder when the first symptoms of these diseases appear. It makes them sneeze and cough, loosens mucus, and helps to relieve congestion and prevent strangulation.

BETTER THAN LIQUID SPRAYS
Poultry experts prefer the DRY DUSTING method of B-K; makes mass application easy; avoids possible excessive moisture risk from liquid sprays in cold weather.

ADD B-K TO BIRDS' DRINKING WATER
One sick bird can endanger your entire flock. Add B-K Powder to flock's water daily. Use B-K Powder frequently, according to directions, in coops and brooding houses to promote higher sanitation and to aid in preventing spread of diseases.

American Agriculturist, Box

By J. F. (DOC.) ROBERTS

AFTER ENJOYING two Thanksgiving Days in two separate weeks, one in New York State and one in Vermont, am still wondering whether the true values of this great day are doubled or cut in half.

On the trip on ice and snow through New York State and into Vermont, I saw many horses out in the open. When the kindly Mrs. R. saw the first of them, not far from Buffalo, she was all sympathy; so I told her to watch closely and if she saw any that didn't look happy, round and contented, to point them out, and we would stop and inquire. We didn't need to stop anywhere. So again, give your animals fresh air, exercise and a dry, sheltered place to lie down, and you are kinder to them than when they are tied up in some sultry, close, ammoniated barn.

Another thing that impressed me was the apparent busyness in and around the small towns; and then the more I heard and saw, the more impressed I became with the prospective future of these towns. Our cities have become so highly organized and controlled, through politics, taxes, big business, chain stores, labor unions, etc., that the average individual and the average business man, in trying to make a living, are completely surrounded by a set of conditions over which they have no control. Therefore the trend, as I see it, is very definitely back to the small towns. Small business, small manufacturing, even small branches of large businesses, seem to be headed toward these towns. If this is true, as a rural community has more and more to offer, so the agriculture of that community becomes improved and farm diversification becomes more and more important.

The importance of farm diversification has probably never been so severely impressed upon us as this year because of the almost total failure of cash crops in central and western New York State. Have had many men tell me that their little livestock operations this fall have returned them more money than all their cash crops. With more livestock on feed in the Northeast than for a number of years, I hope that this loss can be overcome. Prospectively, all livestock will be good property before spring.

A few years ago, we were all complaining about the way livestock was doing through that winter. This seems to be one of those years when all livestock is doing well. I wonder if comparatively cheap grain and lots of hay haven't more to do with this condition than any other factors. Plenty of good feed makes plenty of good livestock in any year, on any farm.

What to do with livestock that has become crippled on the farm is often a very important question. In most cases, it will not bring as much on the market as it really should. This is because

Here is a picture of the champion lifetime producer of St. Lawrence County. This registered Holstein-Friesian cow, Leafy Lawn Milly, Abbeckerk, No. 1230737, has just been awarded an honorary certificate of production by the New York Holstein-Friesian Association, crediting her with a ten years and four months record of 175,535 lbs. of milk and 5,789.7 lbs. of butterfat.

This cow was bred and reared by B. Morrison of Leafy Lawn Stock Farm, Rensselaer Falls, New York. She is nearly thirteen years old, and is still producing well. Her three best years of production were at five, six and seven years of age, when she produced 22,612 lbs. of milk, 764 lbs. of butterfat; 23,180 lbs. of milk, 797.8 lbs. of butterfat; and 21,289 lbs. of milk, 706 lbs. of butterfat respectively. She has produced ten living calves, three of which are in the herd at Leafy Lawn Stock Farm. She also has a granddaughter, Leafy Lawn Ormsby Pride, credited with 20,705 lbs. of milk and 731.7 lbs. of fat, Class B, at the age of three years and eight months.

stock killed in packing houses is subject to Government inspection, and these inspectors are very apt to throw out anything that seems to them sick or crippled. Therefore, the buyer must protect himself and purchase with that in mind. If such animals can be economically converted into meat at home, that is what should be done.

Growing Up in the Horse and Buggy Days

(Continued from Page 5)

ram? Many a farm boy has been rolled end over end by a swift blow from behind just before reaching the safety of the fence, and we were always just a little wary about crossing fields where sheep were grazing. Our neighbor, George, had an ugly ram, an old, cautious, wise patriarch who was respect-

ed by all the animals on the farm. The farm was across the road from our school and I can still see Ralph, the smart-aleck pupil, visiting us from the school to the north, rolling over and over on the ground after venturing too near the old ram in an attempt to stir him up. The old ram stirred all right, but not until his judgment told him that Ralph had ventured well within the limits of the ram's rope. Then a rush, a thunderbolt through the air, a boy rolling on the ground with the expectation of sitting lightly on a chair for a week.

Well, the winter days were sometimes long and boresome. Old Ram was in fine spirit; the owner and his men treated him with great respect, rarely venturing into the pen. About the middle of a certain forenoon, Orlando strolled into the basement barn for a visit. In the course of the joking, someone spoke of the bad temper of the old Ram. Said Orlando, "Want to let him out and see me tame him?" Naturally, the men thought it would be fun to see Orlando's soft-looking, fat body rolling end over end, so the offer was immediately accepted. Orlando placed himself in the center of the wide driveway through the basement, and blatted like a sheep. Old Ram walked daintily out onto the floor, proud, competent, and more than ready. An imitation blat from Orlando provided the proper start, and old Ram started on a trot, then faster and faster, until he left the floor in one final jump sighted for Orlando's middle. But at just that moment, quick as a cat, and light as a feather, Orlando leaped into the air and came down with his two hands on old Ram's head, jamming his nose into the stable floor. Old Ram was shaken but not conquered. It was hard to understand, but backing off to judge the situation he again plunged to the attack. Once more that fat man wasn't there but old Ram's nose was pushed into the floor until it bled. The men who had come to laugh stood in wonderment at the exact timing of each leap by Orlando and the accurate landing on old Ram's head. One more attack and Ram had had enough. With an unconquered but puzzled blat, he turned and trotted to the gate of his pen.

Some day I'll tell you about Orlando's experiences as a bull fighter.

(To be continued)

The judging team representing New York State at the 13th Annual Convention of Future Farmers of America at Kansas City took first in judging Guernseys. Seated, from left to right, are Leonard Palmer, coach of the team who teaches agriculture in Corning, and Arthur Clemons of Holland Patent. Standing are Leo Lindsey of Sandy Creek, and Philip Ostrander of Wallkill.

In individual scoring, Philip was 11th for all breeds. Arthur was first in judging Guernseys and Philip fourth. Another boy from the East with a good score was Victor Wasser of Stoneboro, Pa., who stood seventh in judging all breeds.

A DEPENDABLE UDDER OINTMENT

Soft, pliable and healthy udder and teats are too important to permit the use of just any ointment. Bag Balm is heavy in refined LANOLIN, distilled pine oils and a potent antiseptic ingredient. It costs more to make, yet it actually sells for less than many "salves" made of far cheaper ingredients. TEN FULL OUNCES for only 60¢. Beware of similar names and similar packages; only BAG BALM can give Bag Balm results. At feed dealers, general stores, druggists. *Treatise on Cow Ailments sent free on request.*

The Home Takes On a Holiday Air

By RUBY PRICE WEEKS

Nothing seems more satisfactory for use over a fireplace than evergreens.

The centerpiece for the Christmas dinner table is almost as important as the dinner itself. The charming one pictured here is not hard to arrange, and is described in detail in Mrs. Weeks' article on this page.

LIVING in a section of the country where evergreens are plentiful makes decorating for Christmas very inexpensive and fairly simple. And how much more beautiful than something artificial are sprays and cones which may be found perhaps in our own woods and used in so many ways.

Different ideas always add interest, so this year instead of a wreath on the front door, why not use sprays of evergreen and cones (wired together and tied with narrow bright red ribbon) at the top of the casings on either side of the door? Then stretch across the doorway—from one spray to the other—a string of sleigh bells? They will be above one's head, yet within reach if one cares to ring them.

Nothing seems more satisfactory for use over a fireplace at Christmas, than evergreens. Pine is particularly suited since it lasts well without falling off. With cones piled in the center, and back of them three low candle sticks with tall red candles—the middle one higher than the others—the result will be pleasing. The light from candles, combined with that of a cheerful fire on the hearth, surely creates a festive atmosphere in any home. This same arrangement could be made on book shelves if your room lacks a fireplace. Or sprays may be used advantageously over lights or pictures, while other sprays could be in those stone jars used by our grandmothers. Small ones could be set on tables, and the tall, larger ones on the floor.

Most homes have a regular place for the Christmas tree each year and generally use the same lights and other decorations which are carefully preserved from one season to the next. Have you ever fastened small pieces of broken mirror to the branches, in places where the lights will be reflected to best advantage? This may be done by pasting cloth suspension-rings to the pieces, then hanging them on the tree by means of hooks used for holding tree ornaments. If no broken mirror is available, small ones which come in purses may be substituted and later used again.

Christmas dinner being one of the highlights of the season, much thought will not only be given to the food but also to the table appointments. For this meal our most choice glass and silver are always brought forth along with the best tablecloth and napkins. Tall red candles in low holders add much to the holiday setting regardless of the time of day and whether or not the weather is cloudy! Should your candle sticks be tall, use short candles in them.

A centerpiece of equal interest to young and old is always reindeer driven by Santa Claus lad-

en with gifts. On the table pictured on this page, old Saint Nick is sitting atop a cone-covered log, inside of which are tucked the presents. But any other centerpiece, fully as effective, could easily be made by using reindeer, Santa and sleigh, all to be collected in any Dime store.

Santa Claus heads, really designed to use on a tree, were placed at intervals about the table shown but of course aren't necessary, though youngsters love them. Simple place cards, very easily made, are pictured. They are artificial trees which are sold three on a card for a dime. (Sprays of your own evergreen tied to the card with red ribbon might be even prettier.) Each of the trees was pasted to a plain white card, upon which was written the name of the person to sit there. On the back of each was a conundrum referring to something associated with Christmas dinner, as:

What part of the turkey is a story? Ans. The tail (tale).

What happens when a salesman fat, sits down on some one else's hat? Ans. Squash.

These may be read at any time, though invariably some one will pick up his place card during the meal and discover a quiz on the back. Then the fun will begin with answers pouring in from all directions.

After dessert is finished, the contents of Santa's pack are distributed. Everyone should receive a ten cent present which has been purchased by some one present. Each present should be accompanied by an original four-line verse and wrapped alike in white tissue paper, tied with red ribbon. The chap who is a motor cycle enthusiast may get a motor cycle; the daughter who teaches nursery school may have a tiny doll garbed to represent one of her charges; while the aunt who always forgets to clean her glasses may receive a pair of colored ones (from the dime store) which are brown and won't need to be cleaned. No end of fun will result when these are opened and the verses are read aloud.

Such a gay spirit prevails during the whole season that it's almost with a bit of sadness one packs away the decorations, marking each plainly that it may be easily located when Christmas comes around again.

SMART Mid-Winter Styles . . .

BLACK started strong early in the fall and winter season and still keeps the pace. Now it is set off by touches of white, beading, embroidery, gloves and hats. New tones of brown also have found favor as have delicate, dusty pastels or "pale wools" for wear under winter coats.

WOMAN'S FROCK PATTERN No. 2572 has an air all its own with its curved shoulder yokes, hip slimming skirt and smart three-quarter sleeves. It lends itself well to the sheer wool or heavier crepe types of materials. Furthermore, the pattern is available in sizes 14 to 48. Size 36 requires 3½ yards of 39-inch fabric.

PRINCESS JUMPER PATTERN No.

"I got here first!"

AUNT JANET'S Favorite Recipe

WITH the pumpkin season now on and the nutritionists telling us to use as many yellow and green vegetables as possible, this pumpkin custard will be good for child and adult alike:

Pumpkin Custard

1½ cups sifted pumpkin	½ teaspoon ginger
¾ cup brown sugar	1 teaspoon salt
1 teaspoon cinnamon	2 eggs
	2 cups milk

Steam or bake fresh pumpkin and put it through a sieve, or use canned pumpkin. Then add other ingredients in order given. Turn into buttered baking dishes and cook in moderate oven (325° F.) until a silver knife inserted in the center will come out clean. Do not let the mixture boil as that makes it watery. If oven heat cannot be controlled, set baking dishes in a pan of hot water.

To vary this recipe: 1. Separate egg yolks, beat whites separately and fold into the mixture last. 2. Add ½ cup finely chopped nut meats. 3. Serve with whipped cream and a tart jelly. 4. Cook in pie crust starting with oven at 450° F. for ten minutes, then reduce to 325°.

2519 is a fashion headliner in this season of popular jumper styles. Its sleek princess lines and heart-shaped neckline is extremely flattering. Have a variety of blouses and you will never tire of this costume. Blouse pattern included. Sizes are 12 to 20. Size 16 requires 1½ yards of 39-inch fabric for blouse; 2½ yards 54-inch for jumper.

TO ORDER: Write name, address, pattern size and number clearly and enclose 15c in stamps. Address Pattern Dept., American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our Winter Fashion catalog.

Today in Aunt Janet's Garden

Give or Get Plants

BLOOMING plants seem to breathe the very spirit of Christmas, and nothing is more gratefully received by a true flower lover. Poinsettia, begonia, geranium, impatiens, Jerusalem cherry, cyclamen and flowering bulbs are the usual group to choose from.

Less showy, but more house-hardy plants, are sansevieria, dracena, aspidistra or ferns. They would not give the glowing first impression but would probably be easier to care for afterwards. They stand a lot of heat and the changeable temperature and humidity of the average home far better than blooming plants, each of which has its own peculiar requirements as to amount of sunlight and moisture.

Geraniums and impatiens are the most adaptable ones on the blooming list, as long as they have enough sunlight to keep them blooming (six hours of direct sun every day). As for the other blooming plants, it is probably wise to enjoy them to the full as long as they can be kept blooming,

and then discard them unless you are willing to do what each one needs to have done and that is not always easy.

Poinsettias which are brought into bloom in full light should be placed as near to a well lighted window as possible and an attempt made to keep the temperature around 70° in the daytime and 50-55° at night. Humidity is very important with the poinsettia as with all other plants. Water pans that hang behind the radiators, a trough-like flower stand which holds a layer of gravel and water standing in it, or one of the commercial plant mats which stands in a shallow pan of water—all these devices help supply the

BREAD

By Jessie M. Dowlin.

New-baked bread,
Hot to the hand,
Steams with the fragrant
Yield of the land.

Light with the savor
Of sun and rain,
Full of the sweet
Of wind-clean grain.

New-baked bread,
Fresh from the pan,
Holds earth and life
In its brown-loaved span!

needed humidity. The old-fashioned kitchen with the teakettle steaming all day long has its advantages for supplying plants with moisture even though inconvenient in other ways.

* * *

After the poinsettia has finished blooming, it may be dried off gradually and placed in the cellar but it should not be allowed to become dust-dry. When the tops die they should be cut back to within 6 or 8 inches of the base. About May the plant may be repotted and sunk outdoors in a semi-shaded place, then brought in when frost threatens and nursed back to flourishing condition, full light being necessary.

The cyclamen is difficult even in the greenhouse, but if you want to make a stab at keeping yours this method is suggested. Water it by setting the pot in a pan of water until the moisture is drawn to the surface. It wants plenty of light but no direct sun. 50° is its best temperature. After it has finished blooming, keep the soil fairly moist until new growth begins to show. Then repot into a compost of equal parts of loam, sand and leafmold with a little dried manure.

As for watering houseplants, the soil should be kept just moist. One test is to rap the pot with the knuckles. If it is a hollow sound, water is needed. If a solid sound, no water is required. Overwatering is just as bad as underwatering. Furthermore, good drainage is essential as roots must have air as well as water. Ventilation is also essential because plants require fresh air but resent drafts as much as humans do.

For Joyful Cough Relief, Try This Home Mixture

Saves Good Money. No Cooking.

This splendid recipe is used by millions every year, because it makes such a dependable, effective remedy for coughs due to colds. It's so easy to mix—a child could do it.

From any druggist, get 2½ ounces of Pinex, a compound containing Norway Pine and palatable gualacol, in concentrated form, well-known for its soothing effect on throat and bronchial membranes.

Then make a syrup by stirring two cups of granulated sugar and one cup of water a few moments, until dissolved. It's no trouble at all, and takes but a moment. No cooking needed.

Put the Pinex into a pint bottle and add your syrup. This makes a full pint of cough remedy, very effective and quick-acting, and you get about four times as much for your money. It never spoils, and is very pleasant in taste.

You'll be amazed by the way it takes hold of coughs, giving you quick relief. It loosens the phlegm, soothes the irritated membranes, and helps clear the air passages. Money refunded if it doesn't please you in every way.

Lemon Juice Recipe Checks Rheumatic Pain Quickly

If you suffer from rheumatic or neuritis pain, try this simple inexpensive home recipe. Get a package of Ru-Ex Compound, a two week's supply, mix it with a quart of water, add the juice of 4 lemons. Often within 48 hours—sometimes overnight—splendid results are obtained. If the pains do not quickly leave you, return the empty package and Ru-Ex will cost you nothing to try. It is sold under an absolute money-back guarantee. Ru-Ex Compound is for sale by druggists everywhere.

The School Bus Goes By

By ROMEYN BERRY.

YOU WHO now live in remote places, you who still remain upon the farm but are yourself no longer youthful—what picture flashes on the inward eye when "district school" is spoken?

To me it is a small rectangular structure, red or white, with snow about it all around. There is a thin pencil of blue smoke rising from its single chimney, and here at Christmas time there are wreaths of ground pine in the windows. The bell is ringing, and toward it, up and down the road and across the fields, groups of children are plowing their way with red tippits and redder noses; the big ones in front breaking the path, the little shavers following behind and striving to keep up for their very lives.

Try to hold that picture in your mind, for it's fading fast and won't last long. The school bus goes by now, and all that remains of the district school up where the road turns are the old pump and the trees which once shaded games of prisoner's base at recess time.

Nothing else these fifty years has changed life on the farm quite so much as the disappearance of the little school at the crossroads and the arrival of the school bus. You may think the road in front of your house has been paved for your convenience, that the snow plow goes through before daylight to the end that you may drive to town without putting on chains, but you're wrong. It's all been done so these farm youngsters may grow up to be informed citizens of the world and not just little numbskulls.

If you don't believe it, see what happens if we get another big snow during this Christmas vacation when the school bus isn't running. The town will plow you out, of course, but the work will proceed in a dignified and leisurely manner, with a certain amount of gossiping going on between the crew and the folks along the road; none of this roaring haste at 2:00 o'clock in the morning that goes with drifting snow at a time when the school bus is operating. One suspects that the snowplow gang have children of their own and will go to any lengths to clear the path so that the little So-and-Sos won't have to be around the house all day and under foot.

The school bus has slipped in quietly, has taken a place in our lives the little school at the crossroads never filled—except in our romantic memories. Take that last big snow! For two days no school bus passed our door, and you've no idea how empty and lonely the drifting fields and fences seemed without it. Twice a day it goes by normally, and you can set your watch by it. When it doesn't come, there is a void that day as ominous as if the sun had failed to rise and it had kept on being night. Any day the school bus doesn't go by, you know without being told that society and government have bogged down and that you must meet primitive conditions on your own resources.

Tuesday and Wednesday there was no school on account of the storm, and nothing much went by our place save the vast engines now and then with which the Town manages to keep the roads open and the taxes up. And then Thursday morning, when we were out in our caps, tippits, boots and mittens opening once more the narrow path through the drift from the kitchen to the barn, something important happened. First thing you know, there was Elmer dancing up and down as he waved the big shovel, without which no

chambermaid can function in a cow-barn. There was I, shouting as for a touchdown and brandishing the scoop with which one shovels wheat. And all it was that caused so much excitement was the school bus getting through again after three days of clogging storm.

That's all it was to you, perhaps, and it was less than that to the apathetic little passengers in the bus; but to us it was the symbol of a re-awakening quite as stirring as the first robin, the first spear head of the north-bound geese, the first pink arbutus in the snow. To us it meant that while the battle continued, we were not alone in our struggle with the elements, that society was reasserting itself, and government was functioning again. There had been no thought of surrender at any moment, but I think we'd all had enough of rugged individualism and were comforted to see the state, the county, the town and the school district all forming on our flanks to sustain us in our primitive struggle with the winter.

The school bus has its social side as well as its educational features. They tell me children like to go to school nowadays. They like the ride in the bus, anyway, along with the other youngsters. And it's a long ride for the first boy or girl the bus picks up in the morning, the last one it sets down in the afternoon, winding in and out among the town roads, with a vast amount of opportunity for visiting with one's fellow citizens and for observing the life of the community.

We've always farmed with hands and

horses on our place, and every time the school bus goes by its precious, adolescent freight advise us in a unanimous, derisive chant to "git a tractor." This may or may not be sound advice in our case, but it shows which way the wind is blowing and what public opinion in our town is likely to be 15 years from now. Any Supervisor or Selectman who desires to remain in public office will do well to ponder any unanimous opinion coming from the contents of the school bus. For all of those passengers will be voting 15 years from now, and it rather looks as if they'd all be voting the same way.

I suppose it did something to the character of a little boy when you sent him off all alone to the district school, facing a mile walk against the drifting snow, sustained by nothing more than a stomach tight with buckwheat cakes and sausages and the prospect of a refueling with pork and beans at dinner time. It tended to make him a courageous, independent individual, capable of breaking his own path and getting home eventually under his own steam.

But different times make different customs, and there can be no doubt that the school bus is here to stay, nor that the district school is bound to go the way of the beaver, the panther, and the passenger pigeon. One may regret the passing of the latter while observing compensation in the abundant advantages of the farmer. The bus may not train sturdy pioneers, but it is throwing all those children together for hours every day under conditions calculated to turn them into a social unit capable of working together to a common end; into little cooperators whose combined strength will do more toward making ours a better countryside than the pioneer farmer stock ever dreamed of. The last century called for the individual virtues of the district school; this next one seems more likely to need the rural cooperation of the school bus.

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Christmas, 1940

Quietly the sun sets.

Peacefully a star
Gleams above the hilltop
Where the fir trees are.

Sounds of children's laughter,
Candles brave and bright,
Reach across the snow path
This Christmas night.

May the Lord of Christmas
Across the sea look down
To comfort harassed mothers
In every blackened town.

Before another Christmas,
Make this terror cease.
Let their shining candles
Greet the Prince of Peace.

—Dorothy P. Huden,
Bradford, Vermont.

of them said. "I'll bet those scamps have been in the schoolhouse!"

They stopped, then approached the door.

In great trepidation again, Addison hurriedly got on top of one of the benches, and reaching a little scuttle in the low ceiling of the room, pushed it open and raised himself by main strength through the hole. In fact, he had but barely time to draw himself up, when the searchers entered noisily, discovered the baskets and became much excited again. Addison could hear all they said very plainly, as they lighted matches at the stove and examined the baskets, then looked in the woodshed and in the dark corners of the room.

"We've scared 'em off," said Rufus, "but they will be back after their baskets before morning. Luke, you put back and get Merrick and the others. We'll stay here and watch."

Meantime, Willis and I turned the team and drove slowly out of the logging-road to the highway. After waiting a while, Willis went back on foot along the road to the bend, and while watching there saw Merrick and four or five others coming, at a run, toward the schoolhouse. Thinking that another pursuit was being made, he ran to the pung and we drove off as fast as we could. What had become of Addison we had little idea; but we surmised that he might have escaped by what was called the "north road," leading around from "Baghdad" to our home district.

He was not at home, however, when we arrived; nor did he appear next morning. I was obliged to explain his absence to our folks as best I could. We felt considerable anxiety concerning him, but were somewhat at a loss what to do.

In point of fact he was a close prisoner in the little dark loft, over the Baghdad schoolroom. For so confident were those boys that we would return to get our baskets, Rufus, Merrick, Luke and two others kindled a fire in the stove and kept watch from the window. Addison had the pleasure of hearing them describe what they meant to do, if they caught us.

After it grew light, all save Luke went home to get breakfast. He declared that he would stay, keep the fire and sweep the schoolroom—it being his turn to do so—and that Rufus

Addison's Christmas Misadventure PART II.

After a glance to make sure that it was not Willis and I, Addison drew back into the little shed or portico of the schoolhouse and gently closed the outer door. He then tip-toed into the schoolroom and peeped out at the window. Generally Addison was a good

strategist; but fortune was against him that night. The portico door, which he had gently closed, swung back, partly open of itself. As Rufus and the other boys were passing, they noticed that it was ajar.

"How came that door open?" one

The Song of the Lazy Farmer

THIS YEAR ain't been so very hot, and '41, as like as not, might be much better, so we'll shout and help to kick the old year out. For 1940, sad and glum, came in with slaughter and with bomb, it's been a year of fight and strife, so let's erase it from our life and start anew in '41, in hopes that ere the year is done the world will be a saner place, where honest men can show their face, where we can turn from war to peace, and from our fears find some release. The common folks in ev'ry land don't want to kill each other, and they'll cheer the day when rulers will make peace, and folks can have the thrill of peace and git back to their job instead of always raisin' hob.

There's many things us mortals need instead of battle-ships; indeed, we wouldn't need them things at all if folks would work instead of brawl. The cost of implements of war would buy us things we've hankered for, we all could live like kings if we would just shake hands in peace, by gee. So let us hail the glad New Year and usher it in with a cheer, and let's resolve to do our part to put good will in ev'ry heart and pull the old world out the mire with friendliness replacing ire. If that should come in '41, we'll say when this new year is done it was the best we ever knew, and we will miss it when it's thru.

might bring him something to eat, at school time.

Addison now had thoughts of coming down from the loft, overpowering Luke and escaping; and he was afterwards exceedingly sorry that he had not done so; but he disliked to betray his identity and still hoped to escape, somehow, unrecognized.

After a time the scholars assembled, and when the girls began to find the stockings of confectionery under their desks, and the boys to read the advice given them in the old books, there was a general pow-wow—all of which Addison heard.

The girls openly praised "St. Nick" whom some of them declared they knew was Addison. The Thomas girls told what they had found in their fireplace; and there were lively comments all around, till the teacher entered and school began.

All this time Addison had scarcely dared move. He lay on two boards which were placed across the scantlings to which the laths and plaster of the ceiling were affixed. It grew warm, too; for they had a hot fire in the stove below. The heat made him drowsy in spite of himself; it was dark up there, and he had been astir all night. He began to catch cat naps; and at length, in one of these which may have lasted some minutes, he rolled uneasily over, off the narrow boards, jumped to recover himself and actually thrust one foot, boot and all, down through the plaster!

Instantly there was a scream from the girls' seats!—followed by a whoop from the boys! Schoolmaster Wilson stood staring, amazed, then exclaimed, "Whoever is up there, come down, instantly!"

Dreadfully mortified and broad awake enough now, Addison for a moment was inclined to defy them all and stand a siege; for he fancied he could hold the loft against all comers. But reflecting that in the end he would inevitably be forced to surrender, he crept to the scuttle.

"Come down instantly!" the master again called out.

Addison raised the scuttle and (one can imagine with what a chapfallen smile) showed his face.

A roar of recognition, and an outburst of ironical laughter and jeers from the boys greeted him.

He was in for it now! Slowly he lowered himself to the desk below and then to the floor and, not forgetting his manners, made his best bow!

Another shout of laughter arose!

"Well, sir, how came you up there?" cried the master.

"Mr. Wilson," replied Ad, "that is quite a long story. But I meant no harm. I did not get up there willingly. I did not mean to make a disturbance."

"But you have made one!" exclaimed the master. "I think we shall have to keep hold of you a while. You have done us some damage."

"I will gladly pay for the hole I have made in the plaster," replied Addison humbly.

"Well, sir, you may take a seat at my desk, till school is dismissed. On second thought, I think you may sit on the desk and face the school. When we have such unusual visitors, we want them where we can all see them!"

This was a humiliation; but Addison was obliged to submit to it, for the master placed himself between him and the outer door. Worse still, although he had slipped out of his St. Nicholas togs before coming down, some of the boys looked up in the loft and drew them out. The master then compelled him to don the whole absurd rig, horse-tail whiskers and all, as he sat there on top of the desk, facing the whole school!

He no doubt suffered agonies of mortification during the next half or three-quarters of an hour. There was

CHRISTMAS JOY

By Julia Lounsbury Wallace.

Christmas holds some joy for every being:

Sweet recollections of departed days,
The bright-eyed zest of ever vibrant childhood,

Or hopefulness at life's new branching ways.

Christmas links us all in one endeavor
That something really lovely we may bring,

Woven of all our joys and all our sorrows,

An offering for the birthday of our King.

one continuous laugh and titter. Study and lessons wholly ceased. At length the master dismissed school for the forenoon and went off to his boarding-place for his dinner, leaving Ad to the tender mercies of all "Baghdad!"

Merrick, Cephas, Rufus, Tim and others at once made at him with doubled fists, promising him a sound

drubbing—for his Christmas advice. But those girls, Myrtle, Edith, Leola and others, fifteen or twenty of them, promptly gathered around him and stoutly declared that their nice, dear "St. Nick" should not be molested! They formed a great ring about him, protected him out of the schoolhouse and escorted him away down the road, through the woods. It is always a good thing to be on the right side of the girls. So at least Addison found it.

Meantime Willis, Thomas and I had been through our own district and raised a party. At noon that day, fourteen of us set off to invade "Baghdad" and rescue our missing man.

We met him on the road, coming home afoot, with the bushel baskets resting on his shoulders, partly over his head; and his face, as he looked out from under them, wore a very sheepish grin.

He would not tell us what had befallen him, but our girls got the whole story from the Thomas girls a week later.

(EDITOR'S NOTE: This is from Chapter 8 of the book entitled "A Great Year of Our Lives at the Old Squire's," by C. A. Stephens.)

Personal Problems

May Have to Compromise

Dear Lucile: I'm a school teacher, living on the farm with my mother, and am engaged to a young neighbor farmer. The understanding was that when we were married he would come to our place, since his brother married last fall and went home to live. Now, however, this brother is leaving, as they did not think he provided well enough for the old folks and they did not like his wife. My fiancé is now talking that we should move in with his folks . . . and I'm against it, for I can't leave Mother alone. Now, his mother is saying that we should part. She is influencing him a lot, for he has broken some dates with me for the first time since we've been going together.

There is a lot of work at his place, his mother isn't well, and I wonder how he would treat me after marriage since he listens to them now, instead of to me. I want us to live here, build a little house for Mother a short distance away and yet be near enough to help his folks to some extent.

What do you think about the case?—
School Teacher.

Your problem is a very difficult one. On the basis of what you have told me, it would almost seem that this young man is listening to his own people too much and is not giving you quite a fair deal. However, there may be conditions which I do not know of that

cause him to have to think along these lines. It may be that he feels he can make a better living by sticking to his own family and, of course, he may not take to the idea of going to your place and sort of teaming up with your mother on the farm, as it would seem that you plan to do.

I think that it should all be settled before any further plans are made and that you would be better satisfied to have a showdown with him about it, each stating your viewpoints very frankly and deciding whether or not to go ahead with plans.

It seems to me that if you truly love each other, that these obstacles can be overcome in a way satisfactory to all concerned . . . that if you think enough of each other you may be able to manage the objections of his family and both of you be willing to make concessions if they appear necessary. I hope that you will be able to work things out happily.

* * *

You Were Too Hasty

Dear Lucile: I was going with a fellow last fall of whom I thought a lot and I think he thought a lot of me, too. A little while after he'd gone with me he showed my best girl friend a ring he'd

gotten for my Christmas present.

He had to work Christmas so he couldn't come down. He came down after Christmas and I was wearing his class ring at the time. He asked me if he could have the ring back for a week or two as he wanted to have a different set put in it. I gave it back, believing him. He made a date for the next Friday night but he never came. I was angry and I wrote to him and told him if I didn't hear from him by that Saturday he didn't have to bother about me any more. He always wrote or called me up before but this time I never heard from him.

Later on I wrote to him again asking him to come so I could talk to him but he never came. This took place in January and since then I haven't seen or heard from him. Is there anything I could possibly do to get him back again?—*Desperate.*

I am somewhat at a loss to know what to suggest to you as a possible cause for the young man in whom you were interested dropping you the way he suddenly did.

However, I am rather of the opinion that it might have been the letter you wrote him saying that he needn't bother about you any more. You were perhaps a bit hasty in this as there might have been some reason why he could not have kept that Friday night date and you may have spoken to him about it before he had a chance to explain or apologize.

Since things have happened as they have I do not know just what I can tell you to do to get this young man's interest back again. You say you have written and that he did not answer your letters and I certainly do not think you should continue writing him under the circumstances. Perhaps you will meet him sometime and he will again evidence interest in you, but I would not depend upon it too much. Interesting yourself in other nice young men who may ask you for dates is the best way to forget him that I can recommend.

Good Books to Read

ROSE GALBRAITH, Grace Livingston Hill. A new book from the pen of Mrs. Hill is always welcome to her many readers, and this one lives up to expectations. It's a colorful, warm-hearted story, with a Scottish atmosphere.—J. B. Lippincott Co., Philadelphia, Pa. \$2.00.

Good Movies to See

THE GREAT DICTATOR. A satire on present-day conditions in Europe. Charlie Chaplin, as a victim of amnesia, escapes from a hospital and attempts to resume his old life as a barber in the Ghetto, only to come face to face with the swift changes of events which brought a dictator into power. By accident he is thrust into the Dictator's place. Supported by Jack Oakie, Paulette Goddard, and Reginald Gardiner.

"WHEREAS, The United States Department of Agriculture is furnishing money for the storage of corn and wheat, and this grain is being stored mainly in the Midwest States, and as the Eastern States are large consumers of this grain,

"BE IT RESOLVED, That the above named Association requests and thinks it advisable and practical to store a sufficient quantity of this grain here in the Northeastern States to take care of any emergency which may arise."

Resolutions like the above sent in by the secretary of the Long Island Poultry Association, Inc., keep pouring in. How about it? Shall Northeastern poultrymen demand some protection of their feed requirements by the United States Department of Agriculture?

* * *

GRASS FOR HENS

As I have previously reported, we seeded a three-acre range last summer with a special grass seeding mixture designed to give us the best possible pasturage for growing pullets. Ladino clover was one of the principal plants in the mixture, and last summer seemed to be a ladino year.

We raised about 1600 crossbred heavies on this range. They did exceedingly well, and despite the fact that they grew out into big heavy pullets, some of which weighed over six pounds when we put them in the laying house, their feed cost was extremely reasonable.

We are now trying to cut our cost of feeding some 2200 layers by using more grass. Each morning we are feeding approximately a bushel of grass silage to each 500 hens, and each afternoon we are feeding a bundle of leafy, green, third-cutting alfalfa hay at the same rate. Jake feeds both the silage and the alfalfa hay simply by scattering it in the litter. The birds eat the silage up clean very quickly. They take longer on the hay, but eventually clean up

all of the leaves; the stems are left to become a part of the litter.

In feeding hay and silage, it is noticeable that the crossbred pullets which were pastured on our special range are much better customers for the silage and the hay than are birds which were hatched much earlier and therefore had little range experience.

In an endeavor to cut the cost of feeding our layers to a minimum, we are this winter using a straight meat scrap laying mash, fortified, of course, with cod liver oil. This mash is made up entirely from our own home-grown grains. It, therefore, is very important to us that the grass silage and the alfalfa hay furnish our birds with the elements which are missing in our mash and which would be present in a more complete mixture, particularly in a mash containing milk.

We may be heading for trouble, but at the moment we are getting satisfactory production and having the lowest laying house mortality in years, while our feed cost is the most reason-

able it ever has been.

A few years ago we switched from cracked corn to whole corn in order to save the cost of cracking. We have never regretted making this economy. Now, if we can substitute our own leafy, green, third-cutting alfalfa hay for the costly alfalfa meal in a laying mash, we may be able to pick up a saving of a few more cents in producing eggs.

SMELLS GOOD

If grass silage, particularly grass silage containing a high percentage of clover and alfalfa, isn't just right, it smells to high heaven. In fact, I have seen the time at SunnYGables when the men who were feeding it hated to go to the house because of the fuss the women-folks made.

As we have gained more experience in making grass silage, we have pretty well eliminated bad odors. We fully expected, however, to run into some this year when because of the expense we abandoned the use of molasses and

phosphoric acid and relied on immature winter grain as the source of the sugars and starches which must be mixed with green legumes if they are to be made into wholesome ensilage.

No bad odors, however, have developed. In fact, I haven't heard a single *phew* by any of the women-folks around the place.

Down Mexico Way

By H. E. BABCOCK, Jr.

December 8, 1940.

THE WEATHER here is as a rule so pleasant that I overlooked entirely the possibility that it could at times be unpleasant. As a result, when I made my forecast of the work that had been done while I was gone, I had not counted on the fact that the terrible ice storm in Texas could have affected Roswell. A wet snow that lasted over night put a stop to all farming activities for nearly a week. Things were only just starting again when I got home.

The eighty-acre wheatland maize field was finished last Monday. When we finished tallying up, we found that it had averaged nearly 71 bushels to the acre, a total of 5,670 bushels. Pete finished picking the number one cotton field at the same time. For the first pick on this 100-acre field, we had 94 bales of cotton. This will probably equal a little more than 500 pounds to the acre, a yield which would not lose us any money. At that we will have another picking which should yield us several hundred pounds more.

In the feedlot, following the snow, we have had a rather trying time in attempting to determine what had happened to our lambs. As many as a hundred would be stiff each morning. They would often have to be helped up, but once standing, they would walk off, a little lame at first but gradually loosening up. After exhausting our own meagre veterinary knowledge of what could be the matter, we called in our veterinarian. He soon admitted that he was stumped, since there were no symptoms whatsoever. The lambs continued to eat whenever they felt like walking to the feeders. We soon learned that the condition existed all over the valley, and that causes had been arrived at by all the feeders. However, there were as many causes as there were feeders. As the ground and air have begun to dry out, the cases are improving and diminishing, which has lead us to the conclusion that our stiff lambs had good old-fashioned rheumatism.

The other day the county agent showed me the figures covering the lamb feeding operations in the valley this winter. In all there are over 150,000 lambs on feed here. Two feeders are feeding over 12,000. However, the majority of the feeders are running from three to five thousand lambs. In addition to these lambs, there are a good number of calves on feed.

Our brood sows are keeping up production schedules in fine shape. At the present time, five sows are raising 33 pigs. We are moving one or two prospects into the waiting room every few days where they are receiving special feed. Our whole hog herd has just been removed from the eighty-acre maize field where they are cleaning up the down heads. The hogs having removed a majority of the grain, we have turned our ewe flock on the stubble to eat the leaves and generally clean up.

On our hundred-acre oat field we now have a steadily growing flock of ewes with baby lambs. The oats, which had been eaten off to the ground by our hospital flock of feeder lambs, have, after two weeks' rest, started to green and are providing excellent feed for the milking ewes.

Kernels, Screenings and Chaff

By H. E. BABCOCK.

THE PHOTOGRAPH: Every little while a reader of this page turns up at SunnYGables and asks for the editor. One of the penalties of having opinions and airing them is a certain loss of popularity with people who disagree. At such times it is always comforting for the editor of "Kernels, Screenings, and Chaff" to return to SunnYGables and the welcome of its herds and flocks. In the picture above Joe welcomes him home.

Brittle Promises

"Demand Cash" Says Protective Service Bureau

"I sold an elm tree to the — Nursery for \$15.00. After they had the tree loaded on the truck, they told me they had to go to the bank after some money to pay for it, and would be right back with the cash. They never returned and as yet I have been unable to collect it."

Seldom a day passes without a letter something like the one above. It appears that the only safe way to handle a situation like this is to come out flatly and say, "no money, no trees" — or whatever it is you're selling. We know of some cases where the subscriber has said this and where the purchaser was able to find some money in some pocket that he had apparently forgotten!

* * *

"Business Builders" Often Backfire

Frequent letters from owners or proprietors of stores in small towns show unsatisfactory experiences with firms selling trading stamp schemes. It all starts when an agent appears and explains the plan in glowing terms. His company sells stamps to be given to customers with purchases to be redeemed in the form of premiums to increase the store's business.

It all sounds good but frequently, unforeseen difficulties arise. Sometimes the company putting out the stamps just folds up and disappears. Sometimes the quality of the premiums received is altogether unsatisfactory, and then again, the company may wiggle out of its obligations by taking advantage of terms printed on the agreement in type so small that it requires a magnifying glass to read it.

All in all, the experiences which have been related to us have made us skeptical about signing up for any business-getting propositions of this kind.

* * *

No Hay — No Pay

I have just been reading a file of correspondence over an inch thick and dating back to 1936. It concerns two cars of hay on which a subscriber was quoted a price of \$17.00 a ton delivered, and which he shipped to Vail and Company, Boston, Massachusetts. The hay was reshipped by the company to a town other than the one designated. These added transportation charges were deducted from the check, and the price received was entirely unsatisfactory.

The Service Bureau made the claim that the transportation charges for re-routing were unauthorized by the subscriber and, therefore, that he should not be charged with them. A check for \$79.00 was eventually sent the subscriber, but was refused by him. You can't blame him for that. It is not a

very satisfying return for two cars of hay.

Over a period of several months we attempted to get this settled. Then we turned it over to a collection agency to bring suit. Eventually last spring we had a letter saying that a judgment had been secured for the original check plus the extra transportation costs. The judgment wasn't paid. The debtor was again brought into court and ordered to settle within thirty days, which he did not do.

In plain, every-day language, it appeared that the debtor did not have the financial resources to pay this judgment, and the whole matter was dropped.

I do not remember a case where the Service Bureau ever worked so long and so persistently without results. The lesson learned from the experience is that it is unsafe to ship hay or other products to a firm until you have a thorough report on their financial responsibility.

Buy from Licensed Insurance Companies

"If they are reliable, THIS is very cheap insurance."

This sentence from a New York State subscriber's letter is worth some study. In the first place, the company to which our subscriber refers is located in another state, and is not licensed by the New York State Insurance Department. This means that in case of any dispute or unsatisfactory experience with the company, the State Insurance Department can be of no help in straightening it up. Because of this situation, the Service Bureau recommends that a subscriber refrain from doing business with companies that are not licensed in the state in which he lives.

In buying insurance, you will find little difference in cost for policies containing the same provisions. Low-cost policies issued by a company that is licensed are worth what they cost, but naturally the coverage is limited. The important point is to deal with companies that are licensed. The North American Accident Company, which issues the policy sold by *American Agriculturist* salesmen, is licensed in all states in which it is sold.

Eight One-Act Prize Plays Royalty Free

Copies of *American Agriculturist* one-act prize plays (comedies dealing with country and village life) are available at 20c each, royalty free. These plays are especially suited to production by amateur dramatic groups connected with Granges, Home Bureaus, 4-H Clubs, schools, churches, and other community organizations. For copies of these plays, write to Play Dep't., *American Agriculturist*, Box 367, Ithaca, N. Y., and enclose 20 cents (coins or check) for each copy wanted. You can't go wrong on any of them. All are amusing and have been carefully selected:

WHD IS WELLINGTON? by Mrs. Carrie Ladd.
THE ELECTRIC FENCE, by Mrs. Minnie Partridge.
FRACTIONS, by Floyd Spicer Armstrong.
NOTHING DOING, by Grace Smith Beers.
RAISIN' THE DEVIL, by Robert Gard.
LET'S GET ON WITH TH' MARRYING, by Robert Gard.
A DAY IN THE VINEYARD, by Irene Baker and A. M. Drummond.
FISHIN' WEATHER, or THE ANTIQUE SHOPPE, by Samuel S. Hale.

Repair Parts

Many subscribers have trouble in getting repair parts for farm equipment which is no longer manufactured. In some cases the parts are not available, and in other cases it is a matter of knowing where to send for them. The Service Bureau welcomes questions asking about the availability of repair parts for farm machinery. If you can't get the parts you want, write us. We will try to find out whether or not they are available and where you can get them.

Farm Service Bulletins For You

IN ORDER to make available to readers more information which will help increase profits, the editors of *American Agriculturist* have prepared several mimeographed bulletins on timely subjects. These are available to any reader without cost other than 3c each to cover mailing and shipping costs. Bulletins now available are:

- ☐ No. 101—HOW TO RAISE BABY CHICKS.
- ☐ No. 102—PULLORUM DISEASE OF CHICKS.
- ☐ No. 103—HOW TO CONTROL MASTITIS.
- ☐ No. 104—HOW TO BUY A HERD SIRE.
- ☐ No. 105—HOW TO CONTROL WEEDS.
- ☐ No. 106—HOW TO COOL AND PACK EGGS.

Check the ones you want, include mailing cost, and return the coupon to *American Agriculturist*, Box 367-S, Ithaca, New York.

From time to time we plan to make additions to the list available.

THE G.L.F. PATRON

The basis of a sound business cooperative is voluntary use by fully informed patrons

Baby Chicks Made-to-Order

What is a Chick?

A chick is raw material taken from the feed and transformed by the body of a hen into an egg, then heated for three weeks until it hatches. In transforming feed into an egg, the personalities, traits, and physical characters of two parents are invisibly added.

Specifications

The specifications for building a good chick are: (1) Select parents that have the traits you want to pass on to the chick. (2) Keep them under healthful and comfortable conditions. (3) Feed them good quality, palatable feed which contains everything that makes up the physical body of the chick. (4) Hatch the eggs.

The Breeders

Every poultryman who saves any eggs for hatching can be guided by

the methods of successful breeder-hatcherymen.

Most breeder-hatcherymen have already selected the breeders which are to produce next season's chicks. Good breeders were selected for size, body type and vigor as well as for those characters which show high egg production. (Trap-nests are sometimes used to gauge numbers of eggs as well as kind of eggs laid.) Breeders have been blood-tested for B.W.D., which is a disease carried by some parents and transmitted to their offspring through the hatching egg. Carriers are detected by this test and eliminated from the breeding flock.

The Raw Materials

Proteins, fats, minerals, vitamins, and water are the raw materials out of which a hen manufactures a hatching egg.

G.L.F. has put into its breeder feeding program the ingredients which contain the kind and amounts of each of these nutrients that science and farm experience have dictated.

The G.L.F. breeder feeding program includes Super Laying & Breeding Mash, plus a choice of several Scratch Mixtures, fed on

about a 50-50 basis. To this may be added daily feedings of wet mash or mash pellets to increase total feed consumption. Crushed oyster shells, grit, and water, available so that the birds easily get all they want, complete the program.

The Final Check

Aside from having a good incubator, properly handled, one more thing can be done to increase the chances of getting good chicks. That is to sort the hatching eggs.

Like begets like. So, by selecting out of our breeders' total production

only those eggs for setting which have the right color, size, shape, and shell texture, we're much more likely to get pullets that will lay the right kind of eggs.

Holiday Suggestion

Most G.L.F. Service Agencies are now showing Christmas baskets of G.L.F. Family Foods at special holiday prices.

One of the baskets contains Patrons' Pancake Flour, Self-Rising Pastry Flour, Wheat Shreds, Corn Flakes, and 50-50 Cereal. The other contains cans of Tomatoes, Tomato Juice, Peas, Green Beans, Cherries, Molasses, and Beans with Pork.

These inexpensive, practical Christmas gifts will be appreciated by everybody—including the farmers whose crops are marketed in this way.

Dairy Feed Formula Changes

A sharp increase in the price of gluten feed made it advisable to adjust the formulas of the Flexible Formula Dairy Feeds effective December 10.

Cottonseed remains too high. Soybean oil meal is high in price and difficult to get. Ground soybeans are plentiful, but the hope of a government loan on beans keeps the price high. Linseed meal remains relatively cheap; current shipments are running very high in protein.

Ground barley is the cheapest source of total digestible nutrients.

The formula changes consist in general of an increased use of linseed meal, hominy feed and corn meal, and ground barley.

Soybean oil meal is out of Milk Maker, Exchange Dairy, and Legume Dairy. Gluten feed is out of the Cow Feeds.

These changes effect a saving to farmers.

The Super feeds, Fitting Ration, and the supplemental feeds remain unchanged.
